"But she insisted on a daily slip because sometimes she played a few other numbers too. Well, one day, out jumped 698 and to everybody's surprise this chick comes in and demands her \$600 [Editor's note: The chances of winning are 1,000 to 1].

"I pointed out that the winning number was 698 and that she had played 699. Well, she pulls out her slip and handed it to be. It looked like 698 all right, but I could tell that part of the last 9 had been carefully rubbed out to make it look like an 8.

"We are used to hustles like that but we didn't want a stink, so we told her we'd check with the bank and get her original copy back.

"Well, we had the copy sent up the next day and it was plain as hell that she had bet 699, as she had been doing right along. We showed it to her and also told her we had checked the bet on the ribbon (the adding machine tabulation of the day's bets)."

The operator said the woman refused to accept the evidence and returned with a boy friend.

"They raised so much hell that they scared off some of our legitimate customers, people who had been trading in the store for years without knowing numbers were played here also. And that's bad; if you don't have any legitimate business at all, even being on the Pad can't help you but so much.

"We finally got them out of here, but they threatened to come back next day and take the place apart. They didn't, though, because we passed the word along and some of the boys dropped by to talk to them and we thought that was the end of it."

MORE TO COME

The operator then came to the point of his story:

"Well, it was about a week later that a plainclothes guy from the local squad dropped in and asked for me. I come up front and he said:

"Look, fellow, I'm sorry, but Downtown is sending us up a letter of complaint that says you are writing numbers in here. So you've got to give me somebody right now so we can cover ourselves."

"Now that isn't the usual S.O.P. The guys usually telephone you when they got to make an arrest, but they usually give you until later that day or early to next morning to line somebody up.

"That will give you time to hire some local wino or junkie who hasn't had too many policy busts so that he can be picked up by the cop in front of the place or even inside, if necessary.

"It's better still if you can get some guy who has never been busted at all. For you got to give him \$50 to take the bust anyway. And if he's a first offender he'll get a suspended sentence, anyway. In that way, you don't have to slip his wife or family nothing while he's serving time. But you've still got to put out \$25 for his lawyer and another \$25 for his bond if the magistrate don't stand still.

"But this plainclothes guy wouldn't take that 'later' stuff. He said he had to have somebody right now. He said the letter had too many details about my spot—I figured it must have come from the chick who had tried to hustle us—and even hinted we might be on the Pad. So he had to have somebody right now."

SOMETHING HAD TO GIVE

"Well, there was nobody there then but me and my writer, and you know I couldn't afford to take no bust. I didn't want my writer (the \$85-a-week employee who accepts the bets and makes out the slips) to take one neither, for it don't do to have a writer with too much of a policy record.

"I told this to the local guy, but he said everything would be okay. 'I got to have him or somebody,' he told us, 'but don't worry. I'll keep him clean. He'll be back behind that counter by the time you open up tomorrow.'

"The cop was a man of his word. When he booked my boy, he made out the complaint to say that he didn't find any numbers on his person but that he did find a bunch of slips under the radiator near which my boy was standing.

"Naturally, the magistrate threw the case out."

The operator smiled in reminiscence.

"That was the last I heard of it personally," he recalled, "but I learned later that that chick's complaint was sent up from Downtown the next day, but it was already a dead squawk. The squad boys reported to Downtown that they had been keeping the place under surveillance, and that they had just made a policy arrest there the day before.

"They said they had trailed the guy (my writer) into the store just before making the pinch, and said that he usually operated on a street corner about a block away. They said their surveillance indicated that my store was clean and not a numbers drop at all."

He smiled broadly in conclusion.

"So that poor retired schoolteacher need not worry. Nobody's going to ignore any written complaint sent to Police Commissioner Stephen P. Kennedy."

Address by Congressman Schwengel

EXTENSION OF REMARKS

OF

HON. GARDNER R. WITHROW

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD I include an address by Congressman SCHWENGEL, delivered at the 15th annual convention of the National Limestone Institute. Said convention was held January 21, 1960, at the Statler-Hilton Hotel here in Washington, D.C. I recommend this address very highly. It is a wonderful review of the huge Federal road program.

The address follows:

ADDRESS BY CONGRESSMAN SCHWENGEL AT THE 15TH ANNUAL CONVENTION OF THE NATIONAL LIMESTONE INSTITUTE, JANUARY 21, 1960, WASHINGTON, D.C.

To you good people from all over this great land, welcome, first of all, to Washington, the site of the greatest Capitol on this earth, where what happens daily makes some difference somewhere in the world. The dome of the Capitol that you will see or have seen since you have been here represents, first of all, freedom and liberty as no other people in the world know. It represents wonderful things for our own people and it represents a longing hope for billions of people outside this land of ours. Since I have been here, I have made it my business to study some

of the things that happen in that Capitol, and I can say to you that I believe that more things of importance have happened to people there than any place else in the world. And, I could spend the whole hour talking about it. I want to call this to your attention because while you're here I want you to appreciate its importance, its grace, and invite you not only to see the Capitol but see the monuments that have been built to great men who represent big ideas and great ideals.

I have recently done a little research on the foreign people who were invited to this land to speak from the House podium, and I have found this to be one of the largest heritages that we have—a subway hidden that we don't even use or know about. Let me quote just one phrase from one of the 74 different speeches made from the podium of the U.S. House of Representatives. This one by a Mr. Mayhew when he was here in 1949, which is among the many fine speeches we have had.

"My good friends, I toured your Capitol and I visited many of your monuments, and it was a thrill to receive something of the spirit that was in the hearts and minds of those wonderful people you call your forefathers."

This is how they influenced him. Last summer we had a well-known world character come into this country. He is a character, and that is the best compliment I can give him. While he was here, our State Department had the idea of taking him on a little tour and they took him to the Lincoln Memorial. That is the place you ought to visit—if you haven't friends. He walked up those 58 steps with Mr. Lodge and Mr. Lodge took him first to the south wall and there talked to him briefly about that great public document, the Gettysburg Address; showed him this monument and explained why Lincoln was sitting and facing the east. He pointed out the east, it was from the east that we got all the ideas and ideals that were put together in this wonderful thing we call America. And, also, facing the east because this way he could be watching that great symbol of liberty and unity that he believed in so much. And, then, took him to the north wall and read to him, " * * * with malice toward none; with charity toward all; with kindness in the right as God gives us to see the right; let us finish the task we are in; bind up our Nation's wounds; to care for him who shall have borne the battle, his widow and his orphan; and to do all to achieve and cherish just and lasting peace among ourselves and with all nations." This was interpreted to Mr. Khrushchev.

He thought a moment; he said, "This is beautiful language; this is a noble thought, I bow to Mr. Lincoln." It occurs to me that this may be the first time that this Communist who represents anything but good in the government had ever bowed to anything that wasn't communism. And, somehow this experience might have proved—and showed him that there was more to America than our power. He might adhere with this experience and others, and come to realize what we ought to realize and that is the greatness of America is not our might and our power and our know-how; but the greatness of America is in the hearts and souls of America; the spirit of man. And then Mr. Lodge said to him, "In these 72 words, 59 of them one syllable words, 12 of them two syllable words, and 1 three syllable word, is found the heart and soul of America and the great objective for our people and for all the people. This is something we ought to think on often." I share this experience with you for whatever it may be worth, in hopes that you will think briefly on something of the meaning of that experience and from the experiences that you can have while you are here.

Now I come to you as a politician and I admit it. Lincoln once said, "You can't be a statesman unless you get elected . . ." and I have found in my brief experience that politically you can't get elected unless you are somewhat of a politician, and it isn't easy sometimes to be the kind of a politician you want to be. Someone has said if you believe it's easy to be a politician try sitting on the fence with your hands on the post, your ear to the ground and then when it comes time, throw your hat in the ring.

I've diverted some from the subject that I wanted to talk about. Let me begin by saying to you, Mr. Seitz, and good friends, that I am glad to have the opportunity to substitute for a colleague of mine on the subcommittee, the ranking member of the Subcommittee on Roads and Highways of the House Committee on Public Works. And I appreciate the reference you've made to the "watch-dog" or study and investigation committee views. This is certainly going to be a part of what I am going to talk to you about. But, before I go too far, I feel that it is necessary to begin with the presentation of certain facts in a brief review of what has transpired in the field of highways and highway construction.

We all know that the Government, with the enactment of the Federal-Aid Highway Act in 1956, created and began the greatest single internal public works project ever attempted by any nation in the history of mankind. Besides substantially enlarging the program for the construction and reconstruction of the primary and secondary highways and their urban extensions—those known as the ABC System—this act finalized a plan for a National System of Interstate and Defense Highways, a plan that was desperately needed and is becoming more important than we realized when the act was passed. The initial concept of the Interstate System began with the studies by the Bureau of Roads and the appropriate committee in the Congress as far back as 1938 and the preliminary plan was presented to Congress in 1939. The records show that these studies finally resulted in making section 7 in the Federal Act of 1944. This officially created a plan called the National System of Interstate and Defense Highways which was limited then to 40,000 miles, or less than 40,000 miles actually. Little was done until extensive congressional hearings were held in 1955 and 1956. I sat through every one of those hearings, and there were 74 different sessions. So I can say to you that this had a pretty thorough going-over at that time. This legislation also established another very worthwhile feature—the highway trust fund as a depository for revenues from those who used the highways. It established a good principle, I think, hence, motor fuel taxes and the other highway user taxes, the receipts of which were to be used to finance this vastly expanded program. The legislation also established authorization of funds to be apportioned to the various States from fiscal 1957 through fiscal 1969—a period of 13 years—for construction of this System. These authorizations then totaled \$24,825 billion, which was then the estimated total cost of the Federal Government for completion of this 40,000 miles on a 90-percent Federal, 10-percent State cost-sharing ratio.

Such a program carried a great message of hope and a challenge to the American people—a fond hope that the transportation problem, which was becoming more serious, would be solved and a challenge to those who would accept it. Highway contractors and those who furnish material for building highways especially saw the challenge. You of the National Limestone Institute, who represent a most important cross-section of this group, and the manufacturers of equipment and others of the great and almost matchless road-building team expanded

greatly to carry out this program. This was favorably impressed upon the Public Works Committee by your representative, Bob Koch, in his testimony before that committee, of which I am a member. And I want to say to you that you have, in this gentleman, a very, very capable public servant and a fine representative of your organization in whom everyone who knows him has confidence, and this part is important because this does not prove true of everyone who represents associations in this community.

And now, in less than 4 years, because we were not realistic—and when I say "we," I mean Congress and some people who appeared before our committees, because they made some recommendations that were unrealistic, too—we were unrealistic—too many demands have been placed on the fund for projects that could have waited; and because of some mistakes made by Congress, we see this expanded program for highways with its back to the wall and in very, very real financial trouble—trouble that we must contend with now and, I imagine, for the duration of the program. What caused the trouble? This is a good question that needs some forthright answers and needs to be appreciated and looked at by everyone. Testimony by administration officials during the hearings of the Committee on Ways and Means last July on financing the Federal-aid highway program revealed that the latest estimate to complete this dynamic and necessary program is over \$10 billion more than the estimate in 1955. Let me say that again: Over \$10 billion more than the estimate in 1955.

Partly explained by that old word we call inflation—and I'd like to make a speech on that tonight, because I think everybody should have some very real concerns about that problem; because if we won't be concerned about it, this great and wonderful thing we call America could be lost just because we have ignored the problems that caused this. Well, \$8.9 billion of this at least will be paid by your Federal Government. When you break this down, there is a 5-percent increase due to traffic costs, increase due to traffic costs under estimated traffic, \$1.2 billion; a 15-percent increase due to local needs costing \$3.4 billion; a 3-percent increase due to utilities costing \$700 million; and a 12-percent increase in prices for \$3.6 billion; and then for the additional 1,452 miles added to the Interstate System it will cost at least \$1.5 billion over and above the figures just quoted, making a total \$11.5 billion of the original cost. Now this is something for us to think about.

What has brought this about? I've already mentioned inflation. As I began this talk, I mentioned that the 1956 act launched the greatest program for a system of highways which any nation has ever attempted, and that is an irrefutable statement. The Interstate—I'm going to include in this the Interstate and the ABC System—to make the record clear, is necessary for reasons of national defense and safety and for the far more compelling reason of handling the traffic coming with the economic growth of this country. It should be pointed out that the present program is not necessarily aiding this economic growth which it should. It is following it and, in my opinion, should be leading this growth. It should be pointed out and noted, too, that the Interstate and ABC Systems are not in conflict—and we in the committee appreciate this especially. In some areas this is looked at as a conflict of interests—actually, they complement each other. Right now we're further behind in the Interstate System, and, therefore, I think we should give further accent to that system.

This legislation gave green light to 50 separate and distinct sovereign governments. Each State expanded its highway department. I am sorry to say, and it is indeed unfortunate, that when a program of this

magnitude is inaugurated, men of influence with selfish interests are attracted and tempted to do those things that are not in the public interest even though they may be within the law and this is what forces Congress, often times, into passing laws that might not be in the public's interest. Costs for such things as right-of-way acquisition and engineering go up and all—innumerable ones, go up, and I think it is a shame. I think it should be halted and the answer is, of course, legislation, but the far clearer answer is, and this is something that every American should think about, and especially those people who are directly concerned with this, that we need to call upon statesmanship here as well as in the areas of Congress and the legislative halls of our various States. It is a shame, but how is it halted? Well, the answer to that question is simply that we need statesmanship in this area, too. Now, besides the mushrooming cost due to the increase in right-of-way acquisition, engineering, etc., there is, as many people who have a sincere interest in the highway building program have pointed out, a diversion of monies going on to pay utility companies for such things as relocating any utility line along Federal-aid highways. If the Federal act and the state highway commissions are allowing these companies, as some have said, to raid the Trust Fund of more than \$2 billion we may be forced, and here's something to think about, into reconsidering our policy toward filling stations, motels and other businesses who depend upon the highway who have just as much right to ask for relocating costs. If we do this we run into many billions more than we can't afford and I don't think we should be called upon to pay. I point these things out because we a lot of times can't stand the onrush that makes these things possible in legislation.

Now before I leave the subject of increased costs for completion of this system, it is worth noting, I think, for the record, that your industry along with those in the contracting field has, through price competition, brought bargain prices to the highway bid tables, and this is not the first time I've said this. I've said this in committee and Mr. Koch knows this. Your efficiency, giving rise to increased capacity, has made this one of the most competitive industries in business today. And, as I said in the House committee this is one of the finest endorsements of honest private enterprise system that I know. According to a report recently released by the Bureau of Public Roads, competition among highway contractors was so keen during the first half of 1959 that there was an average of 7.4 bidders per contract as compared with 6.8 and 6.5 in 1958 and 1957, respectively. Now listen to this, on the average bids ran 11.3 percent below engineer's estimates. Your industry has certainly assisted in making this saving possible and I want to commend you for this. And, if it had not been for this we would have been in a heck of a lot worse shape than we are now. Now I'm not suggesting here that you sharpen your pencils upward on these propositions at all—I'm suggesting that you continue doing what you are doing in the good old American way and then we'll have these highways sooner and I think in better condition.

And still another savings is one that can never be given a dollars-and-cents figure but one we must, if we're ever going to talk about it, refer to as one of saving lives. Quite a dissertation could be given on that but just let me say to you briefly what has been estimated. Estimates have been made that 4,000 lives will be saved annually upon completion of the Interstate System. Now, you try to transfer that to dollars and you come up with quite a tidy sum. On this system, which is expected to transport 20 percent of all U.S. traffic by 1975, accident costs will be reduced from one cent per

vehicle mile to 0.3 cents per vehicle mile—a saving estimated at \$750 million each and every year. That's at the present estimate and when this comes into being we all know that we're going to have increased traffic. Is it any wonder we should strive to complete our roads on schedule?

There has been much spoken and written about the world's populations explosion. In the United States, for example, a baby is born every 11 seconds. The area from Boston, Mass., to Norfolk, Va., will become one urban area before the end of our lifetime—think of that. Yet some officials say slow down a system which will comprise only a little over 1 percent of the highway mileage of the United States and yet will alleviate traffic congestion by carrying 20 percent of the traffic, partially eliminate a great accident and death hazard, and contribute—yes, contribute handsomely—to the economic growth of our Nation. I also mentioned the benefits our national defense will receive from this system. There are many officials in the Pentagon who rate completion of this system as important as matching Russia in the missile race. Most of you are ex-military men, or a good many of you are, and know the importance of logistics. It cannot, in my opinion, be underrated in our time.

I wish that what I say here today could stir people like Paul Revere's ride did in 1776. I feel there are two calls to action. One is directed straight at the Congress of the United States. We should revalue the entire highway program. The six special points that I made before the Ways and Means Committee and which I will comment further about in a few minutes are a good starting point for completion of the Interstate System, but we may have to find additional ways to finance this program. And may I say, parenthetically, when the report comes out of the national tests, I hope that all of you will take a second look before you start shaking your heads on any phase of that report and find out all the facts before you say too much. I think they are going to be very indicative.

Last June I advanced to the members of the Committee on Public Roads the proposition to create a study or investigation committee, or as many refer to it as the "watch-dog" committee. I thought that the problems that have been brought to light in connection with the Interstate Highway System needed some attention. I proposed to the committee that there was abundant evidence already and that we needed to investigate ways and means to expedite its completion, that maybe we needed to investigate ways and means to cut down some costs, we needed to do those things that will assure reason and understanding of the total problem by all of our people and that we needed to do those things that are necessary now that call for immediate solution of the problems of today as well as the problems of tomorrow.

I proposed that such a committee be established immediately on a non-partisan basis with an equal number of Republicans and Democrats. That is the only way, in my opinion, that we could show those most interested in the building of the highway and the general public that we are not just witch-hunting—that we intend to be objective and constructive and that politics should be taken completely out of the proposed study committee. If a thorough job is done on this question in this area I feel we can save hundreds of millions and perhaps billions of dollars and at the same time hasten the completion date of the system.

At that time I suggested, and I reiterate today, that the committee would perform a fine public service by:

(1) Reevaluation of the program for extensions which have been granted over and above the 40,000 miles originally approved to determine first of all their justifi-

cation, and second study the possibilities of setting up some kind of a priority system for the building of extensions to the system.

(2) Explore the possibility and feasibility of building two lanes in certain areas of our country where four lanes are not now needed and may never be needed.

(3) That they put a priority on the number of interchanges and conduct a study to determine the advisability of modifying designs which may be too elaborate in some places and not necessary in many areas.

(4) Investigate the charge that not enough emphasis is being put on getting links of the Interstate System built between population centers.

(5) Review the possibilities of putting priority on those sections which studies show will carry the greatest amount of traffic when completed.

(6) Study the possibilities of saving money by adopting different but adequate standards for bridge construction under the Federal Bridge Act.

Not until early September did the Chairman and the Committee on Public Works act on my proposal to have a study and investigation committee formed to consider these questions. The committee was then appointed, composed of 12 Democrats and 6 Republicans. I immediately objected to this because the two to one majority of the committee indicated partisan politics, in my opinion, beyond question.

It should be pointed out and understood that from the beginning of our Federal and Interstate Highway Program in 1916 there has always been a bipartisan approach to our biennial highway bills. It has only been in recent years, particularly since the beginning of the current Congress, that partisan politics seems to have been injected into the consideration of this very important highway legislation.

Republicans on the Committee of Public Works, and Republicans I might add who are not above playing politics, but in this case those on the Subcommittee on Roads have been powerless to call a halt to the present program and the very apparent political domination of the study and investigating committee. As a result, there is a very noticeable diminishing confidence in the committee—in the subcommittee particularly, and the objectives that sincere and devoted members of the committee and the public had hoped for. Because of the vastness of this program and the importance of this program to the economy of our country, a unity of effort is more vital here than in any other phase of legislation that the Congress will deal with in this session.

At the present time the Committee on Public Works consists of 22 Democrats and 12 Republicans. The Subcommittee on Roads has 12 Democrats and 6 Republicans, and this Special Study and Investigating Committee on Roads has 12 Democrats and 6 Republicans. Everyone connected directly with and those most interested in the Interstate System assumed that when the time came to select the members of the Special Roads Study and Investigating Committee that the members of the committee would be selected from the members of the Subcommittee on Roads and that the very able, devoted, and dedicated chairman, Representative GEORGE FALLON, of Maryland, would most certainly become its chairman—and I might add that he served in a very nonpolitical and in a most fair way throughout his entire term during the development of this system and yet he is not chairman of the committee and there are four very distinguished members of the Roads Committee that are not even on the investigating committee.

The fact that the committee has retained crime investigators from a crime investigating committee of the other House and the fact that we have been in session since Janu-

ary 6, and the Study and Investigating Committee has not yet met, has caused a lot of people interested in the highway program, the objectives of this committee and the problem that the building of the Interstate System has created, to wonder, become suspicious and lose confidence in what should be the committee's real objectives. They have begun to believe that this has become a witch-hunting committee rather than one designed to investigate the policies and all the other problems that have no real relation to crime and criminal intent. Now if there is anything wrong and criminal going on in the Interstate Highway building program it, of course, should be investigated and brought to the public's attention and I would be one of the first to join hands to do so. But I am not inclined, at this time, to put the 48 highway commissions under the kind of a cloud of suspicion that this implies.

Another point on which I want to dwell and focus attention is the fact that this committee is so much out of balance and inconsistent with the record of the House and Senate in setting up study and investigating committees in the past. Dating back to the 80th Congress, and this is the 86th, I find that in that Congress there were 6 investigating and study committees appointed and in every instance, except 1, there was a majority of only 1 for the majority party and in that exception the majority was 3 when there were 11 Republicans and 8 Democrats on the Select Committee on Foreign Aid, and in this study and investigating committee there is a majority of 6. In the 81st Congress, controlled by the Democrat Party, we find that there were four committees appointed, all of which had a one-vote majority with the exception of one—that one had a three-vote majority. In the 82d Congress, controlled by the Democrats, we find that there were four committees appointed, each with a one-vote majority. In the 83d Congress, seven committees, all with a one-vote majority with one exception. I imagine our investigation, if we went back further, would confirm that this has been a precedent of policy of the Congress.

Here, in my opinion, is conclusive evidence based upon precedent, that the Public Works Committee of the House has entered into this without much thought or consideration and it could be charged as a deliberate attempt to make this a political committee rather than a true and honest investigating and study committee. Now, I call today for reconsideration by this committee of this problem—the problem of making this truly a nonpolitical committee and immediately get organized and adopt policies which are not yet known, but should be known and understood by the committee and the public and to do those things that will reinstate confidence in the original intent and purpose of such a committee. So much for that.

Let me close with the suggestion that highways are more important to the economy of our country than any other public works in which the Government participates directly or indirectly. They are the backbone of this great country. They should have the best unbiased, nonpolitical attention and direction that can be given to them and, of course, should not be subjected to graft of any kind. A concerted drive should be made to cut costs and make greater speed toward its early completion and to make it on schedule. You, the voter, are important in this. You can help. I urge each of you to contact your Congressman and get others who have a direct and indirect interest in this proposition to contact their Congressman. If he is not a member of the Public Works Committee, ask him to contact members of the committee and urge their immediate consideration of some of these problems that are confronting our Nation today in connection with the building of our Interstate System of Highways.

Have them stress that our highways will not be built on time to meet the growing need if something is not done now. Let us lay the groundwork now to do this job well, adequately and get it done on time.

The year 1961 will bring before the Congress and the American people two reports of outstanding significance. We should be prepared to receive them by laying the groundwork. I have already referred to one of them and made some suggestions about it. As individuals concerned with our highways you can easily visualize the importance of these studies—one will deal with the system's cost and one with the system's physical makeup and direction. Again, I urge you and ask you to urge your friends when you return home—contact your Congressman on the subject of highways. Do not wait until sometime in the future—when there is another crisis like the one in 1959—but do it now and let's have the crisis averted. Be sure to tell your Congressman to get this problem solved. Some of you know of my interest in Lincoln, this man I consider the greatest public-spirited patriot that ever lived. Once he said, and I quote, "But this Government must be preserved in spite of the acts of any man or set of men. It is worthy of your every effort. Nowhere in the world is presented a Government of so much liberty and equality. To the humblest and poorest amongst us are held out the highest privileges and positions."

I suggest to you again that nowhere, at no time, in the history has there been presented a proposition as great and as important as the Interstate System that has been presented to us. It is worthy of your every honorable effort—and, finally, good luck as together we tackle this great job and more importantly, the job of promoting the welfare of our country wherever we can. Thank you for this kind attention.

Khrushchev's Big Lie

EXTENSION OF REMARKS OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. FASCELL. Mr. Speaker, Soviet Premier Khrushchev is a man of many moods and unpredictable temperament. He proved this beyond a shadow of a doubt during his travels in this great Nation. He also is a man who is not unwilling to be abusive of the truth if he believes there is some advantage in so doing.

I am thinking particularly of Khrushchev's recent remarks before the Indian Parliament in which he attempted to paint a picture of the Western nations as colonial powers, at the same time depicting the Soviet Union as the great sympathizer to those nations in the world who are emerging from colonization.

Of course, the fact the Premier neglected to mention is that the nations of the Western World, such as Great Britain, are those which are releasing the bonds of colonialism and allowing the people of parts of Africa, Asia and Latin America the national autonomy they desire. While this has been going on, it has been Soviet Russia that has

tightened the reins on its satellites in a form of domination far worse than any modern colonialism.

Khrushchev's remarks make it incumbent upon the United States and the rest of the free world to make a sincere effort to tell the entire story about imperialism in the world today. The truth will show that Communist Russia is the only great imperialistic power.

I submit for the RECORD an editorial which appeared in the Key West (Fla.) Citizen, concerning Khrushchev and colonialism. I think it hits the nail right on the head.

KHRUSHCHEV'S BIG LIE

Soviet Premier Khrushchev is no stranger to the technique of the big lie. He showed himself to be a master of it in his address to the Indian Parliament. He beat the rapidly weakening, if not yet quite dead, horse of Western colonialism. He proclaimed the Soviet Union's friendly sympathy with the emerging nations of Africa, Asia, and Latin America. He plausibly called upon Western Powers "to repay at least a portion of the looted wealth" of the colonies.

All this, the things Khrushchev actually said and the implications he sought to convey, was a part of the big lie. For the truth is that the only great imperialist power left in all the world is the Soviet Union.

In recent decades, and especially during the last few years, Great Britain and other colonial powers of the West have been cutting the ties of dominance over more backward nations. In many cases, patient, and sincere efforts have been made to help the newly freed peoples along the road to a better life. Contrast this with the Soviet Union's treatment of its satellite peoples, many of whom live under conditions of repression and exploitation as severe as anything in colonial history. Contrast it also with Moscow's ideological domination of some Far Eastern nations.

Khrushchev's trumpeting of the big lie in New Delhi was not unexpected. It does no harm to note again, for the record, that the truth is bigger than the biggest lie ever told.

Bridgeport Post Joins Supporters of Full Military Unification

EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. KOWALSKI. Mr. Speaker, as the sponsor of legislation providing for full unification of the armed services, I am pleased to bring to the attention of the House an editorial from the Bridgeport Post, one of Connecticut's most distinguished newspapers.

The Bridgeport Post editorial points out that recent disclosures of military training manuals which are stupid, nonsensical, and worse make it absolutely imperative that we have a single service.

My bill, H.R. 9874, would accomplish the objectives which the Bridgeport Post regards as necessary. It provides for a single armed service, under a civilian Secretary of Defense, and it calls for the reorganization of our Military Establishment along functional lines. It

would not only mean savings of billions of dollars a year by the elimination of duplicate operations, but would, in my opinion, give us a more effective, more flexible national defense.

Following is the editorial from the Bridgeport Post of February 20, 1960:

AIR FORCE BANS IDIOTIC BOOK

Further circulation or use of an Air Force manual linking the Nation's churches and educational institutions with communism has been banned on orders of Air Secretary Dudley Sharp.

It is good to know that such nonsensical, idiotic garbage has been taken out of use, but the big question, which will be investigated, is how the thing happened to be written, by whom, and who authorized its use among U.S. servicemen?

Whoever is responsible should be dealt with harshly, especially if the person or persons involved hold military rank.

Chaplain and other members of the clergy discovered the manual issued at Lackland Air Force Base, Tex., after distribution of 3,290 out of 6,100 printed copies had been circulated, and protested to Defense Secretary Gates. Senator Prescott Bush referred to the situation as "outrageous and incredibly stupid." That is exactly what the manual amounts to.

In one place the thing says: "From a variety of authoritative sources, there appears to be overwhelming evidence of Communist antireligious activity in the United States through the infiltration of fellow travelers into churches and educational institutions."

The National Council of Churches is attacked by the allegation that 30 out of 95 persons who aided in the revision of the Standard Version of the Bible had been affiliated with Communist causes, and further, by the charge that "even the pastors of certain of our churches are card-carrying Communists."

It is bad enough to have manuals for servicemen on how to clean officers' shoes, mix martinis, prepare salads, care for infants, wash dogs, etc., but this antichurch textbook is the worst yet.

Evidence mounts almost daily that absolute unification of the services, under a tough boss or tough bosses, is what this country needs, to put an end to the nauseating nonsense.

Air Pollution No. 1 Problem

EXTENSION OF REMARKS OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared in the Washington Post on February 28, 1960.

The article follows:

FIGHT ON AUTO-CAUSED AIR POLLUTION TOPS GOVERNOR BROWN'S PLANS
(By Morton Mintz)

Gov. Edmund G. (Pat) Brown of California has made enactment of far-reaching plan to control automobile-caused air pollution "the principal goal" of the State government in 1960.

His program is drastic. It would require installation on antismog devices on new and, later, used motor vehicles. Failure to

comply would be an offense punishable by fine and imprisonment.

Air pollution in which automobile gases are a prime factor have caused more hardship in California than in any other State. But it is widely considered a problem of all metropolises.

Only last week, Arthur S. Flemming, Secretary of Health, Education, and Welfare, asked Congress to broaden and make permanent the Federal Government's role in the fight against air pollution.

SEVENTY MILLION VEHICLES

The Nation has 70 million motor vehicles today. The Bureau of Roads estimated Friday that it will have 114 million in 1976.

The California Legislature meets in special session Monday. Brown has warned it that the State cannot stand idle while the air becomes further polluted by "the curse of smog."

A spokesman for the Governor said the program has an "excellent chance" of passage. Brown himself said that the "vast majority of Californians recognize that smog is a menace to public health."

Brown said there can be no magic cure-all for smog. He declared that California "must work with diligence and determination to keep from falling behind in the battle." The State's population and industry are increasing rapidly.

In 1959, California became the first State to set standards for the safety of the air and for auto-exhaust fumes. Brown's program would implement these standards.

The Department of Public Health would get a \$1.4 million motor vehicle testing laboratory and a motor vehicle pollution control board.

The laboratory would test every plausible exhaust-fume purifier and conduct a continuing study of the whole problem of motor vehicle pollutants.

On the basis of the laboratory's reports on purifiers—at least 20 are being developed—the board would certify those that meet State standards and are practical.

PURIFIER REQUIREMENT

Every new motor vehicle registered or principally used in an air pollution county would be required to have a purifier within a year after a device is certified for the particular make and model.

The Governor's spokesman said that 1962 models would be the first that could be effected. The auto industry has said the cost would be in the range of \$150 per car.

The deadline for used commercial vehicles would be 2 years after the first December 31 following certification of a purifier for the particular make and model. For used personal cars another year would be added. These installations presumably would cost more than those at the factory.

"At least until recent months," Brown declared, "the automobile industry has been shamefully laggard in the development of effective devices." The industry has repeatedly and emphatically denied charges in this vein.

The Governor said his program gives the industry an economic incentive to obtain certification of the devices being developed within its own ranks. He said that if devices developed by others are certified "the automobile makers will have to obtain the right to use these devices if their new cars are to be sold and registered in any 'air pollution counties' in the State."

The control provisions would apply in every county in which a majority of the board of supervisors invoked them. Brown said adoption of the program in the five most populous counties would control 60 percent of the motor vehicles in California. Half the State's vehicles are registered in Los Angeles County alone.

The Governor said that it may be necessary to tighten the law to prevent a motorist

from fraudulently registering his car outside of an "air pollution county."

Brown said that if a certified device must be periodically renewed or repaired, "some form of local inspection may have to be devised." At least one purifier now in the prototype stage requires no chemicals and is expected to last the life of the car.

In addition, Brown would require all cars equipped with exhaust-fume purifiers to have a means of destroying the smog-forming hydrocarbons now vented out the crankcase.

The industry has developed a "blowby" device that does this and intends to put it on 1961 models made for the California market. The cost would be "probably under \$10 per car," a spokesman has said.

Flemming urged the industry Wednesday to put the device on all new cars, not just those for one State. His testimony has brought no public reaction from Detroit.

VFW Old Guard Post No. 2100

Burning the Mortgage

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WESTLAND. Mr. Speaker, the Veterans of Foreign Wars from my hometown of Everett, Wash., is going to do something March 12 that I wish our Nation could do—burn its mortgage.

The veterans who are members of Old Guard Post No. 2100 should be commended for their accomplishments since the post first organized at Lake Stevens, Wash., in April 1930, due in a great part to Elwin W. Spriestersbach. The post has been a leader in veterans' affairs, youth work, and community projects ever since it received its charter in April 1931.

When the post moved to Everett in June 1932, its members met in the Washington State National Guard Armory. These members wanted and needed a home for the post, so they worked toward and finally purchased a site nearby for construction of a modern concrete-and-brick building.

Construction began December 5, 1945. A year and 10 days later the building was formally opened. Now, a little more than 13 years later, because of an active and steadily increasing membership the Old Guard Post is out of debt.

Mr. Speaker, many of the accomplishments of the post are due to the able leadership of its past commanders. Under leave to extend my remarks in the RECORD, I would like to include the names of these veterans, beginning with the first, Clyde Pottruff, who took office in 1931. They include: Dr. C. L. Lauerman, Otto Beilfus, Mel Knudsen, Ernest Swaney, Ellsworth Johnson, Gordon Steele, Thomas Phillips, Robert Knight, Clayton Wilbur, John Campbell, Harry Hansen, Carl Olsen, Walter Callahan, Almon I. Spence, John Matson, Walfred Johnson, Harry Spence, Joseph M. Torrey, George F. Thompson, Wilbur E. Ryder, Blaine Wise, Earl Ray, Harold Hall,

Kurt Kallstrom, Leonard Luce, Morris Stevens, and A. C. "Jerry" Krekow.

Also, Mr. Speaker, I believe recognition is due the present commander, E. "Fuzzy" Forsgren, and the post manager, Warren L. Scheel, whose efforts are contributing to the continued success of Old Guard Post No. 2100.

Lincoln's Education

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DORN of South Carolina. Mr. Speaker, Abraham Lincoln was one of the best educated men in the history of the United States. He had only a few months formal education. I only wish that parents today would realize that education is not necessarily something to be bought with money in some far off day when they send their children to college. Education is a knowledge of people and understanding of things regardless of how it is obtained. Education is a day-to-day process beginning long before we are born. I commend the following article to the attention of every American interested in education:

WHERE DID LINCOLN GET HIS EDUCATION?—
"THE AGGREGATE OF ALL HIS SCHOOLING DID NOT AMOUNT TO 1 YEAR"

(By Samuel B. Pettengill)

A little over 150 years ago a boy was born who grew to feel and express, better than any other man, the deepest dreams of what the American people have wanted themselves to be. Who and what were his teachers?

In 1858, Abraham Lincoln had lost his race for the United States Senate to Stephen A. Douglas. But 2 years later Lincoln was a candidate for President. He was nominated and in November elected.

In June of that year, 1860, his friends asked him to prepare a short biographical sketch which could be used as a campaign document. Lincoln did so, writing of himself in the third person, and insisted that it be used without material change.

In the course of the document he said:
"The aggregate of all his schooling did not amount to 1 year."

"He regrets his want of education and does what he can to supply that want."

"After he was 23, he studied English grammar, imperfectly of course, but so as to speak and write as well as he now does."

"He was never in a college or academy as a student, never even inside a college or academy building until after he had a license to practice law."

Lincoln felt, as so many do, that education comes from schools and books, and having had little of either, he felt he had little education. Whence then came the power to put in pure and limpid English—as clear as a Vermont trout stream—his letter to Mrs. Bixby, who had lost five sons in the War; the closing paragraphs of his Second Inaugural, and the Gettysburg Address? Whence, also, came the power to make speeches and state papers that march to their conclusion with the precision of a proposition of Euclid?

Now, books are important teachers. One would not downgrade them in the least.

They open many doors and tell us many things, some of which we remember for years. A subject taught in school is like a whetstone on a scythe. It may leave a little of its substance on the scythe, but it leaves it sharper.

But books and schools are not as important as that from which they come, life itself, and then they are important only as long as they are true to life, or some facet of life.

An anecdote of the late Charles Kettering, the noted inventor and research scientist, illustrates this point. Kettering had thought up some new idea as to how a piston could work better in an engine. Describing his idea to a famous engineer, the man said "It won't work." Kettering asked "How do you know it won't work?" The man said, "Why, every engineer and all the books on engineering know it won't work."

Kettering said, "But does the piston know it won't work?"

So they asked the piston by putting it in an engine. The piston did not know it could not work. It did work. The books were wrong.

Life is the great teacher. Ralph Waldo Emerson expressed this in a sentence worth remembering: "The scholar loses no hour that the man lives." And he added: "The scholar recognizes his teacher in every man."

What we learn from contact with life, teamwork on the athletic field, competition in the classroom, loyalty to our country, how we sort out those we meet in life, those with honor, and those without honor—with what these teach us, we can go far with no more than one shelf of books, unless of course, one enters some specialty like law, medicine, or engineering.

So the question remains, Where did Lincoln get his education?

In "Prairie Years," Carl Sandburg says of Lincoln: "In wilderness loneliness he companioned with trees. . . . Silence claimed him as her own. In the making of him the element of silence was immense."

In describing the life of Lincoln's family and the pioneer people with whom he grew up, the Encyclopedia Britannica says:

"Many, if not all, frontier women of the old days were dreamers. Their lives were hard their emotions mainly sealed up, but all around them was the mystery of the primeval forest; they treasured it in silence. . . ."

"How had he gathered into himself a subterranean sense of beauty in words, whether it had grown out of long reading of the Bible, Shakespeare, and Robert Burns—the favorite books of his maturity—whether it linked back to his mother's world, with its forests and empty spaces, its loneliness and its lampless nights of stars, who can say?"

Yes, who can say? A great book remains to be written on how the wilderness and the prairie influenced the American character.

Lincoln and all pioneer people learned to think for themselves. They had to. There was no one except an occasional preacher to tell them what to think. Families were often far apart and did not meet for days. There were no newspaper editorials, telephones, radios, or television sets by which pundits from afar could form their opinions and judgments for them.

And so, without all these modern advantages which we possess, the pioneers were free from the mass mind, the "group think," which is one of the curses of our time. They thought as individuals, groping for the truth and the right as God gave them to see it.

Lincoln wrote his own speeches. He did not have the benefit of a stable of ghost-writers like the statesmen of our time, who read a speech to a nationwide audience and

often stumble over the words as if they had never seen them in type before.

In his speeches and state papers Lincoln seldom quoted anyone as an authority for what he was saying. Occasionally he quoted Jefferson—his kindred spirit—and once or twice, Henry Clay. Few others. He was his own authority. He thought things through to conclusions that seemed right to him.

Self reliance was his teacher, as it was of all pioneer people. "Trust thyself, every heart responds to that iron string." Nobody ever taught Lincoln to use his vote so as to eat his bread in the sweat of other peoples' brows. Lincoln made his own way, and he traveled far.

The crude tools of the pioneers taught him their secrets. The ax was put in his hands when he was 8 years old and it was not far from his grasp until he was man grown. What we learn through our hands we seldom, if ever, forget.

These tools taught him many things. They taught him how other people had to struggle to make a living. He learned the trades of the farmer, the woodsman, carpenter, stonemason, surveyor, storekeeper, many others. And thus it was that he learned to understand people and talk to them in words they understood.

We speak somewhat scornfully of a "Jack of all trades and master of none," and of course, a man must be master of something to earn a living. Nevertheless the tools of all these trades taught Lincoln many things not found in books today.

Nature was his teacher. Think of Lincoln as a boy in the primeval forest of Little Pigeon Creek in southern Indiana where the sound of an ax had never before been heard, where century-old trees grew nearly as tall as the redwoods of California, where there was silence and mystery and peace. Think of him looking up through the foliage far overhead to the blue sky of noon, or the bright stars of night—do you think he did not hear voices in the air? Do you believe he ever thought that a divine hand was not behind it all?

Do you think he did not hear the same voices that the Psalmist heard?

"The heavens declare the glory of God, and the firmament sheweth His handiwork. Day unto day uttereth speech and night unto night sheweth knowledge. There is no speech nor language where their voice is not heard. Their line is gone out through all the earth and their words to the end of the world."

The wilderness of southern Indiana echoed these words seven score years ago. We don't hear them so well in a city apartment filled with TV and radio jazz.

Poverty and privation were his teachers. They were close to him and all around him. From them he learned kindness, compassion, sympathy, understanding. He learned many things from living with poor people which rich men's sons often never learn at all. Because this was so, people liked him and trusted him and later voted for him.

It was thus that he could later write to a mother of five dead soldier sons in words no other man had ever put on paper. Only he could have made the Gettysburg Address.

Lincoln never lost the common touch and so it came about in the terrible years of war, that the plain people of the North spoke of him as "Father" Abraham. He trusted them, and most of them trusted him. A stranger to pride and vanity, high office never spoiled him.

Part of his knowledge came from books, but the mystery and the mastery of Lincoln came from life, the great teacher.

One of Our Number

EXTENSION OF REMARKS OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BOYKIN. Mr. Speaker, it is quite a privilege for me to pay this slight tribute to one of our colleagues. His has been an interesting, highly patriotic and unselfishly service-rendering life. That life, replete with fine and friendly acts is capped, I believe, by his record in the Second World War. I know genuine heroes loath to have their praises sung or their heroics lauded and I would be the last to embarrass our colleague in this regard. I do want to mention that he was a civilian employee in the Philippines when the Japanese came. He volunteered as a civilian to participate in the defense of the Philippines. He was captured with the Army and spent 3½ years in a Japanese prisoner-of-war camp. He has recorded this terrible story of Bataan in a book entitled "Horror Trek."

Recently there came to this man, Congressman ROBERT W. LEVERING, a worthy honor bestowed when Maj. Gen. Russell L. Vittrup, acting in behalf of the Secretary of the Army, administered to him the oath of office as a major in the U.S. Army Reserve. I predict he will wear that honor well and continue to serve his country and his people effectively, patriotically unselfishly and most cheerfully.

And so Mr. Speaker under the permission granted to extend my remarks in the CONGRESSIONAL RECORD, I am happy to offer the below clipping from a recent addition of the Mansfield, Ohio, newspaper:

LEVERING NOW MAJOR

Representative ROBERT W. LEVERING, Democrat, of Ohio's 17th District, was appointed a major in the U.S. Army Reserve in January, Department of the Army said yesterday.

Maj. Gen. Russell L. Vittrup, Chief of Legislative Liaison, Office of the Secretary of the Army, administered the oath of office to LEVERING in behalf of the Secretary of the Army.

Appointed in the Judge Advocate General Corps., Representative LEVERING said, "I am deeply honored and delighted to receive this appointment. This military experience will offer many opportunities to serve our country that I would not have otherwise and it will enhance my legal knowledge."

JAP PRISONER

The Ohio Congressman was serving as a civilian for the Government at the beginning of World War II and volunteered, as a civilian, to participate in the defense of the Philippines. He was captured with the Army in Bataan and spent 3½ years in a Japanese prisoner-of-war camp.

His book, "Horror Trek," printed and published in 1948, is a graphic account of the defense of Bataan and Corregidor.

He is the first survivor of the Bataan death march elected to Congress.

Political Status of Puerto Rico

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 24, 1960.

To the Editor of the New York Times

DEAR SIR: Your leading editorial in Tuesday's edition (February 23) on the status of Puerto Rico is so misleading and so far from the reality that I think in all fairness you should publish the following facts:

1. Puerto Rico was certainly a possession of the United States from the signing of the Treaty of Paris up till 1952 and during most of that time was governed by an act of Congress known as the Organic Act.

2. About 1948 Congress consented to a modification of the Organic Act of 1917, and permitted the Organic Act to be modified by a constitution drawn up and voted upon by the people of Puerto Rico.

3. However, a necessary condition for the acceptance of the new constitution by Congress was the retention of the Federal Relationship established by the old Organic Act of 1917. This is clear from the CONGRESSIONAL RECORD for June 30, 1950, wherein Mr. JAVITS of New York expressed his opposition to the bill for the reason that it did not give Puerto Rico the opportunity to vote for independence or statehood, but only the opportunity to vote for a new constitution within the structure of the old Organic Act.

4. It was this new constitution (which modified, but did not abolish, the Organic Act and therefore did not abolish or change the Territorial status of Puerto Rico) which was approved by Congress in 1952. At that time no one had any doubt about what was done by Congress.

5. However, in 1953, Mr. Sears, an official of the U.S. Government, declared before the U.N. Commission for nonautonomous territories, that the United States would no longer report to this Commission in regard to Puerto Rico, which by Public Law 600 of 1952 had ceased to be a nonautonomous territory.

Taking advantage of this declaration and presuming that a change from nonautonomous to autonomous was the same as a change from a territorial status to one of independence, Gov. Muñoz-Marín began to spread the idea and proclaim publicly that Public Law 600 of 1952, had somehow given independence to Puerto Rico, and then Puerto Rico in its turn and by the same law, freely united itself to the United States in a bond of permanent association. This is not what Public Law 600 has done as anyone may convince themselves by reading it. It maintained the organic act as the basic law for Puerto Rico and by the organic act, Puerto Rico is and remains a possession of the United States. In fact one of the necessary conditions for acceptance of the new constitution of Puerto Rico by the Congress was the retention of the Federal relations established by the Organic Act of 1917.

7. The result of the confusion being spread by Gov. Muñoz-Marín is that the New York Times and even the President of the United States are speaking as though Puerto Rico has been given its independence and is now independent but voluntarily associated with the United States. It is for the sake of continuing this thinking that Gov. Muñoz-Marín is now requesting the Congress of the United States (Fernós-Murray bill) to change the terminology of Public Law 600 of

1952 so that the words "Federal relations" will no longer appear and that they be substituted by the words "articles of permanent association." This may continue the confusion, but it will not change the reality which is that only Congress can give independence to Puerto Rico, and up to the present there is no evidence that that has been the intention of Congress, and the recent congressional investigation regarding the Fernós-Murray bill which was held in Puerto Rico last December, made that quite clear.

8. When the New York Times states that "Puerto Rico does not belong to the United States" and "Puerto Ricans themselves have chosen the commonwealth status and are equally free to choose independence or ask for statehood," and when Gov. Muñoz-Marín states: "We are happy to say that Puerto Rico is a proud, free, self-governing Commonwealth, joined to the United States by her own choice"—these are all statements which do not square with the legal realities, and which usurp the powers of Congress over territories or possessions of the United States. Puerto Rico up to 1952 had been a nonautonomous territory or possession of the United States. In 1952 Congress made it an autonomous territory, and that is where we stand at present and until Congress does something about it. It would seem that the people of Latin America have more reason for suspecting our statements than the Times is willing to admit.

If we are ashamed to have colonies, and we should be, then let us get rid of them in a legal way and in a way in which there will be no room for doubt by anyone. The people of our colonies should be given a fair opportunity to choose between independence or statehood. If independence is not wanted and statehood is not practical at the time, there is still the possibility of legislation by Congress that will make all our present territories that do not want independence a definite and integral part of the United States (District of Columbia is not a State, but is definitely and integrally a part of the United States) with the assurance of statehood if the conditions warrant it. But let this be done by act of Congress after consulting with the people concerned, since these are the only ones with authority to make the decision. The present condition in Puerto Rico is that Gov. Muñoz-Marín is, by his own will, imposing upon the people of Puerto Rico and on the Congress of the United States an independence which was never granted and a voluntary association which is absurd unless independence has first been granted.

JAMES McMANUS,

PONCE, P. R.

Top Level Advisory Group Proposed by McDonald

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I conclude the following:

[From the Steel Labor, March 1960]

TOP LEVEL ADVISORY GROUP PROPOSED BY McDONALD—PRESIDENT EISENHOWER URGED TO NAME PERMANENT LABOR, INDUSTRY TEAM TO ADVISE ON MAJOR PROBLEMS

David J. McDonald, international president of the United Steelworkers of America, has renewed his proposal for Presidential appointment of a permanent Labor and In-

dustry Advisory Committee to consider major labor problems.

"The Committee should be appointed by President Eisenhower to serve the dual purpose of keeping the Government advised of impending labor trouble and of keeping labor and management in constant communication between negotiations," President McDonald explained.

ORIGINATED PLAN IN 1957

A similar proposal was made originally by President McDonald in June 1957, when he proposed a special advisory group to keep the President informed of the wage-price spiral.

At the time, he said the group should include only those people directly involved in collective bargaining—thus eliminating such groups as the National Association of Manufacturers and the U.S. Chamber of Commerce.

President McDonald's proposal won immediate support from Labor Secretary James P. Mitchell who reiterated his belief that top labor management meetings can help achieve industrial peace.

Addressing a west coast meeting, Mr. Mitchell said that "outside-the-bargaining-table relations must become a practice in America if we are to meet the needs of the future."

Mr. McDonald, who renewed his proposal recently at the annual civic achievement award dinner at Granite City, said that a "permanent advisory committee could make a significant contribution to harmonious labor-management relations in a period in which friction has continued to grow."

He suggested a committee of 10 or 12 leaders from both sides who would meet the President at least every other month to discuss pressing problems.

"We would need real 'decisionmakers' in the contract negotiation field including presidents or board chairmen of national industries such as steel, coal, automobile manufacturing, and the railroads," Mr. McDonald said.

DECISIONMAKERS

The USW chieftain obviously had in mind the recent negotiations with the basic steel industry which ended with a 116-day strike. During the months of futile talks with the industry's four-man team, Mr. McDonald charged that the real decisionmakers were not present at the bargaining table.

"To those who have engaged in major contract negotiations, two things are immediately apparent," Mr. McDonald asserted.

"The first is that only the really top (industry) men have the authority to make decisions. The second is that there are six or seven nationwide industries in which a labor dispute can vitally affect the Nation's economy."

"If both sides could be kept in touch with each other constantly, major mutual problems would not be left to build up to sometimes futile contract negotiations," he said.

INFORM WHITE HOUSE

Another function of the committee would be to keep the White House informed and advised on problems affecting labor and industry.

"It is my belief that President Eisenhower was poorly informed during periods of collective bargaining—often receiving his information late or thirdhand. Under the proposal, the President would have the facts of what is occurring and would not have to rely on thirdhand information."

Mr. McDonald said he was not criticizing U.S. Labor Secretary Mitchell.

President McDonald charged that a new group of steel leaders and their nonfraternization policy was a major factor in the recent strike and contrasted their actions with the steel leaders of other years "who grew up with us and understood us, even though we had our fights."

Speech by Carl Vinson Delivered at the
District of Columbia Council of the
Navy League Testimonial Dinner,
March 3, 1960

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit therewith a speech by CARL VINSON, distinguished chairman of the Armed Services Committee of the House of Representatives.

Mr. Speaker, crowded into his 46 years of intense activity and service in the defense of his country, CARL VINSON has become the symbol in America of nation military preparedness. His towering stature has cast its protective shadow over every nook and cranny of the free world. No man before him has given more of his intelligent effort to making his Nation militarily capable to defend and protect the ideals of this Nation or the aspirations of other freedom-loving peoples. He gave to America the world's most powerful Navy. He has striven to do the same thing for the other branches of our mighty military machine. He believes in preparedness in every sense of the word. He believes in modern tools to defend his Nation. He knows that a strong America is the only bulwark between communism and enslavement.

Mr. Speaker, for a matchless contribution over almost a half a century of effort in the Congress of the United States, on last Thursday, March 3, at the dinner following the conclusion of the Navy-Marine Corps Symposium conducted by the District of Columbia Council of the Navy League, where CARL VINSON was the guest of honor, he received a scroll from the Service Secretaries signed by the Secretaries of Defense, Army, Navy, and Air Force.

He made the following address which I commend to every American:

Mr. Toastmaster, Mr. Secretary Gates, distinguished Secretaries of the Department of Defense, distinguished guests, ladies and gentlemen, it is not often, in one man's lifetime, that he is fortunate enough to hear so many laudatory things about himself as I have heard tonight.

I must be the first to deny them; but I can assure you that I will also be the last to forget these kind remarks.

I never dreamed that so many wonderful things could be said about me—as "crusty" as I have been diagnosed.

So with all humility, I cherish your gracious remarks.

Usually, a man in public life receives all earthly praise in his obituary—or perhaps when he retires from Congress.

An obituary is, in this instance, definitely premature; and if anyone is under the impression that I am about to voluntarily retire from Congress, I can only paraphrase the remarks of John Paul Jones and say "I have just begun to serve."

May I say to my distinguished friends who have spoken here tonight how very grateful I am for your generous statements.

Mr. Secretary Gates, I also deeply appreciate your very kind and flattering remarks concerning my endeavors in aid of national defense.

I cannot let this opportunity pass without expressing to you, sir, my high regard and admiration for the manner in which you have fulfilled the exacting duties of your many public offices in which you have served.

You bring great credit upon the Office of the Secretary of Defense.

In you, the Nation has a true and tried public servant at the helm.

I especially wish to commend you for your recent directive with regard to your participation in the deliberations of the Joint Chiefs of Staff.

With this one directive you have left an impressive mark on defense organization.

You have strengthened our great Joint Chiefs of Staff system, and at the same time have dealt a shattering blow to the advocates of a single chief of staff system.

And you have vitalized and reaffirmed the constitutional principle of civilian control.

I consider it a particular honor, Mr. Secretary, that you have presented this beautiful scroll to me upon which appears the names of the distinguished Service Secretaries and the members of the Joint Chiefs of Staff, and its great Chairman.

Mr. Secretary, for many years you played an ever-increasing role in the history of our Navy.

I, too, have watched our Navy grow. I have watched it grow from a second-rate power to the greatest naval power in the world, even though its primacy is now seriously challenged by the Soviet Union.

Likewise, Mr. Toastmaster, I've seen the Navy League grow in importance and influence and become a tower of strength in the effort to keep America in a constant state of preparedness.

My recollections of the Navy League carry me back to my early days on the Naval Affairs Committee in August of 1917, and Josephus Daniels. In those days the Secretary of the Navy and the Navy League did not always see eye to eye.

The naval gentlemen who are here tonight probably would have endangered their careers and possibly their personal liberty had they participated in a Navy League banquet during the Daniels' days.

Happily, that event was weathered by the Navy League and it emerged stronger and more influential than ever, just as it did when a former President appointed his own committee to inquire into the Navy League.

You weathered those storms—and if you can weather storms of that magnitude, then you are indestructible.

You weathered those days because your organization was founded upon a rock, and neither wind nor the seas could dislodge it.

From the first day of its organization, down to this hour, the Navy League has rendered great service to the Nation.

I congratulate its not only for the strong support it has always given to the Navy and the Marine Corps, but also to the entire defense program.

Such civilian groups as the Navy League, the Air Force Association, the Association of the U.S. Army, and others, play a vital role in America.

It is through patriotic organizations of this kind that the business interests of the country and the people, are made aware of the urgent necessity for continual progress in the technology of warfare.

The greatness of the Navy League and the other military associations is found in the fact that they are always in the fore-

front of a sound, strong, preparedness program.

This organization, and others of a similar nature, realizes that the expenditures involved in maintaining an adequate military preparedness are vastly less than the cost of total war; and incomparably less than the cost of defeat.

The security of our Nation demands that in our defense structure we attain and maintain a flexibility that will permit us to cope with any type of aggression.

In our defense thinking we must avoid the danger of over commitment to a single concept.

That is why I say to you that we must have a modern Army; and we can no longer delay the modernization of our Army. Each day of delay affects our security.

In addition, we must have an Air Force equipped with superior weapons.

While we do have superiority in manned aircraft today, nevertheless we are overlooking an opportunity for even greater manned aircraft supremacy for the years ahead.

Let me remind you that we must not be so anxious to discard the proved weapons systems of today for the intriguing and vastly complex systems of tomorrow, even before they have become an integral part of our arsenal.

And during this period of transition from the conventional to the ultramodern family of ballistic weapons, we must not forget that the nuclear weapons of the future, whose very usage implies world extermination, may make our conventional weapons even more important than they are today.

That is why I say to you that we must have a Marine Corps capable of fulfilling its mission of readiness.

This means a Marine Corps of three full combat divisions and three air wings.

We must give the Marine Corps the men and equipment to fulfill the mandate of the Congress.

We have a great Navy today, but I do have grave concern for it in the years ahead.

We are not rebuilding our fleet as rapidly as it is becoming obsolete.

And this failure to promptly modernize our Navy jeopardizes our security.

When I first came to the Congress the battleship was the hearthstone of our Navy.

Today, the battleship is but a memory of past glory.

In its place is the aircraft carrier, possessing, as it does, all of the vital attributes of a singularly powerful weapons system.

It is versatile, for it can be used for practically every type of challenge to our national interests.

It is mobile, and thus difficult to find, and its location is impossible to predetermine.

It is powerful in the weapons that it carries.

But a new and even greater future lies ahead for the aircraft carrier as the result of nuclear energy.

The Congress wisely recognized the tremendous significance of the nuclear carrier. Thirty-five million dollars was appropriated last year for long-range planning for this second nuclear carrier. Unfortunately, these funds are still withheld by the Bureau of the Budget.

The action in withholding these funds adversely affects our security and seapower.

By stupendous effort, with magnificent industry cooperation, brilliant planning, and outstanding leadership—the Navy gave birth to the Polaris submarine.

But, now, that this child prodigy is close to becoming operational, there are rumors that the child is to be taken away from its parents.

Let's not separate the child from its mother.

Let the judgment of Solomon prevail.

Naval seapower, coupled with the versatility of the Navy-Marine Corps team, is a priceless capability which we, and we alone, possess.

We must not let this unique and vital superiority wither on the vine, because seapower is entering a new and even greater age in the struggle for the preservation of the free world.

Mr. Toastmaster, there is not one person among us who does not want to see a strong America.

We perhaps differ only in the method by which we will attain this strength.

And in this respect, I want to say that the Nation is indeed fortunate in having a Secretary of Defense, a Secretary of the Army, a Secretary of the Navy, and a Secretary of the Air Force who are truly dedicated, patriotic Americans.

I have worked with many public servants in my years in the Congress, and I can say, here tonight, that the men who now occupy the important positions as the civilian heads of our military organizations have impressed the Nation with their competence, their integrity, their steadfastness, their service loyalty, and their outstanding leadership.

My committee assignments in the Congress have placed upon me the responsibility of dealing with matters involving the security of our country. This has given me the opportunity of working with outstanding civilian, military, and naval leaders.

As a result, I have known some of the finest men America has to offer.

My life has been enriched by these memories.

But tonight will be the brightest star in all my memory.

Women's American ORT

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mrs. DWYER. Mr. Speaker, in many communities throughout the country, today, March 2, was celebrated by thousands of our most dedicated fellow citizens as ORT Day.

The ORT, as our colleagues know, is the Organization for Rehabilitation Through Training which is devoted to the humanitarian work of rehabilitating Jewish people who are in need wherever they may be throughout the free world.

ORT Day this year marks the 80th anniversary of the World ORT Union and the 33d year of service of the Women's American ORT. In this period, several million of their fellow Jews have been helped in a way that merits the understanding and support of all our people.

ORT is based on the principle that people should be helped to develop their God-given talents and innate abilities and aided in becoming useful and productive citizens of the free world. Its program emphasizes vocational training and it has served displaced and underprivileged people whose potential contribution would otherwise have been lost to society and who themselves would otherwise have been denied the fruits and satisfaction of useful lives. Through its 631 vocational training installations in

19 countries, ORT has offered young people and adults the means of learning valuable industrial skills and thereby of participating in a productive way in the economic life of their countries.

It is fitting, Mr. Speaker, that we, the friends of the ORT program, salute the 55,000 members of the Women's American ORT and the 100,000 members of other American ORT Federation affiliates on this happy occasion, and wish them well as they prepare for years of ever greater and more beautiful service to humanity.

Alternative Farm Legislation

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. PELL. Mr. Speaker, a few days ago, Charles B. Shuman, president of the American Farm Bureau Federation, labeled the farm bill recently introduced by 16 Democratic House Members as a "step toward collectivization."

Mr. Shuman has attacked as "rigged" the recent prognostications given the House Committee on Agriculture which foresee a sharp drop in farm income if controls were eliminated and price supports reduced or abandoned. He said such studies had been based on arbitrary and unrealistic assumptions.

If the existing surplus commodities owned by the Federal Government were not hanging over the domestic market, it would seem that an existing damper on prices of these commodities would be removed. Thus, my bill, H.R. 10350, to eliminate acreage and price controls has a cushion because the existing surpluses would be used only to feed starving and hungry people without disrupting domestic or foreign marketings.

No large organized pressure groups favor legislation such as mine, but individuals who hear about its provisions do support my bill.

Here are typical letters from scores of supporting communications which I have received from all over the country:

KIRKLAND, WASH., March 1, 1960.

Hon. THOMAS PELL,
Representative From Washington,
House Office
Washington, D.C.

DEAR SIR: I wish to congratulate you for introducing a bill in the House to eliminate price supports of wheat. In my opinion price supports should have been either eliminated or modified long ago. Your bill seems to be a step in the right direction.

Mr. Benson has worked long and diligently to improve the farm program. Politically selfish interests have too long delayed any effective action to correct or curb the waste which has resulted. I urge Republicans and Democrats alike to support Mr. Benson.

To further express my interest in the bill and its passage I am sending a copy of this letter to the other Representatives from our State. I shall be interested to see what success the bill realizes.

Although I am a registered Democrat, it has been your positive action which has

prompted me to write my first letter to an elected Representative.

Sincerely,

Mrs. JERRY R. GEYER.

BLOOMINGTON, IND., March 3, 1960.

DEAR Mr. PELL: I read in the Indianapolis Star about your bill to free the farmers from Government regulations. I have long wondered why some lawmaker doesn't propose such a thing. It seems to me to be the only cure for the farmers' ills and the consumers' high prices; however, I'm fairly confident that such a drastic course would have to come gradually to prevent a large-scale depression among farmers. Does your bill have a provision for doing this a little at a time? I hope it also provides for doing away with the large farm surpluses.

I'm no economist but I lived on a farm for 16 years and have a lifelong interest in agricultural problems. I'm a college graduate and also hold a master's degree.

Keep up the good work.

Sincerely,

Mrs. JOHN B. IRWIN.

The Christian Science Monitor Is Right: Rejecting Dictators Isn't Enough

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the March 3, 1960, issue of the Christian Science Monitor. The editorial notes the value of the President's South American trip, then adds:

But further action is needed in this field. Presidents Lleras Camargo of Colombia and Betancourt of Venezuela deserve recognition and praise from Mr. Eisenhower for the sacrificial devotion they have shown in restoring freedom to their nations. For reasons of timing, their countries have not been included on the President's tour. But some means of public recognition can, and should, be found to give support to them and their peoples.

The editorial follows:

REJECTING DICTATORS ISN'T ENOUGH

"I have heard it said that the United States supports dictators. This is ridiculous. . . . We repudiate dictatorship in any form, right or left." (President Eisenhower, speaking in Chile.)

The blunt words of repudiation have long been needed. Indeed, what is "ridiculous" is not that some Latin Americans thought Washington supported dictators but that Washington sometimes carelessly did lend support to dictators.

Mr. Eisenhower's four-nation tour has done much to make it clear that the American conscience has not lost its vigor in wishing other peoples free to be governed by their own consent.

But the direct and unequivocal denunciation of dictatorships is only half of what the United States needs to mend its political friendship with its southern neighbors.

More should be done to encourage the democratic regimes that have replaced dictators—and had to struggle with inherited bankruptcy in treasuries and in political institutions.

In the past decade seven dictatorships have fallen in Latin America. Not all have been replaced by free systems. But dictatorship is on its last legs. So speaking out strongly against dictatorship, while welcome, is not so much an act of bravery as of overdue communication.

Mr. Eisenhower is superb at earnest communication. He can make ideals felt. He has done much to lend support to four important democratic leaders struggling with economic, political, and social problems.

But further action is needed in this field. Presidents Lleras Camargo of Colombia and Betancourt of Venezuela deserve recognition and praise from Mr. Eisenhower for the sacrificial devotion they have shown in restoring freedom to their nations. For reasons of timing, their countries have not been included on the President's tour. But some means of public recognition can, and should, be found to give support to them and their peoples.

The taste of irony still lingers there. It is remembered that Washington decorated Venezuela's malign General Pérez Jiménez, and let its arms help support tyrants under the banner of nonintervention—despite its swift action against a dictatorship of the left in Guatemala.

One potential liberator may have served as a spokesman for all when he said: "I didn't specially enjoy being carried to jail in a jeep with a sign on it, saying: 'Gift of the People of the United States to the People of Nicaragua.'"

Fortunately this era of blundering lies mostly in the past, struck down by stones hurled at Mr. Nixon 2 years ago.

But Mr. Eisenhower's excellent missionary work of the past 2 weeks should be extended, by word if not by visit, to other peoples emerging from tyranny and poverty. The clear (to Washington) change in Washington's official attitude is not clear to others until it is communicated in forthright words—and acts. No medals are needed. But encouragement is.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ALGER. Mr. Speaker, I include the following Newsletter of March 5, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 5, 1960.

Civil rights legislation dominates the Washington scene, snow and ice notwithstanding. The round-the-clock Senate filibuster is now an entertainment to see, and many through the Senate galleries. Southern Senators, working in shifts, show no visible tiring. Most Senators do not want to vote to invoke cloture, the shutting off of debate, because of their high valuation of their unlimited freedom to speak. Most would not want to be shut off on other issues. Curtailing debate on civil rights would set the precedent for curtailing debate on other issues. Unfortunately, the Southern effort now results mainly in crystallizing the opposition to the Southern viewpoint. True, these speeches for and against are for "home consumption" of the respective Senators. Meanwhile, other

legislation is backlogged and delayed. To many of us, this in itself is not an unfortunate development. The truth is, as I see it, we pass too much legislation anyway, and any reduction of our legislative output could be in the national interest.

Just what does the Senate civil rights bill involve? Is it a voting rights matter alone? Absolutely not. Behind the voting rights' masquerade is much more—including forced integration and massive Federal aid to education. Briefly, here is an analysis of the bill: Section 1, \$10,000 fine or 2 years imprisonment for interfering with or obstructing school integration. (So your letter or chance remarks could land you in jail.) Section 2, creates a new Federal crime for bombing religious or educational properties and fleeing across State lines. Section 3, local election officials must keep voting records 3 years and turn them over to the Federal Justice Department. Section 4, Federal grants and aid for local schools that desegregate. Section 5, Federal Government provides schools for children in areas where public schools are closed to avoid integration. Section 6, a commission would be set up to seek to eliminate racial discrimination in jobs. (Where now is the right to hire and fire?) Section 7, Federal referees would oversee local election. Here finally the bill is related to voting rights—which now is a State matter.

The truth is, as I've testified before, we are not even defining what civil rights are, besides the right to vote. The solution proposed by this bill could easily create more civil wrongs. What happens to our other civil rights and freedoms—freedom to speak, write, assemble, to hire and fire and not the least, the freedom from Federal persecution, bureaucracy, and increased taxation to pay for it all. Forgotten is the fact that there are 175 million Americans, only 19 million of whom are Negroes. Must rights of the majority be trampled by overzealous efforts to protect a minority? Under all this lies the mistaken judgment of politicians seeking votes by any method. Should increased riots develop in the South, the more serious tinder boxes of racial tension in the North could erupt. * * * Philadelphia, New York, Detroit, and others. The politicians pushing civil rights for political gain will then suffer—but so will all the people in their areas. Meanwhile, in the Senate southern supporters of this exaggerated civil rights bill could become heroes by toning down the bill and controversy they enflamed.

"A bill to amend the Trading With the Enemy Act so as to provide for certain payments for the relief of rehabilitation of needy victims of Nazi persecution, and for other purposes" provoked my opposition in floor debate. Whether good or bad, I know the measure was too little understood by Members of the House. Everyone is in favor of assisting victims of persecution, but when it comes to authorizing the expenditure of a half million dollars, I insist that the purposes, and especially the "for other purposes" provision of the bill, be clearly understood. No adequate explanation was given the House as to why the United States should give \$500,000 to a private organization to settle claims when those who were persecuted, their property taken (now held by the United States), left no heirs. (This bill treats only with heirless property.) By what curious logic do we transfer the property of people now dead and which we acquired during the war, to present percutees, wholly unrelated to the original property owners, through the agency of a private organization? Like the iceberg, there could be more here than meets the eye. Regardless of the merit of the bill's ultimate aim, it struck me as a good example of a slipshod way to legislate.

AFL-CIO Opposes Interest Rate Hike

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, opposition is growing to H.R. 10590, the so-called compromise bill to remove the 4¼-percent ceiling on long-term Government bonds.

Opponents of the bill have little confidence in the Eisenhower administration's fiscal and monetary policies. Its shortcomings in this area have been well-documented by the majority views of the Joint Economic Committee in its report on "Employment, Growth, and Price Levels" and its "1960 Joint Economic Report."

Administration debt-management failures have increased the interest rates paid on Government securities by 63 percent in just 7 years, to their highest level in 30 years. This has raised the annual cost of interest on the national debt by 60 percent, to a staggering total of \$9.6 billion for the coming fiscal year. Next to defense expenditures, this is the largest single item of Federal spending in the President's budget. During this same period the national debt has risen from \$266 billion to \$290 billion.

Under leave to extend my remarks, I include the following letter and statement of the AFL-CIO opposing the interest rate hike and an extract from my radio address of February 27-28 on this important subject:

AMERICAN FEDERATION
OF LABOR AND CONGRESS OF
INDUSTRIAL ORGANIZATIONS,

Washington, D.C., February 15, 1960.

DEAR CONGRESSMAN: Since World War I—through booms, depressions, and military crises—the United States has successfully met its money needs without breaching the 4¼-percent interest rate ceiling on long-term bonds.

Despite urgings of the President, the AFL-CIO continues to believe that no change by the Congress is justified nor should decision-making authority on this vital matter be transferred to the President. The enclosed brief statement summarizes the reason for our view.

It shows that since 1953 hard money has been a persistent objective of the administration and that higher interest rates have been justified on one pretext after another even when more effective and equitable ways of achieving monetary objectives have been available.

It further documents the tremendous costs that ever higher interest rates have heaped upon millions of wage earners and other private borrowers as well as on governments, while lenders reap handsome profits without providing any added service.

Finally, it points to several alternatives the Government can now pursue, rather than initiate still another round of higher interest rates which hurt so many while retarding economic growth.

Because the issue is so vital, we hope you will read our short statement before your own decision is finally made.

Sincerely yours,
ANDREW J. BIEMILLER,
Director, Department of Legislation.

AFL-CIO STATEMENT OPPOSING THE PRESIDENT'S PROPOSAL TO BREACH THE 4 1/4 PERCENT INTEREST RATE CEILING ON LONG-TERM BONDS

The AFL-CIO continues to hold that Congress need not, and should not, lift the interest rate ceiling on long-term bonds (of 5 years duration or more) nor should it give the President authority to raise it, for many reasons:

(1) The scarcity of loanable funds over the last year has been due essentially to temporary factors related to the recovery from the 1957-58 recession. For example, the rapid inventory buildup of last year and the large Federal deficit in 1959 contributed to a rapid increase in the demand for loans. But inventory growth has now begun to subside, the current budget is expected to be in balance, and the fiscal 1961 budget will show a sizable surplus. These events and other factors have reduced pressure in the money market and interest rates have recently tended down.

It is reasonable to assume, as a consequence, that U.S. long-term bonds may soon attract buyers without the enticement of rates above the current ceiling.

(2) The record of the administration doesn't support the sense of urgency to sell long-term bonds and "stretch out" the debt which it alleges exists.

During the years from 1953 to 1959 when interest rates were much lower, the Treasury showed no comparable rush to sell long-term bonds in order to stretch out the debt. Because of its action or inaction, the maturity of the Federal debt actually declined substantially during those 6 years.

It should be further noted that the use of long-term marketable obligations by the Treasury is not and has not been a major source of Federal financing. For example, a year ago—before the clamor to raise the interest rate ceiling was heard—the total interest bearing debt was \$283 billion. However, about \$147 billion of this total—or, roughly 50 percent—represented marketable Treasury obligations. Of these, only \$39 billion were obligations maturing in 5 years or more. By way of contrast, over \$48 billion of a smaller debt was in long-term bonds exceeding 5-year duration at the beginning of 1953 when the administration took over.

(3) Although the Consumer Price Index rose less than 1 percent in 1959 over 1958, Government spokesmen, from the President on down, have been helping to drive buyers out of the bond market by their own incessant and irresponsible scare-talk about inflation. No wonder savers preferred to hedge against the alleged inflation by buying stocks (and to enjoy the special—and unjustified—tax bonanza for dividend recipients put into effect at the request of the administration back in 1954).

(4) The sale of long-term bonds at highly inflated costs at a time when interest rates have been at a 35-year high would unnecessarily add billions to taxpayer burdens and further inflate all other interest rates as well.

There are surely more prudent ways to manage our monetary system:

The Treasury can continue to meet current needs through short-term borrowings on which no interest ceiling has been imposed and on which the rates recently in fact have been going down. This is far wiser—since these commitments are quickly self-terminating—than to sell bonds of 20 and 30 years duration which lock into the debt structure high interest rate obligations over a long term of years.

The Federal Reserve Board could, and should, aid the Treasury by purchasing some long-term bonds itself. This would help stabilize bond prices and benefit both the Treasury and all bondholders.

In the main, the sale of long-term Federal bonds should only occur when interest rates are low or at least, not abnormally high.

The administration, on the other hand, seems willing to add billions more to the crushing interest burden the public already pays to no advantage to anyone but banks and other lenders.

Already the debt burden under this administration has increased staggeringly. Although the debt itself has risen less than 6 percent since fiscal 1946, interest payments have skyrocketed almost 100 percent. These payments totaled \$6.4 billion in fiscal 1954, the first year after the new administration took over. By the end of fiscal 1960, they will have reached \$9.4 billion.

Today, 12 cents out of every \$1 collected in Federal revenue is being paid out as interest to those who own the Federal debt.

It is instructive to recall some additional recent monetary history.

From the time Secretary of the Treasury Humphrey boosted interest rates on long-term U.S. bonds back in 1953, tight money apparently has been a major administration objective. Except during the depths of the recessions of 1954-55 and 1957-58, interest rates have been continuously pushed up by a combination of Treasury-Federal Reserve actions—all avowedly to stop inflation and assure adequate economic growth.

Since 1952, as a consequence, the overall interest rate rise—including the costs of both Government and private borrowing—has been nearly 100 percent.

Theoretically, high interest rates are supposed to reduce inflationary pressures by curtailing spending. However, tight money has not deterred spending by wealthy corporations and individuals who do not need to borrow to meet their investment or consumption needs.

Furthermore, high interest rates have transferred billions from the incomes of working people and other borrowers to the lenders who provide not one cent of additional service for the higher price they receive for their loans.

Millions of average American families have been grievously hurt by tight money. For example, over the last 2 years alone higher interest charges on a 25-year \$10,000 FHA mortgage loan have added over a thousand dollars to the cost of buying a home and installment purchases of all kinds have become similarly more costly. As taxpayers, American families not only must bear billions more in Federal interest charges but the cost of carrying State and local debt has soared as well. For example, recent high interest rates will ultimately make the real cost of a classroom almost double the construction cost of the room.

Is there any wonder that the net profits of member banks of the Federal Reserve System shot up 75 percent between 1952 and 1958 while personal income from interest payments skyrocketed from \$12.1 billion in 1952 to \$22.5 billion in 1959, a 90-percent rise?

What is more, it is evident that many factors besides interest rates influence consumer and business demand and that tight money surely has not immunized America from rising prices. This is particularly true in the case of enterprises that can administer their own prices upward—like steel, auto, oil, drugs, etc.—without any regard at all for the actual level of demand or of interest rates.

Moreover, higher interest rates themselves increase all prices: they inflate the cost of raising a family, of financing Government services, of operating a farm, and of running any other business—and particularly a small or moderately sized one. Thus, higher interest costs are themselves a major price factor in the rising price level.

Finally, ever-higher interest rates have not brought the growth and stability the American economy needs. On the contrary, during the postwar years from 1947 to 1953 our average annual rate of real economic growth was 4.7 percent, but after 1953 it dwindled to 2.3 percent. Moreover, we have

already suffered two sharp recessions since tight money has been sanctified by this administration. Another recession is widely predicted by 1961 because, among other reasons, high interest rates and credit scarcity are already reducing new housing starts and threaten to slow down the growth of personal consumption and business and Government investment.

The AFL-CIO recognizes that periods arise when abnormal demands upon an economy require temporary credit restraints. We believe, however, that the efforts of the administration and the Federal Reserve Board not only have been ill timed but have also employed wrong methods.

For example, acting as though the raising of profits for lenders was its major objective, the Federal Reserve Board has raised interest rates again and again when inflation has been the assumed problem and, therefore, credit restraint has been prescribed. But at no time since the Eisenhower administration came into power have bank reserve requirements been raised—an action that would have restricted credit by reducing the funds available to the banks for loans. On the contrary, since 1953, the maximum reserve requirement of member banks actually has been cut from 24 percent to 18 percent.

Moreover, at precisely the same time Congress was first being asked to breach the 4 1/4-percent interest ceiling to help fight the alleged inflation, the administration also was asking it to pass the "cash vault" bill which sanctions raising the money supply and thus, presumably, increasing the inflationary danger.

It is our view that the President's request for a higher interest rate ceiling does not reflect good economic judgment. It reflects concern for the gains of bankers and other lenders far more than the welfare of the entire Nation.

Today, the American economy depends more than ever upon the wisdom of those who direct monetary and fiscal policies. Above all, old concepts must be constantly reexamined to make sure that they are responsive to realities in our fast changing times.

Clearly, neither the Treasury nor the Federal Reserve Board have been fulfilling their functions in this manner. While ignoring vitally important monetary and fiscal reforms such as those proposed by the majority of the Joint Economic Committee, they continue to adhere to outmoded classical and class-biased practices.

It is high time that the monetary policies of the United States be geared to the needs of the Nation instead of the profits of the national banks. Until this happens, it would be irresponsible to give the President and the Treasury additional power to misuse.

RADIO ADDRESS BY CONGRESSMAN GEORGE M. RHODES, WEEU, WRAW, WHUM, FEBRUARY 27-28, 1960

This is Congressman GEORGE M. RHODES, reporting by transcription from Washington.

The House Ways and Means Committee has voted approval of a "compromise" bill backed by the administration which would raise the interest rate ceiling on long-term Government bonds. A bill to accomplish the same purpose was rejected by the House last year.

The interest rate bill is one of the most important measures to come before the House. It affects every American in his daily life. It would give power to the President to set the interest rate on the sale of up to \$5.8 billion worth of bonds each year—power which no other President in our history has ever had. Heretofore, Congress has maintained control over the maximum rate of interest which the Government could pay on bonds issued for longer than 5 years.

Just last month, a majority of the Joint Economic Committee recommended that the

present interest rate ceiling be retained, after conducting a series of hearings and studies on this issue. The bill to take off the interest rate ceiling would repudiate the recommendation of these economic experts.

The administration contends that the interest rate ceiling makes it impossible for the Treasury to market long-term bonds and forces it to issue short-term notes at higher rates of interest, thus costing the taxpayers more for the money borrowed.

Experts on the Joint Economic Committee and other opponents of the interest rate increase contend that there is no crisis in public debt financing which could not be corrected by administrative reforms recommended by the committee.

It has been pointed out that a private business would be foolhardy to undertake long-term borrowing when interest rates are at their highest levels in 30 years. Yet this is exactly what the administration is proposing to do. Long-term borrowing at present abnormally high rates of interest would burden the next generation with many billions of dollars of additional payments of interest on the national debt.

The administration's high-interest, hard-money policies have already increased the interest payment on the debt to a staggering total of nine and a half billion dollars a year. Such fiscal and economic policies have also curtailed our rate of economic growth at a time when the Soviet Union is forging ahead economically as well as militarily. The serious unemployment problem, particularly in chronically depressed areas, continues to worsen. We now have almost as many persons unemployed in this so-called prosperity year as were unemployed in the recession year of 1954. This is at least partially caused by the failure of our economy to expand fast enough to absorb the millions of young people entering the labor market each year.

Opponents of the so-called compromise bill to raise interest rates contend that once the ceiling is lifted, interest rates would be boosted in every other sector of the economy. Directly or indirectly, this would affect every citizen. It would, for example, make it even more costly to buy a home because of the increased interest on home mortgages. This would have the effect of curtailing the building industry and the thousands of related industries. Higher interest rates on Government bonds would affect the rate of private borrowing, making it more costly for businessmen to finance inventory purchases, expansion, and other activities. It would add to the cost of all goods purchased on time—from cars to household appliances. It would add to the cost of borrowing to finance new schools, streets, and other public improvements at the local governmental level, thus bringing about higher local taxes.

Liberal Democrats in the House are convinced that an increase in the ceiling on Government bonds would be harmful to the vast majority of Americans and only benefit a handful of large banks and insurance companies which grab up bond issues at the present inflated rates of interest. The so-called compromise bill, while it does not go as far as the administration originally requested, would nevertheless break the interest ceiling and transfer legitimate authority of Congress to the President.

A bitter fight over this issue is expected to develop in the House. Liberal Democrats are pledged to fight this giveaway of more billions of dollars of taxpayers' money to the big financial interests which now are calling the tune—not only on Wall Street but at the White House and here on Capitol Hill.

The Real Castro—I

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ANFUSO. Mr. Speaker, the New York Daily News is currently publishing a series of articles by two of its ace reporters, Joseph Martin and Phil Santora, about Cuba's newest dictator Fidel Castro. They bring to light many interesting facts about him which depict the real Castro. The first installment in the series appeared on Sunday, March 6, 1960. Under leave to extend my remarks, I wish to insert this article in the RECORD:

CASTRO: PHONY PROPHET—JUST ONE MORE IN THE LONG SERIES OF CUBAN TRAGEDIES

(By Joseph Martin and Phil Santora)

Fidel Castro, who just 15 months ago was hailed as the Ethan Allen of the Sierra Maestra Mountains—a colorful, magnetic, swashbuckling combination of a canebrake Quantrell and Simon Bolivar—represents the latest in a long series of tragedies to be inflicted on a long-suffering Cuban people.

It is doubtful that most Cubans are yet aware that their idol, before whose picture religious peasant women burn vigil lights as they would before the Christ, is dedicated to communism.

Only the more perceptive realize that Fidel Castro is a consummate actor, that far from the brave revolutionary battling against evil, he is in truth a physical coward, a double-crosser who has sent friends and followers to their deaths, a dictator whose only interest in his people is a selfish one, utter personal power.

LITERALLY, HE IS STRICTLY FROM HUNGER

Castro is the product of a generation of unrest and tyranny in Cuba. He was created out of the hunger of the Cuban people for a true liberator who would free them from the oppressions of the Batistas, the Prios, the Grau San Martins, the Machados and all the others who have systematically plundered the island and deprived them of democratic rights.

But the Cubans have again been short-changed. Even those who have been able to set aside their emotions long enough to realize that their beloved Fidel is just a carbon copy of his bloody predecessors after all, hesitate to say so. They hesitate because they don't want to believe they are in for another era of dictatorship. Of because they can be sent to "the wall" before a firing squad as enemies of the revolution if they are overheard.

The freedom of speech, freedom of the press promised by Castro while he was beating his breast in the mountains before the fall of Batista have not materialized. Nor are they likely to. Free elections have been put off indefinitely. Agrarian reform has become synonymous with confiscation.

Almost every popular figure, outside the tight little circle that includes Fidel, his brother, Raul; the Argentine Communist, Dr. Ernesto (Che) Guevara and close friends in the Red-dominated cabinet, has been "eliminated."

Some have been thrown into jail for long terms. Others have suffered fatal "accidents." Still others have been executed outright or exiled.

Castro doesn't like competition. Neither does he like to have men around him who knew him when he was an embryo hoodlum in Havana University, when he was a bearded revolutionary potting farm animals with a high-powered rifle in the mountains, when he fled from the attack on the Moncado garrison and left others to do his fighting.

CIRCUS TRIALS AND EXECUTIONS

To cover up his many deficiencies, Castro has adopted a familiar theme among Latin-American and South American revolutionists—vilification of the Colossus to the North—the United States. He has kept the Cuban hunger for excitement appeased by circus trials and executions.

He has jailed political prisoners in such numbers that he has been forced to free hundreds of thieves, dope peddlers, rapists and gangsters to make room for the enemies of the revolution.

He has adopted Soviet-style brainwashing methods in dealing with these prisoners. His torturing of these unfortunates rivals that of Batista, the butcher who preceded him.

This series of articles will describe Castro as seen by those who know him best—men who have known him since he was an egotistical student leader at the university, who served with him in the mountains, the priests who gave the last rites to prisoners condemned to death by the Castro tribunals.

There will be first-person accounts by men who knew him in prison, when he taught Marx and Lenin to a literally captive audience.

There will be a report by the investigating officer of the real story behind the disappearance of Camillo Cienfuegos, popular head of the revolutionary army.

WELL-FED LEADER, HUNGRY FOLLOWERS

The exiled former chief of Castro's air force, who flew munitions to Castro and his brother while they were in the mountains, gives his impressions of a man who sat around eating caviar and smoking big cigars while his followers went hungry.

There are profiles on Rolando Masferrer and Gen. Jose E. Pedraza, the two men Castro fears most.

Former chiefs of police, of intelligence, of the anti-Communist division of the national police cooperated in giving The News team an insight into the several faces of Castro. Each of the dozens of interviews was carefully double-checked. In no case was information on Castro accepted without confirmation by sources unknown to the men originally interviewed.

What emerges rips the mask of pseudo-patriotism from the bearded face of Fidel Castro Ruz.

It portrays him as a schemer who always knew what he wanted—complete, absolute control of Cuba. It also shows that he was always a willing tool of the Reds, that he was carefully schooled in Communist tactics by Reds who had gained experience during the civil war in Spain.

This communistic education has molded Castro into a catatonic agent that may, if not checked, crystallize the Red cells in Latin and South America, placing Soviet satellites squarely on the doorstep of the United States.

To understand what makes Castro tick, however, it is necessary to describe the conditions under which he was spawned.

Communism is not new in Cuba. The first signs of the Red ideology go back to the late twenties, to Havana University, which has always been a fertile spot for revolutionary political doctrines.

The first disciples of Cuban communism were Julio Antonio Mella (killed in Mexico

and whose ashes were enshrined on Reina y Escobar Street in Havana; Pablo de la Torriente (killed in the civil war in Spain); Aureliano Sanchez Arango (who deserted the Communist Party and became associated with President Carlos Prío Socarras); Juan Marinello Vidsurreta and others, including Raul Roa, currently Minister of State.

From 1930 to 1933, Fabio Grobart, known as "El Ruso" (the Russian) was assigned to organize the Communist Party. On September 4, 1933, communism erupted throughout the country, infiltrating even the armed forces. Soldiers wore Red armbands.

The party lost some of its momentum, however, and during the next two decades was not a vital force in Cuban politics. It received another jolt when, in April 1952, President Fulgencio Batista, severed diplomatic relations with the U.S.S.R. The Soviet Embassy's 126 employees went to Mexico where they began to apply outside pressure against the regime.

They instigated a plot to kill Batista. Among those who met with the Russians at Havana University were Francisco Calderio (Blas Roca Calderio); Lionel Soto, Alfredo Guevara, Antonio Nunez Jimenez, Vicentina Antuna de Carone, Dr. Raul Roa, and others.

CORRUPT BATISTA WAS FAIR GAME

There was no quarrel with the original objectives. Batista was corrupt and fair game for anyone who wanted to free Cuba from his grasp. But all were accepted as members of the Communist Party, and that was important.

It is significant that the group agreed to name Fidel Castro, who had won notoriety as a gangster at Havana University, as its leader.

Look at some of the names thus far mentioned:

Dr. Raul Roa is currently Castro's Minister of State. He has been a staunch leftist for 30 years. He is famous for his fight against Machado in 1932, a very close friend of Jose Antonio Mella, the slain Communist leader, as well as other Reds.

He is aggressively anti-United States, boasts of his huge library on Communist doctrine and has contributed articles to *Fundamentos* and *Neustro Tiempo*, both well known Red publications.

Roa is one of the men to watch in the Castro regime. He is powerful, ruthless, and has Communist connections throughout the world.

REVISED TEXTBOOKS LEAN TOWARD REDS

Dr. Vicentina Antuna de Carone has risen to a post as general director of culture. She is an avowed Communist and fanatically anti-United States. She and other Reds in the revolutionary government have undertaken teaching reforms in which Communist doctrines have been insinuated into revised textbooks. In the new Cuban history books, U.S. intervention in the fight for Cuban independence has been deleted.

Trivial though it may seem, not the least of Dr. Antuna's campaign has been the abolition of Santa Claus.

Last Christmas, she arbitrarily prohibited the showing of images of Kris Kringle in all schools and department stores and forbade the importation of American Christmas trees into the country.

She also prohibited the selling of U.S. Christmas cards depicting Christ, New England scenes, carolers, and such. Cubans enjoy the U.S. version of Christmas and American relatives of Cubans here were appalled to receive cards showing a bearded rebel holding a rifle instead of a bearded Santa holding a bagful of gifts. On the card was the legend: "Merry Christmas in the Year of Liberation."

Cuban children, whose parents desperately tried to decorate mango shrubs with tinsel and ornaments, burst into tears when they sighted the fraudulent Christmas trees.

REPORTED PLANNING RUSSIAN SUB BASE

Antonio Nunez Jimenez, director of the INRA—the National Institute of Agrarian Reform—was a leader of the Young Communist League at Havana University. He organized the Cuban group that attended the Berlin Youth Festival and is an influential member of the propaganda and cultural section of the Communist Party in Cuba.

Reports are that Jimenez is one of a group working with Russians toward the establishment of a secret Soviet submarine base in Cuba.

He is the author of a geography textbook that aims at the indoctrination of young readers. It praises Russia and violently attacks the United States for the part it played in the Cuban War of Independence. The Batista government banned sale of the book, but it is in use in Cuban schools today.

Along with others, including Dr. Antuna, he is responsible for the elimination of English from school programs; English was a compulsory subject before Castro took over.

In addition, Jimenez is the strong man behind the confiscation of U.S. properties and investments in Cuba.

Lionel Soto studied in Moscow. He was secretary of the International Union of Students, a Red group created in Prague on August 27, 1946, to indoctrinate teenagers. His wife, Geisha Borroto de Soto, was in on the Russian plot to kill Batista. Both have places in the new government.

Soto also helped put out the *Carta Semestral*, a Red publication outlawed by the Batista regime.

Fidel Castro was eminently qualified for the job of putting into practice the Communist "Security Cordon" discussed at the 20th Communist Congress and which had as its main objectives the occupation of the Panama Canal, the assassinations of Carlos Castillo Armas, of Guatemala; Somoza, of Nicaragua; Trujillo, of the Dominican Republic, and Batista.

FIGURED IN SLAYING OF STUDENT LEADER

Castro had been involved in violence long before this. He was one of the principals in the slaying of a student leader, Manolo Castro (no relation), who was shot to death on San Rafael St. in Havana. He was also accused of being one of the group that shot to death Fernandez Caral, a sergeant of the university police. Fidel has a long record as a terrorist.

What was Castro like in his student days, when he was earning the right to become a revolutionary leader? The News team talked to a classmate as well as to police officers who knew him at the time. None can be identified for fear of reprisals against members of their families still in Cuba.

"Even in those days," said one classmate, "Fidel was a complex person. He was not particularly popular because he was a troublemaker, a swaggering individual who carried a .45 and who was habitually hatching plots against his rivals for honors in the political groups at Havana University."

"The FEU (the Federation of University Students that later became a potent force in Castro's successful overthrow of Batista), had rejected Fidel's bid for its presidency. Fidel was angry and he became associated with an underground campus group—the UIR, the Union of Insurrectional Revolutionists."

REGARDED BY FIDEL AS A MORTAL ENEMY

"Manolo Castro had been president of the FEU. He had a police record. On one occasion, he was accused of the murder of Fernandez Fiallo, a professor in the school of architecture. On another occasion, he fired shots at another teacher."

"Fidel regarded him as a mortal political enemy; for Manolo had achieved a stature that Fidel aspired to as FEU president. At a meeting of UIR members, Fidel boldly in-

sisted that Manolo must be killed. There was opposition, but Fidel, still smarting because he hadn't made the team, insisted.

"A group of students finally caught up with Manolo and shot him. Fidel is said to have been with them and he was placed under arrest. However, he was clever. The gang had gone to the home of a friend and put paraffin on their hands to remove any evidences of nitrate."

A police officer said: "Manolo Castro died en route to the hospital. A friend of mine on the force saw a member of the Fidel Castro group—Gustavo Ortiz Faez—come running past Mario's Restaurant near Neptune Street. He fired a couple of shots in the air and Faez stopped."

HE HAD INFLUENCE EVEN IN THE EARLY DAYS

"Faez was a nephew of Grau San Martin, then president of Cuba, and pressure was put on to release him. The business of the paraffin took place in the home of Miguel Suarez Fernandez, an influential senator who was the patron of the UIR for the political help he could get from this illegal group."

"Naturally, when Castro and the others were picked up and subjected to the test no trace of gunpowder remained. Then a judge came to the precinct and they were released. No trial was held. In other words, instead of his going to court, the court came to him. He had influence even in those early days."

Castro hungered for recognition—any kind of recognition. He sought power and popularity on an almost compulsive basis and was an insatiable publicity hound. When a strike was called at the university—and there were many—Fidel would always be up in front, talking to newsmen, posing for photographers.

When he received a small scratch on his forehead during a skirmish, he bandaged his entire head and posed joyfully for the photographers.

He was impatient for success, burning with ambition. He passed a 4-year college course in three by cramming on the eve of examinations. And he was willing to do anything to erase those who stood in his way.

His attempt on the life of Leonel Gomez, a student leader, is typical. Castro didn't know Gomez. He merely knew that Gomez had influence, that he was an obstacle in his path. He told a close friend he was going to kill Gomez.

"He didn't even know where Gomez lived or what he looked like," said a former classmate, "but killing Gomez—who was only 17 at the time—was too big a job for Fidel to handle alone."

ASKED CLASSMATE TO HELP IN KILLING

"He asked me to help and I refused, telling him it was a crazy idea. He tried to enlist the aid of Rolando Masferrer and I believe that two of Masferrer's men went with him 2 weeks later when Gomez was shot, though they didn't help Fidel."

"Fidel ambushed Gomez from the top of a stone wall outside the baseball stadium. He shot him in the back—putting a slug in his lung."

"Gomez was walking down a crowded street when it happened. One of Castro's friends, who happened to be in the area, was accidentally shot in the leg when Fidel opened fire. He was Fernando Freyre de Andrade, a lawyer now living in Havana. Fidel never worried about where his bullets were going."

"Gen. Juan Rodriguez, a Dominican exile living at the San Luis Hotel—he later took Castro on an expedition against Trujillo—hid him, gave him money and even switched guns in the event Castro was captured and they ran a ballistics test."

"He came to me first, however. He was very excited and he told me he had just shot Gomez. He cried: 'I need your help, I need your help.' He almost wept—a great actor

this man. When he wants something, he can turn on the tears." Gomez lived and Castro never came to trial.

During those university days, Castro was somewhat less than a Frank Merriwell. He was a forerunner of today's beatnik. His clothes were always rumpled, his fingernails needed cleaning and he avoided bathing with something akin to fervor.

He seldom relaxed. One night, he started out with the boys for a night on the town. He had his .45 with him, as usual. He spotted a street light on Virtudes Street, near the office of El Mundo in busy, downtown Havana, and decided then and there to brush up on his shooting. He didn't hit the light, but police swarmed to the scene and Castro and his buddies never did get to the bordello.

He had an enormous appetite, something which stuck with him later in the Sierra Maestra. He liked hot, spicy Spanish food rather than the milder Cuban variety and could handle a terrific amount of wine—two or three bottles at a session.

He ate so much that he frequently ran out of money and this sometimes got him in trouble.

"One day," relates a friend, "we went to lunch at Santa Fe, a beach near Havana. We pooled our money and found we had about 6 pesos and we were studying the menu pretty carefully. Not Fidel. He ordered a chicken and a bottle of expensive wine. We were worried but not Fidel. He said: 'Let's eat first and worry about it later.'"

GENTLE GIRL FALLS IN LOVE WITH HIM

"The bill came to more than 25 pesos (\$25). The owner came. Then a corporal and two soldiers came. They were going to arrest us but Alberto Perez Nodarse, whose father owned a large home at the beach, was finally allowed to sign the tab.

"The next week, the incident was almost repeated. We went to Varadero Beach, registered at a hotel, ate the best and Fidel even wine and dined the owner.

"He really made a hit with that man. When the time came to pay the bill, we all walked out of the hotel leaving our empty suitcases behind. Some of us were wearing two suits of clothes."

Castro was devoid of "any civilized manners and was extremely rude to women," in those days. He never brushed his teeth, his table manners were terrible and the sleeve of his jacket served as a handkerchief.

But curiously, Myrta Diaz-Balart fell in love with him. Myrta was a gentle girl who had lost her mother when she was 3. They were married in 1948, while he was still a student.

During what might loosely be described as the "courtship," Fidel's sisters, particularly Lydia, used to give him money to buy small gifts for Myrta. She bore him a son—and then, a few years later, the marriage went on the rocks.

Even then Fidel was drinking rather heavily.

"You hear about his drinking on TV and radio during those long harangues," said a classmate, "or about his drinking in the Sierra Maestra, but he was drinking cognac and taking benzedrine when he was a student, too. He said the combination kept him alert for his studies."

CASTRO COCKTAIL: BENZEDRINE, COGNAC

Benzedrine and cognac—that's the Castro cocktail that keeps him going on those talkathons. The cognac is kept in a teacup so that Cubans will think it's the rum that Fidel is always pushing as an export.

This, through the eyes of those who knew him intimately, is the portrait of the young hoodlum the Reds selected to launch what was to become the symbol of the new revolu-

tion. Castro was to give the caper some individualist touches.

In previous incidents, including an attempt on the life of Batista and Rolando Masferrer, he had always prudently left a door open for retreat in the event something went wrong.

The incident at the Moncada barracks in Santiago was no different. Castro knew the attack would fail—he also felt it would give him the recognition he sought.

We Can No Longer Afford To Waste Water

SPEECH
OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, effective control of water pollution is essential if our Nation is to grow and prosper. Once a plentiful resource, water has now become more precious than any other single resource we have. By 1980, the demand for water will equal the available supply of 600 billion gallons a day.

Obviously, we will be unable to waste a single drop of water. Since polluted water is wasted water, we must begin now to provide the necessary facilities and programs to prevent this waste.

At the present time, it is estimated that less than \$5 million a year is being spent on safe water research by all sources, public and private. I have introduced a bill which would improve this situation by authorizing the U.S. Public Health Service to establish five regional research laboratories in five different areas of the Nation. In these laboratories, research would be conducted with an eye toward developing practical, low-cost ways of making waste-polluted water safe for use.

An editorial in the February 22, 1960, St. Paul Pioneer Press, St. Paul, Minn., commented on the need for this legislation. I would like to include that editorial in the RECORD:

WATER PURIFICATION RESEARCH IS LACKING

One long-neglected phase of the fight to control water pollution is research for improved methods of removing impurities. Present systems of treating municipal and industrial wastes do not remove or break down numerous chemical substances which are increasingly finding their way into public water systems.

Congressman LESTER JOHNSON of Black River Falls, Wis., recognizes this problem in a bill he introduced to establish five regional research laboratories in different areas, to be operated by the U.S. Public Health Service.

A water pollution article in Good Housekeeping magazine estimates that less than \$5 million a year is currently being spent on safe water research by all sources, public and private. It says that billions have been invested by industry in developing new synthetics and other products which now help pollute rivers, lakes, and wells. No one has accepted the responsibility for discovering how to counteract the effects of this type of pollution.

Doing the Week in Washington

EXTENSION OF REMARKS
OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WIDNALL. Mr. Speaker, Edward J. Reardon, the Washington news correspondent of the Passaic (N.J.) Herald-News, on March 5, 1960, wrote a fine column pointing to the serious undermining of our country's moral fiber presently taking place in publications and the movies. The article deserves attention and should command serious thought:

DOING THE WEEK IN WASHINGTON, WITH ED REARDON

(By Edward J. Reardon)

WASHINGTON.—When immorality enveloped the Roman Empire like a plague, it rotted and crumbled.

This has been the fate of other great nations, before and since. Postwar America, with its soft living, its leisure time, and its headlong pursuit of questionable pleasures, is coming close to the crossroads.

It took Soviet Premier Nikita Khrushchev to emphasize how far we have strayed when, during his visit to Los Angeles, he demonstrated in his crude way his dislike for the type of entertainment Hollywood is supplying the American masses. Khrushchev gave an imitation of the dancing girls in "Can Can" and angrily declared he would never permit the film to be shown in Russia.

The movie producers laughed at Khrushchev's antics. But they should have felt a sense of shame, instead.

For the past few years the moving picture industry's most successful films have been those emphasizing sex. Its advertising of these pictures in newspapers and magazines has been of the variety which in former days would have looked out of place even in the old Police Gazette.

The publishing industry has been following suit, flooding the bookstands with trash. Bestsellers today feature immorality and perversion.

In the Post Office Department Building in Washington is a room which Postmaster General Arthur E. Summerfield calls the "Chamber of Horrors." It contains samples of smutty magazines and other items taken from the mails.

A House subcommittee on postal operations held hearings last session in an effort to fashion legislation to strengthen Summerfield's hand in prosecuting the peddlers of this filth.

Its members—Representative GEORGE M. WALLHAUSER, of New Jersey, among them—heard testimony from law enforcement officials that this filthy literature was often responsible for much of our juvenile delinquency, for sex crimes, and in some instances for narcotics addiction.

The subcommittee is doing its best to fight this insidious campaign to weaken and eventually destroy the Nation's moral fiber. Right now it is seeking to induce the motion picture and publishing industries to do their own policing.

But it realizes that if the crusade is to be successful it must have help and that the most effective aid would be action at the community level.

"Only when an aroused and persistent community conscience has been established," it states in a recent report, "can we be certain that the dealers in printed filth will be

thwarted in their devious design of getting their wares into the hands and minds of our youth."

As an example of what can be done at the community level, the subcommittee cites the suburban community of Arlington, Va. Here it was that the Northern Virginia Citizens for Decent Literature was organized about 2 years ago in a small Presbyterian church circle of people dissatisfied with the quality of magazines on local newsstands.

The first goal was simply to ask the newsstand owners to look more carefully at what they were selling.

It was their conviction that an informed druggist would be as unwilling to sell magazines which might be harmful to the mind as he would be to sell drugs which would poison the body.

Today, the group has the active support and cooperation of over 125 organizations, large and small, including civic groups, service clubs, parent-teachers associations and Protestant, Catholic, and Jewish religious groups.

The first step was to ask other organizations to join in an effort to canvass the entire county. Letters were sent to all church, service, civic, and school groups explaining the purpose of the organization. As the membership grew, research into the nature and extent of the community's problem showed that the originators had been completely unaware of how much of this filth was on the newsstands.

A large committee on standards was then established, composed of a cross-section of the member organizations, to develop criteria representing the average citizen applying contemporary community standards. These criteria were then approved by the entire organization. Using this measuring rod, a list of some 50 magazines which should be removed from newsstands was prepared.

A few stands, where the majority of objectionable magazines were found, refused to cooperate on the ground their business would simply move across the State line. So a legislative committee was created by the organization. It went to work to obtain stronger antiobscenity laws at the local level. Result—the Arlington County Board appointed a committee to study the problem. It recommended the State law be clarified and strengthened, with increased penalties.

Meanwhile the committee on standards continues to check and keep the list of objectionable magazines up to date.

This is what one community has done to protect its youngsters against the merchants of filth who would destroy them morally.

It can be done in every community where people are sufficiently interested in the future of their children and the Nation.

Timely Portrait on Trujillo

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item which appeared in Dave Reque's column on TV in the March 5, 1960, edition of the Washington Daily News:

TIMELY

CBS has moved up "Trujillo, Portrait of a Dictator" to March 17 from May, apparently sensing that the benefactor's subjects are about to show forcefully their unappreciation of him.

Statement by Thomas G. Lanphier, Jr.

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which deserves the very serious consideration of every person who depends on America's deterrent power for survival:

STATEMENT BY THOMAS G. LANPHIER, JR., BEFORE THE HOUSE SCIENCE AND ASTRONAUTICS COMMITTEE, MONDAY, MARCH 7, 1960

I would like to thank the chairman and this committee for the honor of the invitation to present my views, as an American citizen, on our national space program and on what I consider to be the perilous state of our national defense over the next 3 years.

As background for my remarks, I would observe that for the past 20 years, I have, like many others, been associated in one way or another with the defense effort of the United States.

For more than the past decade, I have been directly associated, in the Pentagon, in the White House, and in industry, with the development of weapon systems of the hydrogen bomb and ballistic missile era. Throughout this period, I have held a top secret clearance with the Pentagon and a "Q" clearance with the Atomic Energy Commission.

For the past 9 years, I have worked with Convair, one of the Nation's largest and most versatile defense contractors. Convair is a division of General Dynamics Corp. which in its electric boat division, also builds nuclear submarines for the Polaris weapon system.

As Convair's long-range planner, I have over the years, participated in the conception, development, and production of supersonic manned interceptors and antiaircraft missiles for our aid and fleet defense, and have been similarly employed on our nuclear bomber, supersonic manned bomber and Atlas ICBM programs for this country's retaliatory forces. Also, during the past several years, with the advent of the Atlas as the bulwark of the national space program, considerable participation in the long-range planning for some systems in this field.

Throughout this past decade, and particularly over the past 5 years, I have watched with growing concern the perennial development of defense budgets more and more out of joint with the technological times and less and less sufficient to meet the growing threat in the significant areas of ICBM's, antisubmarine warfare and limited war deterrent.

Three years ago, Gen. Curtis LeMay testified before Congress to the effect that unless our defense program changed from what was then planned, the winter of 1959-60 could find us inferior to Soviet Russia in modern military power.

In the intervening 3 years, the only changes in our own defense effort have been to diminish it from what it was then planned to be. The Soviets, meanwhile, have led mankind into space with their sputniks.

Last spring, along with the rest of the world, I heard President Eisenhower admit by implication that we could not meet the Berlin crisis, if force were required, with any alternative but national suicide.

This winter, in the defense budget he has proposed to the Congress, I note with disappointment that the President has proposed no significant step toward arming us with a limited war deterrent for use in the

continuing crisis over Berlin and other, as yet unforeseen, but certainly potentially limited war situations.

I note he has again asked for insufficient ballistic missile and manned aircraft to close the growing gap relative to Soviet Russia in the area of massive weapon systems.

And he has once again read the United States out of the space race while failing to take the simple steps currently possible to better organize the space programs the United States does have underway.

Altogether, I believe my country's defense forces and policies have been allowed to drift to the paradoxical point in time when the President can rightly say our armed force is incalculable and could today destroy any aggressor: and at the same time, I can validly say my country may this winter be in the process of losing world war III.

I believe we are losing world war III for, among other reasons, lack of a sufficient and timely ICBM program, lack of a defense against a submarine attack, lack of a weapons program and policy to deter limited aggression, lack of a sufficient and timely space program and, above all, lack of recognition that we are, and have been for a long time, actually engaged in world war III.

We are engaged, in fact, in the only military phase of world war III we have a chance to win: the deterrent phase. And we are losing it. Losing it to the extent that I believe we could now logically assume ourselves to be in jeopardy of physical destruction and likely to remain so for the next 3 years.

This because modern weaponry, in the hands of the Soviet Union, can be assumed to have reached a qualitative and quantitative point at which our incalculable power to destroy an aggressor can now be itself destroyed, in the main, in a matter of moments.

A revolution in arms has occurred on both sides of the Iron Curtain over this past decade. A revolution not yet thoroughly recognized or acknowledged at the policy levels of the executive branch of our own Government but disturbingly recognized and exercised in the Kremlin.

In the course of this technological revolution in arms, it is worth noting that the scientists, the engineers, and the producers of ICBM's and other ultramodern weapons have moved alongside the uniformed men of the armed services as combatants in the conflict against communism.

Those in science and industry who are responsible for the continuing invention of weapon and space systems timely enough and effective enough to add to the deterrent can and do take pride in their contribution to the defense effort.

Men of science and industry deserve better recognition than they generally get for the major role they play in maintaining the quality of the deterrent force in being. They also should be afforded readier access to such information as our intelligence sources may have developed regarding experience in similar technological fields on the other side of the Iron Curtain.

In regard to the momentary effect of the arms revolution which is occurring, General Power, commander of the strategic air arm, has recently said:

"According to released data on nuclear effects, it would take an average of three missiles, in their current state of development, to give an aggressor a mathematically probability of 95 percent that he can destroy one given soft target some 5,000 miles away. This means that, with only some 300 ballistic missiles, the Soviets could virtually wipe out our entire nuclear strike capability within a span of 30 minutes. To further heighten this threat, only about half of these missiles would have to be ICBM's. The rest could be the smaller IRBM's which are considerably less expensive and easier to produce."

There are those, including myself, who believe General Power is conservative when he estimates it would take as many as three ICBM's to destroy a SAC base and all the retaliatory bombers on it. There are others who argue it would take more. But it is difficult to understand how anyone can argue when he says:

"We must anticipate that the Soviets may have accumulated a sufficient number of operational ICBM's and IRBM's for an all-out missile attack before we have in operation warning systems which could provide reliable and adequate warning of such an attack. We have such systems now under development designed to give some 15-minutes warning which would suffice to get most or all of SAC's ground-alert forces airborne. But until our ballistic missile warning system becomes fully operational SAC's capability to survive a missile attack with little or no warning will be the crux of the free world's deterrent posture."

Yet this winter's budget for our defense does not ask for enough money to keep a significant number of SAC bombers and bombs off the ground and out of the pouncing reach of Soviet ICBM's. An ICBM force which could well be, by this time, more than the 150 Soviet ICBM's General Power opines would be required to wipe out our retaliatory forces.

There is no great mystery about the point General Power is trying to make. Including our carriers at sea and our advanced SAC bases overseas, there are less than 100 points at which the Soviets must aim their ICBM's or submarines in order to destroy our retaliatory power. And in a technological era when we ourselves have nuclear submarines which can outrun our current carriers and have an ICBM which can be delivered halfway across the world, and by the President's own admission, strike within 2 miles of its target, it is certainly within the realm of logic to assume the Soviets may have submarines and ballistic missile forces of equal quality and considerably greater quantity than do we.

Any less assumption as the basis of our defense planning in this age of final weapons is unwarranted.

In World War II, Pearl Harbor came upon us at a speed of about 200 miles per hour from an altitude of about 10,000 feet and we had, in effect, 2 to 3 years warning time with which to retaliate.

The Pearl Harbor of world war III may well be quietly occurring this winter as we drift past that moment in our national planning when we could have maintained a defense force impressive enough to continue to deter the Kremlin from overt physical aggression or unanswerable political ultimatum.

Again, borrowing from General Power, about 30 years ago at the Lenin School of Political Warfare, a member of the committee of the Communist Party told the students:

"War to the hilt between communism and capitalism is inevitable. Today, of course (that is, in 1931), we are not strong enough to attack. Our time will come in 20 or 30 years. To win, we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

All things concerned, our guard is now down. We are, as predicted, cooperating in our own destruction. We are being put to sleep.

To the extent I can cry alarm, with my own individual voice, I propose to do so. And in order to unclutter my opinions from charges of bias, I am regretfully leaving the great company of which I have been a part for almost a decade. This in order that its important programs and my own opinions not encumber one another.

Thank you again for your gracious invitation to hear my point of view.

Capital Punishment

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following testimony of Donal E. J. MacNamara, dean of the New York Institute of Criminology and national president of the American League To Abolish Capital Punishment, before the Legislature of the State of Virginia in support of a bill to abolish the death penalty.

Mr. MacNamara testified on February 29, 1960, as follows:

Senators and delegates of the Virginia Legislature, I urge favorable consideration for the legislation before you outlawing the death penalty from Virginia's penal code for the following reasons.

1. Capital punishment is criminologically unsound. It violates the basic tenet of 20th century penology, i.e., the rehabilitation of offenders.

2. Capital punishment is morally wrong and violative of the ethical foundations of modern democratic states. Opponents of the death penalty readily admit the right of the State to defend itself against aggressors and through its police to protect the lives of its populace even if in so doing the killing of a criminal is necessary. But once the criminal has been disarmed and is in custody, his capacity to injure the State or its citizens has been effectively curtailed and the right of the State to take his life ceases. To execute him at this point is vengeance and retribution, not protection.

3. Capital punishment is unnecessary. It provides no more deterrence to the commission of capital crimes than do alternative, more acceptable penalties. It is a truism of penology that it is not the quantum of punishment but the certainty of punishment which deters the offender. Improving our police and investigative machinery to insure the apprehension of a larger percentage of wrongdoers and of our prosecuting apparatus to insure the conviction of the guilty would, even with much less severe penalties, reduce the incidence of crimes, capital and noncapital, more effectively.

4. That capital punishment has demonstrably failed to achieve its objectives, i.e.: the reduction or elimination of capital crimes, is evidenced by comparing the crimes history of the nine American States which have abolished the death penalty (three for more than 100 years) with the capital crimes rates in those States, with the same social and population patterns, which retain capital punishment. In every instance the capital crimes rate in the States which have abolished the death penalty is lower, often-times significantly so, than in those States

in which the death penalty is on the statute books and is supposedly deterring capital crimes. Most recently, Delaware abolished capital punishment. Short term results are now available. In the 12 months prior to abolition, there were 11 homicides in Wilmington; in the 12 months after abolition, there were but 2. Abolishing capital punishment will not start blood flowing in the streets of Richmond—nor will it make the people of the Old Dominion in any way less secure in their persons or property.

5. Capital punishment has been differentially and inconsistently applied. The statistics of executions since 1930 show that more than half of those executed have been persons of minority groups. Studies in other States have indicated that a disproportionately high percentage of those executed had been defended by court-appointed lawyers whose funds for legal and investigative services were severely limited. There is no showing, for example, that the 48 persons executed in the United States during 1958 were the 48 most dangerous criminals. Indeed analysis of the serious crimes during 1958 shows that the professional gangster murderer, the cold-blooded killer for hire, is unrepresented in that group—and in instance after instance was neither apprehended nor convicted of any degree of homicide.

6. Miscarriages of justice: The American system of criminal justice has many built-in protections for the innocent person accused of crime. The Chessman case is a monument to the desire of our people and our judges to take heroic measures to prevent an execution where there is the slightest doubt of guilt or of the legality of the criminal proceedings involved in determining guilt. Nonetheless there have been cases, in the United States and in other countries, in which human fallibility, coincidence, and occasionally culpable negligence on the part of the police and prosecution or public pressures on the jury and court have resulted in a miscarriage of justice and an innocent man has been sentenced to death. Fortunately for our consciences in most cases the error has been caught and corrected prior to execution; but innocent men have been executed. If we make a mistake and give an innocent man a life sentence and if even after 20 years we realize our error, we can in some way, inadequate as it may be, recompense him for his sufferings; if we execute an innocent man, society can neither make good its error to him nor can it ever wipe the stain of guilt from its escutcheon.

7. Capital punishment increases the cost of administering justice. It makes for long, drawn-out trials, many appeals, and in States with the mandatory death penalty provision, often leads to a guilty man going "unwhipped of justice" due to the reluctance of the jury to be responsible for his execution. The charge is made that substituting life imprisonment for the death penalty will saddle the public with extra costs and increase taxes. I am reluctant to discuss human life in dollar-and-cents terms but a good cost accountant can right here in the State of Virginia demonstrate clearly that it would be cheaper for Virginia in the long run to maintain its murderer in a luxurious suite of the Hotel Richmond across the street than it is to execute them.

8. Capital punishment provides no special protection to police officers. Father Donald Campion, a noted Jesuit priest and editor of America, has studied the incidence of assaults on and killings of police officers in death penalty as opposed to non-capital-punishment States. He finds that the incidence of police deaths in the line of their police duties is lower in those States which do not have the death penalty.

9. The purported deterrent effect of the death penalty is based on the mistaken assumption that the criminal at the time of committing murder or another capital crime is necessarily a rational being, weighing the pleasure or profit to be derived from his crime against the pain or loss to be suffered should he be caught and convicted. This is a popular restatement of the classic, but rejected, "pleasure-pain" theory of penology. But the murderer is seldom a rational man at the time he commits a murder—he is at that time in the words of Dr. Post "the unhappy end product of anger, frustration, jealousy, despair, alcohol, pity, or sex * * *." Most homicides are committed without any consideration of the death penalty. Most murderers do not premeditate, deliberate, and intend the death of their victims. Recent studies at Vacaville (California Correctional Research Institute) and at Ralston (Florida State Penitentiary) give indisputable evidence that at least convicted murderers thought nothing of and were certainly not deterred by the prospect of the death penalty.

10. Capital punishment is then: unsound criminologically and penologically, unnecessary to protect the State and its people, demonstrably no greater a deterrent to crime than lesser, alternative penalties; it is costly to the State; it makes final and irredeemable miscarriages of justice; it has in the past been inconsistently and prejudicially applied; it is retributive rather than rehabilitative and imposes the barbaric "lex talionis" on a civilized, modern democracy; it brutalizes our penal system and makes impossible the reform of criminal justice administration; it provides no special protection to our police officers; again quoting Dr. Post: " * * * however you look at it, capital punishment is brutal, sordid and savage; it is unworthy of a civilized people."

Virginia is a great State. It has contributed not only Presidents and political leaders to America but has given much in the way of cultural and progress not only in science but in morals and ethics. Enact, gentlemen, this legislation and join Virginia to the roll of honor of those nations and States which by abolishing capital punishment have contributed to the march of civilization and respect for God-given human life which only the God who gave it has the power and the right and the wisdom to take away.

DONALD E. J. MACNAMARA,
Dean, New York Institute of Criminology, National President, American League to Abolish Capital Punishment

The 110th Anniversary of the Birth of Thomas G. Masaryk

EXTENSION OF REMARKS OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WIDNALL. Mr. Speaker, today marks the 110th anniversary of the birth of Thomas Garrigue Masaryk, founder and first President of the Czechoslovak Republic, and it is most fitting that the Post Office Department of the United States has issued a commemorative stamp honoring him in the "champion of liberty" series.

Thomas G. Masaryk was born March 7, 1850, in Moravia. He was the son of a

Slovakian coachman. He studied and lectured at the University of Vienna—doctor of philosophy, 1876. From 1882 to 1911 he was a professor at the University of Prague.

Elected to the Austrian Parliament in 1891, he fought for independence for Czechoslovakia. After the outbreak of World War I, he fled to Paris to avoid arrest, and with the aid of Eduard Benes formed the Czechoslovakian National Council, which was recognized during the war as the de facto Government of Czechoslovakia.

Masaryk traveled extensively during the war to gain support for the Czechoslovak cause. When the Austro-Hungarian monarchy collapsed he was chosen—November 14, 1918—as President of the newly formed Czechoslovak Government. He was reelected in 1920, 1927, and 1934, and resigned in 1935 because of his advanced age. He died in 1937.

No one has been more patriotic, more persevering, or more devoted to the Czechoslovak cause than this great leader. It is easy to understand why the celebration of his birth had become a national event in the Czechoslovak Republic before the advent of the Communist regime.

It is tragic that today, because of the treachery of the Communists, this Republic is far from enjoying the freedom and abundance of good things for which Masaryk devoted his life. We in the free world pay tribute to his memory on this day, and devoutly hope that soon the yoke will be removed from the people of Czechoslovakia and that they will regain the liberties they enjoyed under Masaryk's leadership.

Higher Interest Rates—Some Alternatives

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish to enter into the RECORD an editorial from the Dalles Optimist of February 18, which deals with the important issue of higher interest rates. While I am convinced, as you know, that raising interest rates has not proved to be an effective way of putting the brakes on inflation, and while I would also argue that administered prices are a more important causative factor than wages, I feel that this editorial does reflect a growing concern across the country in the administration's reliance on high interest rates alone as our major tool of monetary policy. As this editorial points out, there are alternatives and we should be utilizing them:

HIGHER INTEREST RATES—SOME ALTERNATIVES

No doubt raising interest rates is one way to put the brakes on inflation, but there are other good ways. One method that has

become unpopular during the past couple of decades is spending less money.

Higher and yet higher wages, followed by higher and yet higher prices, is a vicious circle and at the end of that road lies disaster.

This the Optimist emphasizes from time to time; for the most part, nobody listens. Most are too busy trying to keep their balance on the old Ferris wheel.

Not only are interest rates higher than they have been; money is tight, and will get tighter.

It does appear that a strong wave of resistance to lifting the lid on the interest rate ceiling on the Federal level is becoming evident in Congress.

A good many Congressmen are showing concern over business reports. Republicans have been boasting of prosperity, but some of the indexes for the immediate future are not exactly rosy.

Despite recent glowing forecasts for the economy in 1960, the bounce back that was supposed to take place with the inflationary settlement of the steel strike has not been encouraging, to judge by recent stock market declines.

Even for good credit risks, money is not generally available in much of the country for home loans. Good credit risks also are reluctant to involve themselves in long-term higher interest rate buying.

More sensible on the Federal level than higher interest rates might be such obvious alternatives as work for budget surpluses and a reduction in the national debt; better control of consumer credit, and other measures to keep interest rates down.

Narcotics Problem

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. HOSMER. Mr. Speaker, in California, and particularly southern California, problems from the illegal trafficking in narcotics is of serious proportions. Col. C. S. Smith has long been in the vanguard of the forces fighting to clean the situation up. Recently, in his column as publisher of the Herald American newspapers of southeastern Los Angeles County, he has these important words to say on the subject:

THE NARCOTICS PROBLEM

(By Cliff Smith)

Shortly after our new attorney general, Stanley Mosk, took office, I was called to a meeting in the State Building, presided over by him.

Present were approximately 30 men representing law enforcement agencies, prosecutors, and judges.

I remember a number of the men who were present, Sheriff Peter Pitchess, Chief of Police William Parker of Los Angeles, the Treasury agent in charge of narcotics law enforcement for the Federal Government in California, District Attorney William B. McKesson, U.S. Attorney Laughlin Waters, Louis H. Burke, presiding judge of the superior court.

After a considerable amount of discussion, I suggested the following program. This was based upon my own observations and the observations of the various editors of the Herald American newspapers.

Separate the narcotics addicts from the nonaddicts who are engaged in the narcotics traffic. And have a separate set of laws for each class.

As far as the narcotics addicts are concerned, there is no problem determining whether or not they are addicts. Have them arrested whenever located and tried in the Superior Court. If found to be addicts, have them committed to a hospital for treatment. After a certain course of treatment parole them from the hospital. Do not discharge them, but keep them as wards of the Court. A monthly checkup will determine whether or not they are cured or have become addicts again. If at any time they become addicts again, immediately recommit them.

As to the pushers, any pusher engaging in the illegal production, sale, or distribution of harmful narcotics, such as heroin and morphine, should be given a sentence of from 20 to 30 years, without hope of parole.

This simple outline was approved in principle by the majority of the peace officers present. However, the judges, District Attorney and United States Attorney felt there would be grave difficulty in securing convictions.

It is the thought of this writer that the putting away of one pusher for a considerable length of time is of much more benefit to society than the conviction of 50 pushers who are given a 6-month to 1-year jail sentence.

The above plan has a double-edged purpose. Retire the users so that the pushers have no customers.

Make the punishment so great that the prospective profits will not outweigh the danger of being sent up practically for life.

Many countries have no narcotics problem because they use the above system.

Some countries attack the problem directly by making narcotics available at a very cheap price to addicts. This in itself would take the profit out of the narcotics traffic, and without the profit, very few new addicts would be developed.

More than 1 million voters signed a petition under the auspices of the Elks Clubs, asking the legislature to enact laws making the mandatory, minimum sentence 30 years, for convicted narcotics pushers.

The State Assembly passed this measure but it was lost without a hearing in the Senate. Perhaps it is time for a reapportionment of the State, so that the balance of power in the Senate does not lie with a few small counties, with practically no population, in the northern part of the State.

The Real Castro—II

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the second in a series of articles currently appearing in the New York Daily News on Fidel Castro. This one was published in the issue of March 7, 1960:

HE WON LAURELS FLEEING A FIGHT

(By Joseph Martin and Phil Santora)

The attack by fledgling revolutionary Fidel Castro's bewildered forces on the Moncada garrison in Santiago de Cuba is one of the most incredible "military" undertakings of all time. It is important, however, for sev-

eral reasons, because it proved that Castro could talk men into doing practically anything and because it gave him the notoriety for which he thirsted and furnished the symbol for the revolution to come.

It happened July 26, 1953—and it baptized in blood the 26th of July movement that eventually overthrew dictator Fulgencio Batista.

Fast-talking Fidel's sheer magnetism induced 120 men—some of them presumably intelligent—to drive off to a "shooting practice" session in Oriente and it was not until half an hour before the attack that some of the horrified group realized that they were engaged in a military expedition.

BORN TO BE LEADER, RIGHT OR WRONG

One of the survivors of that fiasco, a man who later was sentenced to prison along with Castro, gave the News team his version of the expedition.

"I guess it's a tribute to his magnetism that we followed him," he said.

"You have to understand this Castro. He's a magician. He has boundless energy and personality, a sort of inner fire that creates enthusiasm. The man was born to be a leader—right or wrong, but a leader.

"There is no doubt in my mind now that Castro knew the attack could not possibly succeed—but we didn't realize it then. We couldn't have known that Castro was using us as pawns to build himself a reputation.

"We arrived at a farm, the Finca Siboney, about three miles outside Santiago. We were somewhat surprised to find guards posted at the doors to the house and some of the men asked what in hell was going on.

"Seven of the men backed out then and there. They smelled trouble. I smelled it, too, but I figured that was why we were supposed to be training, if you can call it that. Castro was affable—he told the dissidents they could leave the place after the main body had taken off. He didn't say where.

"TWO WOMEN THERE IRONING UNIFORMS

"There were two women in the place, ironing uniforms. One was Melba Hernandez, until recently in charge of the women's prison in Havana.

"The other was Haidee Santamaria, now married to Armando Hart, who is Castro's minister of education.

"It wasn't until dawn that Fidel gave us an inkling of what we were going to do. He told us then that we were going to take Moncada, that the members of the garrison were waiting to join us—a lie.

"Juan Almeida, now head of the Cuban Army but then a sergeant, gave us instructions on how to load the few .22 rifles and pistols that we were issued. We didn't even know how to work them half an hour before we went into Santiago."

It was 5:30 a.m. when Castro finally got off a speech, possibly the shortest of his career.

Our informant, who now works in a Midwestern university but has relatives in Cuba, said: "The words he uttered are burned in my memory. He told us: 'We are going to take Moncada. Because of the surprise element, the job should be easy.

"The other groups fighting Batista are merely playing at revolution. They have no standing. We are the only ones who can do anything. Once we capture the garrison, the rest of the province (Oriente) will be easy. We are going to be even greater than Maceo and Marti (the two greatest Cuban patriots)."

"The two women donned nurses' uniforms. With them was a man dressed as an intern. They were to gain entrance to the Saturnino Lora, the hospital across the street from the garrison.

"Raul Castro and a small force were to take the Hall of Justice and use its tower as a sniper post."

The attack was a complete fizzle. Only 80 out of the original 120 men ever got near the garrison. Others piled into the cars and thoughtfully lost their way.

"The soldiers weren't surprised; we were," said our informant wryly. "They began chopping us down systematically. When Fidel saw the attack was failing, he shouted, 'Every man for himself' and ran.

RUNS TO PRIEST FOR SANCTUARY

"Boris Santa Coloma was Haidee's sweetheart. He yelled, 'What about the girls?' Castro yelled back, 'We haven't time for that. I've given orders. We can't risk our lives.'

"Santa Coloma covered Castro while he fled. Then he went back to rescue the girls. He was shot to death."

Castro had once told friends that if he ever got into trouble, he could seek sanctuary in a church. Now, along with his brother Raul, he ran to the office of Msgr. Enrique Perez Serrantes, the archbishop of Santiago, two blocks away.

The entire mess had taken less than an hour. It was now 6:55 a.m., July 26, 1953. The 26th of July Movement, which was to sweep Cuba a few years later and catapult Fidel Castro to the power he wanted, was born during that brief, utterly fantastic foray.

It was born—and perpetuated—in the midst of lies, deceit, and violence.

Castro doesn't like to talk about the details of the incident. Neither does he like to talk about the next year or so of his life, when he was arrested and sent to Isle of Pines Prison.

PLEAD TO CARDINAL FOR INTERCESSION

"Most of us were also arrested," said the News' informant, "and imprisoned along with Fidel. It was during that time that I had time to reflect. My conclusions were that Castro had betrayed us out of personal ambition.

"No matter how long he talked, I could remember only that Coloma had covered his retreat and then gone to his death in an effort to save his girl friend."

The refuge Castro had so carefully selected didn't prevent his arrest 4 days later. In November 1953 Fidel, Raul, and 62 other political prisoners were taken to the Isle of Pines.

At that, Castro was lucky he wasn't shot. While he hid in the cathedral, his wife, and his sister, Lydia, pleaded with Manuel Cardinal Arteaga to intercede with Batista. The cardinal based his plea on the fact that Castro was the son-in-law of Rafael J. Diaz-Balart, minister of transportation.

Batista agreed to save Fidel from a firing squad and Fidel was so overcome with gratitude that, since he took power, he has exonerated the cardinal for his friendship with Batista.

"Fidel seldom had visitors," said a man who was in jail at the same time. "His mother visited him only once. He was in a dormitory with 30 or so friends—most of them rowdies who went along with him when he wanted to create trouble.

"Since he was somewhat of a scholar, he started giving history lessons to the less educated among the prisoners. When he was refused books on Marx, Lenin and Engels, he threatened a hunger strike. They gave him the books and he used them as texts, along with books on Cuban history. I know Cuban history and he distorted statements by Marti and others.

REJECTS CLASSES IN CATECHISM

"When a priest and nuns came to the prison to conduct catechism classes, Fidel rejected the idea. He jeered at the men who accepted religious medals.

"On one occasion, Batista and some aids visited the place and Fidel defiantly sang the 26th of July anthem from a window.

He and Raul were placed in a room by themselves. He later smuggled out a letter stating he had been beaten and starved. In reality, he was very well fed and he and Raul had a fine room.

"That religious medal he wore when he was in the Sierra Maestra—many of us laughed when we saw pictures of him with it. He wore it for the effect it would have on a people mostly Catholic."

He bragged constantly. He told of his exploits in Bogota, Colombia, in 1948.

"We knew that story by heart," said a former prison mate. "He told us how he lunched with Jorge Gaitan, a member of the Liberal Party in Bogota, an idol of the working class of Colombia."

"Two days later, Gaitan was shot to death in the street and Bogota erupted into a series of riots that claimed more than 300 lives. The Communists had planned the 'incident' to cast reflection on the Pan-American Conference and Castro helped them."

(Hundreds were injured in the riots and property damage from fire and looting rose to millions of dollars. Sections of the city were reduced to rubble and hundreds of Americans and other foreigners were forced to flee Bogota.)

(Secretary of State George C. Marshall, the then Secretary of Commerce Averell Harriman and other Americans attending the conference were unharmed—although Red mobs swept through the streets looking for foreigners.)

(So great was the carnage that bodies lay in the streets for days following the riots and U.S. Marines were ordered to Bogota to protect Americans.)

Fidel escaped by cargo plane. He never told us who paid his expenses to Bogota.

"Those of us who knew him were cognizant of the fact he had first been introduced to communism in 1946. He was never a card-carrying member of the party—he still isn't—but you don't have to carry a card to be a Red."

(After the Bogota incident Fidel was in hot water in Cuba. He and his bride were in Banas and Rolando Masferrer sent some of his hoods there to kill him. Lt. Felipe Mirabel risked his life and army career by taking Castro and his wife to the Camaguey Airport and putting them on a plane for Miami.)

(Mirabel became a major under Batista and is now in Cabana Fortress awaiting execution at Castro's orders.)

(Recently, relatives of the condemned man waited for Castro outside one of the many homes he uses in Havana and pleaded for leniency. Castro seemed to be weakening, but Celia Sanchez the mannish "secretary" who has been with him since his days in the mountains, snapped: "The revolution doesn't have to be concerned with humanity." That ended the interview.)

(Castro, it seems, never forgives a friend.)

THEIR BEAUTIFUL FRIENDSHIP BEGINS

In May 1955, Batista signed a general amnesty for political prisoners and the two Castros, along with their buddies, were freed. They left Cuba immediately. Raul could not obtain a visa to the United States and ended up in Mexico. Fidel made a grand tour—New York, Miami, Tampa, and Mexico City.

There are several versions of when Fidel actually met Dr. Ernesto (Che) Guevara, the Argentine Communist who now heads the National Bank of Cuba and who is crowding Castro for political honors. The truth is they first met in Mexico and that Raul was the man who performed the social amenities.

Fidel was living in the swank house of Orquidia del Pino in the Pedregal de San Angel. Senora Del Pino was the wife of a friend of Castro's and Fidel wallowed there in luxury while his ragged followers scrounged for ordinary accommodations.

Castro never met his contacts at the house. He used a cheap apartment belonging to Senator Del Pino's sister. It was there he met El Che in late 1956. It was the beginning of a beautiful friendship.

El Che had a long record as a Communist agitator and he had contacts. Within days, Castro and his followers began training under the supervision of Alberto Bayo, a Red who had fought as a captain in the Spanish civil war.

Training grounds were at the Rancho La Rosa, on the outskirts of Mexico City. Castro had little in the way of arms and was trying to enlist the aid of Trujillo, of the Dominican Republic, and of ex-Cuban President Carlos Prío Socarras—who had left Cuba with \$40 million and wanted to go back for a second helping.

TRUJILLO BALKS AT COST OF BOAT

Prío had the money and the arms—cached in Miami, Mexico, Key West, and other spots. He had the organization to move the stuff. He needed a leader to pull his chestnuts out of the fire.

Actually, it was mere accident that Prío rather than Trujillo financed Castro. An aid of Trujillo's tried to make a few bucks on the side by asking the boss for \$100,000 for the *Gramma*, the boat to be used in the invasion. Trujillo found out the boat was worth \$40,000 and he balked.

While Trujillo was still giving his aid a going over, Prío stepped in and bought the *Gramma*. Weeks later, the converted yacht sailed for Cuba where most of the boys died trying to establish an Oriente Province beachhead. Fidel, Raul and a handful of followers miraculously escaped and went on to the mountains. There they were to stay for a long time before they could overthrow Batista.

Prío? He had hoped that Castro and Batista might eliminate each other. He was wrong and today he's a virtual prisoner in Havana, being milked of the money he looted from the Cuban treasury.

The Boys' Club—An Effective Guide Through the Corridor of Adolescence to Manhood

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. SANTANGELO. Mr. Speaker, in our city, our State, and our Nation, there are many dedicated people seeking to direct young boys' activities into proper and useful channels. One of these men that I know is Peter Capra, executive director of the Boys' Club of New York located at 287 East 10th Street, New York, N.Y.

"An ounce of prevention is worth a pound of cure." An occupied young man has no time for activity leading to juvenile delinquency or crime. The Boys' Club of New York is one of the outstanding organizations which is rendering service to the youth of our community and providing them with facilities to develop their growing talents and to occupy their spare hours. This organization should be commended for its outstanding and continuing work with the boys of the community in New York and throughout the United States.

A short history of its origin, its activities, its policies, and its technique will prove interesting reading to those who have an interest in the youth of our country. I am setting forth a short history of the Boys' Club of New York which has come to my attention and which I believe that the readers will enjoy perusing. The history follows:

A young boy scaled a rock through a second-story window on Avenue A one afternoon in the 1870's. Accompanied by splinters of shattering glass it landed at the feet of Mr. E. H. Harriman who was visiting Mrs. Clark, superintendent of the Wilson Mission School for Girls. Mr. Harriman asked:

"Does this happen often?"

"Oh, yes, and it's the lawless street boys who tease the girls in this school and create all of this mischievous activity," Mrs. Clark replied.

His first thought was to agree with her, but he didn't. He looked at the rock again as he tossed it from hand to hand. Without further hesitation he turned to Mrs. Clark and said:

"I can't blame the boy any more than I can blame this rock. The boy was there, the rock was there. But for the want of a little excitement and something to do he wouldn't have thrown it."

"But it happens all the time," Mrs. Clark complained.

"Then let's do something about it," Mr. Harriman replied.

What was done about it is the history of the Boys' Club of New York. The rock an East Side kid heaved through the window around 1870 figuratively became its cornerstone.

With dedicated zeal Mr. Harriman, with friends whom he enlisted, went to work to get the boys off the street and give them something with which to work off their normal energies in a clubhouse of their own.

Harriman's initial try was such a great success that it soon called for larger quarters and a professional staff to assist the volunteers to meet the demands of increased boy membership. In 1887 the organization was incorporated and in 1901 a permanent five-story building, especially designed for its purpose was opened at Avenue A and 10th Street—the Tompkins Square Clubhouse.

Summer camping was developed during the late 1890's under the leadership of one of the trustees, William Carey, and in 1902 a campsite was purchased at Jamesport, L.I. Health services were added to the boys' club program in 1918—with complete dental clinics in 1922. Each successive year added some new milestone in the progress of the boys' club. Only a volume could recount the accomplishments of the Boys' Club of New York in its service to the boys from the tenement areas of our city.

The Boys' Club of New York now operates four clubhouses: The Tompkins Square Clubhouse, 287 East 10th Street; the Jefferson Park Clubhouse, 321 East 11th Street; the Central Park Clubhouse, Fifth Avenue at 110th Street; and the new Pitt Street Clubhouse—opened Monday, November 16, 1959—135 Pitt Street; although serving over 8,000 boys. The club operates two summer camps; Camp Carey, Jamesport, L.I., which provides 1,400 boys a 2-week vacation in the country, and Camp Tabor, Fishers Island, New York, a caddy camp where the older boys can be useful, earn some money and enjoy a healthy summer recreation program at the same time.

Each boys' club center is staffed with professionally trained men and women and some 150 volunteers. These volunteers and staff tangle daily with the ideas of the young and set them an example that comes only through leadership. And because of this genuine interest in their affairs, these youths soon learn

that both individuals and groups of boys have a fuller, more rewarding life when they respect property, the rights and opinions of others—and have fun at the same time.

A sampling of the popular recreational, health, and educational activities offered to the members includes: Swimming, basketball, boxing, body conditioning (weight lifting), tumbling, group clubs, recreation rooms with pool, ping-pong, chess, and checkers, arts, crafts, photography, band, drama, glee club, lounge rooms, trips to points of interest, socials, dances, medical and dental services.

Then, too, there is the educational program which counsels and financially assists boys who are endowed with exceptional industry, motivation, leadership qualities and sterling character, to matriculate in schools and colleges.

Since 1876 the Boys' Club of New York has followed two basic policies:

"The open door policy": Any boy from the age of 7 to 17 may become a member, regardless of differences in attitudes, cultural patterns or spiritual beliefs. Thus each boy has a chance to respect the ideas, customs and beliefs of others, thereby developing his own self-respect and self-confidence.

"The man behind the boy" policy is the day-to-day contact with the men and women who guide the youngsters in worthwhile pursuits, be it the boxing instructor, volunteer leader, art director or the receptionist doorman and hundreds of other dedicated men and women who greet the boy daily.

The contributions of the Boys' Club of New York in the city and the country is history. Its best testimonial is the alumni, numbering hundreds of thousands, all former Boys' Club members who are finer citizens today because of their early association with the Boys' Club of New York: Col. George Kojac, U.S. Air Force; Admiral Berger, retired; the Honorable Louis J. Lefkowitz, attorney general for the State of New York; the Kriender Brothers, of Club "21"; Dr. William M. Hitzig, medical observer for the atom bomb tests at Bikini; J. Rankin O'Rourke and Martin King, prominent brokers on Wall Street; Ralph J. Liberti, teacher-coach in the public school system; Col. Paul Akst, New York City directory, Selective Service System; John A. Byrnes, chief justice of New York City courts; Red Buttons and Senator Ford of the entertainment field; to mention just a few.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CONGRESSIONAL RECORD

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

Appendix

West Virginians Have Enriched American Life Materially, Intellectually, and Spiritually

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. RANDOLPH. Mr. President, today an article I prepared on the invitation of the editor of the Charleston (W. Va.) Gazette on the subject of prominent West Virginians was published in that newspaper.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

THE RICH HERITAGE OF WEST VIRGINIA
(By JENNINGS RANDOLPH, U.S. Senator from West Virginia)

A passenger train of the Baltimore & Ohio snaked its way westward through the rolling countryside of Harrison County, W. Va. It was a leaden day in the dead of winter. The steep hillsides and gently sloping meadows, stripped of vegetation, were covered with snow. I was a passenger, enroute from Washington to my native Salem to attend a meeting of the board of directors of Salem College.

On much of the trip I had been engaged in casual conversation with the man who sat next to me. It developed that he was a blase and somewhat cynical New Yorker making his first journey through West Virginia. He was not impressed by the bleak scene.

"This," he said, waving his hand toward a barren hillside, "is the most God-forsaken country I have ever seen. What on earth could this land produce?"

My response was that beneath the hills through which we were passing lay vast stores of bituminous coal, oil, and natural gas, and, furthermore, during the spring and summer the meadows would be dotted with cattle grazing on the finest bluegrass in America, while in the urban centers there would be found much production in the glass, pottery, chemical, and other industries. And speaking of bluegrass, I acquainted the gentleman with the fact that West Virginia has more of its acreage in bluegrass pastureland than does neighboring Kentucky, which is called the Bluegrass State.

"But," I further declared, "the most valuable product of these hills lies in the character and stature of its men and women, and in the contributions they have made in commerce, public affairs, education, and in the arts and the sciences."

The easterner beside me remained unimpressed.

"Don't remember that I ever heard of any famous West Virginians," he said, and then asked: "Who of importance ever came out of these hills?"

It was pleasing to have the opportunity to tell him that the one county (Harrison) through which we were then passing, had given us the greatest military strategist of

the Civil War (Stonewall Jackson); three members of Presidential Cabinets (Nathan Goff, Secretary of the Navy—Howard M. Gore, Secretary of Agriculture—and Louis A. Johnson, Secretary of Defense); the Solicitor General under President Woodrow Wilson, and later Ambassador to Great Britain, and Democratic nominee for President of the United States (John W. Davis); the man who discovered more oil than any other individual in history (Michael L. Benedum); two national commanders of the American Legion (Louis A. Johnson and Donald R. Wilson); two presidents of the National Education Association (Dr. Joseph Rosier and Dr. Corma Mowrey); the author who was one of the highest paid fiction writers in the first three decades of this century (Melville Davidson Post); and the president of Swift & Co., one of the Nation's largest meatpacking concerns (Porter Jarvis).

My travel companion was astonished. Practically every name I had mentioned was familiar to him—and he recognized these people as being outstanding Americans. He seemed amazed to learn that they were all from West Virginia, but I gave him little time to regain his composure.

"All those outstanding citizens I have named are products of this one county—Harrison," I continued. "Within the next few minutes this train will roll into Doddridge County, birthplace of U.S. Senator Matthew M. Neely, whose home for many years has been in neighboring Marion County, and who served West Virginia in the U.S. Congress as both Senator and Member of the House of Representatives, and also was one of our State's Governors.

"Then, too, within another hour you will be passing through Wood County, home of Adm. Felix Stump, now retired commander in chief of U.S. forces in the Pacific and of the U.S. Pacific Fleet. And there are M. J. Rathbone, president of the Standard Oil Co. of New Jersey, and Holmes Alexander, nationally syndicated Washington newspaper columnist, both of whom are Wood County natives.

"And," I added, "to mention a few other West Virginians who have distinguished themselves, to the south of us is Braxton County, home of the late Dewey Fleming, another well known journalist who was chief of the Washington bureau of the Baltimore Sun; still further to the south is Lincoln County, the birthplace of Maj. Charles Yeager, the first pilot to break the sound barrier and introduce a new age in the exploration of the air; and the tier of counties from Randolph through Pocahontas, Greenbrier, and Monroe also furnished notables, from Randolph having come two U.S. Senators, Henry Gassaway Davis, who also was a Democratic candidate for Vice President of the United States, and Stephen B. Elkins, who also served as Secretary of War; from Pocahontas came the world-famous novelist—the only woman writer to have won the Nobel Prize for literature—Pearl S. Buck, and that county also was the home of Gen. Mason Patrick, the first head of the Army Air Service during and after World War I; from Greenbrier came Gen. John L. Hines, who succeeded Gen. John J. Pershing as Chief of Staff of the U.S. Army.

"To consider the humane art of medicine," I continued, giving my listener no time to rally his forces, "I can readily think

of two contemporary West Virginians who have achieved national eminence, though by divergent routes. Dr. William R. Laird of Fayette County, for his pioneering in the establishment of rural area clinics and other significant contributions, received justified recognition from the American College of Surgeons. And in a very different way, a native of Cabell County, Maj. Gen. Leonard Dudley Heaton, Surgeon General of the U.S. Army, achieved fame. As the commanding general of Walter Reed Army Hospital in Washington, D.C., General Heaton headed the team of surgeons who operated successfully upon President Eisenhower.

"And being a New Yorker, you doubtless know about Eleanor Steber, world renowned Metropolitan Opera star, whose native city is Wheeling, Ohio County. A West Virginian, Dudley L. Simms of Charleston, Kanawha County, is the immediate past-president of the world's largest organization of service clubs, Lions International.

"Then there—"

The train was slowing down for the stop at Clarksburg, from where I was to go by automobile to Salem. Thus, it was necessary that I interrupt my story, but not until my companion had asked a question—a pertinent and challenging one:

"Why haven't you West Virginians told the Nation of these sons and daughters of your State? I am a merchant, but no one would know that I had quality merchandise if I did not put it on display in my store windows and advertise it in the newspapers and through other media of communications. You West Virginians need to do a sales job, not only as relates to your people, but on your other resources as well."

His question still troubles me. Why haven't we told our story? Perhaps it is because we take it for granted that others know as much as we do about our State and its people. It is even possible that many of our own citizens do not know the remarkable story of West Virginia's material and human resources. If so, our first task is to awaken our own people to their rich heritage, for the West Virginians mentioned in the train travel episode are but a few of those who have enriched American life materially, intellectually, and spiritually. And they are but representatives of the capabilities and potentialities which are present among the men and women of our State.

Payola at the Summit

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Sunday, March 6, 1960, issue of the Washington Post:

PAYOLA AT THE SUMMIT

Chairman Doerfer of the Federal Communications Commission made an unimpressed

sive exploration before the Harris subcommittee of his most recent impropriety. His account of the Commission's performance and plans regarding the purification television was rambling and indecisive. His explanation of his personal conduct in accepting the hospitality of a major broadcast licensee was confused and, indeed, pitiful—the more inexcusable in wake of the disclosures of the last few months.

Mr. Doerfer was roundly censured 2 years ago for allowing persons with business before the FCC to be his hosts and pay his expenses. Now it develops that he has done the same thing again. He was entertained last month on the yacht of G. B. Storer, owner of a dozen radio and television stations—all of them, of course, subject to licensee renewal by the FCC. In addition, the FCC chairman accepted a lift to Florida in Mr. Storer's private plane—explaining to the committee that he intends to refund to Mr. Storer the amount of the plane fare.

Mr. Doerfer's justification of all this is the plaintive cry that he "can't be expected to live like a hermit," that there has been "a high morality" among FCC chairmen in the past, that he feels free to associate in a friendly way with persons who have no business of a judicatory nature immediately before the Commission. But the very manner and matter of this justification are an acknowledgment of impropriety. One may sympathize with Mr. Doerfer's good intentions, but the best that can be said of his acumen is that if he doesn't know any better he doesn't belong in the chairmanship of a commission which has the responsibility of regulating an industry which has shown altogether too many ethical lapses.

National Portrait Gallery

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. HUMPHREY. Mr. President, my proposal for a National Portrait Gallery to be housed together with the National Collection of Fine Arts in the historic Patent Office Building was the subject of a fine article by George W. Oakes in the Sunday Star, of March 6, 1960. Mr. Oakes described the present portrait collection now being held by various national galleries until a home is available and pointed out the special appropriateness of the Patent Office Building as a home for the two collections.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VARIETY OF HEROES FOR NATIONAL PORTRAIT GALLERY

(By George W. Oakes)

The long-discussed National Portrait Gallery—a historical museum of portraits and sculpture of America's most distinguished citizens—will become an important addition to Washington's cultural attractions if present plans materialize.

Senator HUMPHREY, Democrat, of Minnesota, last month introduced legislation to establish such a gallery "to foster patriotism and educate the coming generation in what our country stands for." Under legis-

lation enacted in 1958 the National Portrait Gallery would be appropriately placed in the historic Patent Office Building, Seventh and Ninth and F and G Streets NW. This building, constructed between 1837 and 1867, is one of Washington's finest works of architecture.

The portrait gallery, as a separate bureau of the Smithsonian Institution, would be more a historical museum than an art gallery. It would become a national archive for the display and preservation of paintings and sculpture depicting the personalities of prominent Americans who have made significant contributions to the development and growth of our civilization and culture.

THE ORIGINAL IDEA

The concept of a National Portrait Gallery has been current in the Smithsonian for more than 35 years. Since the Civil War many paintings of American civilian and military leaders have been presented to the institution. After World War I many historical portraits, like the one of General Pershing now hanging in the Natural History Museum, were acquired by the Smithsonian's National Collection of Fine Arts.

The idea of a specific museum for such historical paintings perhaps first took concrete form when Andrew W. Mellon, in gathering works of art for the National Gallery, bought in the middle thirties the famous Clark portrait collection of famous Americans. At that time David E. Finley, first director of the National Gallery and now chairman of the Fine Arts Commission, planned with Mr. Mellon that the Clark collection should become one of the nuclei of a national portrait gallery.

Most of the Clark collection, consisting mainly of paintings of 18th and 19th century historical figures by prominent American artists, is being held in storage in the National Gallery of Art, which displays only paintings that are primarily of artistic, rather than historical interest.

To some extent the concept of a national portrait gallery in Washington was suggested by the famous National Portrait Gallery of London. It is the most important one of its kind in existence.

THE LONDON GALLERY

The London gallery began to take shape in 1836 and was moved in 1896 to its present building immediately behind the National Gallery off Trafalgar Square. The British regard it as a national pantheon of historical figures and it has helped to focus the public mind on the nation's past leaders. Although a large part of the more than 4,000 paintings are of deceased British statesmen and public figures, the collection gives special prominence to individuals outstanding in the arts.

In contrast to the House of Commons, where no statue can be erected until the subject has been dead 10 years, the portrait gallery occasionally acquires pictures of individuals within a year of their death. Only reigning sovereigns may be represented during their lifetime.

The gallery has considerable public appeal. Although not as popular as London's National Gallery which averages about 900,000 visitors a year, the Portrait Gallery attracts approximately 150,000 annually.

A special committee of the Smithsonian's Board of Regents under the chairmanship of John Nicholas Brown of Rhode Island is now making plans for our National Portrait Gallery and consulting with its proponents in Congress. Senator Humphrey's bill provides for a director and an advisory board including seven leading private citizens as well as the directors of such Government organizations as the National Gallery of Art, the National Collection of Fine Arts, and the Library of Congress.

Leading art museum officials agree that an outstanding director and a strong independ-

ent advisory board, comparable to the board of trustees of the National Gallery of Art, whose chairman is the Chief Justice, is absolutely essential to set and maintain high standards in gathering and presenting the collection.

MIGHT INCLUDE FURNITURE

The gallery would include mainly paintings and sculpture. It has also been suggested that furniture of the period be on display both to relieve the monotony of the portraits and to create a more realistic impression of living conditions current during the various eras of our country's history. Portraits would be selected on the basis of the subject and not the artist. Despite this policy art critics are convinced that the level of artistic quality can be suitable.

The basis of the portrait collection would be those painting now held for a National Portrait Gallery by the National Gallery of Art and the National Collection of Fine Arts. The National Gallery's collection includes important paintings of Washington by Peale, Lincoln by Healy, John Marshall, Andrew Jackson, Henry Clay, John Calhoun, Nathaniel Hawthorne and Stephen Foster. One of the most interesting portraits earmarked from the Mellon collection for the National Portrait Gallery is that of Pocahontas painted on her visit to England in the 17th century.

But a National Portrait Gallery would reach into wider areas of American life. Outstanding scientists like Edison would be represented as would educators, artists, and poets as well as industrial and labor leaders. The problem of who is to be included will undoubtedly be formidable. In order to withstand the anticipated pressure of those urging a particular candidate, many feel that an acquisitions committee composed of respected authorities should be appointed. Such a group, acting as a buffer for the director and the trustees, might initially prepare a list of subjects whose portraits should be exhibited.

Although it is likely that some art museums and many private collections will donate paintings to expand the present nucleus of the collection, considerable difficulty can be anticipated in obtaining certain desirable portraits from art galleries now possessing them. In this event, consideration might be given to the use of substitutes for the original portrait. Funds for the acquisition of portraits would be provided by the Government.

CONTEMPORARY FIGURES

The question of whether portraits of contemporary figures should be commissioned is one that the director and trustees will determine at a later date. Some distinguished art museum directors would oppose this on the basis that the collection should be composed of those whose place in American history has been clearly established by the passage of time. For this reason it might be decided that except for Presidents of the United States, no individual should be eligible for consideration until 10 or 20 years after his death.

The National Portrait Gallery might also include extensive archives of photographs of famous Americans, for the use of scholars and students.

The Patent Office Building, one of Washington's architectural landmarks, is considered a particularly appropriate setting for such a gallery. The site was marked on the L'Enfant Plan of 1791 for the construction of an American Pantheon. President Andrew Jackson commissioned the distinguished American Architect Robert Mills of South Carolina to design the building. He did so in 1837 using the Greek Revival style which he also selected for the Treasury Department. After the building's completion in 1867 it was used to house 200,000 models of American inventions until they were moved to the

Smithsonian's National Museum at the end of the century.

THE SITE IS HISTORIC

As the Patent Office Building is naturally suited for museum purposes, the cost of renovation would be minor. Present plans provide for the inclusion there of both the National Portrait Gallery and the National Collection of Fine Arts although each collection would be completely separate with its own entrance. Despite the fact that this building has been authorized by law for such use, it will not become available until the present occupant, the Civil Service Commission, is moved. As no funds are yet available for its new building, this shift will probably not take place for another 4 years.

Legislation for the National Portrait Gallery was first introduced in 1950 by Senator GREEN, Democrat, of Rhode Island, when Mr. Finley was Director of the National Gallery. At that time, although President Truman endorsed the plan, Congress failed to pass the bill. Now Senator GREEN has become a cosponsor of Senator HUMPHREY's bill. A companion measure has been introduced in the House by Representative RHODES, Democrat, of Pennsylvania. Whether legislation will be required to supplement the 1958 act authorizing the Patent Office for such use will be determined by the Smithsonian's Board of Regents.

The Fight Against Smut

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. OLIVER. Mr. Speaker, one of the most effective means of combatting the ever-increasing threat which obscene literature poses to our society is through informed, intelligent, and responsible but aggressive civic action.

The Portland, Maine, area is fortunate to have a dedicated man, Rev. Vincent A. Tatarczuk, to spearhead this crusade. Father Tatarczuk has devoted considerable time and effort to speaking before civic, fraternal, and religious groups, alerting them to the serious effects of obscene literature, not only on our youth, but on our entire society as well. He has been personally instrumental in the formation of local civic committees dedicated to the objective of keeping this objectionable material off our newsstands and out of our mails.

It is, with pleasure, that I insert in the CONGRESSIONAL RECORD a speech and an editorial prepared by Father Tatarczuk. The first deals with the overall problem of obscene literature in our society; while the editorial, which originally appeared in the July 10, 1959 edition of *The Church World*, a weekly newspaper, published in Portland, Maine, comments on the Supreme Court decision relating to the New York State ban against the movie, "Lady Chatterly's Lover."

(The speech and editorial follow:)

THE FIGHT AGAINST SMUT

Until recent years, whenever any group of citizens made a concerted effort to halt the indiscriminate sale of lurid and obscene books, pocketbooks and magazines in their

communities, they were generally labeled as bluenosed reformers, self-appointed censors, or prudish busybodies. Today, in every part of the Nation, whole communities have been aroused by the deluge of pornographic literature which has flooded our newsstands and drugstore counters, and is even disseminated through the mails, despite the valiant efforts of the Post Office Department. Now more than 200 cities have organized committees of Citizens for Decent Literature to work with law enforcement officers and agencies in stopping the distribution and sale of smut.

Why the change of attitude?

I believe there are three basic reasons:

The first is that within the past decade the printing, distribution, and retail sale of indecent literature has developed into a multimillion dollar business, with new pornographic books and magazines issued every month, vividly depicting every form of moral depravity and perversion. It is no longer a question of an occasional risqué picture magazine or book which is procured by a behind-the-counter sale. They are flaunted all over the newsstands and counters, in the most conspicuous places, and consequently they can no longer be ignored.

The second reason for the public rage is that a great percentage of the new releases are aimed directly at the teenagers, whom the industry has discovered to be the most avid readers of this filth, and therefore the most important customers.

The third reason for the change of public attitude is the proven effect that these publications have had upon those who constantly feed their minds with this trash.

The purveyors of obscenity challenge the alleged connection between the reading of lurid material and the commission of crime and the increase of delinquency, but we hazard to guess that not one of them would introduce into their own homes the books and magazines that exploit sensational sex, crime, and perversion, for fear of the effect this literature would have upon their own offspring.

There have been many painstaking studies made of the case histories of young people taken into custody for immoral behavior or for various other crimes and delinquencies. The results of these investigations have frightened even those who were already convinced of the direct connection between pornographic literature and immoral or delinquent behavior. These surveys have been extended by different agencies to all phases of the juvenile problem, and the end result has been the undeniable conclusion that the minds and consciences of countless American youths have been warped by the violent and lurid content of their reading materials.

The New York State Joint Legislative Committee Studying the Publication and Dissemination of Obscene and Offensive Materials concludes its current report with the conviction that "children are attracted to lurid and sexy publications; they depict actions the teenagers might not have otherwise known about; they often make such activities seem socially acceptable or even glamorous and subtly challenge the young to imitate them."

This committee has only confirmed what parents, through their intimate observations, have always known. In 1957, the Trendex News Service conducted a nationwide poll of parents—only parents of children from 6 to 20 years of age. The question proposed was this: "Do you think that some of the lurid magazines and books on many newsstands contribute to juvenile delinquency?" In answer 70 percent said yes; 15.4 percent said no; and 14.6 percent had no opinion.

Courtney Ryley Cooper, in his book "Designs in Scarlet," draws a shocking picture relating to this problem which is not born in his imagination, but of the surveys he has

taken over a long period of time with the cooperation of the Federal Bureau of Investigation, the U.S. Post Office Inspection Department, the Federal Bureau of Narcotics, and other national and local agencies having to do with the detection of crime. He attributes the increase of crime to the decay of moral codes, and the decay, in turn, to the destruction of the moral sense of youth through its contacts with sex perversion produced by a sex-mindedness resulting from the reading of lewd literature. His studies have convinced him that the filthy magazine is not a chimera of prudish minds. Its menace is real, its influence potentially crime-inciting.

It has been many years since Mr. Cooper concluded his investigations, but the subsequent development of our juvenile history has offered no rebuttal to his conclusions.

Of course, as the New York State Legislative Committee has recently observed, the purported defenders of freedom of speech will still steadfastly contend that there is only an imaginary or, at most, a coincidental relationship between the reading of obscene material and delinquency, despite the contrary opinion of qualified psychiatrists, social workers, and police officials, and despite the numerous cases where defendants in criminal actions have themselves attributed to lurid reading the inspiration for their crimes.

Now we do not contend that all our American teenagers read these materials, but we do contend that they are all exposed to it. It is available to anyone of them provided they have a quarter, or 15 cents, or even just a dime for a purchase. We do not contend that every youngster who may pick up an indecent piece of literature will be permanently tainted by it, but we do contend that it is, for young and old alike, a very proximate occasion of sin, and for those who do make it a habit, it is a very real corrupting influence.

As Mr. John Brennan, assistant executive secretary of the NODL (National Office for Decent Literature) has recently noted: "Once an individual has been initiated, his predilection becomes progressive. He develops a tolerance for pornographic stimuli, and like the drug addict finds himself needing stronger and stronger doses to get the thrill he is looking for."

Surely our publishers, distributors, and retail salesmen are not going to contend that such a person is going to be satisfied with the vicarious thrills derived from his reading and that, even though his habitual patterns of thought have been changed, he is not going to seek a new outlet for his prurient tastes.

It is for all these reasons that so much publicity has been given to this problem in recent years. Yet, despite these facts which I have just related, and despite the publicity in the secular and religious press and from speakers' platforms, there are still three distinct reactions to this problem of smut.

There are those who have recognized the problem, who have come to realize the depraving influence of printed filth and the danger it presents to their own young people, and they have conscientiously concluded that they must act, not as guides to the public conscience, not as bluenosed reformers or censors of the reading habits of the community at large, but as dutiful parents, as good teachers, and as responsible civil officials. In many communities they have banded together in committees of Citizens for Decent Literature, and have attempted, through the normal processes of law, to give some measure of protection to those youngsters whom God has placed in their charge. They have, but this past February, coordinated their efforts on a national level in order that they might work more effectively to roll back the tide of obscenity which, as U.S. Postmaster General Summer-

field has said, "is poisoning the very marrow of our national life."

In opposition, there are those who fight even more vehemently to protect what they hypocritically call the freedom of artistic expression, the freedom of thought and the freedom of the American press. The publishers, distributors, and even some of the retailers of obscene publications have resorted to every legal trick and maneuver, and with considerable success, to protect their selfish interests, despite the moral cancer they know they are spreading throughout the Nation.

Whenever they are indicted and brought before the courts, they raise a hue and cry against what they call a medieval censorship, and then they solicit the aid or at least the moral support of the various liberty groups, pleading that they are not after the American dollar, but are only trying to fight for the freedom of expression and individual liberties against reactionary bluenoses and overzealous prudes. But they are, in fact, little disturbed that their publications have turned the thoughts of their readers to the lurid and obscene, making their minds cesspools of salacious and lustful phantasmas, and that these thoughts have too often erupted in external antisocial actions. They print and peddle their filth and corruption in order to fill their own pockets, and then, like Pilate, they attempt to wash their hands of the consequences.

They have too often succeeded because of the apathy of the third group. This group is made up of those who cannot believe that there is a problem in their own community, either because they are unaware of all that passes through the malls and are blind to the displays on their newstands, and in the drugstores, supermarkets and neighborhood grocery stores, or because they naively believe that we and our dependents are immune to the cheap publications.

Some months ago, in preparing a feature story for the Sunday Telegram, a staff writer for the Gannett Publishing Co., made a survey in the Portland area. He discovered that this problem is not restricted, as we would like to believe, to the great metropolises of our country. Here, on almost all newstands, and in most drugstores, there were displayed an unbelievable number and variety of slick magazines which cater to the prurient taste. We have discovered that the situation is no different in the other cities and towns of Maine. The magazines and other cheap-paper publications of similar theme are available, and they can be bought by any teenager.

Because of the action of various national organizations and many citizen committees, the material of most of the romance and confession magazines has changed for the better. Now most of them—not all—are trashy rather than obscene. The dominant theme, however, is still unmitigated sex. Here, for example, are titles of stories found in these milder publications which appeared on our newstands in recent months. They were taken from a random selection. "I Elope With My Mother's Lover," "A Woman's Nightmare," "I Had a Baby at Twelve," also "Sex Problems of a Divorce" and "Why Some Teenagers Have To Be Bad."

Among the real offenders, however, are the men's magazines and the growing number of "pin-up-boy" publications obviously intended for homosexuals.

Even these heavily illustrated magazines are outdone, in lurid content and in volume, by the pocket-size books whose characters, as aptly described in the latest report of the NODL, "move in a miasma of rape, incest, lesbianism, homosexuality, sadism and masochism."

Why do they continue to be printed and distributed, and allowed to contaminate our society? Because of our apathy, and because too often, we do not have adequate legal sanctions.

At the present time the U.S. Supreme Court holds that obscene speech and writings are not protected by the constitutional guarantees of freedom of speech and the press. There are many, however, and perhaps some of the Justices of the Nation's highest Court are to be included among them, who believe that almost any restriction of the expression of ideas is a violation of constitutional rights. They confuse liberty with license, and should they succeed in their present purpose, which is to void all existing laws dealing with this problem and to prevent the enactment of more precise and adequate legislation, then they will be responsible in great measure for the breakdown of the moral fiber of our people.

We must admit that here in Maine our laws are not adequate to cope with the problem with which we are faced.

The 1954 Revised Statutes of the State of Maine contained the following enactment: "Whoever imports, prints, publishes, sells or distributes any book, pamphlet, ballad, printed paper or other thing containing obscene, indecent or impure language, or manifestly tending to the corruption of the morals of youth, or an obscene, indecent or impure print, picture, figure or description, manifestly tending to the corruption of the morals of youth, or introduces into a family, school or place of education, or buys, procures, receives or has in his possession any such book, pamphlet, ballad, printed paper or other thing, either for the purpose of sale, exhibition, loan or circulation, or with the intent to introduce the same into a family, school or place of education, shall be punished by a fine of not less than \$100 nor more than \$1,000, and by imprisonment for not more than 5 years."

This statute was by no means perfect. In the light of recent court cases, for proper enforcement there would be a need for a clarification or definition of terms. A revision was in order.

But in 1957, the following statute was substituted for it. "Whoever sells, rents, displays for sale, loans, gives or distributes to a child under 18 years of age or offers for sale to such a child any pamphlet, magazine, comic book, picture, picture book which contains fictional illustrations of sadism, sexual perversion, bestiality or lust, or of the physical torture of human beings, shall be punished by imprisonment for not more than 30 days or by fine of not more than \$50. Under this section it shall be necessary to prove that the defendant knows of the offensive picture contained in the literature involved." In 1959 this last sentence was revised to read "it shall be necessary to prove that the defendant by the exercise of reasonable diligence should know of the offensive picture contained in the literature involved."

Under the existing statute, only fictional illustrations come within the scope of a penal sanction. It matters not how much of the obscene and indecent may be described or related in any publication, providing it contains no pornographic picture or an illustration of physical torture.

This revision of statute, no matter what was its motivation, represents a tremendous victory for the smut industry.

There is, of course, no good prospect of new and stronger legislation, on a national or State level, unless there is an end to the gross indifference of the general public.

At the present time efforts are being made in our Nation's Capital to strengthen the arm of the Postmaster General in his fight to rid the mails of every form of obscene material. We will have greater assurance of success if our representatives in Washington know that they have your moral support. Let them know that you expect the enactment and enforcement of laws pertaining to obscene and pornographic literature.

On the local level no more effective program has been realized than the Citizens' Committee for Decent Literature. Its modus operandi is quite simple. The first step is an objective evaluation of the problem in the community or State. When this is accomplished, a program of information is carried out, usually through the various civic and religious groups working in cooperation with the proper municipal or State authorities. If there are no adequate State laws or local ordinances to deal with the problem, the machinery is set in motion to cure this defect. If the laws are adequate, then the committee, representative of the community at large, works for their enforcement.

We believe this program is vital.

Rev. VINCENT A. TATARCZUK, J.C.D.
PORTLAND, MAINE.

[From the Church World, July 10, 1959]

NEW CONCEPT OF FREEDOM

We read with great interest several of the opinions of the Justices of the U.S. Supreme Court who unanimously agreed to set aside the New York State ban on the movie "Lady Chatterley's Lover."

The decision was handed down on the ground that the ban "struck at the very heart of constitutionally protected liberty" by forbidding the advocacy of ideas. The film depicts an adulterous relationship in an attractive light, and attempts to convey the idea that it is, in some circumstances, permissible.

Some 4 or 5 years ago, New York censored and banned a notorious foreign film on the ground that it was immoral. The U.S. Supreme Court decided that the term "immoral" was too vague, and that it afforded those responsible for the censorship of films too wide a discretion in determining when an exhibition license should be denied. Accordingly, after much deliberation and debate, the New York statute was amended, and the words "sexual immorality" substituted for "immoral." Then, in 1956, "Lady Chatterley's Lover" was banned on the ground that it taught that adultery could be a proper or at least a tolerable relationship. Again the U.S. Supreme Court ruled that the ban was out of order.

There is much food for thought in the various opinions of the Justices, all of whom concurred in the speedy reversal of the New York Court of Appeals which had upheld the ban.

In the main opinion, Associate Justice Potter Stewart wrote that "Its (i.e. the first amendment's) guarantee is not confined to the expression of ideas that are conventional or shared by a majority. It protects advocacy of the opinion that adultery sometimes may be proper, no less than advocacy of socialism or the single tax."

Justice Stewart must realize, however, that adultery, which is forbidden by the natural law, by the positive law of God as expressed in the sixth commandment, and by the civil statutes of all the American States, can never be tolerated in any healthy, God-fearing society. He may fear, with Justice Felix Frankfurter, that vague censorship laws may "lead to timidity and inertia and thereby discourage the boldness of expression indispensable for a progressive society," but he must admit that freedom of expression does not include the right to disseminate ideas calculated to weaken the moral fiber of the Nation or to destroy our reverential concepts of marriage, family, and the home.

He might note, too, that socialism and the single tax, unlike adultery, cannot be described as inherently wrong; 'twas a most unhappy analogy that he used.

Our laws provide for many restraints calculated to protect the legitimate interests, the health, and the well-being of the citizen. These restraints are rarely challenged

as attacks on our "constitutionally protected liberty," because we realize that freedom does not imply the license to jeopardize the strength of the Nation of the welfare of its people. The advocacy of adultery or the advocacy of any form of immoral behavior is not less a threat to our national well-being than the physical dangers from which we are protected by the countless ordinances and statutes of the cities and States in which we live.

Justice William O. Douglas also gives evidence of the haste with which the U.S. Supreme Court moved in reversing the New York Court of Appeals. We quote: "I can find in the first amendment no room for any censor whether he is scanning an editorial, reading a news broadcast, editing a novel or a play, or previewing a movie."

Would the Justice claim that those who would make irresponsible use of the various media of communication and entertainment, and threaten social and moral harm, cannot be restrained by any human authority?

Soon after the U.S. Supreme Court ruled that States may not interfere with the advocating of antisocial ideas, a constitutional amendment was introduced in the U.S. Senate by Senator JAMES EASTLAND, of Mississippi. It reads: "The right of each State to decide on the basis of its own public policy questions of decency and morality, and to enact legislation with respect thereto (e.g. the film censorship laws of New York), shall not be abridged."

Supporting the amendment, Senator FRANK LAUSCHE, of Ohio, declared on the Senate floor: "I cannot accept as sound the declaration that under the right of free speech the showing of moving pictures in public encouraging and implicitly approving an adulterous life is lawful, and that the Government is helpless to do anything about it."

Evidently, with proper respect for the opinions of our Supreme Court Justices, there are responsible public leaders who agree with the late Pope Pius' declaration that "the watchful care of the State's officials (over the press and motion pictures) is not an unfair limitation on the liberty of individual citizens, for it is concerned not with the private citizens as such but rather with the whole of human society with whom these arts are being shared."

He answers with broad assurances. The country's defenses are adequate, he says, although there are many well-informed men who say differently. America is not in any space race with the Russians, he assures, although a high-ranking official of his own administration says otherwise.

The President's statements are probably reassuring to most people. Yet the suspicion grows that America is not giving its best in this struggle with a militant, determined, well-organized foreign ideology that seeks to impose itself upon all the world. And the suspicion grows that the country is not rendering its best because no one demands its best.

In recent days several prominent individuals have appeared before a Senate subcommittee that is inquiring into the adequacy of Government policymaking procedures. None of them was a partisan politician with an eye on November's votes. None of them was a general or an admiral with a "parochial" military viewpoint. Several were Republicans.

Yet what they had to say added up to a serious questioning of American effort, American priorities and American leadership.

Said Robert C. Sprague, who was cochairman of the Galther Committee on National Security in 1957:

"We have not done a great deal that urgently needs to be done * * *. It's just utter nonsense to believe that we can't do the things that we need to do to survive, to win this contest. * * * The danger is more serious than the President has expressed."

The United States must be awakened to the seriousness of the overall Russian threat, he continued. "There is only one man in the United States who can do this effectively, and that is the President."

Said Robert A. Lovett, former Under Secretary of State and Secretary of Defense:

"National security depends on many things. Some of them, to be sure, are material things. But the most important ones are matters of national spirit."

"It depends on our belief in the future; it depends greatly on our willingness to give up a little of today in order to have a tomorrow. While the challenges of the moment are most serious in a policymaking sense, I see no reason for black despair or for defeatist doubts."

"We can do whatever we have to do in order to survive and to meet any form of economic or political competition we are likely to face. All this we can do with one proviso: we must be willing to do our best."

Said Thomas Watson, Jr., president of International Business Machines:

"We cannot just go along with 'business as usual' and hope to win. * * * If we do not impose the strains necessary to win, it is obvious that at best we will live in a Soviet-dominated world and, at worst, in a Soviet province."

"* * * Our national goal should be clear superiority over the Soviet Union in all possible areas, and we should believe enough in our democracy so that we will not be reluctant to enter fully into the contest."

And said Dr. James P. Baxter, president of Williams College and a member of the Galther committee:

"It is really tough business for a nation to sustain the prolonged effort that cold war demands. But I think we are right up against it, and we are going to have to do it."

These men are saying that a nation with $2\frac{1}{2}$ times the resources of Russia can meet any Communist challenge, provided only that its resources are summoned and used.

It can mount whatever defense program is necessary. It can regain the lead in space exploration, whose propaganda importance is tremendous even if its military importance is not.

It can strengthen its educational program, and it can summon itself and its allies to a greater effort in behalf of the underdeveloped nations.

It may require a sacrifice in the frills and fancies of consumer goods, and a sacrifice in taxes. But that would hardly wreck the Republic, while the Communists well might.

The High Price of Drugs

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. UDALL. Mr. Speaker, the Kefauver committee's investigation continues to reveal case after case in which the prescription drug industry has abused its public trust. Last week the Senate hearings revealed that some companies may not only be charging unreasonable prices but may also be pushing incompletely tested drugs onto the market—drugs that could be worthless or even dangerous.

Under leave to extend my remarks in the RECORD, I include the following editorial from the February 26, 1960, edition of the Washington Post:

THE HIGH PRICE OF DRUGS

The Kefauver committee investigation of the prescription drug industry is getting onto distinctly firmer ground. An alarming, and certainly disgusting, picture of some industry practices is emerging, and Minority Leader DIRKSEN would do the Senate and the public a favor by dropping his ill-considered objections to the orderly continuation of the hearings at normal hours even though they may conflict with Senate sessions.

The early Kefauver disclosures of fantastic markups in individual drug items made more headlines than they did sense; many essential steps in the development, manufacturing and marketing process were simply not taken into account in the calculations. The committee acknowledged this, but the resulting publicity was nonetheless unfair. As the broader picture has emerged, however, it has become apparent that profits of many larger pharmaceutical houses are outrageously high—twice the average for all industry. The way in which this stunning financial success has been achieved makes the really dismal reading, however.

As the hearings have shown, the enormous growth of the drug business in the past decade has been brought about in part by the development of an infinite variety of similar drugs which have been patented, labeled with brand names and peddled with massive promotion and advertising campaigns among doctors. The cost of all this has added considerably to prices, but it now appears that this may be the least of the evils of widespread hucksterism.

As yesterday's hearings, Dr. Haskell J. Weinstein, a former research director for Charles Pfizer & Co., charged that incompletely evaluated drugs have been brought on the market "which not infrequently are hazardous." Doctors, he said, are virtually "brainwashed into prescribing new medicines, under their costly brand names, even without adequate information about their efficacy. Dr. Weinstein's predecessor at the Pfizer Co., Dr. Martin A. Seidell, said he had quit because of such "perverted

Americans Fight a War From a Peacetime Stance

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. ERVIN. Mr. President, on March 7, there was published in the Charlotte (N.C.) Observer a significant editorial entitled "Americans Fight a War From a Peacetime Stance." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICANS FIGHT A WAR FROM A PEACETIME STANCE

President Eisenhower seldom holds a news conference now in which he is not asked about charges that the country is not doing all that it must do to meet the Communist challenge.

marketing attitudes" which he found "incompatible with both the ethics of my profession and my sense of morality." If drug promotion, in addition to burdening patients with inordinate costs, is also resulting in the distribution of dangerous (or even merely useless) pharmaceuticals, the Kefauver committee has at last struck legislative "pay dirt."

Obviously, the companies' answers to these latest charges must be awaited before any conclusions are reached, and it would be wrong to indict all drug manufacturers for the practice of some. But if there is doubt about what the Government could or should do to end profiteering, there is no doubt whatever about its powers—and its obligation—to protect the public from the premature dissemination of drugs that may be of dubious value or even dangerous.

It is also beginning to appear that physicians themselves must bear a considerable part of the blame for their patients' increasingly burdensome drug bills. By relying so heavily upon brand-name promotions, they may be denying their patients considerable savings possible through the prescription of medicines by their generic names. Indeed, if the Kefauver hearings do no more than educate the public to demand more economical drugs whenever possible, they will have performed a genuine service.

Milwaukee Journal Calls for All-Out Effort for Peace Through Strength

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. PROXMIRE. Mr. President, the Milwaukee Journal in a remarkably constructive fashion recently called editorial attention to the warnings by distinguished American businessmen that we are not doing enough to keep America defensively strong. The Journal agreed we should do much more to assure our strength, and then went on to call for sober reflection on where the missile race and the construction of weapons of infinite destruction is taking us. The Journal eloquently concludes:

While making sure that we are adequately armed, must we not make more intensive, imaginative, consistent efforts to find ways to peace—disarmament, nuclear controls, guarantees of existence? Should not the basic concern be over our leaders thinking in outmoded terms—and the fact that the voices which must show the way to a livable future are seldom heard, almost always ignored?

Mr. President, I ask unanimous consent that this editorial from the Milwaukee Journal be printed in the Appendix of the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VOICES THAT SHOW THE WAY TO LIVABLE FUTURE SELDOM HEARD

President Eisenhower has heatedly defended our defense and missile programs. He sees no threat to our national prestige in

Russia's sputniks. He calls inflation the greatest danger to our Nation. He says that his administration has fully informed the Nation on the international situation.

Recently three leading Republicans and an independent who has strongly supported Eisenhower and has been the President's frequent guest appeared before the Senate Government Operations Subcommittee headed by Senator JACKSON, Democrat, of Washington. The committee is studying how, in JACKSON's words, "can a free society organize to outthink, outplan, and outperform totalitarianism—and achieve security in freedom?"

Said Robert C. Sprague, Boston businessman and cochairman of the Gaither committee which Eisenhower named to make a confidential study of national security problems:

"The Nation faces a clear and imminent threat to its survival but we have not yet fully awakened to this unpleasant fact." Only one man can do anything about this—"the President; I don't think there is anybody else."

Then he added: "I believe the danger is more serious than the President has expressed himself to the American public." Sprague said that it was silly to argue that increased spending for survival would bankrupt America. And he criticized the budget approach to defense.

Sprague's final criticism was that it wasn't enough for a President to have briefings on important subjects—"Even the best briefing is no substitute for homework. The man who does not have time to do his own reading of really basic studies and policy papers and reflecting on them has not assigned proper priorities to the demands on his time."

Robert A. Lovett, investment banker with long experience in government, said many of the same sort of things. He said, in relation to competition with the Soviet system, "We are doing something short of our best." The Government underestimates the Communist threat and this Nation has been losing prestige.

James Phinney Baxter III, Gaither committee member and president of Williams College, was also critical of the budget approach to real national needs for security and said: "I am willing to pay more taxes if it is necessary to do the things we need to do, and I believe that our entire people would feel the same if they realized all that is at stake."

And, finally, Thomas J. Watson, Jr., president of the International Business Machines Corp., who says he's an independent, said that "we cannot go on with business as usual" and expect to compete with the Russians. He did not mention the President, but he said: "I do not agree with people who suggest that we must not push our economy to any point necessary to win in competing with the Soviet because we might lose what has made this country great."

This testimony shows deep concern over whether this country is on the proper course, is doing enough and even understands where it is headed. Part of that concern must include the question of where, in this age when complete destruction can be a matter of seconds, the whole weapons and missile race is taking us.

While making sure that we are adequately armed, must we not make more intensive, imaginative, consistent efforts to find ways to peace—disarmament, nuclear controls, guarantees of existence? Should not the basic concern be over our leaders thinking in outmoded terms—and the fact that the voices which must show the way to a livable future are seldom heard and, when heard, almost always ignored?

Backward Step

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. HIESTAND. Mr. Speaker, when Congress enacted the Landrum-Griffin law last year, it very carefully considered the matter of picketing on construction sites and included certain fair but specific limitations.

Certain union leaders would like to have all restrictions on picketing removed. That would, in the opinion of many, create a secondary boycott situation strictly forbidden by the Taft-Hartley law.

A very able editorial in the Washington Evening Star, March 3, 1960, comments on the situation and is produced herewith:

A quietly bitter fight over a 1949 ruling by the National Labor Relations Board, later upheld by the U.S. Supreme Court, is going on before a House Labor Subcommittee.

The ruling, issued in what is known as the Denver Building Trades case, establishes four conditions under which picketing may be carried on legally against a primary employer (the one involved directly in a valid labor dispute) at a construction site. Since construction normally involves multiple employers—subcontractors hiring workers in different crafts—the board set up these conditions in an effort to prevent interference with the operations of "unoffending employers" . . . in controversies not their own. Picketing in violation of the conditions was classified as an illegal secondary boycott.

The Building and Construction Trades Department of the AFL-CIO has fought this limitation on so-called common site picketing on grounds that it is unduly restrictive in the peculiar circumstances of the construction industry. President Eisenhower and Secretary of Labor Mitchell have recommended legislative clarification to make it explicit that concerted action against . . . an employer who, together with other employers, is engaged in work on the site of the project, will not be treated as a secondary boycott. A belated effort to accomplish this through amendment of the Landrum-Griffin bill while in House-Senate conference last year was dropped when the threat was raised of a point of order against including new legislation in conference.

At this point, strong opposition is being voiced by the National Association of Manufacturers and the U.S. Chamber of Commerce on grounds that it is special-interest legislation that would tend to break down safeguards against secondary boycotts in many areas, that it would be the first wedge to weaken the protection offered workers and employers by the labor reform law and that it would be in direct conflict with national labor policy as already determined by the Congress.

Unfortunately, but not surprisingly, the pressures of election year are apt to play a part in consideration of legislation of this sort. The evils of secondary boycotts have been well demonstrated. A legislative redefinition should be undertaken with the greatest caution, and without political motivation.

Time To Stand Up for World Law

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in Life magazine of March 7, 1960, entitled "Time To Stand Up for World Law."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO STAND UP FOR WORLD LAW

Those who believe the rule of law must be superior to the rule of force in the world won a tough, hard battle in Chicago last week at the meeting of the American Bar Association's House of Delegates. The issue whether the ABA would continue, as it has done for 13 years, to support repeal of the notorious 1946 Connally amendment. This amendment hampers extension of the rule of law by a reservation that only the United States can decide whether the World Court may take jurisdiction in any case involving our Nation. The repeal proponents won, 100 to 93 on one vote and 127 to 68 on a second.

But the size of the opposition shows how many people there are—even among lawyers, who should be the most vigorous advocates of the rule of law—who have been misled by the argument of unreconstructed isolationists (or pure demagogues) that repeal would undermine U.S. sovereignty. And some also fear that foreign judges may decide cases on ideological, political, or nationalistic lines.

Actually, both these fears have little basis in reality, as any reasonable examination of the facts proves. The Court's decisions have been generally excellent in legal reasoning, scholarship, and judicial integrity—and furthermore those who take cases to the Court usually obey its decisions. Among the 15 judges, chosen by the U.N.'s General Assembly and Security Council for 9-year terms, some have rendered decisions against their own nations. For example, a Peruvian, appointed as an ad hoc judge, decided against Peru in one case, and in another, won by the United States, a Soviet judge strongly defended the U.S. position.

As Arthur Larson's World Rule of Law Center at Duke University points out, the United States, with its billions invested in so many lands, needs the protection of law and the Court's jurisdiction more than any other country. But so long as the Connally reservation exists, any other nation can use it against us, as Norway did against France (which had a similar reservation) to keep the Court from ruling on Norway's repudiation of some gold bonds sold to French citizens. Last year even President de Gaulle, with all his touchiness about French sovereignty, saw his way clear to abolish France's reservation.

Some enthusiasts for extending the rule of law go so far as to claim that strengthening the World Court could establish world peace and order right away. That's too much to expect. But what it can and would do would be to build an accretion of precedents—of peaceful settlements of disputes accepted and obeyed by all the parties—which would help the world grow more orderly and less violent. As these precedents accumulate, smaller regional courts might well be established—for example in

the Organization of American States—to judge such issues as the sort of expropriation which Cuba is now undertaking.

The next chapter in the fight for repeal of the Connally Act is now opening. It hinges on whether Senator FULBRIGHT, the Democratic chairman of the Foreign Relations Committee, brings out upon the floor the repeal resolution already introduced by Senator HUMPHREY. FULBRIGHT himself supports repeal, as do the President, Vice President NIXON and Attorney General Rogers.

What worries FULBRIGHT is whether this support is merely lip service or whether Eisenhower and Nixon are willing to make a vigorous, emphatic fight for repeal and force Republican leaders to go along. If such a fight is not waged, FULBRIGHT fears the possible defeat of repeal could be a damaging propaganda blow to the United States before the world. And so it could.

NIXON, especially, can wield great influence in this fight because he is very popular among the admirers of former Senator John Bricker—who are the principal opponents of repeal. But only last week Clarence Manion, the former dean of Notre Dame law school, who has always opposed repeal, accused NIXON of "ambiguity" in his support and urged him to make an "unequivocal statement" of how he stands.

NIXON's past statements have been clear enough in support of repeal (Life, April 27). But Senator FULBRIGHT is fully entitled to demand that the administration back its words by drumming up maximum support from Republicans in the Senate.

Three Views on the Need for New, Clean Elections Legislation

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. UDALL. Mr. Speaker, the press throughout much of the country has displayed a gratifying, sustained interest in the current drive for clean elections legislation.

Recent editorials from three papers representing widely separated areas are typical of the many written about the need for modernizing election laws. These three, from the Springfield (Ohio) News, the Pittsfield (Mass.) Berkshire Eagle, and the Birmingham (Ala.) Post-Herald, read as follows:

[From the Springfield (Ohio) News, Feb. 5, 1960]

SOMETHING GAINED

After 6 uphill years, a crew of conscientious legislators has bulldozed a really good elections reform bill through the Senate. The Senate itself couldn't be more surprised. The majority was amazing—59 to 22. So is the bill.

In addition to more realistic ceilings on campaign expenditures, it would open the books on spending in primaries, State conventions, and by local and State committees on behalf of Federal candidates. The power of individual contributors to bid for political favor with wide-open checkbooks would be curbed at last.

The end of this beautiful dream of honest election legislation will come, of course, in the House. Southern Congressmen don't want disclosure of primaries bookkeeping.

Others, mindful of the cost of standing for election every 2 years, will be glad to join them in presiding at quiet last rites.

So the old Corrupt Practices Act of 1925 will stay on the books—for now. As a control on modern campaigning it's like trying to tame tigers with catnip.

Yet something important has been ventured and won. Modern Republicans joined northern Democrats to carry a Senate victory blocked by conservative coalition since 1954. Good ground has been gained for the day when lavish campaign spending produces another scandal and a strong public clamor for reform.

[From the Birmingham (Ala.) Post-Herald, Jan. 28, 1960]

MORE GIVERS, LESS MONEY

In the debate on the "clean elections" bill just passed by the Senate, a principal theme was the desirability of minimizing the "fat cats" in a political campaign and relying on many small contributors.

The Senators even considered a proposal to permit small tax deductions as an encouragement to small donors in election campaigns. This properly was turned down, but not because of disagreement over the objective.

As passed, the bill takes a step toward curbing oversize contributions. It fixes a flat ceiling of \$10,000 on the total any one person may give to all political committees in one year. (Present limit is \$5,000 per committee, but a well-heeled contributor can make us many \$5,000 gifts, as there are committees.) No effort was made to curb the spending of labor organizations, other than the flat overall ceiling applied to all interstate committees.

The top on presidential election spending by national committees would work out to \$12.5 million on the basis of the 1956 election—the ceiling is fixed by a formula tied to the number of voters. (The two major parties are estimated to have spent \$33 million between them in 1956.) The proposed new ceiling was said to be "realistic" in view of today's high cost of television and travel.

But there is massive waste and extravagance in every campaign. If candidates and parties had to depend on far lesser totals, they could manage quite reasonably. And if individual contributions were limited to sums most people could afford—say up to \$100 at the most—the politicians would not be tempted by slush funds contributed by those seeking favors from Government, or even by the rackets.

The Gallup Poll once reported 17 million American families were willing to give small sums, at least \$5 each, if they were asked by the parties they favored. This would amass a sum sufficient to run all political organizations and campaigns, if they operated prudently.

When a relative few of the wealthy donate a high percentage of a campaign's expenses, they automatically assume an influence all out of proportion either to their wisdom or their benevolence. A public official elected with the help of 2,000 donors of \$5 is indebted to practically no one—but a man who gets \$10,000 from a single contributor obviously is in hock to his benefactor. That's the nub of it.

[From the Pittsfield (Mass.) Berkshire Eagle, Jan. 27, 1960]

THE SENATE BUYS A BROOM

The U.S. Senate passed its first major bill of the 1960 session Monday night: a bill aimed at providing effective control over political campaign expenditures. It is a sweeping reform—so sweeping, in fact, that plans are already underway to ambush and kill it in the House.

If this happens it will be an unhappy ending indeed, because the Senate bill is

both excellent and long overdue. The truth is that present legislation governing campaign spending and financial reporting by political candidates is an almost unqualified farce. Existing restrictions are inadequate, unrealistic, unenforced and, for all practical purposes, unenforceable.

The new Senate bill, largely the handiwork of Democratic Senator HENNING, of Missouri, beefs up the ineffective Corrupt Practices Act of 1925 in four vitally important ways:

It deals with party primaries as well as with final elections. This would make restrictions on campaign contributions and expenditures applicable for the first time in the South, where victory in the Democratic primaries is normally tantamount to election.

It establishes for the first time a fixed ceiling (\$10,000) on the amount that any individual may contribute for political purposes in any election. Present law provides that no one may contribute more than \$5,000 to any individual candidate—but this is meaningless in practice because there is no limit whatever to the number of \$5,000 contributions a person may make to different candidates or to the various separate campaign committees of a particular candidate.

It raises the present law's ceilings on campaign spending by candidates to more realistic levels—for example, from \$10,000 to \$50,000 in the case of U.S. Senate campaigns, and from \$3 million to \$12,500,000 for presidential campaigns. The proposed new limits are still far below what is normally spent in campaigns for Federal office, but they at least represent a step in the right direction.

Finally, the Senate bill extends the provisions of the Corrupt Practices Act to the activities of purely State and local committees when they spend money in behalf of candidates for Federal office. This closes a loophole through which many candidates have received enormous campaign contributions without bothering to report them.

It would be naive to suppose that enactment of these reforms would automatically end such longstanding evils as concealed political contributions and dummy campaign committees. This, after all, is a field in which enforcement is peculiarly difficult, if only because those charged with enforcement are often themselves the beneficiaries of loose financial practices in their own political campaigns.

But at the very least the Senate bill would establish a sound standard to which the proponents of reform can repair. It would deter many otherwise law-abiding candidates and campaign contributors from illegal practices which they now rationalize on the grounds that the laws make no sense. And it would at least provide a realistic basis for crackdowns in the case of the most flagrant violations.

Ike for Tykes—Journey at Home

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Ike for Tykes—Journey at Home Proposed," published in the Delaware County Daily Times of Chester, Pa., which was written by Mr. Bob Finucane, city editor, which contains an extremely interesting suggestion to the

general effect that President Eisenhower, either during his term of office or perhaps after the conclusion of his term, should make a tour of the United States, so that our younger generation may have a chance to see and to become acquainted with the President and to view and to observe him before he becomes a historical figure, which may inspire them to a greater recognition of the accomplishments of this great and good man, both as General of the Armies and as President of the United States, in the hope it will give them an opportunity to cherish in their recollections through all the years the memory of having seen in person the President of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE FOR TYKES—JOURNEY AT HOME PROPOSED
Mr. DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Welcome home.

All of us hope your journey to South America will not, in the long run, rob you of time in that rocking chair to which you aspire.

The months ahead, we realize, are to be full ones for you. But we cannot contain the urge to suggest to you still another trip. This one would be called "Ike for Tykes."

Watching films of your tremendous receptions in many foreign lands, it occurred to us these people of many distant nations have enjoyed a thrill youngsters in this country rarely experience—a closeup of the President of the United States.

We are suggesting, then, you make a relaxed tour of this country—perhaps even after you leave the White House—to give our youngsters a chance to cheer a living American hero at close range.

If touring by train, allow on the platforms only children of high school age or below.

If by plane, rope off the landing area for these same young people.

If street parades could be arranged, reserve for just boys and girls the best curbstone locations.

A man we know still tingles at the mention of Franklin D. Roosevelt's first inauguration. He was there, you see, and agrees it should be "Ike for Tykes" above all else.

It's time, we think, our sophisticated American youth be given the opportunity to see, hear, and cheer a genuine red, white, and blue legend in the Lincoln, Lee, Grant tradition.

While you were away, Mr. President, the U.S. hockey team whipped the Russians in the Olympics.

The telecast of that Squaw Valley classic—and its dramatic finish—gave Americans a rare opportunity to holler for our team on what might be termed "the homeland level."

Most youngsters take a certain pride in their community, their school—even their State. But how often, except for the brief Olympics thrill, are they given the chance to stand up and cheer for their country?

Cheering you, our youngsters would be cheering their country as well. Who was it, Mr. President, who led their fathers on another U.S. team to that big win in Europe in 1945? Who is it, Mr. President, who still leads the U.S. team in what may be a contest for survival?

Do our boys and girls the same favor you've done for millions abroad and at the same time do yourself a favor: see the affection in which you are held by our young.

It's been said, Mr. President, you personify the "father image."

A Mount Vernon farmer—first man to hold your office—is in the history books with a

similar label. Our children can only read about him.

Before becoming just another fat chapter in a future publication about the past, Mr. President, show yourself in the flesh to our young.

Sincerely,

DELAWARE COUNTY DAILY TIMES.

The First Thing First

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting editorial on the narcotics traffic on the U.S.-Mexican border, which appeared in the Los Angeles Times on March 1, 1960.

THE FIRST THING FIRST

"Any perceptive person roving the border towns knows; he may not have direct information about the organization behind the traffic, but he sees it going on all around him."

The experienced commentator was speaking of the narcotics traffic on the U.S.-Mexican border.

TERRIBLE IMPACT

This is an international business which can be dealt with only by sovereign national governments. The dope traffic has a terrible impact on California, but this State does not have the authority to negotiate with Mexican governments, national or state. Only the Government in Washington, dealing directly with the Government in Mexico City, can find a formula to control the smuggling from Mexico into the United States, most particularly into southern California, where the degrading effects of the narcotics traffic are far more serious than in any other border States. Two-thirds of the narcotic most widely used in California—the opium derivative called heroin—is smuggled across the border from Mexico, where it is produced.

This is why the Times, which tries never to ring three alarms for small fires, has so strongly urged the Government in Washington to do something decisive about the border traffic. Under pressure, Washington has made some gentle gestures, and the Mexican Government, with hardly a demur, has offered to receive U.S. narcotics agents in Mexico to cooperate with its own.

UNITED STATES DRAGS ITS FEET

The U.S. Government has not been eager to accept this invitation, nor to press for further negotiations with Mexico: for example, for an agreement to suppress heroin production at its source by destroying Mexican poppy fields.

The reluctance in some Federal quarters to act in this matter prompted the proposal for a White House Conference on Narcotics. Such a Conference would focus national attention on dope problems, particularly—it is hoped—on California's helplessness without Federal support. And it might goad the executive departments to give their wholehearted support.

Senators and Representatives have endorsed this proposal, and a resolution calling for a White House Conference will be heard by a House judiciary subcommittee tomorrow. There is much sympathy in the Senate and the House for California in its helplessness and for the other border States which suffer impotently, and only in a lesser

degree, from the smuggling activity. For that matter, there have been sympathy and cooperation, within limits, at some elevated levels in the State and Treasury Departments; the unwillingness of the bureaus to exercise their full authority is probably institutional rather than personal in most cases.

The stock objections to our urgent plea for Federal assistance are (a) that the narcotics plight of California has been overstated, (b) that the bulk of California heroin is not smuggled from Mexico, and (c) that California can do its own policing without Federal help.

CONFIRMED RESEARCH

The answers are that the frightening magnitude of narcotics addiction in southern California is self-evident. Reporter Gene Sherman spent months on his grisly researches and his findings, published in the Times last summer, were confirmed by the hearings of a visiting committee of U.S. Senators. Moreover, Mr. Sherman established, with only some bureaucrats in Washington dissenting, that most of the miserable stuff came over the border, the processed product of the Mexican poppy fields. As for California policing and punishing, that is not pertinent to the border problem, which is the central problem.

Unquestionably, there is some slack to be taken up in narcotics suppression within the State, and there have been many proposals for reform. It seems probable that State penalties against peddlers are too light or that judges are too lenient with offenders. Some proposals would suspend constitutional guarantees to make police work easier in narcotics cases, and these proposals should have very cautious examination.

But none of the proposals for State enforcement and punishment should distract anxious citizens' attention from the main issue, which is that the U.S. and Mexican Governments must act together to close the border to narcotics. The first thing must come first.

Every Traveler Is an Ambassador for His Native Land

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. RANDOLPH. Mr. President, at this time of the year many thousands of Americans are beginning to examine travel folders, consult airlines and steamship schedules, and make plans for a summer in Europe or other lands abroad.

The thousands and hundreds of thousands of Americans who go abroad each year may do much for good or ill for the United States, depending upon how they conduct themselves in other lands. While our diplomats conduct our relations with other governments, they are not our only ambassadors. For the attitudes of the people of other countries, as distinguished from their governments, are often responses to the quality of behavior which they encounter in Americans who travel abroad. Thus, every American traveler may be an ambassador of good will, especially if he takes with him a sense of courtesy, a genuine desire to understand other cultures than

his own, and a respect for the traditions of other people.

This perspective is well expressed in a letter to the New York Times which comes to me from my good friend, W. H. M. Stover, a business and civic leader here in Washington, and president of the Leadership Training Institute of District of Columbia, an institution where I have often lectured. The writer of the letter, the journalist and broadcaster, Oliver K. Whiting, has also taught for Mr. Stover, and is well qualified to speak on this subject. As a faculty member of the Dale Carnegie & Associates of New York, and sponsor of the Dale Carnegie Courses in the British Isles, his work places him in frequent contact with Americans abroad and Europeans in this country. Therefore, I ask unanimous consent that this letter be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

EVERY TRAVELER IS AN AMBASSADOR FOR HIS NATIVE LAND

MARCH 1, 1960.

CORRESPONDENCE EDITOR,
New York Times,
New York, N.Y.

DEAR SIR: No traveler ever set out with better equipment than that which is available to him today. Before he closes his front door he has been thoroughly advised where to go, what to see, how long it will take, how much it will cost, what clothes he will require, what food to eat, and what luggage to carry. Every conceivable piece of information has been offered by his travel agent or the appropriation section of the press. Everything is made clear to him except the most vital fact of all, and that is, that the moment he sets foot on a foreign shore, he will cease to be a private individual responsible only to himself. He has become a public figure. In the eyes of those he visits he is a representative of the country from which he hails.

We all know how this works but it cannot be too clearly understood. Suppose you meet an Italian, or Frenchman, or any foreigner, in New York, and he should treat you with discourtesy, one's instant reaction is not how unpleasant Mr. X made himself, but rather, "What an objectionable fellow that Frenchman was." And, similarly, should he be kindly, gay, and attractive, we think (though for some reason too often we refrain from saying), "What a charming gentleman that Frenchman was." In both cases, his country has been credited with what he may have fondly felt was his own particular idiosyncrasy and of little outside concern.

Last week in Grand Central Station, an Englishman waited in line at the information counter to find the platform for his train. By the time he got attention, his train had left. In annoyance, he shouted, "Why don't you people go over to Europe and learn how a railroad should be run," to which the clerk replied, "If you feel like that about it, why don't you stay on the other side."

It is important for us to remember in a foreign land, our smallest action, as traveling Americans, even our momentary moods will add a touch of color to our host's mental picture of Uncle Sam, and throw a kindly or a hostile light on our native soil.

It is said a million Americans will go abroad this year. What a fantastic opportunity they have to win friends all over the world for the United States of America. It will not be done if we fill the air with invective comparisons, criticisms, and complaints. Let us remember we are guests; in

many cases, in countries whose civilization was established a thousand years before the first white man set foot on the continent of America.

We are rightly proud of our fine cities, our skyscrapers, our hygiene and sanitary equipment, and they, too, have their pride, not counted perhaps in weights and measures, or dollars and cents, but in an ancient tradition seasoned by the centuries and which, incidentally, cradled the very democracy from which we spring.

So fellow Americans, as we travel on, let each determine to seek those things we can praise and admire, and to carry in our very bearing the things which we would like others to see in us, and in the America we represent.

The responsibility of those who travel is truly great, but so, too, is their opportunity. For if we are so determined, we can each become an ambassador of good will to every land we visit.

Sincerely yours,

OLIVER K. WHITING.

Jet Progress—Alaska

EXTENSION OF REMARKS OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. RIVERS of Alaska. Mr. Speaker, on the 1st of March, Pan American World Airways, in keeping with its history as a pioneer airline, began jet airplane service between Seattle and Fairbanks, Alaska. The jet flights, which will operate on Mondays, Tuesdays, Fridays, and Saturdays, will require 3 hours 15 minutes of flying time, cutting approximately 2½ hours off current piston-engined flight times. This saving in time will, I hope, enable many of my colleagues who have never been in Alaska to visit the 49th State and thereby better comprehend its problems, great potential, and significance to the Union in regard to national defense and otherwise.

These flights are on a round-trip basis, Mr. Speaker, and will bring to Alaska a service it richly deserves, covering a distance between Seattle and Fairbanks in excess of 1,500 miles.

Those of us who have long lived with the transportation problem in and out of Alaska have a great appreciation for this latest innovation by Pan American. Pan American was the first scheduled carrier to operate between Seattle and Alaska about 20 years before Alaska became a State, so it is not a mere coincidence that Pan American became the first carrier to commence scheduled jet operations between Seattle and Fairbanks. In fact it took considerable initiative, as permission had to be obtained from the Air Force to temporarily land and take off at Ladd Air Force Base, pending extension of the runway at the Fairbanks International Airport, which job will be completed about a year from now.

For this achievement, I salute both Pan American and the Air Force for recognizing the need of this very valuable public service between the State of Alaska and the State of Washington.

Letters to the Editor

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that two letters to the editor which have appeared in recent weeks in the Appleton Post-Crescent newspaper by Henry Flanagan, Sr., in support of my food-for-peace proposal and my bill to assist middle age workers in obtaining employment be printed in the Appendix of the RECORD.

There being no objection, the letters to the editor were ordered to be printed in the RECORD, as follows:

LIKES HUMPHREY'S PROPOSAL TO AID MIDDLE-AGED WORKER

EDITOR, POST-CRESCENT:

I read with interest your editorial dated January 2, 1960, "Looking Ahead for the Aged." I agree that there is a problem in regard to the plight of the older worker. However, the immediate problem seems to be that of the middle-aged worker and his inability to be considered for work because of his age, which was mentioned in the editorial. One of the main reasons that the employer gives is that the added costs of hiring older workers proves to be too great a burden and, consequently, younger persons are hired instead—even though the younger worker has a minimum of training and experience.

A step in the right direction seems to have been taken by a bill that Senator HUBERT HUMPHREY has introduced in the last session of Congress. The bill provides that employers could compute the additional costs of fringe benefits involved in the employment of older workers, as compared to younger persons doing the same work. Such costs could be treated as a tax credit against the income tax for the employer.

If Senator HUMPHREY's bill is accepted by Congress I am sure that it would result in a two-fold benefit. First, experienced and trained workers would find a market for their talents and second, employers could use the tax credit as an incentive when considering the possible employment of an older person. For these reasons it would benefit both the employer and employee to support this bill in the present session of Congress.

HENRY FLANAGAN, Sr.

BEAR CREEK.

NATIONAL FOOD RESERVE WOULD SOLVE OUR PROBLEMS, AID FRIENDS

EDITOR, POST-CRESCENT:

Recently the Post-Crescent published two articles in reference to the farm problem. The first was under the date of January 6 entitled "Agriculture Still Has Problems of Production and Income" which covered a statement by Robert L. Clodius. The other article appeared January 22, "Farm Problem Looks Worse for 1960 Despite General Prosperity," which was accredited to the New York Herald.

Because the two articles were so different in approach and conclusion I think that the Post-Crescent should be congratulated for being objective. However, the basic premise of each view appears to be so different that I think they should be restated. Clodius does not hold that the solution to the farm problem is answered by driving the farmers off of the land. On the other hand, the New York Herald flatly states "that the only solution is the retirement

of whole farms—and whole families—from agricultural activity."

Now I want to make it clear that I am on the side of the family farmer—I am for family size farms. To be sure the Fox valley must recognize the importance of the family farm to the economy. If we were to liquidate these farmers by forcing them from the land, the only place left for them would be the cities and towns competing in the mills and factories for jobs.

The New York Herald calls this problem an albatross hung from our national neck. I agree that if it is an albatross at all it should be hung from the national neck and not from the farmer's neck. Why should we belittle our farmers for being the most efficient producers in the world.

It is true that production and marketing controls would help somewhat to curtail the problem. But the national policy must not stop there, Congress must find a plan that will take advantage of our God-given abundance. The farmer can be induced to reduce production but is that really necessary? I don't think that our farm production must be cut back as far as the Department of Agriculture says. If as much effort were put into formulating a national food and fiber program as in the energies expended attempting to cut production, I am inclined to believe that our present farm output would not be producing a surplus.

America's farm policies need to be examined and clarified in terms of objectives sought in the Nation's interest and not in the light of political slogans designed to turn city consumers against the producing farmer.

We need a program that really does something about surpluses. A program that will make better use of what we have and adjust production to meet all possible needs. A national food policy is needed that will be closely aligned with a farm policy so the Nation can gear its productive resources to the needs of humanity at home and abroad. This should be the plan instead of merely producing to fill Government storage bins.

We must realize that the country will have to pay one way or the other. It seems that it would be cheaper and far wiser to mobilize our agricultural abundance in a fight for peace than mobilize our sons and economy for war. Wouldn't it be logical if a National Food Reserve was created? The country spends billions of dollars for missiles and weapons that never get off of the drawing board—all in the name of good national defense. Why would it be so unusual to have a national food reserve on hand to meet any unforeseen calamity, when as in war, a tremendous demand is created overnight? Finally it seems that it would be cheaper and more humane to use our abundance to raise the standard of living for the low income groups, rather than turn to a philosophy of scarcity that would force up food costs for all society.

As mentioned before, a new dimension has been added to the use of agricultural surpluses—surpluses as an implement of peace—which was worked out by Senator HUBERT HUMPHREY: It is called the Food for Peace Act and is essentially an extension and revision of Public Law 480 of the 83d Congress, which was perfected by the Senator from Minnesota. We have all seen the benefits that have resulted from this law, but, in the long run, it has proven to be inadequate to deal with and effectively use our disposable surpluses.

The primary function of the Food for Peace plan would be getting our surpluses in the hands of underdeveloped countries. The proceeds from these sales then would be loaned back to the recipient country who would carry out programs designed to be mutually beneficial to both countries. A second objective enables the President to furnish emergency assistance on the behalf of the American people to friendly peoples in

meeting famine and other unusual relief requirements. This would be done through an agency of the Government or distributed to various voluntary relief agencies as CARE or church organizations. In addition the plan calls for the President to barter for strategic materials necessary for our national defense and to establish in friendly countries nonprofit foundations to foster and promote research, education, health and public welfare.

The proposal of course directs the Government to act in such a manner so the disposal of the agricultural commodities will not disrupt the world market. For example Food for Peace would not be sold in our normal dollar or pound sterling market. It would operate where there are no dollars or British pounds.

It must be remembered that food is security and it will win more friends than weapons. A few tons of powdered milk in Africa or Asia will do us more good than a ton of uranium or a case of rifles in the same area.

HENRY FLANAGAN, Sr.

BEAR CREEK.

The Wrongs of Civil Rights Legislation

EXTENSION OF REMARKS
OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. HARRISON. Mr. Speaker, civil rights is a compact and disarming label for a legislative package of explosive danger to constitutional guarantees.

Although frankly aimed at the South, this bill of the Eisenhower administration, as devised by Attorney General Mitchell with the President's approval and the strong endorsement of Vice President Nixon, could suspend free elections in other sections of the Nation as well.

The bill contains additional provisions of sweeping effect, notably that which would make it a felony to oppose the Supreme Court's school integration fiat. Too few citizens are aware of this provision which could have ticketed for prison every member of the Virginia General Assembly who voted recently for a resolution stating the sense of that free elective body that the Court's decree was illegal.

To return to the election controls in the bill, however, Mr. Speaker, it is important that citizens familiarize themselves with the Federal voting referee scheme. In this connection, I take the liberty of directing the attention of this House to a straightforward and perceptive analysis of the provision by our learned colleague from Louisiana, the Honorable EDWIN E. WILLIS, whose reputation for dispassionate and conscientious legal scholarship is known to all here. Under leave to extend my remarks in the Appendix, I include Mr. WILLIS' comments, as printed in the Richmond (Va.) Times-Dispatch of March 7, 1960:

THE RIGGED CIVIL RIGHTS BILL

(By EDWIN E. WILLIS, Congressman from Louisiana)

(Congressman WILLIS is a member of the House Committee on the Judiciary which handles civil rights legislation. His ability as a constitutional lawyer is said to be highly respected and recognized by both the Democratic and Republican Members of the

House of Representatives. Here he discusses the Federal voting referee proposal.)

Very few people have had the opportunity to read and study the voting referee provision of the pending civil rights bill rigged up by the U.S. Attorney General and so-called liberal groups. It is one of a series of punitive political measures designed to penalize the Southern States in order to appeal in the coming presidential election to the organized minorities in the large cities of the North and West. This effort to make the Southern States the political whipping boy is participated in with equal vigor by leaders of both the National Democratic and Republican Parties.

Fundamentally, it restores the old force bills of the chaotic Reconstruction days following the Civil War, when the people of the South lived under a government by carpetbaggers. The pending bill was conceived by the same minds and the same U.S. Department of Justice that induced the President to commit the tragic error of sending the Army into Little Rock. The bill was cleverly drafted and hastily introduced, and is sought to be grafted, without hearings, on a comparatively moderate bill reported out of the House Judiciary Committee.

The desperate filibuster now being conducted in the Senate hinges around this new bill, proposed, devised, and written by people outside of the legislative bodies. It takes from the States and vests in Federal authorities the supervision and control of elections, Federal and State, from the justice of the peace to the Governor of the State. It is important for the people to know and understand from the language of the bill itself how cunningly it is devised to deprive the States of their constitutional and inherent right to determine which of its citizens possess the necessary qualifications to vote under State law.

Here is how the bill will work if enacted into law:

Upon complaint, the first step will be, upon request of the Attorney General, for the Federal court to make a finding whether discrimination exists against Negro voters pursuant to a pattern or practice. The bill does not define what constitutes a pattern or practice and the decision on this question is left entirely to the discretion, whims, or prejudices of a Federal judge.

It does not require that the Federal judge shall be a local one. A judge from any other State in the Union may be designated to preside and supervise the local elections. It will be remembered that a Federal judge from North Dakota was designated to preside over the hearings that led to the Little Rock incident.

There is a total lack in the bill of any provision of how this finding shall be made, or the rules, procedures, or evidence under which it is to be done. After the Federal judge, under the guidance of the Attorney General and without any specific provision for a hearing on the part of the State involved, makes a finding that a pattern of discrimination exists, the decree would establish a conclusive presumption that all Negroes, who were not even parties to the initial proceeding, have in fact been discriminated against. It would make it totally unnecessary for them to prove any alleged discrimination on account of race or color. That is the nub, the crux, and the very heart of the bill.

In the next step, the referee appointed by the Federal judge takes the statement of the applicant and the specific language of the bill requires that the applicant shall be ex parte, which means that the other parties, the State and the authorities in the locality, are denied the opportunity to be heard. The first bill introduced on the subject specifically required that these referees be selected from persons outside of the State. This was such an obvious carpetbagger requirement

that in the revised bill that provision is omitted. But there is no provision in the present bill that the referee shall be a local person with knowledge of local people and it still permits, although it does not require, the court to appoint carpetbagger referees from out of the State.

The next step in this cunning scheme compels the referee to presume that the applicant has been denied the right to vote on account of race or color and to accept as true his representation or misrepresentation as to his age, residence, etc. The referee really does not referee anything. He hears only one side of the issue. The bill, in violation of all standards of due process, denies local registrars of voters or State officials, who are presumed to have denied the right of an applicant to vote on account of race or color, the right to be present with counsel at the so-called hearing, and the right to confront and cross-examine their accusers.

In the next step, the referee reports the result of his phony hearing to the court. At this point only, the attorney general of the State is invited to file exceptions to the report, but since the report contains only the self-serving declaration of the applicant, without the right of confrontation and cross-examination, this invitation is practically meaningless.

When all of this unprecedented procedure has been carried out according to plan, the court gives to the Negro a certificate that he is a qualified voter and then authorizes the referee or such other person or persons as he may designate to attend the election at all polling places, look over the shoulders of the State authorities and see that the person is voted, and that the vote is counted. State law requires election officials to keep people a stated distance from polling places and voting booths, so that under the bill, if they admit the Federal agents, they go to State jails, and if they exclude them, they go to Federal jails.

Likewise, in all other respects, if complaint is made by a Negro voter that the judge's orders have not been carried out to the letter, the State election officials may be hauled into court on a contempt citation and sentenced to jail, or fined, or both, and deprived of the right to trial by jury. It is a frightening prospect that in the United States our Federal jails could be filled with political prisoners consisting of State officials.

Such is the devil's brew that is cooked up for consumption for the Southern States alone. It is utterly unconstitutional. It is devastating. It is the sure breeder of racial troubles of untold proportions.

Rural Envoy

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey is proud of the many achievements of its young people. They have been among those who rank high in the fields of science, general scholarship, and understanding of citizenship.

The 4-H Clubs of New Jersey are among those groups which have helped our young students to extend their range of interests. An editorial in the Newark (N.J.) Sunday News of March 6, tells about the well-earned honor which

has been given to one club member. His story is one which should be of great interest to other students he will meet in Nepal.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

RURAL ENVOY

Farm organizations of the future will have their sights set higher than lobbying for subsidies, if 4-H Clubs are any indication. For several years now, the clubs' youth exchange program has sent Americans to Europe and South America while arranging for foreign youths to sample rural life in the United States.

One of the 4-H members chosen to go abroad this summer is Dennis Dalton, of Mendham, a Rutgers senior who has majored in political science with emphasis on Far Eastern culture. He has selected Nepal, that landlocked little country wedged between India and Tibet.

Aside from his long interest in the area, Dennis has other qualifications that should make him an effective ambassador to a people who scorn extravagant materialism. Starting at the age of 11 with a 25-cent weekly allowance, he built up his own egg business and succeeded in winning national poultry awards.

The world would have a more accurate impression of American values if it saw more youths like Dennis Dalton and fewer Hollywood movies.

Senseless Textile Policy

EXTENSION OF REMARKS OF

HON. HUGH Q. ALEXANDER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the Record, I would like to insert in the Appendix an editorial entitled, "Senseless Textile Policy," which appeared in the Stanley News and Press, Albemarle, N.C., on Friday, February 26, 1960.

I heartily concur in the views expressed in this editorial, which follows:

SENSELESS TEXTILE POLICY

Henry Kearns, Assistant Secretary of Commerce in the Eisenhower administration and the man most closely associated with the international aspects of the textile situation, startled members of the Charlotte Textile Club before whom he spoke Monday.

Mr. Kearns, who apparently expresses the policies of the present administration, appears very cool toward any move for protection of the American textile industry against foreign imports and contends that other factors besides foreign competition are mostly to blame for the feeling of insecurity among textile leaders.

He even went so far as to say, "Survival for the South's mills lies in 2 billion 'under-clothed' potential customers in the world. They offer the long-range solution to your problems."

The textile industry is now seeking some Government protection from mounting imports from countries where the textile industry is just now developing. They have openly expressed the feeling that mills in this country cannot compete against foreign

manufacturers who not only have the latest in textile machinery, but have labor which works for a fraction of the American wage and can purchase American cotton for 8 cents per pound less than our own mills have to pay.

To be sure, much of the world's textile market lies in the 2 billion underclothed people in all parts of the world.

The principal reason why they are underclothed is because they haven't the money with which to buy.

Since foreign manufacturers can produce textiles much more cheaply than we can, it does not make sense to expect these people who lack money to provide the field for markets for our high-priced articles while we give away the market right here in our own country which could support our mills.

It would be much more reasonable to expect the people of the underdeveloped areas to purchase the low-priced foreign textiles than to ask them to pay our high prices. They would achieve a much better standard of clothing by spending their meager income for items of non-American manufacture than by spending for similar items which come from American mills and cost them more.

Stanly County has a definite stake in this problem. Several local plants make quality textile products. If Mr. Kearns' philosophy is allowed to operate, this Nation will apparently throw its markets open to clothing and textiles from Japan, Hong Kong, or any other place which happens to want to ship to us. Our stores will sell these goods to our people at prices below what they would have to charge for similar American goods.

When our own mills seek to market their products they will have to send traveling salesmen around the world, trying to interest the tribesmen of Africa or the laborers of India in purchasing the items we have caused to be crowded out of our own stores. That sort of selling will be hard and unprofitable, for those tribesmen and laborers know they, too, can get goods from Japan or Hong Kong cheaper than they can get American goods. So, Uncle Sam will have to dig into his "foreign aid" and give them dollars with which to buy his goods.

If Mr. Kearns' thinking represents the thinking of the Washington policymakers, and we have every reason to believe it does, then there needs to be a complete rethinking of the problem.

It must be a sadistic government, indeed, which penalizes our textile mills 8 cents a pound for cotton and then deliberately gives away the markets in our own country to foreigners, telling our textile men to go and look elsewhere, among the "underclothed" people of the world, to find a long-range solution to their problems.

Article on Capital Punishment by Senator Keating

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by the junior Senator from New York [Mr. KEATING] on the subject of capital punishment, containing his views thereon, with particular reference to the capital punishment provisions under the laws pertaining to the District of Co-

lumbia. It is a very learned article by a very well known lawyer, a Member of the Senate Committee on the Judiciary, which I commend to the attention of Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME AGGRAVATING CIRCUMSTANCES SHOULD BE GIVEN CONSIDERATION

(By Kenneth B. Keating)

(Senator KEATING, Republican, New York, is also well known as a lawyer and is a member of the Senate Judiciary Committee.)

Discussions of capital punishment are rarely dispassionate. Those who favor its retention are accused of being sadistic, warped people full of hate and vengeance. Those who plead for its abolition are typed as weak-minded sentimentalists, more concerned with saving the criminal than protecting society.

Such highly emotional reactions to the imposition of the death penalty are not hard to understand. Cases which present the possibility of a death sentence are sensational and sordid. They draw a tremendous amount of attention. They almost assume the character of a dramatic production and the same deep feelings of sorrow and hate are stirred as by a play. This is not the setting in which reason flourishes.

Another quite different but increasingly common tendency in discussing this subject is to reduce the argument to a bunch of statistical tables. Some tables I have seen would force a statistical logician to conclude that murder increases in places where the death penalty is present and decreases where the death penalty does not exist.

Corollary: Removal of the death penalty is a deterrent to murder. While this may be logical, I do not believe it will strike too many people as being correct.

This subject cannot be considered adequately in either an electrically charged or a coldly calculated context. Neither passions nor collections of figures will lead us to a solution of the problem appropriate to our conception of justice.

This does not mean that studies by penologists and others are useless in our inquiry; nor does it mean that we can ignore the emotional impact of whatever policy is pursued. It just means that we are likely to fall into error if we rely too heavily on either frame of reference.

In my opinion, we must retain capital punishment for those cases in which the reflective moral judgment of the community would be shocked by any lesser penalty and for those cases in which no other sanction is possible. Such cases, thank goodness, are rare. There are some who say that they are nonexistent, but this, unfortunately, is not so.

On one issue in this discussion, there should be universal agreement, and that is that the supreme penalty should never be exacted as the automatic punishment for any predefined crime. It is incredible at this late date, with all the liberal advances which have been made in this field in the last century, that right here in the District of Columbia it is still the law that "death by electrocution" must be imposed in all first-degree murder convictions.

It is this kind of unremedied anachronism in the law that sometimes leads to gross injustice either because it will induce a jury to acquit a guilty felon entirely rather than send him to his death, or because it will require execution of a defendant regardless of the circumstances which may mitigate his offense. There must be room for the exercise of judgment and discretion in any case before the supreme penalty is imposed.

A number of aggravating as well as mitigating circumstances are appropriate for

consideration by the judge and jury in passing sentence. The aggravating circumstances include the fact that the murder was committed by a convict under sentence of imprisonment (think of the situation in which a convict under life sentence kills a prison guard trying to escape); that the murder was committed for hire, or that the murder was especially heinous, atrocious, or cruel, manifesting exceptional depravity.

Certainly, such cases are to be distinguished from killings by a defendant with no previous record, in which the victim may have been an accomplice in some crime, or in which the defendant may have been impaired mentally or under some form of duress. These aggravating and mitigating circumstances are obviously pertinent, and justice in the District of Columbia will be impaired as long as such factors cannot be considered in passing sentence.

Because I have introduced a bill to abolish mandatory capital punishment in the District of Columbia, many people have assumed that I am opposed to capital punishment as such. What I am opposed to is arbitrary punishment, particularly in cases where the death penalty is invoked.

I have in fact introduced another bill in this session of Congress to allow a discretionary death penalty in lynching cases, but here again it will be up to the judge and jury to weigh the circumstances in each case in assessing punishment.

It seems to me that this approach answers the capital punishment problem better than provisions for automatic death penalties or absolute death bars. Where discretion is allowed, the death penalty must be unanimously recommended by the jury and the recommendation must be accepted by the judge.

I have tremendous respect for our jury system and for the judges who serve us. I believe that they better reflect the community conscience in such situations than do either defense lawyers or prosecutors, both of whom are naturally imbued with a passion for their cause.

Let each side have an opportunity to present its arguments. Surround the defendant with every necessary protection. Admit all the evidence pertinent to the issue. Maintain the requirement that the jury be unanimous and that the judge and jury must concur. Do all these things and you will meet the ends and requirements of justice in these cases.

Mrs. Geraldine L. Thompson

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. AUCHINCLOSS. Mr. Speaker, I am very grateful for the opportunity to pay my respects and heartfelt appreciation for the long and useful life given to the service of mankind by my dear friend, Mrs. Geraldine L. Thompson, who recently celebrated her 88th birthday.

While Mrs. Thompson has been active for many years in Republican politics in the State of New Jersey, she has continued always to devote a great portion of her time to the relief of sickness and distress in one form or another to afflicted humanity. She has thousands of friends who rise up and call her blessed and wherever she goes she brings a per-

sonality which is priceless and which gives encouragement to everyone she comes in contact with. I am greatly honored to have her as a friend and the inspiration of her thoughts, her deeds and her wonderful outlook on life have brought me much courage and comfort in the days gone by. I know this to be the testimony of a host of people who glory in wishing her good health and happiness for many days to come.

I include in my remarks an editorial about Mrs. Thompson which appeared in the Asbury Park Press on Sunday, March 6, together with a news article appearing on the same day in the same newspaper.

OUR LEADING CITIZEN

When Mrs. Lewis S. Thompson of Lincroft celebrated her birthday last week the traditional cake carried only 16 candles although the guest of honor has passed the four-score mark. Mrs. Thompson dismissed the incident by saying that it would be rather foolish to crowd 80-odd candles on one cake. That is one explanation; we have a better one. It is this:

No one ever thinks of Mrs. Thompson as a person who is living in her eighth decade. Her interest in public affairs and her driving ambition to see the world a better place in which to live have kept her young. Her usefulness belies her years and, symbolically, 16 candles represent her more accurately than five times that number.

Mrs. Thompson may well be regarded as Monmouth County's foremost citizen. Her efforts to improve her county and State would require pages to recount. She has led a full and fruitful life and no young person can do better than to strive to follow in her footsteps. Everyone is grateful for the years of service that have been allotted Mrs. Thompson. May she have many more ahead of her.

MRS. THOMPSON REMEMBERED BY SCORES ON 88TH BIRTHDAY

MIDDLETOWN TOWNSHIP.—Mrs. Geraldine L. Thompson waded through scores of birthday cards and messages yesterday at her Brookdale Farm, Lincroft, home, and finally found the one she was looking for. It was from Governor Robert B. Meyner.

"After I read this one," she quipped, "I was almost persuaded there is a Democrat one could vote for."

Mrs. Thompson, an outstanding leader in social work in New Jersey for more than 50 years, observed her 88th birthday Wednesday.

Governor Meyner's message read in part: "I speak for all the informed people of New Jersey in saying this State owes a special debt to you for a lifetime of vigorous, fruitful, and generous service on behalf of those who are unequipped to speak for themselves."

Mrs. Thompson was appointed in 1925 as the first Republican State committeewoman from New Jersey and held the post for many years.

MRS. ROOSEVELT SENDS GIFT

Mrs. Thompson received gifts from Mrs. Eleanor Roosevelt, former State Senator H. Alexander Smith; a phone call from Dr. Anna Cross, New York City Health Commissioner; flowers and cards from many other people.

Mrs. Thompson quickly shifted the conversation from herself to her first love, children.

"When one gets into second childhood," she said, "one's chief interest is in the children of today."

"Isn't it remarkable what has happened to the youth since World War II," she said. "Look at what you get on television. You've got to have the fastest gun, a good horse, and all that."

WANTS SOMETHING FOR YOUTH

"I'd love it if we could set up something for our youth in Monmouth County," she said.

"We're going to start a new center for delinquent girls at Allaire," she said. "If we can do the right thing for the girls, perhaps we can get people to understand what delinquency really is and what problems young people face today."

Mrs. Thompson, although technically retired, still attends the juvenile court at Freehold once a week to "rescue delinquents."

She said jokingly, "perhaps they'll be putting some parents in jail instead of the children."

POOL CHANGED BOY

She relates the incident of the boy from the State Home for Boys at Jamestown, whom she allowed to swim in her pool last summer. "It brought a miraculous change in that boy," she said, "almost overnight."

Mrs. Thompson served on the board of control of the State Department of Institutions and Agencies from its inception in 1918 until her retirement in 1957.

MATCHED STATE FUND

She has matched a State appropriation to make up \$75,000 for one psychiatrist, one psychologist, one social case worker, and one remedial reading teacher to treat disturbed children.

She thinks the institutions have got to come closer together if we are to achieve the best effect.

"An example of a fine institution is the one at Glen Gardner," she said.

Russian Language Study

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article from the Sunday Star of February 21 by George W. Oakes reporting on the increasing interest in this country of the study of the Russian language be printed in the Appendix of the RECORD.

It is encouraging to note from Mr. Oakes' article that, whereas only 4 years ago only 5,000 Americans were studying Russian at all educational levels, today 36,000 students are learning the Russian language. I have maintained for many years that we should encourage the study of this language so that we may have as great a knowledge as possible of that country, its people and its institutions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHO'S TAKING THE LANGUAGE?—EVEN HIGH SCHOOL VOLUNTEERS STUDY RUSSIAN NOW

(By George W. Oakes)

About 36,000 students are now learning Russian in regular credit courses in public and private schools, colleges and universities in this country. Thousands more are taking Russian at home on TV, in adult education courses, commercial language schools, and university extension courses but the exact number is impossible to ascertain.

Since Sputnik I dramatized Soviet scientific prowess in 1957, there has been a phe-

nomenal rise in the public urge to study Russian. Perhaps never before have so many Americans suddenly tackled for the first time such a difficult foreign language.

Four years ago, it is estimated, only 5,000 Americans of all ages studied Russian at all educational levels.

Now approximately 15,000 college students alone are taking Russian courses in 415 institutions. Only 165 colleges gave Russian courses 2 years ago. There has been an increase of 700 percent in some colleges even in the last year. A college professor of Russian who had 10 students in 1958, now is likely to have 100. Four years ago a college student who took Russian often was regarded with suspicion—now he's considered patriotic.

FIGURES IN RUSSIA

Latest U.S. Office of Education estimates show that, contrary to the general impression that 10 million Russians are studying English, about half that number, approximately 5 million, are probably enrolled in school and university courses in the Soviet Union.

Officials believe that 3.5 million schoolchildren in Russia were taking English courses in 1957. This figure has dropped slightly in the last 3 years. Another 800,000 university students and possibly the same number of technical school students are believed to be currently learning the English language in the Soviet Union. American education observers who have visited Soviet schools have not been greatly impressed by the quality of the English courses taught there.

Columbia University, one of the chief centers for Russian study, has some 750 students enrolled in the language. Its Russian Institute, started in 1946, has probably trained more than half of all college graduates in the United States who have taken advanced degrees in Russian studies since World War II.

Four hundred and fifty high schools are giving Russian language training, often outside of the regular curriculum, to some 13,500 students. In 1957 only 15 schools taught Russian. None offered it before World War II.

IN HIGH SCHOOLS HERE

Even in the elementary schools there are between 750 and 1,000 students taking Russian in 50 schools, mostly on a voluntary basis, outside of regular class hours.

The rise in the study of Russian in the schools and colleges has been so rapid that educational authorities have not had time to collect exact statistics.

In Washington, Russian was offered first in 1958 at Eastern and Woodrow Wilson High Schools, and later at Western High School. Ninety students, compared to 50 last year, are enrolled in these schools in a 2-year course. All who took the beginning course passed. One of the best classes is conducted at Eastern High School. The district school system allows only students who have shown competence in other foreign languages or in English to take Russian in their last two high school years. Also district school officials do not permit students to drop a foreign language that they have studied for only 2 years in order to learn Russian.

The largest number of elementary schoolchildren in this area studying Russian is in Montgomery County, Md., where 7 schools offer extracurricular courses sponsored by the local parent-teacher association. Next year Russian will be a regular school course.

In nearby Virginia there was such pressure from the teenage children themselves to learn Russian that 3 high schools, Fairfax, Annandale, and Falls Church, organized a Russian language program outside of school hours for a hundred students.

What's happening in the Washington area is typical of the rapidly increasing study of Russian in schools all over the country, ac-

cording to Prof. Helen B. Yakobson, executive officer of George Washington University Department of Slavic Languages and Literature and chairman of the national committee for the promotion of Slavic languages in secondary schools.

Russian-TV courses, given by colleges, and high schools throughout the Nation, have been one of the most significant developments in spreading public study of the Russian language.

LANGUAGE OVER THE TV

Just a year ago George Washington University started a half hour Russian TV program at 6:30 a.m., three times a week. Of the 3,304 officially registered students, all but 87 took the course on a noncredit basis. The entire listening audience for the 45 sessions was estimated at some 30,000. In the second semester of the 1-year course which has just been completed, the number of registered students has dropped, probably due to the early hour.

Professor Yakobson, who also directs the TV course, noted that most students who took it for college credit did better in their grades and knowledge of the basic material than her college students taking a similar Russian course on the campus. Seven members of one Herndon, Va., family—the parents and five children from 6 to 11 years old—all studied the beginners TV course together.

Other universities that have been giving TV courses are Harvard, University of Pennsylvania, University of Washington, University of Alabama, and Western Reserve. All are operated as university extension courses and two are sponsored by scientific organizations.

Last year Pittsburgh ran a 1-hour TV-Russian program three times a week, financed by the Ford Foundation, for 69 of the city's high schools.

In addition to TV courses in Russian now telecast in more than a dozen cities, community and fraternal organizations are helping to satisfy the public demand to study at least elementary Russian. In the Washington area there are about half a dozen of these study groups.

The study of Russian is being pushed in the Government—especially in the State and Defense Departments. Federal Government employees totaling 837, exclusive of those in the Central Intelligence and National Security Agencies, were receiving instruction in Russian as of September 30, 1958, either on a full- or part-time basis. At present, 9 Government officials are doing 30 hours of classroom work a week for 9 months to a year at the Foreign Service Institute and another 25 take a year's course at 7:30 a.m. each day for an hour and a quarter on their own time. Even wives of Foreign Service officers headed for a Russian-speaking post voluntarily join in the full-time course. Many Government employees who have learned beginning Russian either take correspondence courses or work at home on tape recordings.

THE FAVORITE METHOD

The trend in the teaching of Russian in schools, colleges, and on TV is by the audio-lingual method. This is the process of learning a modern foreign language by imitating and memorizing conversational patterns instead of using the grammar translation approach. The new procedure is first hearing, then speaking, reading, and writing the language. In this method major use is made of sound films, filmstrips, tape recordings, and phonograph records.

The extraordinarily rapid growth of the study of Russian plus the increasing use of the audio-lingual method has created a serious shortage of teachers and instruction materials. At present there is a need for several hundred college teachers of Russian. The lack of teachers also has limited the number of high schools that can offer Rus-

sian. As a result of the shortage many schools are forced to employ Russian teachers either with marginal qualifications or who utilize outmoded teaching methods.

Government programs under the National Defense Education Act of 1958 are partially meeting the teacher problem. Sixty-nine fellowships for graduate work in Russian were awarded last year under the act and this year the number will be at least doubled in order to provide more college teachers.

SPONTANEOUS ENTHUSIASM

The situation will be somewhat improved by the summer of 1961 when more Russian-trained college students will graduate and, after a summer institute course, will be available for college teaching.

Perhaps the most significant aspect in the remarkable growth of Russian language study in the last few years is that it is spontaneous. Public, not Government, pressure has been responsible. As Senator HUMPHREY, Democrat, of Minnesota, whose Senate subcommittee made a special report on the Federal Government's foreign language program, has observed, "the stimulus has come from our young people. They understand the kind of world in which they will live."

Mrs. Marjorie Percy Bowen, supervising director of foreign language in the District public schools, points out that schoolchildren want to study Russian for the following reasons: For professional use, because some are language specialists, some on account of their Slavic background, and because many feel knowledge of the language will provide them with a means of understanding and communicating with the Soviet people.

George Washington University conducted a survey among those who took the Russian TV course and found that the largest group were housewives, the next largest scientists. Professor Yakobson feels that the housewives, mostly in the suburbs, found that taking Russian on TV satisfied their starvation for knowledge. Many said that professional advantage was their reason for enrolling and almost as many stated they were concerned about the growth of Russia as a world power of increasing importance.

Although there are some indications that the widespread urge to learn Russian may be a fad, many who have worked with students both in school and adult courses are inclined to doubt it. Actually, since the popularity of Russian is only a few years old, it's probably too early to tell.

How much Russian can a student learn in a high school course? After a 4-year program, a useful competency in the language can be achieved including the four basic skills: Listening comprehension, speaking ability, reading, and writing. A 2-year course of study gives a student a general understanding of the spoken language. And proponents of the TV course claim that a year's intensive study will achieve a working knowledge of Russian—enough at least to read newspapers and get the sense of the spoken and written language.

Philippine Sugar

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. LEVERING. Mr. Speaker, the time is ripe for the Philippine case for sharing in the U.S. sugar consumption increases either by an outright additional allocation or by allotting the Philip-

pine a percentage in U.S. consumption increases. As you may have read in the press, Russia and Cuba have just concluded a trade treaty in which Russia is buying 1 million tons of Cuban sugar per annum for 5 years. In view of the great restraint shown to Cuba by the United States in the face of provocation, Cuba's growing intimacy with the Communists must cause many of our colleagues to wonder whether Cuba should continue to be so heavily favored in the U.S. Sugar Bowl as hitherto.

The Philippines, on the other hand, for all its national sensibilities and pride, is a proved friend and ally of the United States. Unlike Cuba, the Philippines fought in the last war and suffered heavily.

President Eisenhower, when signing the Sugar Act of 1956, which is now due for renewal, wrote down his hope that special consideration—then denied to the Philippine case—would be extended to the Philippines in 1960.

There is much unemployment in the Philippines. The first impact of any increased sugar quota that may be allotted to the Philippines would be to the benefit of Philippine labor. In sugar production, unlike oil refining, cement manufacturing, and some other industries, labor is a high component of production cost. Philippine employment and Philippine contentment would be affected by an increase in the Philippine sugar quota long before any benefits of that extra quota come through to the sugar capitalists, the majority of whom are the Filipinos.

The U.S. domestic producers in the sugar beet and cane States—including Hawaii—should obviously receive the first consideration from the U.S. Government, but we sincerely believe that second only to them, consideration should be given to the Philippines, the only Christian country between Suez and San Francisco and the one in which the American conception of democracy is most indigenous.

Court Under Fire

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. ERVIN. Mr. President, on March 5, the Washington Evening Star published a penetrating editorial entitled "Court Under Fire." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COURT UNDER FIRE

The Supreme Court's decision this week in the Globe case has brought that tribunal under fire from journalistic guns which generally are trained upon anyone else who presumes to criticize the Court. One of the journalistic critics went so far as to say that the Globe decision "deprives the Supreme Court of the intellectual respect it needs

now more than it ever did." All of which brings to mind the adage concerning distinctions which arise, depending upon whose ox is being gored.

Arthur Globe, a temporary employee of Los Angeles County, was dismissed after he had refused to tell a subcommittee of the House Committee on Un-American Activities whether he was a member of the Communist Party. Globe had been warned by his superiors that, under regulations and State law, a refusal to answer for any reason would result in his dismissal for insubordination. He refused on several grounds, including, in general terms, the first and fifth amendments.

The Court's problem was to distinguish this situation from its 1958 ruling in the case of *Harry Slochower*, a Brooklyn College professor, who was dismissed by the city of New York for refusing to answer a question concerning past Communist affiliations. He invoked the fifth amendment ground of possible self-incrimination. Slochower's dismissal, the Court said, was unconstitutional.

As we read the two opinions, the distinction drawn between the Globe case and the Slochower case is an exceedingly fine one. Nevertheless, there is a distinction. And certain facts should be considered before one concludes that the Court has forfeited its right to intellectual respect, or, as Justice Black put it, that the Globe decision "does not bode well for individual liberty in America."

The Court divided 5 to 4 in the Slochower case, with Justice Reed writing what we thought was a persuasive dissent. The division in the Globe case was 5 to 3. In a companion case this week, involving a permanent fellow employee of Globe's, the division was 4 to 4. (The Court did not discuss this case, but the even division had the effect of also upholding the permanent employee's dismissal on the same grounds as those in the Globe case.)

An interesting point is that Chief Justice Warren, who joined the majority in the Slochower case, did not participate in either of this week's decisions—presumably because he will still Governor of California when the statute involved in the Globe case was under consideration. In some future case he might well join this week's minority. Another interesting point is that Justice Clark wrote the majority opinions in both Globe and Slochower. Finally, the 5-to-3 majority in the Globe case resulted from the fact that Justice Frankfurter, also in the majority in Slochower, agreed with Justice Clark that a valid distinction could be drawn between the two decisions.

To us, this suggests honest differences of opinion on fine points of law. We do not think the Court, as a result of Globe, should be refused intellectual respect, nor do we believe that the Globe ruling raises a threat to individual liberty in America. It is possible, of course, that the Globe decision amounts in practical effect to a modification of Slochower. If so, we are not alarmed. For our sympathies were with the four dissenters in the Slochower case, and we would welcome a tendency on the part of the Court, if such a tendency exists, to move away from the decision.

Alberto Gualano

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 25, 1960

Mr. LIBONATI. Mr. Speaker, a true idealist died the other day. He had

spent a lifetime fighting in righteous causes for the welfare and protection of the rights of the immigrant Italian. He was born at San Vincenzo al Volturno, Province of Campobasso, Italy, on the 31st of March 1868. Upon his emigration to the United States—having received a law degree at Naples—he further completed his law study at the Illinois College of Law in Chicago, Ill. He became a famous and influential member of the bar association and served as judge of the Municipal Court of the City of Chicago. The greatest part of his brilliant professional career was spent in the city of Chicago and the State of Illinois. He sparkled with fervor in defense of his countrymen. His popularity was acclaimed by all the citizens of the community. No one had greater success in lifting the enslavement of his people. The second-class citizenship label of the bigoted disappeared.

During his retirement he established residence in the city of San Gabriel in the San Gabriel Valley, Calif., and again the urge to put into play his great literary and oratorical talents sought an outlet in the establishment of a cultural newspaper publication, titled "L'Italo-Americano di Los Angeles." He also was the author of many illustrious articles on various public subjects; some controversial and others informative. He had truly a great mind. His writings in book or pamphlet form were given the highest acclaim in most noted Academy of Scholars in Italy. He was invited to many memberships in these societies and in one he was elected president. His favorite writings—two periodicals—The Story of Rome and Italy and his *Numi Tutelari* were published exclusively in the great daily, *L'Italia*—The Italian News of Chicago—edited by the distinguished editor, *Aria Lo Franco*.

The Congressmen of Illinois, cognizant of his great service to the community for a long period of years, mourn his passing. A telegram, as follows, was sent to his dear widow, Tina, and daughters Ida, Virginia, Amelia, and his son Alberto, Jr., presently a lieutenant in the U.S. Air Force. Also, his brother Ettore Gualano, master of music.

MARCH 7, 1960.

Mrs. Tina Gualano and Family,
San Fernando, Calif.:

It is with a deep feeling of sadness that I learned of Judge Alberto's death. He spent his life fighting for the Italian cause in America and his career was typical of the great leaders before him—a series of political sacrifices. He was energetic in his courageous political activity and, as an honest man, fought against great odds.

He had the confidence of the Italo-Americans and spent his time, energy, and money in the advancement of the Italo-American immigrant. He was a loyal friend and an earnest, outspoken adversary. His success as an editor, and author, and attorney, carried him to brilliant accomplishments throughout his career. As a man of letters in his fiery editorials and persuasive oratory, he merited the distinguished recognition that the Italo-American public gave to him.

He lived and died a great American. Your loss is the community's loss. I know that you, his family, contributed so much to his happiness in life and you must be proud to enjoy such a distinguished heritage.

In the death of this great leader the people of California and Illinois have lost an outstanding citizen and public servant. We mourn his passing with you.

May I offer you my deepest sympathy and sincere condolences.

Congressman ROLAND V. LIBONATI.

In appreciation, the widow's reply, herewith:

MARCH 7, 1960.

Congressman ROLAND V. LIBONATI,
Washington, D.C.

HONORABLE SIR: The eulogy that so many tried to express, came to me this morning in the form of a telegram from Washington, D.C., signed ROLAND V. LIBONATI. Who else, but the one so highly esteemed by him could put into words what the grey-haired idealist really was? I feel so completely relaxed now, that now through you a voice that has been stilled will echo and reecho in the halls of the Congress of these United States. His guiding hand will be with you and I pray that in the years to come, his son, Lt. Alberto N. Gualano, Jr., USAF, will justify the heritage you painted so beautifully in words. This family will always pray for the successful fulfillment of your duty and your freedom from care. God bless you.

Mrs. Tina Gualano and Family.

The Voice of Buffalo

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. KEATING. Mr. President, this week's Time magazine contains an interesting article about my good friend A. H. Kirchhofer, who is editor of the Buffalo Evening News. Mr. Kirchhofer is one of America's great newspapermen, and a legend among the people of western New York.

He has worked long, hard, and successfully for the welfare of Buffalo, New York State, and the Nation. His is the voice of Buffalo, and it is a voice that is strong for the good. I ask unanimous consent that the article about this fine man be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Time, Mar. 7, 1960]

THE VOICE OF BUFFALO

The city room, tidy and peaceful as any library, is free of the crumpled balls of copy paper and other litter usually found around working newsmen. No smoke hangs blue above the desks; by executive order in the interest of "increased efficiency," smoking is prohibited. To make phone calls, most reporters retire to soundproofed glass booths along the wall; when they want a copy boy, they do not shout, but press a buzzer button. The big room has an almost palpable serenity, helped along by the sight of the old-fashioned dust jackets worn by some of the copyreaders.

Upon this scene, every midmorning, arrives the Buffalo Evening News' editor, Alfred Henry Kirchhofer—an austere, bony-cheeked man of 67 in rimless glasses and a dark blue suit. He looks much like Woodrow Wilson, a resemblance not fancied by Kirchhofer, who, like his paper, is a lifelong, root-stock Republican. Two feet six inches away from Kirchhofer's desk a visitor's chair is bolted

to the floor; that is as close as Kirchhofer wants anyone to approach. Before long a flurry of blue memos pours from his desk to every department. Sensing the news possibilities in some current local development, Kirchhofer hands out the assignment. "I can't put my hands on the fish," he says, "but the smell is there." By 2 o'clock, with the help of 190 respectful and sometimes awe-struck editorial staffers, Editor Kirchhofer has produced another issue of the newspaper that is as much a part of Buffalo as its 400,000 city-owned trees.

LOCAL IN FLAVOR

The Buffalo News is a big (circulation 285,206), powerful and prosperous example of the U.S. provincial daily, whose voice rings commandingly at home but is rarely heard outside. The News' province embraces eight upstate New York counties, of which Buffalo (population 607,000), Erie County seat, is the industrial core. To the 1,642,500 inhabitants of its territory, the News speaks loudly of things they want to hear.

The paper is intensely local in flavor; it devotes nearly as much space to domestic news as it does to national news. One of its most popular features is a three- to four-column chronicle of Buffalo items, headed "Daily News Summary" and set in eye-straining agate type. Here the News reports birth, traffic mishap, burglary, blaze, marriage license, missing person, court judgment, bankruptcy and stolen car. Deaths, society notices, club meetings, and high school athletic contests get more generous shares of space.

The city's brawling political affairs, in which dozens of factions spiritedly divide along party, ethnic, and religious lines, are covered with the thoroughness of a paper whose editor believes that "politics and Government turn out to be our job." The News' republicanism, usually confined to the editorial page, gives local Democrats the conceptions. Just last month Mayor Frank A. Sedita, a Democrat, went on television to bewail what he considered lopsided News coverage of his office. But between swipes at the paper, the mayor reads it attentively, takes all but two of the seven daily editions, and in cooler moments has been heard to say that "the News' pages have been fair to my administration."

The News has been Republican ever since its establishment, 79 years ago, by Edward H. Butler, a Scranton, Pa., newsman. Butler did help one Democratic mayor of Buffalo, Grover Cleveland, become President of the United States, but this was hardly more than a burst of local pride. After Cleveland took office, in 1885, the News picked a quarrel with him, and has not since supported a Democrat for either Governor or President.

By sensibly concentrating on homegrown news, Butler handily survived the killing competitions of early 20th-century journalism. Buffalo has put as many as 12 dailies in the field, including 3 in German and 2 in Polish. The only survivors are the News, in the afternoon, and the morning Courier-Express, which publishes the city's only Sunday paper, but has only about half the daily circulation of the News.

LIKE A TOOTHBRUSH

The News has remained in the hands of Butler's heirs, but Alfred Henry Kirchhofer runs it. Buffalo-born, a trained-on-the-job newsman who did not go to college, Kirchhofer started on the News in 1915 as church reporter, worked 12 to 18 hours a day in his course to the top. When Founder Butler's son, Edward, Jr., died in 1956, Kirchhofer, then managing editor, took full charge. On the News' masthead his name stands above that of Publisher James H. Righter, a Butler son-in-law.

Unbending and unflamboyant, Kirchhofer keeps his staff loyal and happy by paying handsome salaries: 25 News men make more than \$10,000 a year. The News stylebook, largely drafted by Kirchhofer and cast in his own stern image, warns staffers that "motherhood is treated as an institution, not as a situation comedy"; advises them to "avoid mention of hideous creatures or gruesome circumstances." For years the paper fastidiously designated rats as "rodents." Says Kirchhofer stiffly: "We don't use 'rat' on page 1 unless it bit Eisenhower or he bit it."

Kirchhofer is as much a municipal fixture as his newspaper. He lives quietly with his wife in a modest two-story home on Hallam Road, bordering on the city's most fashionable neighborhood. By nature aloof, he likes to putter around his garden, has been seen standing moodily alone, in topcoat and straw hat, on a summer beach. But Kirchhofer is a vigorous swimmer in the main currents of city life—he is a trustee of the Community Chest, a board member of the Buffalo Fine Arts Academy and the University of Buffalo, and belongs to both the Buffalo Country Club and the Cult of the White Buffalo, an order dedicated to making Buffalo "a better place to live in."

In fulfilling its mission, the News has become an ingrained Buffalo habit that grew with the city and faithfully reflects its image—solid, conservative, industrious, and, at first glance, colorless. "It looks like a dull sheet," says a former city editor under Kirchhofer, now in Manhattan. "But after you've been in Buffalo a few weeks, you find you can't do without it. You miss it like a toothbrush if you don't see it every day."

United States Unprepared on Pacific Front

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Mr. Keyes Beech of the Chicago Daily News Foreign Service which appeared in the Washington Post and Times Herald on February 27, 1960:

UNITED STATES UNPREPARED ON PACIFIC FRONT
(By Keyes Beech)

TOKYO.—In the midst of the great debate on the state of America's military preparedness, there are a few things worth noting about the Pacific:

1. U.S. defenses in the Pacific are more vulnerable than at any time since the end of World War II. The vulnerability is so great, in fact, that it could lead the Communist bloc into the kind of major miscalculation that brought on the Korean war.

2. Soviet Russia has the nuclear capability to knock out every major U.S. base in the Pacific from Japan to Hawaii.

3. The United States is not prepared to fight a conventional limited war, which is precisely the kind of war it is most likely to have to fight in this part of the world.

4. Regardless of whether the United States is a second-rate military power, a great many Asians think it is. And in this part of the world what counts is not necessarily the way things are but the way people think things are.

By far the most significant military event in this part of the world in years was the recent highly successful firing of two Soviet ICBM rockets into the central Pacific.

The Soviet tests served several useful purposes. They served notice that the central Pacific is no longer an American lake, a great psychological jolt to many Americans and a sobering thought to anti-Communist Asians who have cast their lot with the United States. They demonstrated they could hit any target of their choice with an accuracy of 1.5 miles from a distance of 8,000 miles.

The rockets that fell 1,000 miles southwest of Hawaii could just as easily have fallen on Pearl Harbor—with a nuclear warhead. They could have hit Guam and eliminated the retaliatory power of the U.S. Strategic Air Command base there. They could have done the same thing to U.S. missile bases on Okinawa.

In addition, the Russians managed to leave the impression with impressionable Asians that U.S. defenses in the Pacific are weaker than they actually are.

Perhaps the most ominous fact—and it is a fact—about these long-range Soviet shots is that the United States has no warning system that would tell when an ICBM was on its way. The United States and its allies have a network of nearly 400 early warning radar stations scattered from the Philippines to northern Japan. The network includes 100 smaller ground control intercept stations. But none of these stations is capable of tracking space rockets or ICBMs.

U.S. airbases in Japan also live under a nuclear gun—from a complex of intermediate range ballistic missile launching sites in the vicinity of Vladivostok.

Here again the United States is at a distinct disadvantage, for it has no missile bases in Japan. The United States-Japan security treaty specifically forbids the United States from bringing nuclear weapons into Japan, which tends to minimize the effectiveness of Japan-based U.S. airpower. The U.S. 7th Fleet, our most powerful striking force in the Pacific, packs an enormous nuclear punch. Also, it is not a fixed target. It could retaliate swiftly.

But where ships of the 7th Fleet would go for supplies and replenishments after getting off their missiles is another matter. Every U.S. naval base in the Pacific from Japan to Pearl Harbor is within range of Soviet missiles.

There may be some comfort in the assumption that the Russians won't use their missile arsenal because any attack in the Pacific or elsewhere would mean a general nuclear war. But this is cold comfort to military men who must reckon not with Communist intent but with Communist capability.

However, the possibility of a surprise nuclear attack is not what worries U.S. commanders most. U.S. Pacific bases would, after all, be backwater targets in a nuclear war.

But what does—or should—worry them is the possibility that the United States will have to fight the kind of war that was supposed to end with Korea—a limited or brush-fire war with conventional weapons.

This the United States is not prepared to do. Yet such a war could come at one of several places where southeast Asia's soft, tempting underbelly is exposed to Red China's hungry gaze. Laos and Vietnam are two places where it could happen.

The United States has two Army divisions in Korea. But these are only 65 percent of strength and the rifle companies are manned largely by Koreans. What's more, they are in fixed positions for duty in Korea and not available for other assignments.

These seem to be reasons for concern if not alarm.

Problems of the Aged

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES
Tuesday, March 8, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Senate Subcommittee on Aging recently made a far-reaching report on the problems faced by those Americans who find their way of life changed after they reach what others describe as advanced age. The report was one expression of national concern about a national issue. It emphasized that we must have an all-out mobilization of interest on the part of Government agencies, private groups, and all citizens. The need for such a response is, I think, obvious. Americans must realize that we must plan adequately and act effectively to deal with the looming crises tied to the overall problem of the aging and the aged.

Mr. President, a five-article series in the Elizabeth (N.J.) Daily Journal recently discussed the question.

I ask unanimous consent for the printing of the last article in the series in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Elizabeth (N.J.) Daily Journal, Mar. 4, 1960]

THE SENIOR CITIZENS—PLANS TO AID AGED
SIFTED BY FEDERAL, STATE GOVERNMENTS
(By S. Walter deLazaro)

Society and government from the municipal to Federal level are poised to tackle the problems confronting the Nation's 16 million senior citizens, including 37,000 in Union County.

A solution to the acute crisis facing persons 65 and older will depend on the efforts put forth by various groups.

Several recommendations to cope with the plight of the elderly have been made by the Senate Subcommittee on the Problems of the Aged and Aging, following hearings in Washington and seven other cities.

As stated before, the Senate group has suggested that Congress provide more financial aid for low-rent housing and for nursing homes which meet designated standards.

In addition, the subcommittee, headed by Sen. PATRICK V. McNAMARA, Michigan Democrat, recommends a substantial increase in old-age benefits from a minimum of \$33 a month to at least \$50, expansion of the system of old-age, survivors, and disability benefits to include health service and action by the States to outlaw discrimination against employment of the aged.

"A major need of America's aged and aging," a subcommittee report asserts, "is a central agency in the Federal establishment to represent them and their problems."

FEDERAL OFFICE SUGGESTED

Therefore, the Senate body suggests a U.S. Office of the Aging should be created to cope with the full range of problems of America's citizens.

"The creation of such an agency," the subcommittee admits, "will not automatically solve the problems of senior citizens."

"It will, however," according to the subcommittee, "establish on a permanent basis an agency with authority to take positive action nationally and develop cooperative re-

lations with States and local communities in programs for the aging."

U.S. Senator HARRISON A. WILLIAMS, JR., of Westfield said he has reserved judgment on some of the subcommittee's proposals until they reach final legislative form.

But, he added, he considers the subcommittee's program "a thoughtful and much-needed one."

"The subcommittee majority is not disputing the devotion of today's children and middle-aged adults," Senator WILLIAMS stated. "Its proposals are intended to help State and hometown agencies do even a better job," he continued.

LOCAL AGENCIES ASSISTED

Senator WILLIAMS asserted that the New Jersey State Division of Aging is helping private and public agencies and groups in getting results where they count most—at the neighborhood and hometown level.

"Administrators in charge of the State division don't try to do the job alone," he added. "And certainly Federal Government can't do it alone, either."

"We shall need total mobilization of interest by all Americans," the Senator emphasized. "If the subcommittee helps accomplish that much, it shall have accomplished a great deal."

Some 3,000 delegates from throughout the Nation will meet in Washington next January to discuss some of the problems of the aged.

The White House conclave will probe into such problems as housing, medical care, recreation, religion, job opportunities, and retraining programs.

REPLACEMENT SERVICE

Some officials hope that a huge replacement service for the older person who wants to launch a new career will result from the national meeting.

Prior to the Washington session, various States will hold their own conferences in preparation for the White House session.

In New Jersey, various segments of the population, including labor, business, and welfare workers met in Trenton last year to discuss the needs of the senior citizen. Many carried home ideas for helping the aged in their communities.

No concrete programs resulted, but the awareness of the crisis was there, and with it a promise of things to come.

In Princeton this week the problems of providing long-term care for the aged and chronically ill were explored during a day-long institute held by the New Jersey Hospital Association.

While it has been emphasized that assistance must be given to the elderly, Elizabeth Welfare Director Theodore Rathjen pointed out that many senior citizens must learn to help themselves.

GUARDIANSHIP PROBLEM

The welfare official noted that his agency finds itself with a problem involving guardianship of aged persons who are not as mentally alert as formerly.

"There should be some action to expedite guardianship procedures for people in this situation and I'd like to see more interest in this problem," he asserted.

"A real, acute problem is that many need help," Mr. Rathjen stated, "and they won't ask for it."

He suggested that the Senior Citizens Center in Elizabeth consider a program under which one of its members would attempt to convince an elderly person in need to seek help from the agency.

The center is among several old-age clubs established in this area to promote recreation for the elderly and give senior citizens a chance to make new friends as they reach the lonely years.

As ideas and suggestions are offered by all segments of society, the groundwork is laid

for aid to the Nation's growing number of senior citizens.

But an increase in public interest is vital to support the foundation on which programs will be built to solve the problems facing the aged.

The Keating-Van Zandt Bills (S. 2882-H.R. 9841) Will Adjust Conditions of Competition Between Certain Domestic and Foreign Industries With Respect to the Level of Wages and Working Conditions in the Production of Articles Imported Into the United States

SPEECH
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. VAN ZANDT. Mr. Speaker, on January 21, 1960, Senator KENNETH KEATING, of New York, introduced S. 2882 and on the same date, I introduced H.R. 9841 as a companion measure. This legislation is designed to adjust conditions of competition between certain domestic and foreign industries with respect to the level of wages and working conditions in the production of articles imported into the United States. In plain language, if the legislation is enacted into law it would eliminate the existence of a condition that has long plagued American industry and which has produced much of the unemployment the Nation is faced with today.

The cause of unemployment in various industries of the United States has long been recognized as being due in great measure to the unfair competition American industry has been forced to contend with from cheaply manufactured foreign goods that flood the American marketplace.

It is a matter of simple arithmetic to determine the true picture. When you consider that a manufacturer in a foreign country pays a wage equivalent in dollars to 10, 15, or 25 cents per hour, naturally he enjoys a competitive advantage over an American manufacturer who pays the traditional wage standards of industry in the United States. This is further emphasized when you realize that wages represent a large portion of the cost of production.

Americans are proud of the fact that sweatshop conditions in the United States were outlawed at the turn of the century and that today there is no denial of the fact that American wage earners are worthy of their hire. Every right-thinking American favors the wage earner being given the opportunity to enjoy the high standards of living in the United States. To make certain that such an opportunity is constantly safeguarded we need and must maintain a strong industrial economy. To do otherwise is to encourage unemployment and with it the misery that follows in its wake.

As an example of the serious inroads made against American industry by cheaply manufactured foreign goods, one needs only to cite the chaos and the uncertainty of the future that are the lot of the following industries: china and glassware, textiles, clothing, hand-tools, kitchen utensils, small appliances, umbrellas, rugs, toys, bicycles, light-machinery, footwear, athletic equipment, plumbing fixtures, tile and ceramic fixtures, etc.

According to the February 1960 issue of *Steel Facts* a steel executive recently stated:

With imports of steel up and exports of steel declining, American mills and American workers have had a combined loss of 6.6 million tons of steel output in the past 2 years.

He estimated:

Had this steel been made here at home it would have provided employment for nearly 52,000 people in the steel industry.

Mr. Speaker, what is the answer to such a distressing situation where the jobs of American wage earners are threatened or destroyed through the uncontrolled importation of foreign goods manufactured at slave labor wage rates?

It is now a thoroughly documented fact that the swift, accelerating course of events taking place in American foreign trade and competition has rapidly outdistanced both our legislative and commercial ability to keep apace.

Two years ago when the trade agreements program was extended for 4 years a number of my colleagues in the House rose to caution and protest in the name of prudence that such a lengthy extension was clearly out of key with the tell-tale signs of rapidly rising imports and diminishing exports so clearly evident even in 1958.

Be that as it may, this House cannot now escape the responsibility for the fact that when we slammed shut the doors of this body to the pleas of import-injured industry and labor for 4 long years we have heard a great many echoes of other closing doors; namely, those leading into our mills and mines and factories. Once open to all who sought gainful and honest employment, many of those passageways are now locked and barred by the deluge of excess imports from foreign factories financed by funds which we so generously provided and continue to provide in large volume.

The distressing situation prompts me to ask this question in all sincerity. Which distinguished Member here will step forward today and meet face to face the chairman of a New England shoe manufacturing concern who recently said, "Sure all this free trade may be great for international relations, but how do I explain that to several hundred of my employees who were waiting for a midyear bonus and got termination notices instead?"

Or perhaps some of our distinguished Members would prefer to meet the group of industrialists, or the labor union which stands with them on this issue, whose industry has been whittled from 184 firms to 56. Referring to imports, they said:

Sharing a market is one consideration; but to dominate it completely is not justified.

In my opinion, this statement offers one of the most accurate descriptions of the so-called reciprocal trade program that has yet been made.

I now ask: What are you going to tell employers and employees such as these? Will you say,

Don't worry fellow, the trade agreements program has only 2 years left to run and we will deliberate over it then?

You can easily guess the retort, which would be short and to the point:

Congressman, you explain that to my wife and kids.

Despite the apathy and the anxieties of our Department of State and the fact that this is an election year, the time for legislative action is now—not 1962. Members in gratifying numbers from both sides of the aisle are voicing their concern almost daily on the issue of crippling competition. They realize there is a time and place for everything, including politics, but now is the time for straight talk on a problem so serious that few political districts remain untouched.

Let us consider two facts: One, that the foreign trade tail is wagging the dog of our domestic economy. Do not misunderstand me. I stand fully in favor of developing our foreign markets to their maximum capacity and if there are untapped foreign markets available, let's go after them. What I am saying, however, is that the real bread and butter market is and will remain the domestic market. Even our big exporting corporations understand this. Our foreign exports represent but 5 percent or so of the domestic giant's trading capacity. For this reason, the home base must not continue to be subjected to competition from low-cost imports, often encouraged by our diplomats who piously plead that they never interfere in domestic matters.

And the second point: Our State Department reflects the wishes of peoples, friendly and otherwise, all over the globe. But we of the House speak for the will of the American people, a known but sometimes overlooked truism. The State Department's interest is international while our first concern is the welfare of our Nation. The State Department alleges no jurisdiction on the domestic front while claiming a high priest's privilege as sole custodian over all our international activities.

However, in practice the Department of State couches one and all of its programs including that of free trade in the name of the national interest. Whether State Department officials realize it or not, the phrase contains convenient words to make more palatable their theories to the Congress.

Mark you, it is Congress through which the pulse of the people beats. It is the Congressman, not the diplomat, who is reminded of this fact each morning as he sits down to a desk stacked high with letters from home. It is in this daily ritual that we search for the interests of the people, not in the pages of scholarly books on the philosophical foundations of international commerce. It is these letters with a misspelled word here or a

grammatical error there that speak to us with a humble but deafening eloquence that reveals the emptiness of State Department slogans designed to promote free trade.

In addition to the direct and intolerable interference in the economic stability of this country brought about by international-minded administrators of our trade agreements, there remains the question of jurisdiction in America's foreign commerce.

We all know that the Constitution under article I, section 8, provides that responsibility over foreign commerce rests squarely with the Congress. We know on the other hand that it is the task of the executive branch to carry out the duties accorded that body in the political, cultural, and similar areas. In 1934, the Congress delegated certain management activities in the theater of foreign commerce to the executive branch of Government. It is necessary to acquaint the Members of the House with the subsequent operations and conduct of our foreign trade policies since that time and especially since World War II.

The Department of State has not only picked up the ball and run with it, it has changed the rules of the game and by so doing has distorted the game beyond all recognition. It has construed our delegation of a simple managerial function to be a complete, final, and outright grant of basic congressional rights. And now we see to the Representative in Congress who dares to question the so-called prerogatives of the Department of State.

To those who say the executive free trader should not have it both ways, let me reply that they already have it. Because of the distressing situation I am speaking in the name of the people of Pennsylvania who resent the loss of markets and jobs through uncontrolled imports of cheaply manufactured foreign goods.

The reason for insisting on fair trade and not free trade is based on the desire to protect and preserve the jobs of American wage earners. Let us look at the situation as it is, not as we might like it to be. We have high priced products which cannot compete because everything that goes into that product is high priced: the wages, the salaries, the material, the taxes, the overhead, the advertising, and so forth. Would you quarrel with this? Would you be the one to take the first cut?

If you are in utilities, would you be the first one to cut your water or light bill in half to a given steel company so that its bids against foreign companies on ships or structural jobs would not be double that of its competitors abroad? If you are its supplier would you be the first to reduce your prices on ingots a similar amount? And taxes—are you and I prepared to unburden our hypothetical firm in domestic steel or other industries from the crushing load which it carries?

Who among the workers, the businessmen—any of us—stands ready to step forward to take the first reduction on payday? Were such a question truly put to the test, the silence I dare say

would be profound. We are priced out of world markets by our high-priced products because we are a high priced Nation so to speak. Is this to be considered a felony? Are we to live with this horrible crime on our collective consciences like some unforgiven sin of the past? Must American industry now be battered and penalized by imports created by the force of circumstances which elevated our Nation's economy and its standard of living to the industrial mountain top, relatively out of reach of the foreign economies in the valleys below? For these achievements, surely we should not be asked to hang our heads.

By some peculiar emotional twist the free traders seemingly look upon our economy as some unclean spirit through whose veins flow the dirty, degrading dollars of life. Our relative economic abundance seems to prey on their minds. They have reached the conclusion that the quicker we can spend ourselves down to the economic level of other countries, the sooner hastens the day of our rebirth as a socially conscious Nation with a new image and a pure industrial soul.

Realizing that the voices of protest grew louder against unfair competition and the State Department's grants and gifts to competitive trading nations abroad, another way had to be devised which would hasten our acceptability into the free-trade academy. Such a way was recently discovered through a market give-away program.

As the foreign manufacturer wedged his competitive offense deeper into the fabric of our markets, not a word, not a murmur was heard from the free traders. It would be somewhat inconsistent, to say the least, were they to take sides when one considers the fact that the International Cooperation Administration, the handmaiden of the State Department, had led hand in hand approximately 25,000 of our foreign friends since 1950 into the very vitals of our industries and to study and learn the essence of our economy. In addition, Americans are now being sent abroad officially to teach the men who run the marketing operations of foreign producers the latest methods of merchandising. In this connection, we have shipped abroad tens of billions of dollars of the most up-to-date machinery and equipment.

American style techniques will soon move their wares into the United States as well as third countries where we are in even more serious competitive difficulties than at home, if that is possible.

The question which immediately faces us is: How are we going to legislate ourselves out of the corner into which the executive branch has painted us? And bear in mind that preparations are now underway here in Washington for the forthcoming Geneva meeting in October of the General Agreement on Tariffs and Trade—GATT. A new list containing many hundreds of domestically made products is being readied for the sacrificial altar of free trade. All, of course, in the national interest you understand. Tariffs already too low are to be cut another 20 percent.

It is my belief that many of my colleagues share the view that this House is ready to act.

A noted author once said in chiding his opposition:

If you have 10 boys but only 5 hats you solve the problem by simply lopping off 5 heads.

Are we to lop off and dissect the highly industrial, integrated organism of the American economy in order to make it artificially conform to the "hats" of other nations? Or do we select the prudent and reasonable course, by passing the measures, long overdue, which insure our domestic producers a fair share of commerce in the marketplace?

If we are to come to grips with the issue of foreign imports this body must provide our people with equitable conditions of competition. Feasibly, such conditions might take the form of an escalating duty or quota on incoming products, flexibly administrable to all classes or commodities according to their port of entry price irrespective of countries of origin. Thus the wage gap would be automatically reduced.

Regardless of the final form which remedial measures may take, the following principle should be the foundation for our actions: foreign producers should not be enabled to enjoy commercial advantages within the American market not obtainable or available to the American producer in competition with the same or similar product.

If this precept were adhered to, the products of American industry could have a fighting chance to compete with foreign imports which, in comparison, are priced at ridiculously low levels. Conversely, were this principle to be applied by foreign countries to our own exported products affording us no greater nor less an advantage in their markets than their producers enjoy there, we would fare considerably more favorably than at present. Our industry would not then find it necessary to send its capital abroad in order to compete.

For example, an American car which retails for about \$3,000 here is now selling for \$4,000 to \$6,000 and higher in European countries. In other words, our exporting manufacturers not only do not enjoy the commercial conditions of the automakers abroad in the European theater of competition, but are also needlessly tarried out of contending in a market where low prices provide their own built-in protection. It was because of this that our automobile manufacturers began producing in England, Germany, and France and then sending some of their output overseas back to this country.

Whether foreign producers pay their employees high wages or low wages, charge high prices or low prices, organize common markets or not, pass voluntary-quota resolutions or not, let me say that it is their right to do so as it is surely our right to do that which serves our interests.

Parenthetically, I might add that it becomes both irksome and tiresome to read and hear the meddlesome musings of the disciples of free trade who having

helped create our problem now intend to right things by foisting their socioeconomic theories upon others abroad.

"In due time," say our free traders in their efforts to make all countries alike in this age of conformity, "foreign wages, productivity, and so forth, will increase everywhere and then all the nations will come to us and buy our machines and goods." On the contrary, the facts show that our customers, for example in Latin America, are turning away in droves from the United States and now do their shopping in Europe, and so forth, where other trading nations are moving to higher levels of industrial productivity. In addition, they want to make for themselves the goods which we formerly sold them. This kind of outcome was not contemplated by Adam Smith.

I feel it my duty to suggest to the exponents of free trade that they explain their theories to the workers of Pennsylvania who like to work and eat even as you and I.

Meanwhile, here in the House we have a job to do. We may have our personal views on various aspects of international affairs but at hand is our professional duty which must concern itself with the problem as it affects us and in those areas where we can effect the honest regulation of excessive imports.

In short, let us stop theorizing about what Europe may or may not do, or what Japan has or has not done, and do here what must be done. If the foreign producer wants to sell his product in his country at his prices, that is his business. But if he sells his products at his prices in my country, then it becomes my business, and I will continue to consider it my business as long as his low-priced goods lay waste the markets and destroy the jobs and industries of the State of Pennsylvania.

Twin jeopardy faces both sales and jobs every time foreign products capture a larger slice of our markets. Our working people face on the wage level what the producer meets on the price level in competition with imports. If employer and employee are to unite on this issue both must clearly understand this. Debates about the low-waged foreign workers who make the low-priced foreign goods that abundantly stock our shelves and warehouses being over or underpaid become rather academic at this stage of the game. They have legislators and labor unions to provide them recourse.

Similarly whether we have high prices because of high wages or high wages because of high prices does not nullify the demand for immediate action before we arrive at the point where we will lose both by default.

In the market of wage competition we are sadly outpriced, too, as the following approximations indicate.—Basic average hourly wage before benefits, in U.S. equivalents:

The Japanese textile worker receives a wage of about 16 cents; the Italian, 27 cents; the French, 51 cents; the German, 46 cents; the English, 68 cents; and the American, \$1.58 per hour.

The Japanese wood worker receives about 18 cents; the Italian, 24 cents; the

French, 54 cents; the German, 48 cents; the English, 50 cents; and the American, \$1.98 per hour.

The Japanese chemical worker receives about 37 cents; the Italian, 37 cents; the French, 49 cents; the German, 57 cents; the English, 68 cents; and the American, \$2.44 per hour.

The Japanese leather worker receives about 23 cents; the Italian, 30 cents; the French, 54 cents; the German, 40 cents; the English, 47 cents; and the American, \$1.59 per hour.

The Japanese glass worker receives about 26 cents; the Italian, 36 cents; the French, 47 cents; the German, 55 cents; the English, 70 cents; and the American, \$2.22 per hour.

The Japanese steel worker receives about 41 cents; the Italian, 46 cents; the French, 53 cents; the German, 59 cents; the English, 83 cents; and the American, \$3.10 per hour.

The Japanese machinery worker receives about 28 cents; the Italian, 36 cents; the French, 54 cents; the German, 59 cents; the English, 74 cents; and the American, \$2.50 per hour.

The Japanese auto worker receives about 26 cents; the Italian, 46 cents; the French, 54 cents; the German, 64 cents; the English, 94 cents; and the American, \$2.69 per hour.

The addition of employer and government benefits to the foreign worker's wage would increase the overall take-home pay from about 20 percent in the case of Germany to as high as 60 or 70 percent in the case of some Italian workers, with other countries falling somewhere within this wage spread. The fringe benefits accruing to the American worker are not as high as those abroad in proportion to the basic wage, although in some categories such as overtime, they may be. Yet 10 percent of \$2.69—average U.S. auto wage—would be higher than 50 percent of 36 cents—average Japanese auto wage. In the United States, overtime generally takes effect above the 40-hour point whereas some foreign workers may not receive such benefits until they have worked 44 hours or more.

While it is difficult to obtain accurate statistical data of comparative hourly income in different countries and industries for the same period of time because of the complexity and variation of conditions under which such benefits apply, it can be conservatively stated that one inescapable fact stands forth: Benefits notwithstanding, in his relation to foreign workers the American worker is waged out of the market. Current benefits received by foreign workers could well double, triple or more the amount of his basic wage and foreign products would still outprice American-made products.

While certain Government officials continue to insist that we are not priced out of the market, our competition readily concedes that we are.

"From the cost point of view," said one British steel industry official, "we had an advantage over America in that our wage rate was only about one-third of theirs and even though their pro-

ductivity was twice ours, this enabled us to sell at lower prices."

Nor must the phenomenal increase in productivity enjoyed by many foreign industries as a result of advanced mechanizations be overlooked.

Recent reports disclose that some ultramodern automobile plants in Europe can now produce 3,000 cars a day in one-half the time required for us to make 1,500 cars.

Continuing on the subject of productivity, Dr. Karl Fetter, vice president of research and development of Youngstown Sheet & Tube Co., who recently returned from Europe where he studied new steelmaking processes had this to say:

Many European mills were partially or completely destroyed during World War II. These mills have been rebuilt and expanded, partly with our foreign aid money, and we find more of their steel being produced in new and modern mills than in our own country. It was interesting to note that in every new mill the very latest automatic production, material handling, recording and control equipment has been installed to increase productivity per man-hour. Every possible new mechanical, chemical and electronic device is being used to produce high quality products at low cost. We saw one completely new steel plant in Liege, Belgium, that for practices and equipment is the finest we have ever seen.

In order to minimize the effects of the vast disparity in wages and in prices there and here and to provide an opportunity for our people to compete in an honest market, further legislative delay must be avoided.

Needless debate simply perpetuates the disruptive elements which have caused chaos to orderly and sound industrial planning and which are even now affecting our future growth and expansion by curtailing research and siphoning off investments from domestic facilities to ready havens abroad.

As stated previously, it is for this reason and the reasons outlined that I introduced the following bill, H.R. 9841 on January 21, 1960, as a companion measure to S. 2882, introduced on that date by Senator KENNETH KEATING of New York:

H.R. 9841

A bill to provide for adjusting conditions of competition between certain domestic industries and foreign industries with respect to the level of wages and the working conditions in the production of articles imported into the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Fair Labor Standards Trade Act of 1960".

SEC. 2. FINDINGS.—Sweatshop labor conditions are prohibited by law in the United States. The rapid expansion of American foreign trade in recent years, in effect, permits foreign industries in which wages and working conditions are below American standards to compete with domestic industries in which wages are significantly higher and in which minimum wages and working conditions are set by the laws of the United States and the several States. Many American industries, especially those in which labor costs constitute a high proportion of the total production cost, have been injured or are threatened with serious injury as a

result of such competition. The following procedures are established to provide relief for such American industries.

SEC. 3. PROCEDURES.—(a) Upon the request of the President, or upon resolution of either House of Congress, or upon application of the representative of any domestic industry or employee organization in a domestic industry, or upon application of any interested party, or upon his own motion, the Secretary of Labor (hereinafter referred to as the "Secretary") or his designee shall make an investigation of any situation in which it is alleged that the differential in costs, due to the existence of wage rates and working conditions significantly below United States standards, gives foreign manufacturers or producers a competitive advantage over United States manufacturers or producers.

(b) In carrying out an investigation and hearings under the foregoing procedure, the Secretary shall to the extent practicable consider (among other factors): wages and all other forms of remuneration for work performed, labor productivity, production costs and the components thereof, levels of automation, working conditions, legislation or regulations pertaining to working conditions, and living standards in the United States and in the country or countries of origin of the imported article or articles under investigation.

(c) The Secretary shall request the views of the Tariff Commission in writing on relevant trade and international factors in all cases in which he deems such information necessary to the investigatory process under this Act. He may in addition request the views of any other interested agency or agencies.

(d) Should the Secretary find that a domestic industry is being or is likely to be injured by imports of goods which are produced in foreign countries under wages and working conditions below United States standards, he shall recommend to the President such new or additional duties, import quotas, or other remedies, as he shall deem necessary or proper in each case, but in no event shall such new or additional duties exceed existing rates of duty by 100 per centum or by the amount of 50 per centum ad valorem, whichever is higher, or shall such new or additional quotas exceed existing quotas by 50 per centum.

(e) Upon receipt of the Secretary's report and recommendations, the President may by order impose such new or additional duties, import quotas, or other remedies (1) as recommended by the Secretary to be necessary to afford relief to the domestic industry, or (2) as are determined by the President to be necessary for such purpose.

(f) The Secretary shall make and publish, with dispatch and in no event more than six months after the request, application, or resolution is made, a report on each request, application, or resolution under this Act.

(g) Any order issued pursuant to this Act may be modified, suspended, or terminated under the procedures herein established.

(h) The new or additional duties or import quotas imposed by the President or other action taken by him under this Act and any modification, suspension, or termination thereof, shall become effective on such date as he shall specify in his order and shall be treated for administrative purposes as a part of the Tariff Act of 1930.

(i) The Secretary shall within ninety days after the enactment of this Act promulgate procedural regulations to give effect to the authority conferred upon him hereunder.

SEC. 4. EFFECTIVE DATE.—This Act shall take effect as soon as practicable, on a date to be specified by the President in a notice to the Secretary of the Treasury, but in any event not later than ninety days after the date of enactment.

Importance of Saving Family Farms

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. YOUNG of Ohio. Mr. President, the family farm has always been one of the great bulwarks of our democracy.

From the ranks of family farmers have come some of America's most outstanding leaders.

Recently, the Ohio Farmers Union sponsored a statewide essay contest on the importance of the family farm to American life.

The winners were 16-year-old Diana Oliver of Mount Orab, Ohio, and 11-year-old John W. Simmermon of South Solon, Ohio.

Mr. President, I ask unanimous consent that the essays by these fine young people be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

(By Diana Oliver)

I want to save the family farm because I want to save the best place to rear a family. The family farm is a family operation, with all members sharing in the responsibilities, enjoyments, and rewards. The family farm furnishes the ideal partnership for man and wife. It is the best place to prepare young people to be honest, wholesome, and conscientious. It brings to one the responsibility and satisfaction of home ownership.

The family farm is important to the community because of the wholesome association with genuine neighbors. There is a pattern of helpfulness in a farm community—a certain way of life, certain traditions, certain standards of education. Those things help make up the culture of the community.

The welfare of our Nation is dependent on the family farm. A Nation built on a wide diffusion of private home and farm ownership will remain essentially a democracy, as Jefferson viewed American—a land of independent farmers and artisans rooted deeply in a democratic tradition, with all the blessings and freedoms of a democracy.

Japan and the Philippines were once countries in which land was held by a few people. In order to prevent communism from taking over in these countries, we encouraged the breakup of the large holdings into small family units. This brought a new prosperity not known under the old system and a greater respect for democracy. In our own country we are drifting in the opposite direction, and too few people seem to realize the danger. If someone else owns the land on which the farmer works it might as well be the government. When the private ownership is gone, democracy is gone. The family farm is democracy.

The family farm is best for the family, the community, the Nation, and the world. Let's keep the family farm.

(By John W. Simmermon)

I want to save the family farm in the United States for it is the foundation of our democracy. The family farm stands for more and better interested citizens. The family is more concerned with the work of the farm.

In different countries there are men called barons. They own hundreds of acres of

land. The people are peasants and not much more than slaves. The baron works the soil to death by planting one crop year after year, cheating future generations of its fertility.

Farms in the United States should be small farms uniting together to support everyone, not just one big farm run by one man. The family farm can help the community in different ways. It is a landmark for some people. The family farm can be a good farm if worked correctly. The family gets more interested and does much better work. The hired hands sometimes do not care about the crops. The big farmer does not care what help he gets. He works them hard for a few days and then lets them go.

We must have proper legislation to support the family farm and proper understanding to keep our way of life—America's way which is the best way in all the world.

Girl Scout Week in New York State

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. KEATING. Mr. President, the week of March 6-12 has been designated as National Girl Scout Week. This is a richly deserved recognition of an organization which has won a place in the life of our Nation and in the hearts of all Americans. Founded on March 12, 1912, the Girl Scout movement has played a vital role in the cultural pattern of the United States. Through its spirit of service, through the manifold activities of its enlightened program, the Girl Scout organization has contributed importantly to the moral, physical, and spiritual development of the citizenry of the United States.

Gov. Nelson A. Rockefeller of New York has proclaimed the week of March 6-12 Girl Scout Week in New York State. In view of the significance of this observance, I ask unanimous consent that Governor Rockefeller's proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

We cannot emphasize too often the fact that 97 percent of our young people are admirably worthy of the love and respect that we give them. In the face of many difficulties they are making adjustments to a fast-moving world with intelligence and sensibility that command our admiration.

This gives us powerful reason to appreciate an institution such as the Girl Scouts of the United States of America, now about to celebrate the 48th anniversary of its founding.

As a people, we have millions of reasons to be thankful for the existence of this truly great and beneficent organization. They are to be found in the women of varying ages and walks of life who have been Girl Scouts, and who proudly acknowledge the many happy days they enjoyed in their scouting years, and the immeasurable benefits they had and still have from their experience.

It is reassuring and inspiring to know that membership in the Girl Scouts is increasing

with rapidity. I have every confidence that this growth will continue.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim March 6-12, 1960, as Girl Scout Week in New York State, and I urge our citizens to give this admirable organization full cooperation.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 15th day of February in the year of our Lord 1960.

NELSON A. ROCKEFELLER,

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

Military Translingua

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. MARTIN. Mr. President, I ask unanimous consent that an unusual article by Capt. E. E. Waller, U.S. Army, which appeared in the February 1960 issue of Signal, be printed in the Appendix of the RECORD.

Captain Waller and his brother served on active duty throughout World War II and the Korean war, and his father in addition to serving on active duty throughout World War II and the Korean war served throughout the Mexican campaign and World War I. They are a highly patriotic family. I am proud indeed to present for the RECORD Captain Waller's excellent article so that the Members of the Senate may have the opportunity to read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILITARY TRANSLINGUA

(By Capt. E. E. Waller, AS/SigC)

(The author is stationed at the U.S. Army Security Agency, School and Training Center, Headquarters Co., 1st Battalion, Fort Devens, Mass.)

One of the fascinating recent developments in linguistics has emerged after several years of research at the University of Iowa. Seven years ago Dr. Erich Funke, head of foreign studies at the State University of Iowa, began work on a method for interlinguistic communication. A practical application of Dr. Funke's method is Military Translingua, which is designed for multilingual military commands and international commercial correspondence.

Since the dawn of history, the military leader has been faced with the problem of precise communication with allies and elements of his command who use different tongues and dialects. The clarity of modern warfare and the need for all the allies that the free world can muster in these challenging times impinges heavily on the efforts of the soldier to explore every new vehicle that may help him find a meaningful, simple, precise, unclassified method of interlinguistic communication.

The translingua script offers interesting possibilities to alleviate this age-old military problem. It recognizes the validity of the sage advice of Sun Tzu: "He who has a thorough knowledge of his own conditions as the condition of the enemy is sure to win in all battles."

Translingua divides all human knowledge into some 35 numerical categories (for example, 15 denotes "medicine and health," and 26 refers to the "Armed Forces"), which are, in turn, broken into subconcepts to make up a basic vocabulary of 25,000 words of a numerical language.

How is this used?

Take the title of this article. Its teletype equivalent would be 18.201-1.778:5-19.500:4-1.432:18-121-5.628. Assume that the originator is a West German commander, Gen. Karl von Rhein. Without needing a knowledge of English or any other language used in a NATO command, he has been able, by the use of his German-translingua dictionary, to prepare this translingua numerical sentence from the following German: "Der Feind griff die Stadt überraschend von Süden an." The English-speaking recipient, just the same as a Portuguese, Dutch, Italian, or other language group, without leaving the domain of his own language, can simply obtain his own tongue by the use of his translingua-English dictionary (or translingua-Portuguese, translingua-Dutch, etc.) to obtain: "The enemy attacked the city surprisingly from the south."

When dealing with the more exotic languages of the East and the concomitant problems of translation, the use of translingua comes into closer focus, especially in preventing the tyro linguist from making serious mistakes stemming from a lack of precise knowledge of idioms or technical military terminology. Anyone who has heard a story repeated several times readily understands the possibility of distortion when many people are involved. It may seem humorous that "jack up" in Spanish could be literally translated as "to raise with the cat," but the exigencies of the military situation in modern conflict may not give us the luxury of enough well-trained language personnel to prevent a modern version of the Tower of Babel. The following passages may point up the ease of using translingua if a dictionary is available:

You, as an English-speaking recipient, may receive the following sentence from an Arab originator, General Abdullah: 7.1805-6.1000:2-5.400:17-5.625-5.626-5.429:4-6.103:2. The Arabic original of "Algutru 'Imisriyu yuk-sueinu 'zzswiyata 'shahamôyaya 'shihar-giata min afrigiyatin" may be rendered into: "The land of Egypt forms the northeast angle of Africa," by learning the simple translingua grammar and by quickly looking up each number, as separated by dashes. Other examples could be given in languages ranging from Spanish to Indonesian and Swedish to Chinese.

Translingua, by itself, is no more safe than ordinary English. Its vocabulary needs more revision for military use. It is no more difficult to use than a telephone directory and its vocabulary numerical equivalents do not change, though they may be added to at any time by new words or new concepts. The following exercise evinces the preciseness of translingua grammar in action:

8.1-1.162-7.312:4 for, "The man drinks water."

8.1-1.162-5-7.312:4 for, "The man drank the water."

8.1-1.162-8-7.312:4 for, "The man will drink the water."

8.1-1.162-7.312:4 for, "The men drink the water."

8.1-1.162-2.35-7.312:4 for, "The man drinks cold water."

8.1-5.770-1.162-7.312:4 for, "The man drinks the water today."

8.1-4-1.162-7.312:4 for, "The man does not drink water."

8.1-29-1.11:5-119-31.1-1.162:5-7.312:4 for, "The man who came into the house drank water."

11-41-1.162-30-7.312:4 for, "You can drink this water."

11-44-1.162-30-7.312:4 for, "You cannot drink this water."

11-35-41-1.162-30-7.312:4 for, "You can drink this water now."

Note the simple sequence of words and the use of "1" for the plural concept and "4" for the direct object.

Research into the nuances of translingua usage and practical applications thereof is continuing at the State University of Iowa (Iowa City) under direction of Dr. Funke. In a day when our free world allies speak languages ranging from Norwegian to Turkish and Portuguese to Siamese, any meaningful multilingual concept becomes useful for considered study. As Bacon has noted, "Knowledge is power."

The U.S. Balance of Payments and Foreign Policy

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. SALTONSTALL. Mr. President, I ask that the brief statement developed by the Princeton Conference on the Balance of Payments of the United States, dated November 16, 1959, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT DEVELOPED BY THE PRINCETON CONFERENCE ON THE BALANCE OF PAYMENTS OF THE UNITED STATES, PRINCETON, N.J., NOVEMBER 16, 1959

THE U.S. BALANCE OF PAYMENTS AND FOREIGN POLICY

The large deficit in the American balance of payments since early 1958 has raised the question whether the United States must make a fundamental adjustment in its economic, financial, and military relations with the outside world.

We believe that corrective measures are in order. But those measures must be chosen with care, lest they prove destructive of our basic national objectives.

Our foreign payments situation does not require the United States—a rich country with growing riches—to run from the commitments it has imposed on itself. It should not withdraw from its postwar role of leading most of the world back to a liberal system of trade and payments precisely at the point when this leadership has reaped amazing success. It should not cut back its aid—now at a modest level—to the poor and underdeveloped countries of the world. Nor should it, on economic grounds, reduce its military strength at home and abroad. To react with haste to the deficit in our balance of payments would entail a major setback in the security and welfare of the non-Communist world.

Balance-of-payments analysis

The major items in the U.S. balance of payments since 1950 are set forth in the summary table in the appendix. In 1958, the combined gold sales and increase in foreign short-term liabilities of the United States—commonly regarded as its balance-of-payments "deficit"—amounted to \$3.4 billions; in 1957 we had recorded a surplus of \$500 millions. In the second quarter of 1959 (excluding the effect of increases in the U.S. subscriptions to the International Monetary Fund), the deficit ran at an annual rate

of \$4.4 billions. For the entire year 1959, the deficit is generally forecast at \$4 billions.

The position indicated in the table is a serious one, and merits governmental and public attention. It is, however, important to view it in perspective. There are transitory elements in the position, apart from the once-and-for-all payments to the Fund excluded from the table, which may be listed as follows:

1. The 6-month lag behind the United States in Europe's recovery from the 1958 recession, which has made our income and imports rise more sharply than Europe's in the current phase of the cycle. This influence is now at an end.

2. The collapse in U.S. exports of cotton in 1958-59 from the 1957 peak. These exports are now recovering part of the lost markets.

3. The steel strike, which has produced a slight decline in exports but a large increase in imports.

4. A series of special situations in particular commodities of considerable magnitude: in airplanes, where exports are down while production shifts from propeller to jet-driven types; in meat, where substantial imports were required owing to a temporary decline in domestic supply; in small cars, where the shift in public taste led to a rapid rise in imports from Europe which may now be checked by the introduction of American models; and in coal exports to Europe.

We recognize that some part of these changes may be structural, and that there are other temporary factors which have operated in the opposite direction to expand exports and curb imports. Nonetheless we suspect that the cumulation of unfavorable factors in the first half of 1959 made this a peculiarly unrepresentative period. Even after these short-term influences have been taken into account, however, there remains a basic change in the structure of the U.S. balance of payments. In particular there have been:

1. A step-up in the rate of private investment abroad.

2. A pronounced expansion in the U.S. demand for foreign manufactures, both capital equipment and consumers' durable goods, and for foreign travel, as a consequence of rising incomes and changing tastes.

3. A substantial increase in the competitive supply facing U.S. markets abroad, in Europe, Japan, and in third markets, as a result of the expanding industrial capacity of especially Germany and Japan, but also of the United Kingdom, France, and the rest of Western Europe.

4. A rising trend, especially between 1950 and 1955, in U.S. military expenditures abroad. This has been partially offset by the elimination of recovery aid to Europe, which was larger than the current flow of economic aid to underdeveloped countries.

We have discussed the widely held view that the United States is "pricing itself out of the market," and we find that the evidence is inconclusive. Greater price rises here than in Europe and Japan have doubtless occurred in some lines, notably certain steel products, and perhaps heavy machinery. But American prices generally have not risen more than elsewhere. For the most part, however, the gains of Europe and Japan stem from a pronounced expansion of supplies at existing prices—prices in many cases already lower than ours; and especially from a faster rate of technological innovation and imitation.

A number of factors are already at work to bring about some correction:

1. Higher interest rates here than abroad, which will discourage part of the outflow of capital as has already happened in the case of foreign sales of dollar bonds.

2. Action taken by foreign countries to remove quotas on imports from the United States.

3. Rising wage rates in industrial countries enjoying lower levels of unemployment than this country, with a consequent increase in imports, loss of competitive edge in exports, and some discouragement to U.S. direct investment.

4. The maturing of credits previously extended by this country to assist recovery in Europe and elsewhere, and in some cases, repayment prior to maturity.

5. Prospective returns on the new investments and licensing agreements of the last few years, which are now coming to fruition.

In our view, the hard core of the projected deficit, when temporary factors have been eliminated and the built-in adjustment mechanism has gone some distance, is still substantial, and if continued, will pose a serious problem.

Short-term foreign claims on the United States are now more than \$16 billion. On the other side of the ledger there is the \$19.6 billion of gold, more than \$37 billion worth of private foreign long-term assets, and our capacity to produce and export, but it is well to bear in mind that other countries have been getting along with much smaller backing. The redistribution of gold and the gain in foreign dollar reserves which have taken place, as far as they have gone, are testimony to the success of past policy. And a continued small deficit, accompanied by a greater accumulation of long-term assets, would not be unhealthy for this country and at the same time would provide growing reserves for the rest of the world.

A deficit in our balance of payments represents a decrease in our net foreign liquid assets, not necessarily in our total net foreign assets. We can remedy the deficit either by cutting our long-term lending and grants to match our net exports, or by raising our net exports to match our net long-term lending and grants, or by some combination of the two adjustments.

We place main emphasis on measures to raise our net exports of goods and services for two reasons. The United States, as the most prosperous country in the world, continues to have a substantial share of the burden for providing real goods and services to those countries which still need additions to their own real resources. Recently, despite our financial aid, we have not been translating such aid into its full real economic counterpart: goods and services. Further, we are in a better position than any other country to increase our net exports of goods and services without further reducing the volume available for our own use.

To deal with the problem of the remaining deficit, there is no need to take measures which would defeat other national objectives. Before turning to constructive alternatives, it is worthwhile to point out the objections to the measures which we regard as destructive. We agree that there is a great variety in the magnitude of undesirability among the policy alternatives listed. We did not undertake to evaluate their relative importance but did agree that they had the factor of undesirability in common.

Undesirable policy alternatives

1. Reduction of military expenditures abroad: The size of our forces abroad should not be determined on balance-of-payments grounds. There may exist today, or arise tomorrow, excellent reasons either to increase or reduce these forces. In either case, the decision should be based on political, military and diplomatic considerations, with which this meeting is not concerned, rather than on balance-of-payments grounds. Any other policy could gravely weaken the position of the Western World in forthcoming East-West negotiations and might endanger seriously our security and the survival of the free world.

2. Reduction in foreign aid: To reduce American economic aid to underdeveloped countries would be both unwise and futile.

Gold and foreign exchange reserves of underdeveloped areas are altogether insufficient, and foreign-exchange shortages are as critical a limitation as ever on their economic progress. Moreover, the great bulk of our aid expenditures now results in American exports, so that only a small fraction of any reduction in aid would go to improve our balance-of-payments position.

As indicated below, we welcome the opportunity created by Europe's economic recovery for greater aid contributions on their part, both bilaterally and through such international bodies as the proposed International Development Association. But with the present aid levels far short of needs, these new efforts should be net additions to, not substitutes for, continued U.S. action to promote development abroad. With our national output increasing at an annual rate of 15 to 20 billion, it hardly seems necessary to refute the argument that the American economy cannot afford the present—or substantially increased—levels of economic aid. It would be especially untimely to curtail aid to, say, India, at the very moment she is facing serious problems of domestic and foreign policy.

3. Tied loans: One other palliative—"tying" our loans and grants by requiring recipient countries to spend our assistance primarily in the United States—has already been applied to credits extended by the Development Loan Fund.

In our judgment, such measures are not a constructive remedy. If extended to all our aid funds, it would admittedly assure the spending here of the small proportion of these funds not now resulting in American exports. But the effect would be to hamper the best use of limited assistance resources and thereby reduce the extent of world economic development that could be achieved. At the same time, it will probably encourage other aiding countries to extend ties on their now increasing foreign aid and, over time, thereby deprive American exporters of substantial potential markets.

Much more constructive would be a vigorous effort to secure agreement among all assisting countries to eliminate the various tying practices that now exist, to the end that the countries receiving government-to-government loans and grants may make the maximum use of their aid.

4. Reducing private foreign investment: Private investment can play an important part in promoting foreign economic development. It would be an error to reverse the national policy trend of recent years toward encouraging such investment in the underdeveloped countries. Moreover, foreign investment affects both sides of the balance of payments, the initial outflow of capital (which is itself often matched by exports of machinery) soon being followed by a reverse flow of royalties, dividends, and interest payments. Special incentives to increase foreign investment in Europe seem to us no longer justified.

5. Devaluation of the dollar: While exchange rate alterations are often a sound means of correcting balance-of-payments disequilibria, this remedy is out of the question for the United States under present circumstances. It would be of doubtful effectiveness, since other countries might also devalue their currencies. Any doubt regarding the dollar price of gold would undermine the use of the dollar as a major international reserve currency, a use essential to expanding world trade. We fully agree with the administration on the wisdom of maintaining the value of the dollar in terms of gold; and we have no doubt that it can and will be done.

6. Import restrictions: Another retrograde line of policy which may be pressed upon the U.S. Government in the months ahead is the reduction of imports, either by applying import quotas, by raising tariffs or other direct controls. Today, after 25 years

of patient negotiation, the principal trading nations of the world are removing the bulk of their quantitative restrictions on private trade. American business can sell its goods abroad with fewer restrictions now than at any time in recent decades. To turn our back on the bipartisan policy of lowering trade barriers would reverse this trend and might lead to a retaliatory increase in restrictions on U.S. goods.

Desirable policy alternatives

There remain a series of constructive measures for improving the U.S. balance-of-payments position. Among them are the following:

1. Removing restrictions against American exports: Since the war, American exporters have faced extensive discriminatory barriers against dollar goods as well as some nondiscriminatory restrictions which bear particularly on American goods. The redistribution of international reserves now makes it feasible progressively to remove such restrictions. The United Kingdom, France, West Germany, Japan, and other important trading countries have recently taken significant steps in this direction. We endorse the efforts of the administration to promote and hasten the elimination of discrimination and the continued reduction of trade barriers in general. Such liberalization should also, of course, extend to travel and other service transactions and to capital movements to the United States. In addition to steps already taken, such action, if vigorously pursued, could contribute significantly to correcting the present imbalance in U.S. payments.

2. Harder selling abroad: With the other major industrial countries back in production and with import restrictions being lifted, the question remains whether American business will take the measures to meet the hard competition it faces in export markets. While we have no wish to see a competitive race in the area, the U.S. Government might assist in this process by insuring that credit facilities for U.S. exporters are no less favorable than those of competing countries.

3. Enlarged foreign participation in economic assistance and joint military burdens: The improved economic position of Europe and Japan makes possible greater contributions on their part to economic aid for underdeveloped countries. They should be encouraged to expand the amount and broaden the coverage of such aid. We must reiterate, however, that more aid from other countries should be a net addition to present efforts, not a replacement of ours by theirs.

A number of our allies are now also in a position to assume a larger share of the burdens of collective defense.

Any action in the direction of redistributing the burden of development aid or military expenditure must take into account that the main criterion for international burden sharing remains productive capacity rather than the balance-of-payments position. Given the improvement in both incomes and balance of payments, however, Europe in particular should expect to carry a substantially increased burden.

4. Policies for economic stability and growth: There is, further, the policy, to which we subscribe, of avoiding inflation while promoting economic growth. We do not advocate deflation, which is of dubious effectiveness in correcting a structural maladjustment and is harmful to growth; neither are we suggesting that the United States should abdicate its position of leadership in the international economic community. But much more than in the past, our domestic, monetary, credit, fiscal, and wage policies must be influenced by the serious long-run position in our balance of payments. We must avoid waste, and, if primary objectives of domestic or foreign policy

require expenditures above expected tax income, we should impose taxes to meet them. Our \$500 billion economy can sustain additional charges which we may have to impose on it, but we must manage it effectively.

5. Transitional measures: There is a good chance that the constructive measures above will eliminate or reduce to manageable proportions our payments deficit. But they may take time. In the meantime we have access to a number of temporary measures of international cooperation, such as arrangements for prepayment of debts due us on past assistance and other measures which we did not discuss in detail.

CONCLUSIONS

We are aware that restrictive methods of coping with the payments deficit are more immediately under the control of our Government than are the constructive steps which require cooperation by our friends and allies. But the evidence is that our friends are disposed to provide such cooperation. Restrictive policies are largely self-defeating and threaten to undermine the economic strength, the military security, and the political cohesion of the free world.

In emerging from its 19th century isolationism, the United States has had to make a series of fateful economic choices. Some were made well, some badly. Among the

mistakes are the Smoot-Hawley Tariff Act of 1930, and the premature termination of lend-lease aid. On the other side, among the successes are Bretton Woods, the Marshall plan, and the continuously evolving scheme of international and national assistance to defense and economic development of the past decade.

We think that the United States is now faced with another fateful choice. This country is in no danger of collapsing under its responsibilities. Though a payments problem exists, there is no need to switch to a short-run and parochial view of our interests, which subverts the international order which we have helped to bring about.

Aid to Education

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. HUMPHREY. Mr. President, recently I prepared a statement for the American College Public Relations Association on some of the problems of financing higher education.

I ask unanimous consent that my statement, which appeared in the February 1960 issue of the American College Public Relations Development Section Newsletter, be printed in the Appendix in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

HUMPHREY FAVORS FOUR-POINT FEDERAL PROGRAM

(By Senator HUBERT H. HUMPHREY)

We cannot—and we should not—consider the financial problems of our institutions of higher learning on only one level. To achieve our goal of adequate financial support, we must keep in mind the fruitful diversity of these institutions and we must direct our efforts so as to enlist the rich variety of private and public action.

The pressures of rising enrollments and rising costs already put tremendous burdens on many colleges and universities. Although a few operate at less than full capacity, the rising tide of the college age population in the 1960's threatens to engulf even those institutions which are not already popping at the seams.

How can we deal with these problems? Where will the money come from?

A few points are already familiar to ACPRA members. Individual alumni and alumni groups must be educated to their responsibilities. We must make it clear to them that their education was subsidized by underpaid professors and depreciating classrooms and dormitories. College graduates have greater income earning capacity. They must realize that they have incurred obligations to the institutions which gave them this capacity at less than full cost.

You know also that American private enterprise has a responsibility to support the hard-pressed institutions which supply highly trained scientific and administrative

manpower. Fortunately, more and more of our leading business firms recognize their obligations to provide financial support for these institutions. I hope we will see a more rapid trend toward unrestricted gifts for higher education. Gifts with strings attached can result in lopsided, unnatural development. A college may need a dining room or better library facilities far more urgently than it needs an endowed chair of chemistry or business administration. Unrestricted gifts—without emphasis on quick, visible results—allow college administrators to put available money where it is most needed. This makes sense, but it does not happen often enough.

What kind of help should Congress provide?

There are four specific measures which I believe will help provide vitally needed financial assistance for our institutions of higher learning—a college construction loan program, tuition tax credits, grants to institutions enrolling scholarship and fellowship winners, and Federal insurance for loans to students.

Last year, Congress tried to put a long-term, low-interest college loan program into the housing bill. That effort was supported by the American Council on Education, the Association of American Colleges, the American Association of Land Grant Colleges and State Universities, the Association for Higher Education, and other organizations. We were not successful then, but we are trying again. I am supporting a \$125 million loan program to colleges and universities for construction, alteration or improvement of classrooms, laboratories, libraries, and related facilities of public and private institutions of higher learning.

Under my tuition tax credit proposal, any student or parent or friend could charge off against his net income tax 30 percent of the cost of tuition and fees for higher education up to \$450 a year. At first glance, this may appear to benefit the student's pocket-

book more than the institution he attends, but I am convinced that this proposal would encourage our colleges and universities to put their tuition charges at more realistic levels by removing the fear of penalizing the talented young people from low or middle income families.

My third proposal is for grants to colleges which bear added costs as the result of accepting students with scholarships. The National Defense Education Act of 1958 recognizes the problem by authorizing payments of up to \$2,500 a year to institutions of higher education for each student studying there under an NDEA fellowship. This is a sound idea—and college administrators should call it to the attention of private scholarship donors. I have proposed a Federal scholarship program, but I know that colleges and universities cannot expand enrollments without putting terrific strains on existing facilities. My bill would authorize payments up to \$500 to the college which accepts a scholarship winner. We must be prepared to consider the indirect costs of any scholarship program and to compensate the institutions which incur expansion costs because they accept scholarship winners.

I believe we must also give very serious attention to legislation providing Federal insurance on loans to students by institutions of higher education. I have joined in sponsoring a bill for this purpose. This proposal could insure up to 100,000 new college students a year for \$1,000 loans. The maximum insured loan to any student under this program would be \$4,000, and would be repayable within 6 years. I do not want to see this loan program take the place of a Federal scholarship program, but I think the loan program should be a part of the overall attack on the financial problems of higher education.

As we try to solve financial problems, let us not forget our purpose. H. G. Wells put it succinctly: "Human history becomes more and more a race between education and catastrophe." Let us do our part to make sure education wins the race.

Notre Dame Civil Rights Conference— Part 20

EXTENSION OF REMARKS OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. BRADEMAS. Mr. Speaker, on February 14, 1960, the University of Notre Dame Law School sponsored a conference on civil rights. Discussion at the conference centered on three aspects of civil rights legislation: voting rights, school desegregation and equal opportunity in housing.

In the Appendix of the CONGRESSIONAL RECORD of Monday, February 29, 1960, on pages A1706 through A1734, a number of my colleagues joined with me to include the proceedings of this conference on the subject of voting rights.

I am pleased once again to join with several of my colleagues at this time to include in the Appendix the remaining part of the proceedings of this conference on school desegregation and equal housing opportunity:

II. ASSISTING SCHOOL DESEGREGATION

Dean O'MEARA. I shall call on Professor Ward of the Notre Dame faculty for a brief

preliminary statement on the problem of assisting school desegregation. Professor Ward.

Professor WARD (Notre Dame Law School). The recommendations of the Civil Rights Commission with respect to desegregation problems were quite mild. The Commission recommended that it be authorized to serve as a clearinghouse of information to communities effecting desegregation, and to establish a conciliation and mediation service to assist local school officials in developing plans designed to meet constitutional requirements and local conditions.

Three of the Commissioners, Hannah, Heshburgh and Johnson, recommended that Federal agencies entrusted with some \$2 billion annually for various educational institutions, be authorized and directed to withhold funds from institutions of higher learning which refused admission of qualified students on racial grounds. Commissioner Johnson was alone in his proposal that Federal funds be withheld from all segregated schools, primary and secondary.

BILLS BEFORE CONGRESS

These recommendations triggered no such legislative explosion as those about voting rights. Most of the bills now pending were put in during the last session before the appearance of the Commission's report. They fall, generally speaking, into three categories. First, a whole slew of bills providing criminal penalties for obstruction of integration orders and destruction of school facilities. Second, bills authorizing the Attorney General to bring suits to compel integration and to prevent intimidation of those exercising rights under or charged with execution of integration plans. Third, bills authorizing the Secretary of Health, Education, and Welfare to extend technical assistance to communities in the form of advice and money, and, when and if these latter prove unavailing, to formulate a plan for integration and proceed to enforce it with the help of the Attorney General if necessary.

In appraising proposed legislation in the school desegregation area I think we must move much more cautiously than in the voting rights area. I agree with Professor Wofford and others that there's an enormous symbolic value in any congressional action in the civil rights field. And I think it's true enough that whatever voting bill Congress passes this year, the public can be counted on to insist that ultimately a workable, practical bill be produced. I'm afraid it's otherwise with school segregation. I'm afraid that a large number of Americans can be persuaded that there are insuperable problems in the way of integrating schools. And a series of aborted bills, all seemingly aimed at the problem of implementing desegregation, would in my judgment be a disaster. Indeed every bill which simply pays lip service to the school problem is a strategic triumph for the segregationists.

INADEQUACY OF H.R. 8601

Applying this philosophy to the three bills upon which most discussion is centered, I must conclude that two of them—H.R. 8601, the Celler bill, and Senate 499, the Johnson bill—should be disavowed. The Celler bill, which is the most famous, for it is the center now of a petition to pull it out of the committee, barely squints at school desegregation. It penalizes obstruction of integration orders and flight to avoid prosecution in property destruction cases, and it provides for education of children in the Armed Forces in areas where schools have been closed by State or local authorities.

This latter provision may contain the germ of a bigger and better idea, but standing as it does, in the context of the Celler bill, it seems to be what Father Kenealy would refer to as a sort of camel's-head bit of legislation. As to the criminal provisions, criminal provisions are rather clearly not the answer to

the school problem. Only last week Attorney General Rogers admitted their general ineffectiveness. To my mind they're the best examples of the kind of legislation which ought not to be allowed to pass under the guise of being civil rights legislation.

The general understanding about this is—and I take this simply from my political advisers in the New York Times—that the supporters of H.R. 8601 are just waiting to get the bill to the floor where it can be toughened up by amendments. If so, well and good. In my judgment the bill as it stands would be a positive disservice to the problem of desegregation.

JOHNSON'S CONCILIATION SERVICE PROPOSES

The contribution of the Johnson bill, which properly speaking is not a school bill, is the establishment of a community relations service as an independent agency of the Federal Government. Now there's a revised form of this bill that does allow the Secretary of Health, Education, and Welfare, on call from the States to offer certain advice and provide information, but basically the heart of it is this establishment of a community relations service. The rather obvious but nonexplicit function of the service is to arrange for and perhaps preside over discussions of problems arising out of the necessity of compliance with desegregation order.

I have very great doubt that there's any need for such a service. Conciliation is of value where both sides have an interest in settling the controversy. I doubt whether such an interest exists in some areas of the South. And in those areas where there is a real interest, Federal machinery is unnecessary.

THE DOUGLAS OMNIBUS BILL

The third bill is the Douglas bill. This is an omnibus bill specifically aimed at this problem of implementing desegregation. Its chief contribution is that it gets the Attorney General directly into the business of initiating and following up the litigation made necessary by the decision in the Brown case. Furthermore, it contains an elaborate statement of the role to be assigned to the Secretary of Health, Education, and Welfare. The Secretary is to provide a conciliation service like that recommended by the Commission. And the recommendation of the Commission, by the way, ought not be confused with the recommendation of the Johnson bill. What the Commission recommends is a perfectly sound business, that is, conciliation with a direct view toward integration—talks between school groups in a given community. The Secretary is given this role under the Douglas bill. Furthermore the Secretary is to encourage formulation of a plan. Finally, to go through it quite quickly, if all else fails the Secretary is to come up with a plan and if necessary the Attorney General is to take the plan into court for enforcement.

I think the great virtue of this bill is that it can form the basis of an acceptable compromise bill. It seems to me that any civil rights bill affecting school desegregation ought to contain an authorization to the Attorney General to initiate court action leading to desegregation, and ought to protect local officials and Negro citizens in the execution of court orders. If this much can be gained in the present session, we can afford to wait another day for the provisions involving the Secretary of Health, Education, and Welfare.

I simply do not have time in the 5 minutes assigned, which I've already exceeded, to discuss the rather interesting provisions of the bill proposed by Governor Collins which may be of general interest. I neglect to do so simply because I think of all the bills currently mentioned it probably has the least chance of serious consideration in this Congress.

Dean O'MEARA. Thank you, Professor Ward. Congressman BRADEMAs will open the discussion.

Congressman BRADEMAs. Following Professor Ward's analysis I have a number of questions that seem to me we might use as a basis for our discussion. In the first place we have the suggestion of the Commission that there should be established by Congress a clearinghouse of information on the matter of desegregation of schools across the country. I think it might be fruitful if we had a little more discussion of the difference between this particular proposal and the community relations service suggested by Senator JOHNSON. I for one am not yet clear on the distinction.

A second subject that I think we might talk about has to do with a point made by Father Hesburgh in his speech at lunch, in which he suggested—a suggestion in which he was joined by two of the other Commissioners—that we should have a Federal policy whereby the Government would withhold funds from any institutions of higher learning that failed to promise that they would not discriminate. Being sympathetic with Father's suggestion, I'm also aware of the logic of Commissioner Johnson's suggestion that this policy ought to be applied at the elementary and secondary level as well. And I am a little curious as to how Father Hesburgh can defend the one and not go along with the other.

I hasten to add that I'm among those Members of Congress who voted against Commissioner Johnson's proposal and voted with Congressman Adam Clayton Powell, Congressman Dawson, Congressman Nix and Congressman Diggs when this proposal was applied to the housing bill last year, because we felt we would have been mousetrapped by the enemy into helping to defeat the bill. So I raise two questions here: one, of the logic of the position, and two, of the politics of the problem.

Now we come to the Celler bill. I'd like to hear more discussion of the specific objections to the two proposals in the Celler bill that concern the field of education. One, the criminal penalties for obstructing court orders in enforcing school integration. And two—what's the matter with Mr. CELLER's proposal to give assistance to the education of children of members of the armed services in trouble spots?

Then we come to the Douglas bill. I believe Professor Ward endorses Senator DOUGLAS' proposal that the Attorney General should be authorized to help in desegregation cases. I would like to have some clarification as to how he can, on the one hand, object to Mr. CELLER's proposal for criminal penalties for obstructing court orders in these cases while, on the other hand, he would be sympathetic to an authorization of action by the Attorney General.

Now, if I haven't confused everybody suitably, I'll stop and hope that we can have some discussion about these questions.

Mr. FOLEY. For the enlightenment of those participating here I wish to point out a little legislative history, pertinent to Professor Ward's statement. What is known as the Celler bill today, H.R. 8601, having been reported by the Judiciary Committee and now before the Rules Committee, is not the original Celler bill. The original Celler bill is identical with the Douglas proposal. That bill was considered by the Judiciary Committee, both in subcommittee and then again in full committee. Literally and figuratively it was gutted in subcommittee. They struck out all after the enacting clause, and that position was overwhelmingly supported in the full committee. So from the House standpoint the Douglas proposal I'm afraid is dead, completely.

Now the provision you have today, so far as protecting court orders is concerned, is a recommendation by the President himself,

and submitted as an executive communication by the Attorney General. The same thing applies to the relief to the children of members of the Armed Forces. And here I think you should also consider that there was an additional proposal by the President—somewhat of a midway version between the Douglas proposal and nothing at all—namely some kind of technical aid and assistance, and financial assistance as well, through the Commissioner of Education. That particular proposal was rejected by an overwhelming vote in the full Judiciary Committee.

So from the standpoint of House legislation now those proposals have been rejected and little hope is held out that they will even be considered on the floor of the House. There is one strong possibility of implementing the Celler bill insofar as school desegregation is concerned, and that is the restoration by floor amendment of the old title III of the 1957 act, in a rather modernized version let me put it. But that is subject to a serious parliamentary question, namely the question of germaneness to the bill.

Mr. EDELSBERG. I want to begin again by looking at the problem as I see it. I think the great problem in school desegregation today is no longer the matter of resistance along the lines of violence that we found in Little Rock. Resistance to school desegregation takes the form of legal evasion of legal compulsion—takes the form of pupil placement laws—and it also takes the form of the threat of closing down the public schools altogether. Now within the past year only a handful of school districts in this country desegregated. The process of desegregation seems to be grinding to a halt.

And the question is who should bear the burden of bringing the legal suits which today seem to be necessary to speed the process of desegregation in the school systems. Up to now the burden has been borne by the NAACP, and I for one think they've acted with exemplary discretion in picking the areas in which to institute their suits. We cannot be sure that the business of picking the site for another court test will be wisely chosen, and we certainly cannot expect the NAACP to shoulder the financial burden of doing this job. In this area, unlike the area of voting rights, the voluntary civil rights organizations are agreed—they are agreed that the Attorney General should have the power to enforce general civil rights including school desegregation in particular, as he has the power to do in the case of voting violations.

The only issue is: Since suits will be necessary, who should bear the burden of vindicating these basic constitutional rights? In our judgment the answer is clear that the Attorney General should do it.

Now I depart from my colleagues in the voluntary civil rights organizations when I suggest that this so-called part III legislation is not as important today as it was last year, and certainly not as important as it was two years ago. If it is true that southern legal evasion will be the response to legal compulsion, we ought to be seeking new approaches toward getting genuine compliance with the spirit of the Supreme Court's decision in Brown against Topeka.

POSSIBILITIES OF CONCILIATION

The administration's proposal to offer technical and financial assistance is one such way to bring better compliance. And another way, I think, may be found somewhere in the confines of the Lyndon Johnson proposal, which has been fairly cavalierly dealt with this afternoon.

I argue like this: Any conciliator sent into a southern school situation is a representative of a national political position, and that national political position cannot afford to permit the South to continue to evade.

Just as the Attorney General and the Department of Justice were put on the spot under the Civil Rights Act of 1957, because people said, "How many new Negroes have been added to the voting list," so a conciliation service federally administered would be on the spot if at the end of a year or two of service it couldn't point to genuine desegregation accomplished as a result of its efforts.

I think a conciliation service might move into the softer periphery areas of the South—certainly not in the Deep South tomorrow—and begin to conciliate and offer technical and financial assistance to those communities that are closer to doing the decent thing. For one thing they can persuade southern communities that desegregation is not quite a fate worse than death. I think it would be a useful starting point to have Federal educators and other officials coming into a school superintendent's office, where there is reason to believe he is well disposed, and help him become the leader of a movement with the school board, looking toward the adoption of a school desegregation program that certainly couldn't be any worse than the kind of pupil placement we're getting today, as a response to compulsory legal process.

Professor WARD. I would like to answer a couple of questions, some of them implied I think. First of all, Mr. Foley, I'm well aware of the background of the present House bill. My point is that I think Mr. CELLER is making a real mistake in associating himself with that bill. It seems to me that what has happened is that what started off as a splendid bill has been completely emasculated and it's not even recognizable—it isn't a bill—and yet the southerners have maneuvered advocates of civil rights into the position where now they are with a great deal of clamor getting up a petition to pull that bill out.

This looks to me like what the national football people call the mousetrap play. When that bill finally comes out, if it gets to the floor and if it gets a favorable vote, we're going to be told then, "You got the bill you wanted. You beat us down. Over our resistance you got it. What good has it done you."

Now, Congressman, you asked what's wrong with the first section of that bill making it a crime to interfere with the carrying out of integration orders. I say nothing is wrong with it. It's another criminal statute that goes on the books. I think it's perfectly obvious that those criminal statutes are not likely to get us anywhere. You have to bring those people before southern juries. I have the word of the Attorney General of the United States that this is not a very fruitful procedure.

But the heart of my position simply is: Better no bill, no bill at all, than a bill that isn't going to do the job. Because what I fear is that the moral indignation of the American people, which I think still exists—although apparently it took the bombshell of the Commission to activate it last September—I think that moral indignation will not be still until and unless it becomes clear that what we're trying to do simply isn't doable. And I am afraid that here, unlike in the voting area, there are a number of perfectly well-meaning, decent, peaceful citizens who have serious fears that integration in the schools in the South is simply not possible. I think it would be a disaster if a whole series of ineffective bills cemented that conviction.

Congressman DINGELL. I thoroughly agree with Professor Ward as to the effect of H.R. 8601. I think it's necessary, however, to maintain a certain perspective. I would first like to criticize the bill then I'd like to explain some of the background. I agree that the provision for making it a criminal offense to interfere with the court orders for

enforcement of integration is now within the contempt power of court, and people have been sent to jail for precisely this very act. I agree that flight to avoid prosecution is now a Federal offense. I agree, as a matter of fact, that flight to avoid giving testimony across State lines is now a Federal offense. The Civil Rights Commission, we all know, was extended for an additional 2 years, and furthermore the education of children of military personnel is traditionally a power which the President has had and which he's carried out, at least during my lifetime that I know of and for sometime previous.

But you have to understand the nature of the Congress and to look at it in perspective. Now MANNY CELLER, as author of this bill, is not such a fool that he would say that it is a strong bill or that it is a worthwhile bill. However, as chairman of the committee, he was authorized by resolution to introduce a clean bill, I believe, or at least he has a bill which was badly emasculated. Either one of those two things happened in the committee, and I think Mr. FOLEY could explain precisely what happened there.

Now, with regard to the discharge petition, I thoroughly agree that we are fighting very hard to bring out a nothing. But we are fighting very hard to bring out a nothing which can be amended and strengthened very much on the House floor, if we are able to get a sufficient number of votes. One of the problems we have is that within congressional committees very frequently things can be and are done behind closed doors which cannot bear the scrutiny of the daylight on the House floor or the Senate floor—the same thing being true in the case of the Senate. So you have to understand the reason and the motivation for this thing.

I think that having come to an understanding of the need, let's say, for either referees or voting registrars or a Congressional Election Commission, we can understand that there is a distinct possibility that this can be added on the House floor if this matter gets to the House floor. Our real problem is this: As a matter of parliamentary procedure there is virtually no way that we can shake this bill loose and bring it on the floor—because it's been effectively pigeonholed in the Rules Committee for a long time—without the discharge petition.

I would point out this discharge petition now has, or did have on Friday last, 206 signatures. It needs 13 signatures. This discharge petition has in it a very interesting provision, which would be interesting to students of parliamentary law. It waives points of order—any amendment at all will be germane and will not be subject to points of order. Now this is in effect a self-defeating discharge petition, because certainly the chairman of the Rules Committee is not going to permit a piece of legislation of this sort to be brought to the floor under, in effect, a rule waiving points of order. So I think you have to understand this whole parliamentary system and to understand why we do what we do to bring out a piece of legislation of such apparent and obvious and such real worthlessness.

Notre Dame Civil Rights Conference— Part 21

EXTENSION OF REMARKS OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROUSH. Mr. Speaker, under unanimous consent, I include in the

RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

Mr. BERNHARD. I'd just like to go back for a moment behind some of the legislation to the factual situation which the Commission has had an obligation to keep current. You may recall that in our report—I was just looking at it—it is stated that voluntary desegregation reached its peak in 1956. Since then a growing proportion of starts have been under court order and the trend seems likely to continue. Well, we've gone back and attempted to see what actually has happened in the last year, and really right within the last few months, and as predicted in the Commission's 1959 report, initial desegregation, voluntarily originated or initiated, has all but stopped.

I think this is a simple fact and I think in turn it relates to the type of legislation which may be needed. The only optimistic point is in the area where there are so-called military personnel. We found that in North Carolina, in Dade County, Fla., and in Pulaski County, Ark., where there has been some token desegregation, this has resulted predominantly in military districts.

We realize that in six States—Delaware, Maryland, West Virginia, Kentucky, Missouri, and Oklahoma—the official State policy is one of compliance. But in the 11 so-called compulsory segregation States nothing is presently being done except through the pupil placement laws. This relates to what Herman Edelsberg stated previously. Take the comparison between North Carolina and Virginia. North Carolina used the so-called pupil placement system, and in total some 53 Negro pupils in seven schools have been integrated. In Virginia, where they tried massive resistance, since February 1959 there have already been 106 Negro children integrated.

What this points to is that some of the recommendations of the Commission and some of the bills which have been introduced, relate to the demand for information as to voluntary desegregation plans. Now if what we seem to find is true, then I think that conciliation and mediation and the exchange of information are essentially outdated. It could be that court decisions because of class suits will change the situation, but if they do not, I think that the entire approach may have to be shifted somewhat. There may not be the desire to communicate. There may be more falling back on the legal paraphernalia and court orders and pupil placement laws. I think this is true to some extent of Senator JOHNSON's conciliation bill—and I think the same is true of Senator DOUGLAS' technical and financial assistance, because this is based upon the local communities who are planning voluntarily to set up plans for desegregation and to implement desegregation.

Overall I think that there just has to be a shift of emphasis to recognize that the successful thing today, in terms of overcoming the opposition, is the law; that voluntary desegregation seems to be ceasing; and that the one great hope and the one point of optimism for voluntary desegregation—occurring more rapidly is in only one place and that's where military—either on-base or off-base—schooling is involved.

Dr. MORSELL. I had two comments to make, the first of which Congressman DINGELL has more than adequately covered; namely, in answer to Professor Ward as to the minuscule elements in the bill now known as the Celler bill, that the whole strategy is based on getting something on the floor under conditions which will permit it to be amended. And this of course was the vehicle whereby the voting provisions also are expected to be made effective.

I'd like to put a question, once again, to the legally trained. This is in connection

with the pupil placement and assignment laws. As at least two speakers have noted, this constitutes the real 100-percent down-to-earth roadblock to desegregation in the predictable future. As you know, the Supreme Court has, by declining to review adverse decisions in lower courts, in effect upheld pupil placement and assignment laws as not unconstitutional on their face. The implication of this language obviously is that if the laws are administered unfairly, in a discriminatory manner, then the court will find against them.

Now the question is, since class actions are not possible against assignment laws, each individual child's case must be handled in and of itself, on its own merits. What is the likelihood that, within the next 3 or 4 years, to use perhaps a minimal time, a pattern of discrimination in application sufficiently clear can be demonstrated, so as to result in decisions which will strike down the assignment laws on constitutional grounds? Is this indeed a probability or only a matter of fancy?

Mr. SLARD. I think, John, that in response to your and to Herman Edelsberg's points, it certainly seems correct that the problem of the moment is not the totally intransigent States, but continued movement in the States where movement has begun, and in that connection something like conciliation might make sense in certain areas. On the other hand, it doesn't in itself solve pupil placement.

Now there's a suggestion which I think could cut through pupil placement, and that's simply to have the courts do what the Supreme Court obviously contemplated they would do and they have never yet done, which is to demand that a plan which at least starts toward desegregation be put into effect or be put up for discussion and one or another kind adopted.

In this connection I think Professor Foster had an idea 9 months ago that should be put out on the table again. Oddly enough, he proposed referees long before anyone mentioned referees in the voting area. He proposed that referees in the school area might very well provide the mechanism by which the courts, not in themselves willing to take the burden of promulgating or demanding the promulgation of a plan of compliance, might nevertheless choose such persons in the community as masters who could, if for no other reason, at least by their community status, move things along toward the possibility of a plan. And I really would like to have Professor Foster outline that idea.

Dean O'MEARA. Professor Foster has made a study of the role of southern district judges in school desegregation. I understand he talked to a lot of judges and that he discussed with them the possibility of something like referees. Would you be willing to tell us about that, Professor Foster?

Professor FOSTER. Well, only by disclaiming just about everything at the outset. I am a great fool if I were to presume that I really know anything much about this. Indeed every time that I have acquired any more information I've found that my uncertainty about next steps only increases rather than diminishes. I hadn't really expected to be called on to speak in any detailed way about this, and my thoughts are not really going to be connected especially. I'd rather like to come back to that master's thing in a few minutes, if I may, John Slard.

In a fair balance I am quite discouraged about the immediate prospects for school desegregation in the South. At the point of the decision in *Brown v. The Board of Education* in 1954, there was somewhere in the neighborhood of 3,000 biracial school districts which were segregated. Three-quarters of those today have so far taken no step whatever toward desegregation. In the quarter in which the step toward desegregation has

been taken, that step has more often than not been only the most minimal token step. And the truth of the matter is that even in those places where beginnings have been made, with a few exceptions, there are very few real instances of intermixing of races in the educational process.

By and large, if I could write a ticket for a single piece of congressional legislation at the moment, it would be a very simple piece of legislation. It would simply declare that we, the Congress of the United States, endorse the principle of *Brown v. The Board of Education of Topeka*.

Everywhere I went in the South, in talking with judges, newspapermen, educators—everyone—the point insistently was made that the Supreme Court has usurped constitutional power—done something beyond the permissible limits of what the Constitution allows. And the strongest proof of this usurpation came out of the fact that neither the Congress, nor the President, had ever indicated any agreement whatever that the decision was a correct decision. And if, therefore, we could get at least out of the Congress that simple declarative statement, "We agree with *Brown v. The Board of Education*," this alone I think would have incredible side effects in an enormously complicated area.

THREAT TO PUBLIC EDUCATION

For at the moment this whole usurpation argument gives strength to the arm of the segregationist who urges the South to turn down public school bonds, not to worry about increasing salaries of teachers, in short, to disregard what is happening to your public schools—because, as the argument goes, you perfectly well know we're all going over to private schools as soon as the courts come in anyway, so there's no point in increasing any expenditures with respect to our public schools. Thoughtful people I talked to in several States of the Deep South said that they are gravely concerned about the future of their public school systems, simply as a consequence of the fact that the segregationists have made such an attack upon the very existence of public education. And I do feel that if we could get at least the Congress—and perhaps hopefully some day the President—to put full support behind that decision, this will be a great help.

Now another thing with respect to school desegregation. As a question of constitutional inequality I would assume that it is entirely consistent with everything that has been decided in *Brown v. The Board of Education*, that a school district violates nothing in the Constitution, if it assigns children to the school nearest each child's home. In short it is relying on residential segregation, something that is a major fact of life in the urban areas of the country. It simply assigns the child to the school closest to his home. You have a completely nonracial criterion, the net effect of which is that Negro children largely will be in Negro schools and white children largely in white schools.

GAP IN ACADEMIC STANDARDS

Now what occasionally shows, as the top of the iceberg, in talking to the southern educators about this problem, is the sinking realization—or it was a sinking realization to me—that the academic standards of the white schools compared with the academic standards of the Negro schools in the same community were so woefully different.

One example will illustrate the general problem. The smartest young Negro fellow in a North Carolina high school—Negro high school—was permitted to transfer to the 11th grade of a white high school in that community as one of the first students to transfer. This was 3 years ago. The principal of the white high school told me that that child who stood at the very top in

achievement in his group ready to enter the 11th grade was more than 2 academic years behind the median white 11th grade student in the school to which he was being assigned. The boy flunked some courses that first semester. To his credit, he graduated with his class 2 years later.

Every Negro child in that community today knows how tough it is to transfer to the white schools at a high school level. And this, if you had nothing more, I submit, is an enormous deterrent to a Negro community socially inert in a great many aspects so far as this problem is concerned. And indeed one of the real evils, it seems to me, of the pupil placement system is the fact that it shifts to this fearful, hesitant, and inert Negro the responsibility of having to step forward and go through a perfectly horrid process as an individual—of cross-examination, interrogation of the most embarrassing kind, in order even to apply to a school that is white. And if on top of this we add to it all the fact that he is going to be so deficient academically at the high school level that he can't keep up, then I think we've got a system which is pretty close to what we do have, in these places in the South where these transfers have occurred at the high school level.

THE NASHVILLE PLAN

The Atlanta school board, as you know, has recommended a plan of a grade a year from the top down, and this has been agreed to tentatively by the district judge there. It was at the high school level that this breaking down process began in Little Rock, Ark. To me it makes a great deal more sense to look to what was done at Nashville as a pattern for the future.

It is perfectly clear, statistically at least, that the 6-year-olds who approach the first grade, black and white, both share equally their literacy. But it is equally true statistically that the Negro of the South is far less ready to go to school at 6 than the white is at 6. The teachers ascribed this to the fact that a Negro child perhaps has never held a book, nor has ever been read to. Now this is not to say that there are not whites of whom the same way be said, for obviously there are whites in the same condition. The simple point is that there are far more Negroes in that condition. Such a child has to be taught to want to read before you can even teach him to read. So that the readiness of these children to start at the first grade level is far less.

Nevertheless, the Nashville plan has about it two characteristics it seemed to me were the real consideration here. They are first that the initiative is not on the child to be assigned. The child is assigned to the school by the school board on the basis of the geographic location of his home in relation to the school. In short, the school board makes the initial assignment on a nonracial standard.

Now in the second year of the Nashville plan—they had at this point desegregated the first two grades at Nashville—by this system of geographic assignment about 150 Negro children were assigned to schools previously white, and about 70 white children were assigned to schools previously Negro. Then what happened? Into operation came the second aspect of the Nashville decree. This provided that any child, having been assigned to a school, might thereafter apply for a transfer to any other school, provided that the applicant could show that he was a member of a racial minority in the school to which he had been assigned.

VOLUNTARY TRANSFER SYSTEM

Now let me unwind that and explain what it means. It meant that every one of the 70 white children assigned to the Negro schools was of course a member of a racial minority and was permitted to ask for and did get a transfer out of the Negro school.

On the other hand, so far as the Negroes in the white schools were concerned, the white children had to stay put. They couldn't ask for a transfer and run away from the Negro. In other words you did not set up a game of musical chairs of the sort that took place at Miami where all the white children transferred out of the school after the Negro children went in. The whites had to stand pat at Nashville. But the unhappy fact was that of those 150 Negroes assigned in the second year, 122 asked for and got transfers back to the Negro schools. This is in the first and second grade levels, mind you.

Now, so far as pupil assignment is concerned, it seems to me that we are going to be able in the next few years to approach the day that we can demonstrate that plans of the Nashville type—and the entire State of Delaware is under a decree of comparable kind—that those court plans that shift to the school board and away from the Negro the initiative of getting placed in a school in the first instance, that these are in point of fact bringing about desegregation and that those systems such as pupil placement which require the Negro individually to take the initiative and are not producing this kind of result. But at the point that we can then compare the two systems in operation in enough cases, we have the foundation for overturning cases like *Shuttlesworth* which have refused at the outset to say that the placement laws are invalid.

NEED FOR SUITS BY ATTORNEY GENERAL

To this end it seems to me of urgent importance that we get going as many lawsuits as we can find Negro plaintiffs to bring them, provided we can get skilled counsel to man the operation. To this end I feel very keenly that the old title III provision rejected from the 1957 act is of real need at this point. For if we had vigilant activity in the Civil Rights Division of the Justice Department—if they really moved in, to Birmingham, into Knoxville, into the urban communities of the South—remember there hasn't been a school suit—I haven't checked this within the last 2 weeks—there hasn't been a school suit even started in Memphis, mind you. And Memphis will do—you won't have any trouble in Memphis if this thing is adequately handled. But if the Attorney General were permitted, in the name of the United States, to bring these actions so that we could test in a whole wide variety of circumstances and get this comparative data that we need to demonstrate the inefficacy and unfairness of these pupil placement plans as compared with those systems in which we get the board taking the initiative, as at Nashville, then and there I think we have the foundation for rather quickly peeling back what is at present a very unhappy setup with respect to pupil placement.

But even this doesn't do very much of the trick for reasons of residential segregation and some of the other problems of Negro hesitation. For there will be those Negroes who will withdraw from the white school if they're given a chance to do so. And it seems to me that something more than simply worrying about what someone here called the political—or the legal—chess game is in order. I would give anything, frankly, if we could have a really first-class Federal aid-to-education program—I mean this—that would go into the secondary schools with far greater contribution in the form of salaries, in those States that simply have not come up with adequate salaries for their teachers. For the inequality that faces the Negro, it seems to me, in the southern school systems, is not merely something that comes out of the fact that he's been kept separate, but the fact that in that separation the academic standards have been permitted to lag so far behind the levels in the corresponding white schools of the system.

COURT MASTERS OR REFEREES

Now, finally, where might a master come into the operation? It seems to me that there are going to be, in the course of the kinds of evasive tactics that can be anticipated here, resignations of school boards right at that crucial instant that the court orders the board to come up with a plan, or some other kind of recalcitrance on the part of the board that calls for skillful and imaginative use of inherent equity powers.

There is a magnificent paragraph in the second Brown decision of Justice Warren that suggests that the lower courts make liberal use of their traditional equitable remedies to handle this kind of thing. It is here that I see real hope if we can have joining that heroic handful of people that represent the attorneys working with the legal defense fund of the NAACP on this—if we can have joined with them a cadre of Government lawyers who can give to these Federal judges opportunities imaginatively to use equitable powers in the form of masters, referees, what have you, to meet any kind of contingency as it opens up.

One thing that rather bothers me about the possibility of spelling out, as the Attorney General's proposal now suggests that we do, the use of these equity powers in the voting cases, is that perhaps this might suggest to conservative southern judges that they ought not use the same equitable powers in the school cases. Indeed an amendment that I would very much prefer see going into any legislation this year that might use the Attorney General's suggestion would be an amendment that would make it clear that nothing was to be implied from any Federal legislation now setting up referees and the like that comparable equitable remedies ought not be available in the enforcement in Federal courts of any other kinds of Federal rights.

Notre Dame Civil Rights Conference— Part 22

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, under unanimous consent, I include in the Record the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

EXPERIMENTATION REQUIRED

But mind you this—I'm no expert on this thing—I have spent an awful lot of time worrying about it. I don't know what the answers are or should be. But nevertheless, I feel that no great harm can come from trying as many combinations—permutations—as we conceivably can try, to get the answers as fast as we can on the things that work and don't work and pragmatically to push forward every time we find a system like Nashville that works—try to get a somewhat better version of Nashville somewhere else—and let's really get about the job as a national responsibility—something I think we can do only if we succeed in getting comparable power given the Attorney General in this area to those that in 1957 were given him in the voting area.

Dean O'Meara. Thank you, Professor Foster. Mr. Yarmolinsky.

Mr. YARMOLINSKY. Bill Foster has said almost everything that I wanted to bring to

your attention as we went along here, but I would like to add just a word or two, bringing in a couple of facts from outside this chess-game area entirely—facts from work that I happen to have been doing in the area of education and educational psychology. The more the psychologists look into the nature of human intelligence, and particularly of the intelligence of children, the more apparent it is that ability is to a tremendous extent a function of motivation, and the capacity of an individual child to improve his IQ—which we used to think was something that was fixed and immutable—is quite extraordinary. Variations have been measured—and over short periods of time as much as one standard deviation in the IQ of a schoolchild, the same child.

At the same time I think we have to take note of the fact that the educational process—the process of secondary education particularly, and education even through the 14th grade, the first 2 years of junior college—is very rapidly becoming not only a right, but indeed an actual possession of all, or of substantially all the Americans who are growing up in our country today.

Now, given these two facts we find ourselves in a situation where education is available to everybody, but unless we take some giant steps to improve the quality of education that is available generally, we are going to have a system of education which is more and more segregated, not by levels of actual ability, but by levels of opportunity, so that we'll not only have a perpetuation, even in the North, of de facto racial segregation, but we will have segregation of every disadvantaged group in our society, and that segregation will grow greater and greater and not less and less as the quality of education and the distribution of education is increased.

NEED FOR FEDERAL AID TO EDUCATION

Therefore, it seems to me that an essential ingredient of any legislative program that we talk about here today is really a massive infusion of Federal funds—because I think only Federal funds can do this job—to make it possible to offer the kind of education that the abilities of all the young people in our country can absorb, and to do this with all the ingenuity and using all the techniques that are now available—that in a small way have been tried out with the limited resources of foundations and private organizations, colleges, and universities.

Just to give you an example, I mention the so-called junior high school 43 plan in New York, where a very substantial increase in facilities is available to boys and girls in a single junior high school—which was, I believe, 40-percent Negro and 30-percent Puerto Rican. This resulted in overcoming these 2- and 3-year deficiencies in reading skills, arithmetic skills, and other abilities over a period of months, so that the kids were brought up to a level where they could go on to compete with other not-disadvantaged students in the New York City high schools of fairly high educational standards, and go on as they are now doing to college and professional preparations.

So that I would say that discussion of strategy, tactics such as Bill Foster proposed here, is, of course, essential, but it will be to no avail unless it is coupled with a very substantial—and I use the word "massive" intentionally and advisably—a massive program of financial assistance to American primary and secondary education.

Representative PAUL SIMON (Illinois General Assembly). This is just a very minor point that hasn't been covered that we found important in the State of Illinois. Technically segregation has been illegal for more than three-quarters of a century in Illinois, but two terms ago in our State legislature we passed a bill which possibly could be an amendment to either Father Hesburgh's suggestion of Dean Johnson's. The bill prohibited State aid to any school dis-

trict which practiced discrimination in the employment of teachers. They had to sign an affidavit to this intent.

Now this has been important, particularly in smaller communities where the teachers frequently are those who can provide—sometimes are the only ones who can provide—the real leadership, but have been very reluctant to do it because of economic reasons. It has been a very helpful thing in the State of Illinois in getting more leadership, in providing a little more employment opportunity, and in helping to solve this paradox of a shortage of teachers and a surplus of teachers at the same time.

Dean O'Meara. We're approaching the limit of the time that we can devote to this aspect of civil rights, but I do think we ought to hear from Mr. Fleming before we go on to anything else.

Mr. HAROLD FLEMING (Southern Regional Council, Atlanta). Much of what I might have said has been said, and very ably here, in the last few minutes—a mighty fine diagnosis and prescription. I'd like to emphasize very briefly a few of the points inherent in what's been said that I think are tremendously important for any legislative approach to the problem of school desegregation.

First, in amplification of what Herman Edelsberg said, while true that the nature of the problem is shifting a good deal, let's not forget that the basement States are just now being reached, and I think it would be a little premature to hope, or to be sure, that the Little Rock type of resistance is at an end. And I think this should be kept in mind in any legislative planning about sanctions against interference. That's certainly still a part of the package.

The two things it seems to me most important to bring home—and these points, as I say, have been certainly inherent in what's been said—are first that there is a vacuum, there has been a vacuum, not so much in the collection of information on school desegregation—though that hasn't been as much as might be desired—but in the dissemination of information. There's really been nothing of comparable power and financial backing and vocalism generally to match the calculated campaigns of misinformation on the subject, and nowhere could it come with greater authority and with greater resources behind it than from the executive branch of the Government. And for my money this should be a sine qua non of any prescription in this field. This job simply cannot be done alone by voluntary agencies and by the courts.

UNDUE RELIANCE ON JUDICIARY

And on that subject, which goes back to what we were talking about earlier, the disposition in some quarters to rely on the judiciary for the total remedy here I think has reached just about a saturation point. I'm not worrying about the overworked Federal judges. That's more in the line of the lawyers here, but I am worried about public images and the effect on public opinion that this exclusive reliance on the judiciary it seems to me is producing. Someone spoke of the disrepute in which the executive branch of the executive department of the Government may have fallen. Believe me, in my part of the country it's nothing compared with the disrepute in which the judiciary has fallen—labeling the courts the superschool boards, which I can see very rapidly is going to be supplemented by labeling the courts superregistration boards. All of that, it seems to me, has got to the point that it is essential that the other branches of the Government become involved, and I heartily endorse Bill Foster's suggestion about the one-sentence resolution that Congress should pass.

The practical choices? Voluntary segregation? It's true it's just about died out, but I don't think this is an argument against the conciliation approach if it embodies very

strongly the mandate to carry on public education or to disseminate information—not just to specialists but to the public at large, to inform the whole Nation on this important question. Because the practical choices that are afflicting people—as in my home town of Atlanta now on whether to have some desegregation in the schools—are producing a receptivity to information on this subject. I agree that the movement is slow and grudging, but the receptivity among rank-and-file citizens to information and reassurance that desegregation is not synonymous with catastrophe—this receptivity has increased enormously.

TIME FOR NEW EFFORTS

It's at the political level that the lack of movement and the lack of change is most perceptible. Down below that there is tremendous ferment, and I think that this is an ideal time for more of this kind of information, new information of the sort Adam Yarmolinsky suggested as well as what we now know, and new imaginative approaches such as Bill Foster suggests couldn't be better time than now in the South, as I see the situation.

Of course I share fully the idea of taking the burden of litigation, some of the burden anyway, off the plaintiffs in these cases, or off the Negroes generally and the NAACP. Everything that has been said on that subject seems to me to be right on the point.

Finally, I wonder if in this discussion—I know we've reached the end, and I've helped to push it over beyond the end, but I think it would be very helpful, if it were possible, to at least make a beginning toward the kind of consensus that Mr. Silard offered us on the voting legislation. I realize this one is much bigger and looser, but certainly if we could make a beginning toward agreeing on some of the principles that ought to be achieved through legislation and otherwise in this field of school desegregation, this might help to lessen some of the flailing around on this subject, which I think fairly characterizes much of the public debate in and out of Congress.

DEAN O'MEARA. Thank you, Mr. Fleming. We have reached the seventh inning, and we're entitled to a stretch; but we're so pressed for time that I'm going to suggest that you take the stretch in this room and that you limit it to 5 minutes.

Notre Dame Civil Rights Conference— Part 23

EXTENSION OF REMARKS OF

HON. THADDEUS M. MACHROWICZ
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. MACHROWICZ. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

III. ACHIEVING EQUAL OPPORTUNITY IN HOUSING

Dean O'MEARA. We've reached the last of the three specified subjects that we wanted to consider here today—achieving equal opportunity in housing. Professor Broden of the Notre Dame law faculty will introduce this last subject.

Professor BRODEN. In the housing field no civil rights bills are now being pushed and the Commission recommends none. How-

ever the Commission urges the executive branch of the Federal Government to modify its present administrative policies to promote equality of opportunity in all federally supported housing programs. Specifically the Commission calls for an Executive order requiring equality of opportunity in Public Housing, Urban Renewal, FHA and VA housing programs and for a more vigilant policing of all these programs to insure equality of opportunity. Finally the Commission recommends the creation of city and State housing commissions to combat discrimination in housing.

ALTERNATIVES TO COMMISSION APPROACH

These recommendations are more meaningful when we consider alternatives to the approach of the Commission. On the one hand is the approach that the government—Federal, State, or local—has no business in the housing field. Builders, owners, investors, lessors, rental agents, and others should be free to deal with whom they wish on whatever terms they find profitable. If some discriminate on the basis of race, creed, color, or national origin (or as Senator LYNDON JOHNSON likes to add "section of the country") this is a purely private matter. For the most part the Commission rejects this approach and adopts the position that racial discrimination in housing is a proper governmental concern.

Another approach is that represented by the Powell amendment, named for Representative ADAM CLAYTON POWELL of New York. By it Congress would expressly require all recipients of Federal insurance or other aid to give assurance in writing that the property involved would be available for sale, lease, or occupancy without regard to race, creed, or color. Furthermore it would empower Federal officials to withhold, suspend, or terminate insurance of other aid if the recipient, beneficiary, or any successor in title failed to conform to such written assurance. The Commission rejects this approach in recommending no Federal legislation.

This approach raises basic legislative policy issues which warrant some consideration. The advantage of this approach is that it would firmly establish a sound nondiscriminatory Federal policy. The disadvantage is that it might dry up any Federal aid for housing in the places needing it most. This raises the ultimate issue of whether we should sacrifice Federal aid for segregated housing today in the hope of achieving non-segregated housing tomorrow.

EXISTING LAW

The Commission recommendations do not write upon a clean legal slate. There is a large body of existing law, legislative and judicial, Federal, State, and local, dealing with racial discrimination in housing. The law is generally that a private person acting on his own is free to discriminate as he pleases. On the other hand generally when the Government acts on its own, the Constitution prohibits racial discrimination. Some examples of the latter are as follows: The 14th amendment to the Constitution of the United States has in validated racially discriminatory zoning laws. *Buchanan v. Warley* (245 U.S. 60 (1917)). Likewise it has invalidated the judicial enforcement of racially restrictive covenants whether of the obvious kind, *Shelly v. Kraemer* (334 U.S. 1 (1948)) and *Barrows v. Jackson* (346 U.S. 249 (1953)) or of the more sophisticated kind, *Harris v. Sunset Islands Prop. Owners* (4 Race Rel. L. Rep. 716 (Fla. 1959)). (In the *Harris* case the Florida Supreme Court invalidated a restrictive covenant limiting land ownership to members of a private corporation where the effect was to exclude Jews and non-whites.)

Although the pressure of local prejudice maintains racial segregation in many low rent public housing units, such discrimination by local governmental authorities clearly

violates the 14th amendment. State governmental action is obviously present. Although some might suggest that the separate but equal doctrine is still alive in the housing field, I'm certain it is not. I'm sure the Supreme Court of the United States, if called upon to decide the question, would reach the same result as that of the Sixth Circuit Court of Appeals in *City of Detroit v. Lewis* (226 F. 2d 180 (1955)), that is, that separate but equal public housing accommodations violate the 14th amendment.

COMBINED PRIVATE AND PUBLIC ACTION

The question becomes more complicated when the Government and private persons combine to act and the private person seeks to discriminate. We have this in the urban renewal and FHA and VA loan guarantee programs. In these programs private developers act with Government aid and the question is whether there is sufficient public involvement to constitute governmental action covered by the 5th and 14th amendments of the U.S. Constitution. In the urban renewal programs, after the local governmental authority has cleared the site, private builders take over and develop it according to the plan of the local authority. Judge Rives of the Fifth Circuit Court of Appeals said that under these circumstances the developer is not merely engaged in private action but rather is a vital participant in the governmental plan and that discrimination by him constitute State action within the 14th amendment. *Barnes v. City of Gasden* (268 F. 2d 593 (1959), cert. denied 28 Law Week 3181 (1959)). The district court had concluded that the private developer was engaged in purely private action.

An even more difficult question is presented in the FHA and VA loan guarantee programs. Courts have disagreed as to whether the loan guarantee programs render the action of the builder or seller sufficiently nonprivate to bring it under the 5th and 14th amendments. Judge Oakley of the Sacramento, Calif. County Superior Court held that "the mortgage insurance guaranty, inspection services and the various other administrative accompaniments incident to establishment of the system" constitute sufficient governmental action to come within the protection of the Constitution. *Ming v. Horgan* (3 Race Rel. Law Rep. 693 (1958)). He said "When one dips one's hand into the Federal Treasury, a little democracy necessarily clings to whatever is withdrawn." A contrary result was reached by U.S. District Judge Kirkpatrick in an earlier case involving Levittown in Bucks County, Pa. He rejected the notion that the loan guarantee program with its inevitable governmental regulations sufficiently clothed Levitt's action with a governmental character. *Johnson v. Levitt & Sons* (131 F. Supp. 114 (1955)).

HOUSING AND HOME FINANCE AGENCY POLICY

A few observations concerning the legal policies of the Housing and Home Finance Agency are in order. In general that agency has attempted to attune its programs to the racial policies of the local communities. This has resulted in segregated low rent Public Housing projects in some parts of the country and integrated projects in other parts of the country. Similarly in the urban renewal program and the FHA and VA loan programs developers are relatively free to abide local policies. In some of the States and cities having antidiscrimination laws the Housing and Home Finance Agency and the Veterans' Administration have agreed affirmatively to advise the developers that they are expected to obey these laws and to refuse to deal with violators. Administrator Mason has announced that developers convicted of violating State antidiscrimination laws would not be eligible for urban renewal programs. In the mortgage loan guarantee programs the agency has also prohibited the

inclusion of racially restrictive covenants in deeds.

STATE AND LOCAL LAWS

The most vigorous antidiscrimination action in housing has been taking place recently on the State and local level. At least 13 States and 34 local communities have enacted provisions against racial discrimination in housing. The reach of these statutes and ordinances varies. For example in Oregon any person engaged in the business of selling or leasing real property is prohibited from engaging in discriminatory practices. The Civil Rights Commission reports that in Colorado discrimination is prohibited in transactions involving all dwellings other than owner-occupied units. The New Jersey, New York, and Washington statutes not only cover public housing but also prohibit discrimination in the sale or rental of private multiple dwelling houses built with Government loan insurance. The New York City ordinance prohibits discrimination in multiple dwellings of three or more units and in housing developments of 10 or more units, as well as in all public housing. Many of these laws are administered by housing commissions which first seek voluntary compliance but have authority to hold hearings, issue cease and desist orders, and seek court sanctions.

SELECTION OF ADMINISTRATIVE REMEDY

There is a parallel in the Commission's recommendations concerning voting and those concerning housing. The Commission does not leave these problems to the courts alone. It recommends administrative remedies as well. And I would suggest there are good reasons for this.

At present the scope of judicial protection in the Urban Renewal, FHA and VA loan guarantee programs is uncertain. As far as housing cases are concerned there are complex legal problems concerning the jurisdiction of Federal courts. And in any judicial remedy, State or Federal, there is the problem of expense and delay which is significant for the usual victims of racial discrimination.

By invoking the administrative remedy, discrimination would be prevented in FHA and VA housing without forcing victims to court litigation in States and cities having antidiscrimination laws. The advantageous flexibility of the administrative process would be employed in the selection of sites for public housing to avoid racial concentration and to assure that spokesmen for minority groups participate in urban renewal planning. Presumably these are some of the reasons the Commission turned to the administrative remedy. The Commission urges that the power of governmental agencies, Federal, State, and local, be affirmatively exercised to combat racial discrimination in housing.

CONCLUSION

I close with two points the Commission stressed. First, the national housing crisis, involving a general shortage of low-cost decent housing, is a potent factor imposing substandard housing on racial minorities. Therefore no real solution to actual discrimination in housing can come until there is a vast increase in the availability of decent low-cost housing. The Commission did not address itself to the general housing problem. However, Father Hesburgh and Dean Johnson recommended legislation for specific assistance to persons displaced by urban renewal and the Federal highway programs and special mortgage and loan programs for low income persons in general. Second, the Commission stressed that discrimination in housing is a national not a regional phenomenon. It is just as ugly and pervasive in the North and West as it is in the South.

Dean O'MEARA. Thank you, Professor Broden. Congressman BRADEMAs will open the discussion.

Congressman BRADEMAs. There seemed to me to have been several questions raised by Professor Broden. The first point that he mentioned had to do with the recommendation of the Civil Rights Commission that there should be established biracial committees or commissions on housing in the cities and States with substantial nonwhite populations. I think it might be interesting to get some observations on the effectiveness of past commissions of this sort.

Another question that he brought up had to do with two other recommendations of the Commission—recommendations for an Executive order by the President stating that equal opportunity in housing was a constitutional objective and directing all Federal agencies to shape their policies and practices to that end. I wonder what objections might be raised to this particular recommendation of the Commission.

But the last questions that I have I think are perhaps better for us to focus our attention on because here are areas which are perhaps more controversial in nature. One of the recommendations of the Commission was that the FHA and the Veterans' Administration should strengthen their present agreements with States and cities that have laws opposing discrimination in housing in a way spelled out by the recommendation—I won't go ahead to read it here. And then Professor Broden said that we had 13 States and 34 local communities which now have such laws. It seemed to me, to give a lay reaction, that we are in effect, if we are to follow this kind of recommendation, requiring a higher standard of performance of these particular areas than we require of those States and communities that do not have such statutes. And I wonder if there's not some sort of problem of fairness involved there.

Then two other questions briefly, which are both related to this last point. One has to do with the Urban Renewal program and one has to do with the VA and FHA loan programs, and I would raise the same questions in both areas. Should the Federal Government enforce a policy of non-discrimination on the developer of an urban renewal site and, comparably, should the Federal Government enforce a policy of non-discrimination with respect to VA and FHA loan programs, or to put it more specifically, should there be congressional action that would stipulate the recommendation set forth by the Civil Rights Commission—on the theory that, if such discrimination is found, the people who are dipping into the Treasury and have democracy touching their hands should not be permitted to keep their hands in anymore?

These are some of the questions that occurred to me that we might discuss.

Professor NATHANSON. I was a little more anxious than usual to get in early on the discussion, because I wanted to link it with the previous discussion about education. Since I didn't get a chance to say a word on that, I'm going to fudge a little, you see, and put them both together.

It seems to me that there is a common general problem with respect to the field of education and with respect to housing that we have to get the courage to face up to and make up our minds about—really the fundamental question that Father Hesburgh was putting to us at lunch: whether the Federal grants-in-aid are going to be conditioned by requirements of nondiscrimination.

It seemed to me that it was obvious from the last comments in the education field that most of us anticipate that in the not-too-distant future Federal grants will be playing a tremendous part in the education field—that the great sanction, really, is going to be the withholding of funds, if we're ready to take that step. That same thing is true in the housing field. I wonder

whether it isn't important that we should have a general policy which affects the whole country on this—which doesn't seem directed simply at the South. It's so easy to be virtuous at a distance—and I know that there's also on the other hand a tendency to make the problem bigger by asking for a bigger remedy. But sometimes the broadest approach has value. I think that perhaps the northern liberal, so-called, will be in a stronger position and will be more influential if what he's asking for really has a bite at home as well as somewhat further away.

So, I wanted to finally tie this down in the form of a question. I didn't quite see why—I didn't understand why—the Civil Rights Commission, although apparently asking for executive action, did not recommend legislative action, at least in the sense of determining policy. It seems to me it's asking too much of the executive or administrative agency to determine that its funds will not be available except on certain conditions so fundamental as this, conditions which may to some extent hamper the carrying out of the program—I think we have to realize that—hamper some of its objectives. It seems to me that kind of a determination—that weighing of ultimate goals here—has to be made by the Congress and that it has to be faced up to by the Congress.

Mr. EDELBERG. What could Congress do, Nat?

Professor NATHANSON. Well, I was about to say. For my own part I think I would be prepared to make the decision. I would say that I would sacrifice the immediate gains, perhaps to some extent, both in education and housing by asking for these conditions. I have great confidence in the persuasiveness of money, and that in the long run there will be enough people who want that money and that this will be really the most effective sanction, the carrot in a sense, both in housing and in the field of education.

Mr. VERNON EAGLE (the New World Foundation). I just want to supplement what Professor Nathanson has said on the power of money and the use of sanctions, and throw out a suggestion. I do it with a little bit of fear and trepidation when they are so many lawyers about, but I agree first of all with his suggestion and with the suggestion that Father Hesburgh made, that it's certainly perfectly right for the Federal Government to attach such strings to public funds, both for schools and for housing. But it occurred to me that there's another field, that of philanthropy. People may not realize the sums that are being spent in philanthropy today, but I think last year it was something like \$7 billion. Not all of this, I can assure you, has been on a basis of discrimination, but a good deal of it certainly has.

Speaking for my own foundation, and there I can speak officially, we've written right into our rules of operation that no money would be given to institutions which discriminate on the basis of race, creed or color. I think we're the only foundation that I know of that states this specifically in public.

I realize that the Congress has been very hesitant to interpret the sections of the Internal Revenue Act of 1954 that relate to tax exempt institutions, and even though the Internal Revenue Department has tried to put a lot of pressure on them they refuse to do it. But it seems to me that it would be perfectly possible and right for them to do so if it requires an act of Congress. Perhaps it can be done on an administrative basis—I don't know.

But if you can put pressure on the expenditure of \$7 billion in a year to see to it that none of these funds are spent on institutions or organizations that discriminate on the basis of race, creed or color, you've got a fairly hard pinch where it

hurts—in the pocketbook. This covers a large area.

Foundations are one part—but you've also got the vast organizations of the churches. And even in this sacred place, I would suggest that the churches are not at all free from criticism in this respect. Also private schools—it seems to me that this possibly may be a way of putting a pinch on the programs that are being suggested and are in existence in the South, where they're going to try to set up private foundations to run the schools. If they had their tax exemption taken away from them it would be a good deal more difficult. I'd love to have some comment from the legal minds here as to how this could be done.

Mr. YARMOLINSKY. I'm not speaking as a legal mind. I'm a little concerned about Vernon Eagle's suggestion and also somewhat about Nat Nathanson's. It seems to me that while obviously money has a good deal of power, the effect of forcing people to act against their principles in order to obtain money—the effect of this, I would be awfully afraid, would be that in the situations where the money was most needed it would be turned down, and the result of turning it down would make the situation that much worse.

Notre Dame Civil Rights Conference— Part 24

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. UDALL. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

Again, this is one of these situations where the choice is a terrible one. But I would be distressed if this were done with Federal funds—well, Federal funds for education certainly—I'm less concerned about the housing issue, because that is a matter more of material comfort. But if you deny people the education they need to overcome the prejudices that they have because they have the prejudices, I don't think this makes a great deal of sense.

Also, on the matter of amending the tax laws or the tax regulations—anything that is done—to tighten up the tax situation on ideological grounds, I am scared of that. I would not want to see it done for any reason. I think this is too dangerous, and also very difficult to enforce. And I don't know where Vernon's 7 billion figure comes from—I take it this is all philanthropy, including foundations. Foundations are 3 percent of all philanthropy.

Dr. MORSELL. I don't have any compunction at all about the desirability or the merit of withholding Federal funds from either housing or education if they are to be used by bodies which are in violation of the Constitution. With regard to Mr. Yarmolinsky's fear that we narrow the areas in which education along liberal lines can take place, I can assure him of two things. If he were to look at the plans already drawn up in city after city in the South for new school construction, he would find that this has been done with the express and explicit and very obvious purpose of making it next to impossible to achieve desegregation no matter what happens. So that from that point of view certainly the loss or the lack of the

funds to construct those schools I would not regard as a hazard.

At the same time it seems to me our discussion has already indicated that different areas call for different kinds of solutions and different means. We had a great deal of debate on voting as to whether we ought not to add something of an executive character to these sanctions and these enforcements. And we all agreed that it was highly desirable. Here in the case of housing the Commission has recommended principally that kind of action—the tightening up of the administration of Federal housing aids, by administrative action, by Executive order. I think this entirely desirable and likely to be extremely effective.

I have in mind one recent order which was not handed down by the President, but by the Federal Housing Administrator, and which can, over a period of time, have quite far-reaching results. This has to do with the disposal of foreclosed FHA properties, which upon foreclosure revert to Government ownership and are then sold to the general public through brokers and are obtainable with nominal or almost no down-payments and on very liberal terms. Now it has been the universal practice that these sales are made through white brokers, who channel them solely to white prospective purchasers. The recent order reaffirms the no-discrimination policy and then provides that all such property must be very plainly labeled, must be a matter of record, and that if Negro purchasers cannot get these homes through white brokers they may consummate their purchases in the regional offices of the FHA itself. And it provides for suitable dissemination of this information in the communities where it's important. Now in a place like Levittown, Pa., I can assure you that this is a matter of some moment, because the number of houses available from day-to-day on this basis is quite large, and it's simply a matter of removing this artificially-imposed barrier to access by Negroes.

I think that it is much more probable that you will get some effective relief here through Executive orders and administrative means than you will through legislation. I don't believe, for example, that Congress will actually affix either to housing or to education bills genuine safeguards against the use of Federal funds in discriminatory ways.

Dean O'MEARA. There have been three hands up. I'll call on the owners in the order in which they put them up. Mr. Anderson.

Mr. DOUGLAS ANDERSON (assistant to Senator DOUGLAS). I would go for this denial of Federal funds to groups that discriminate, but when we do that we must recognize the truth, as one gentleman said over here, that some of those funds are not going to be used. In Chicago in public housing we have a situation like that. Any public housing in Chicago must be nondiscriminatory. And so the only public housing we get is in the Negro areas.

We had one situation out in an integrated area—Trumbull Park—and the battle resounds still about our attempt to keep that an integrated housing project. The white wards will not accept public housing because they know it will be integrated. And so we have a large number of units of public housing allocated to Chicago that go unused.

There's another situation in connection with restricted covenants. A Federal judge is now pondering a situation which has arisen in Deerfield, where a private housing project is being erected with the idea that it will be integrated. From a legal viewpoint the opposition to this group has said in court the other day that there's discrimination on both sides, because the housing project was based on limiting the number of Negroes who could live there to 10 or 11 out of about 45 or 60. And so they were discriminating, too, and therefore how

could the group that was fighting them in Deerfield be accused of a conspiracy to violate the 14th amendment when the other group was violating it also?

QUOTA TO MAINTAIN INTEGRATION?

That's a real problem in the community in which I live, Hyde Park, which is an integrated community. How do you keep it integrated? If you tie FHA's hands and say that FHA money can only go to groups that do not discriminate—any discrimination based on any quota system of course is discrimination. And yet in our area, without some form of a quota system, as disliked as that may be, it's not going to continue integrated.

A Negro friend of mine in our area came to me about a year ago and said, "We're buying a cooperative housing project—six flats—and we'd like to have it integrated." So he said, "We want three white families and three Negro. I'm going to take one of them," he said, "and we've got plenty of Negro applicants, but not enough white. Will you join us?" Well, we were satisfied with our housing so we didn't join him. But eventually it filled up—all Negroes. He was trying to keep it integrated. No FHA was involved, particularly, but here just on a private basis he was trying to keep it like that.

Now there's a group of housing in the near southside, Prairie Shores, Lake Meadows, which is attempting—by a selective process, they call it—to keep it integrated. The one, Prairie Shores, is on the basis of about 60 percent white and 40 percent Negro. The other group didn't start out with any kind of an allotment, but filled up rapidly with Negroes. Now as the Negro families leave they're trying to put whites in there to keep that an integrated project, but they're willing to accept a reverse ratio—60 percent Negro and 40 percent white.

PROBLEMS OF OPEN OCCUPANCY

All of these problems are tied up with the whole question of open occupancy, which all of us are for. Our alderman is for open occupancy in the city council of Chicago, but it hasn't passed. If we get open occupancy, that means first come, first served. The people who need housing most are Negroes. They will flock into our area wherever there are vacancies, and you'll not be able to select with an open-occupancy rule. You'll have to take first come, first served. And so you lose the whole progress of integration.

Now, another thing. If you say open occupancy, that means that Negroes can move anywhere in the city, but where will they go? They will go to the friendliest community—the community that has not fought them—and so they'll come to Hyde Park. They won't move out into areas where they know they're going to be discriminated against in terms of buying and where people next door to them may move out or where they won't have friendly neighbors. They'll come into Hyde Park, because we welcome them. So they'll flood in there, even with an open-occupancy amendment.

These, to me, are some of the real problems that we face in connection with any overall attempt to relate Federal funds only to housing projects that are nondiscriminatory. We get ourselves into some real problems—and this comes from one who isn't a lawyer or the son of a lawyer, but just a practical politician.

Dean O'MEARA. Thank you, Mr. Anderson. We have time to hear only from those who have already raised their hands, and of the three—there are three of them—Professor Dukeminier is first.

Professor DUKEMINIER. It seems to me that we are basically faced with two problems here, and one is the problem of giving adequate housing to all persons, and the other is the problem of discrimination. And, even

If you accept Professor Nathanson's idea that Federal money would not be given unless it was given on a nondiscriminatory basis, I'm not sure that this would help the Negro to the extent that you might think it would, because it's not Federal money that's given. It's private money which the Federal Government insures in the case of FHA and VA guaranteed mortgages. So that you have to get a private banker to make the loan, and then the Federal Government will insure it. Well a subdivider can easily agree that his houses in his subdivision are available to colored and white alike, but the colored person cannot get a private loan from a local banker to buy into the subdivision, and so it remains all white.

So it seems to me that one of the critical problems that the Negro faces is getting mortgage money. And presently the Federal Government does not make any mortgage money directly available to Negroes unless they're veterans and come under the VA direct loan program. And one of the things that it might do—to do more than it's presently doing under the voluntary home mortgage credit program, which is a program that assists Negroes in getting their applications into bankers' hands—is to make direct loans to Negroes who are refused direct loans by private bankers in their community. In this way the property in which they live, which in most cities is in the older areas of the city and badly needs improvement, could be improved, and also they could perhaps get money this way to buy subdivision property.

But I don't think by simply saying that Federal money, or Federal insurance, rather, wouldn't be available to a discriminatory builder, you're going to insure that you're going to get integration of any type, unless you face up to the problem of getting mortgage money into the Negroes' hands.

Mr. EDWARDS. I think the most perplexing problem of legislative morality in this context is the problem of that which John Morrell felt no compunction. He thought the answer was quite obvious. It's the problem of whether or not to tuck on an antidiscrimination provision in Federal aid for social welfare purposes. I've been exposed to this approach since it began with the Bricker amendment. I've seen this device of the antidiscrimination amendment used as the most cynical, amoral parliamentary maneuver of any in the last 10 or 12 years in the American Congress. When Bricker offered his antidiscrimination amendment his purpose was brazen. It was designed to defeat the housing bill to which it was attached, because liberal southerners like HILL and SPARKMAN and some others would not be able to vote for a housing bill to which was appended an antidiscrimination condition.

Thereafter the history of the various attempts to tack on such bills, both in the Senate and the House, is something to behold. In the House I've seen southern Democrats lined up on a nonrecord vote and pulled off the floor, so that they let the antidiscrimination amendment pass, so that thereafter no southerner who wanted the substantive housing legislation would be able to vote for it. They did it as cynically as that. And only in the last session, this last year, Congressman POWELL voted against the Powell amendment. He voted against it, but it was tacked on to the housing bill he wanted. He voted for it when it was tacked on to the housing bill he didn't care about—the Republican version. So that's the kind of history these antidiscrimination amendments have.

PROBLEM OF ANTIDISCRIMINATION AMENDMENTS

Now, what do you do in such cases? Is there any guide? For myself I'm guided by an ancient saying which is attributed to the rabbis—though some rabbis have told me they can't find it. It sounds more like

Adlai Stevenson than anybody else. It says that the obligation to be just cannot be divorced from the obligation to be practical and effective. And I would say, translated to the problem of antidiscrimination amendments, it goes something like this. It begins with a counting of noses on a practical basis. Certainly in any Congress in which you can pass both the substantive legislation and the antidiscrimination rider, you should vote for both. It should become a condition of the legislation.

I'm not so sure what you do when after counting noses you know that if you tack on the antidiscrimination amendment you will kill the principal legislation so that you will have neither nondiscrimination or schools or housing. In such a case I would suggest that if a Congressman feels that by passing the housing or education legislation without the rider—and let's not call it a rider because it isn't really a rider, it's really related to the purposes of the bill itself, and so conventionally and classically it bears the more honorable semantic name of an amendment or a condition. It isn't an irrelevant provision. Where you feel that the substantive legislation enacted can thereafter be subject to antidiscrimination executive action, then you haven't postponed or hurt the possibility of being able to desegregate, to impose nondiscrimination when you have the votes or the executive will to do it.

Then I see no harm, I see no ethical wrong, in voting for the basic substantive legislation. I say this, still believing that this is one of the most difficult problems of legislative ethics to come before a Congressman.

Senator DICKINSON (Indiana State Senate). I think in this matter there are two considerations—well maybe just one: What do we hope to accomplish? And then we have to decide or determine the instruments or the mechanisms most available to us to get a certain job done.

Now I don't have—as a legislator, long ago I stopped having a lot of faith in that which could be accomplished by statutory provisions. I've participated in and followed many laws through. They get on the books in different ways. For example, I can recall when we were working on our FEPC proposition back in 1945. We finally got it through, but it wasn't really the wish of the group that was running the State government. But there were political repercussions and so forth that had to be considered, so they let the law get on the books. But what did the Governor do? He immediately put a person in to administer the law who was absolutely opposed to it all the way along, you see. But he still had a record of getting the law on the books.

Now, actually we should just face it: there's no difference in our difficulties in education and our difficulties in housing. The germ that creates the toxic condition, the poison that causes one to be a problem does the other. I mean if you kill it in one place, you'll find that both of these things will disappear. Certainly laws have a contribution to make, but it seems to me that we can't—we must view other areas in which there has to be honest consideration and effort.

UNWORKABILITY OF ANTIDISCRIMINATION CONDITIONS

On the matter of attaching certain requirements—that is that a subdivision of government, a State or locality, will not be able to participate unless they have clauses prohibiting discrimination—this is very good. I wish it was workable. But I may tell you this could serve, certainly in the beginning, to do nothing much beyond lessening our taxes. And I say that for this reason: right in my own State of Indiana I can recall when the State of Indiana refused a grant of \$400,000 that we could have had without matching funds because this was for a program of rehabilitation for handi-

capped, and it would involve some of our educational processes. Indiana has taken a position against any Federal aid to education. They said therefore we cannot accept the \$400,000. This certainly is not as strong as the matter that we're after. So I'm not so certain that, depending upon what you want to accomplish, there is much to be gained by the concept that "Either you will follow this or you won't get funds."

In our own city of South Bend we are now in the process of building a low-rent housing project. This is going to be, or this is open occupancy. In all of the publicity we have stated that race, national origin, etc., will have no bearing upon the application. Now I don't know what is going to happen. Most people think this is going to be a project solely for Negroes.

Also, we have set up the machinery to have another low-rent housing project. We're having great difficulty in getting the site, and I know the reason why: because the best areas, in the places where the project should be, with the South Bend policy of open occupancy it would mean that it's going to take some of the people of my group into areas where we do not now exist. This isn't written, this hasn't been stated, but this I'm pretty certain is one of the causes of our difficulty. There is much pressure for more low-rent housing in South Bend because of our urban renewal program. It's possible—unless the conscience of this community rises up and gives us some support, it's very likely—we're going to have to put our additional units in an area that's considered more or less Negro.

MORE THAN LAWS REQUIRED

Now certainly it is not my intention to throw any cold water on it. I still—and this is my approach always in the legislature—try to observe that which has to be done and how can I best accomplish it. In this kind of a consideration we must determine what is wanted, and how much of it we're going to be reasonably satisfied with accomplishing over a period of time. But certainly we're going to have to go much beyond the power and the forces of the legislative process and, I may even say, the governmental processes, to accomplish this thing that is causing us so much distress, not only on the local, State, and the national level, but is causing us so much distress on the international level. Legislation—governmental processes—are not going to do it.

However, if we want to stand up and support and do or die with the concepts and philosophies that have tended to promote our situation over the world, then of course we can afford to say, "We'll have it right and we'll go up or down with it." If you want to take what is available and what can be had and what may contribute to alleviating the pressure of the situation, then some of these very strenuous measures are going to have to have a lot of consideration, as I see it, before you decide that you are going to institute them.

Dean O'MEARA. At this point, ladies and gentlemen, the agenda calls for a summary or a summation of the conference, and Congressman BRADEMAS has agreed to undertake that.

Notre Dame Civil Rights Conference— Part 25

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 8, 1960

Mr. DINGELL. Mr. Speaker, under unanimous consent, I include in the

RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

SUMMARY

Congressman BRADEMAS. At times today, during some of the technical legal discussion, I have been reminded of Carl Sandburg's line, "Why does the hearse horse snicker when they carry a lawyer away?"

But on the whole this has been for me, as a nonlawyer and legislator, a most valuable discussion. I do hope that this law school and other law schools throughout the country will carry on this experiment in collaboration between lawmakers and law teachers.

I have learned a lot and I trust that the record of this conference will also be useful to other Members of Congress who will read it in the CONGRESSIONAL RECORD. I would like to see other conferences like this held on other important legislative problems.

In summarizing today's discussion I'm only going to try to make some of the major points that seem to me to have been made in each of these three areas.

HOUSING

In the area of housing, it seems to me that most of our discussion has been focused around the following issue, and we've not yet come to any resolution of it: Are Federal grants to be conditioned on the existence or nonexistence of discrimination in a particular area?

Mr. Anderson has given us a good example of the type of problem one gets into when he tells about the effort in Chicago to keep public housing both integrated and operating under a policy of open occupancy. His point I think was underscored by what Senator Dickinson has just told us.

If we were to assume, however, to come to another point in the discussion on housing, that Federal grants are to be conditioned on the nonexistence of discrimination, we have the following problem: Should this condition be set forth by action of Congress, or should it be carried out by Executive order?

I think Mr. Edelsberg summed up very well the problem as it confronts any Member of Congress. I might say, Mr. Edelsberg, I remember very vividly last year when we had the housing bill up and the opponents of the housing bill thought they had us in a box because they had one of their side all ready to get up—and I'm trying to be, Dean, as nonpartisan as I can here—Mr. BALDWIN, of California, a Republican Member and a very able one, rose and offered a Powell-type amendment. Then the rabbi's problem confronts you.

I'd already made up my own mind what I was going to do on this and, as a matter of fact, I think it's a decreasing problem, because I think more and more Members of Congress who believe in civil rights and who believe in the substantive legislation are now not going to let themselves be mousetrapped on this issue. And I remember the look on CHARLIE HALLECK's face when the time came for those opposed to the Powell-type amendment to go down the aisle, and who should be leading the troops down but ADAM POWELL and the other three Negro Members of the House. That was the only time in my experience when every single Democrat voted the same way on any issue. There was a shout of laughter and a wave of applause. I think, as I say, it is a decreasing issue.

Finally with respect to housing I think one thing we've all agreed on—though we've not settled these other issues—is that we have to give greater attention to more of it.

SCHOOL DESEGREGATION

Now in the field of education, it seems to me that we made several points and that there was some consensus here. We most of us agree that there is a rather discourag-

ing picture with respect to voluntary desegregation, and that we will have to give greater reliance to the law itself.

The suggestion was made by Professor Foster and supported strongly that Congress should itself pass a resolution of some sort in which explicitly the House and Senate would endorse the principle of the 1954 Supreme Court desegregation decision.

Another point on which I think most of us were agreed was that in the field of education we should lift some of the burden from the plaintiffs, for example the NAACP, and place more of the burden for instituting these desegregation suits on the Federal Government.

We also heard a call for more imaginative and more widespread use of equitable procedures on the part of the courts in resolving this problem.

We were agreed that we needed a great deal more information on the ways in which desegregation of school districts has been carried out in the past, and we agreed that the Federal Government should itself establish an agency for the collection and dissemination of such information.

And, finally, it was suggested and generally agreed that we needed the use of Federal funds for public education generally in far greater measure than is today the case.

THE RIGHT TO VOTE

In the field of voting rights we were agreed, I think, first that there should be established some process of Federal registration for disfranchised Negroes and that this process ought to be no more burdensome for Negroes than for whites who register to vote under State procedures.

Second, we were, I think, with an exception or two, of the mind that the Federal registration process should be used for both State and Federal elections.

Third, we were still not in complete agreement as to whether or not the judicial or the administrative approach was the appropriate remedy here.

Fourth, we were most of us agreed that there should be available Federal-court equitable enforcement to assure that whoever was federally registered had a chance to vote.

And fifth, I think we were agreed—and we spent a good deal of time on this subject—that there should be some assurance that the States, although given an opportunity to challenge the Federal registration procedure, should not be able by delay of any sort to defeat the right of those who were registered to cast their votes in the election.

The suggestion was made—a constructive suggestion that seemed to most of us to advance a solution of many of the problems—and I think agreed upon, that the time for the State to challenge the qualifications of a person thus federally registered should come when the person appears to vote, so that, pending decision on the challenge by the Federal courts, his vote can be cast and his ballot impounded and held for subsequent inclusion in the count.

I'm sure that I've missed some of the major points that were made here today, but I've tried to suggest what seemed to one lay observer to have been the most significant points.

And once again, speaking for myself, I want to express to all of you our great appreciation for your having come to the university to take part in this conference, and to express for all of you our great appreciation to Father Hesburgh, to Dean O'Meara, and to the University of Notre Dame for acting as our host.

DEAN O'MEARA. I have only this to add, ladies and gentlemen, the hope that this conference has contributed a little bit toward the realization of that kind of society described by Prime Minister Macmillan as one in which "individual merit alone is the criterion for man's advancement, whether po-

litical or economic." Thank you all very much. The conference is adjourned.

EXCERPTS FROM THE REPORT OF THE COMMISSION ON CIVIL RIGHTS

(Page references to Commission's abridged report "With Liberty and Justice for All.")

VOTING

The history of voting in the United States shows, and the experience of this Commission has confirmed, that where there is will and opportunity to discriminate against certain potential voters, ways to discriminate will be found. The burden of litigation involved in acting against each new evasion of the Constitution, county by county, and registrar by registrar, would be immense. Nor is there any presently available effective remedy for a situation where the registrars simply resign.

If any State were to pass a law forthrightly declaring colored citizens ineligible to vote, the Supreme Court would strike it down forthwith as in flagrant violation of the 15th amendment. The trouble, however, comes not from discriminatory laws, but from the discriminatory application and administration of apparently nondiscriminatory laws.

Against the prejudice of registrars and jurors, the U.S. Government appears under present law, to be helpless to make good the guarantees of the U.S. Constitution (p. 88).

FINDINGS AND RECOMMENDATIONS

The problem (unanimous)

"To secure these rights," declared the great charter of American liberty, "governments are instituted among men, deriving their just powers from the consent of the governed." The instrument by which consent is given or withheld is the ballot.

Few Americans would deny, at least in theory, the right of all qualified citizens to vote. A significant number, however, differ as to which citizens are qualified. None in good conscience can state that the goal of universal adult suffrage has been achieved. Many Americans, even today, are denied the franchise because of race. This is accomplished through the creation of legal impediments, administrative obstacles, and positive discouragement engendered by fears of economic reprisal and physical harm. With those Americans who of their own volition are too apathetic either to register or, once registered, too apathetic to vote, this report does not concern itself. But with denials of the right to vote because of race, color, religion, or national origin, this Commission and the Congress of the United States are urgently concerned.

The Commission's studies reveal that many Negroes are eager to exercise their political rights as free Americans and that they have made some progress. Our investigations have revealed further that many Negro American citizens find it difficult, and often impossible, to vote. An attempt has been made to gather and assess statistics and facts regarding denial of the right to vote. This task has required careful analysis and understanding of the legal impediments.

The Commission has sought to evaluate the extent to which there is an obligation on the part of the Federal Government to prevent denial of the right to vote because of discrimination by reason of color, race, religion, or national origin. This is what Congress asked. The scope of Federal power to protect the suffrage depends on whether interference comes from State and local officers or from private persons; on whether improper voting procedure alone is involved, or whether the interference is based on race or color, and on the nature of the election itself, whether State or National.

Article I, section 2, of the U.S. Constitution has long stood for the proposition that while the qualifications of electors of Members of Congress are governed by State law, the right to vote for such representatives is derived from the U.S. Constitution. Article

I, section 4, authorizes Federal protection of voting in Federal elections against interference from any source. The 14th amendment affords protection against State interference with the equality of opportunity to vote in any election. The 15th amendment prohibits any action by the United States or a State, in any election, which interferes with the right to vote because of race or color or previous condition of servitude. The 17th amendment provides that a person possessing State qualifications has a right to vote which is derived not merely from the constitution or the laws of the State from which the Senator is chosen, but has its foundation in the Constitution of the United States.

Without attempting to evaluate specific changes other than those reflected in the body of our report on voting, it has become apparent that legislation presently on the books is inadequate to assure that all our qualified citizens shall enjoy the right to vote. There exists here a striking gap between our principles and our everyday practices. This is a moral gap. It spills over into and vitiates other areas of our society. It runs counter to our traditional concepts of fair play. It is a partial repudiation of our faith in the democratic system. It undermines the moral suasion of our national stand in international affairs. It reduces the productivity of our Nation. In the belief that new legislation is needed, we submit for consideration of the President and the Congress the following recommendations which we believe will help Americans to make good our declarations of national purpose (pp. 89-90).

RECOMMENDATION NO. 2

The Commission recommends that the Congress require that all State and territorial registration and voting records shall be public records and must be preserved for a period of 5 years, during which time they shall be subject to public inspection, provided that all care be taken to preserve the secrecy of the ballot (p. 92).

PLAN FOR TEMPORARY FEDERAL REGISTRARS

The Commission has investigated sworn complaints of denials of the right to vote by reason of color or race in seven States. In two States where it determined to hold formal hearings, Alabama and Louisiana, its efforts to secure all relevant facts were met with open resistance by State officials. Nevertheless, on the basis of the testimony of witnesses and the examination of the registration records that were made available in Alabama, and through field investigation in other States, the Commission found that a substantial number of Negroes are being denied their right to vote. The infringement of this right is usually accomplished through discriminatory application and administration of State registration laws.

But discriminatory registration is not the only problem. The Commission also found instances in which there was no registration board in existence, or none capable of functioning lawfully. In all such cases, the majority of the electorate already registered were white persons.

Notre Dame Civil Rights Conference— Part 26

EXTENSION OF REMARKS OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. KASTENMEIER. Mr. Speaker, under unanimous consent, I include in

the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

For one example, the members of the Macon County, Ala., Board of Registrars resigned after this Commission's Alabama hearing. At the hearing, 25 Macon County Negroes had testified that the board had unlawfully refused to register them. Invited to answer these charges, the Macon County registrars had refused to testify. But an injunction suit against the board to compel registration of 17 of the hearing witnesses and other apparently qualified Negroes, brought by the U.S. Attorney General under the new provisions of the Civil Rights Act of 1957, was dismissed for lack of anyone to sue. Subsequently, new appointees to the Macon County board were named in July 1959. They refused to serve. Their reason, according to a United Press International report, was "the pressure for Negro registration" and "fear of being 'hounded' by the U.S. Civil Rights Commission."

The two other suits brought by the Attorney General under the same act had not at this writing resulted in a single registration. The suit in Georgia had been dismissed and was on appeal; the one in Louisiana was pending.

In short, no one had yet been registered through the civil remedies of the 1957 act.

Class suits on behalf of a number of Negroes to obtain registration have rarely been successful. The courts have inclined to the view that these suits are an individual nature, with the result that a vast number of suits may be necessary.

The delays inherent in litigation, and the real possibility that in the end litigation will prove fruitless because the registrars have resigned, make necessary further remedial action by Congress if many qualified citizens are not to be denied their constitutional right to vote in the 1960 elections.

FINDINGS

The Commission finds that substantial numbers of citizens qualified to vote under State registration and election laws are being denied the right to register, and thus the right to vote, by reason of their race or color. It finds that the existing remedies under the Civil Rights Act of 1957 are insufficient to secure and protect the right to vote of such citizens. It further finds that some direct procedure for temporary Federal registration for Federal elections is required if these citizens are not to be denied their right to register and vote in the forthcoming national elections. Some method must be found by which a Federal officer is empowered to register voters for Federal elections who are qualified under State registration laws but are otherwise unable to register.

Such a temporary Federal registrar should serve only until local officials are prepared to register voters without discrimination. The temporary Federal registrar should be an individual located in the area involved, such as the postmaster, U.S. attorney, or clerk of the Federal district court. The factfinding responsibilities to determine whether reasonable grounds exist to believe that the right to vote is being denied could be discharged by the Commission on Civil Rights, if extended. Because of the importance of the matter, such a temporary Federal registrar should be appointed directly by the President of the United States.

RECOMMENDATION NO. 5

Therefore, the Commission recommends that, upon receipt by the President of the United States of sworn affidavits by nine or more individuals from any district, county, parish, or other political subdivision of a State, alleging that the affiants have unsuccessfully attempted to register with the duly constituted State registration office, and that the affiants believe themselves qualified un-

der State law to be electors, but have been denied the right to register because of race, color, religion, or national origin, the President shall refer such affidavits to the Commission on Civil Rights, if extended.

A. The Commission shall:

1. Investigate the validity of the allegations.

2. Dismiss such affidavits as prove, on investigation, to be unfounded.

3. Certify any and all well-founded affidavits to the President and to such temporary registrar as he may designate.

B. The President upon such certification shall designate an existing Federal officer or employee in the area from which complaints are received, to act as a temporary registrar.

C. Such registrar-designate shall administer the State qualification laws and issue to all individuals found qualified, registration certificates which shall entitle them to vote for any candidate for the Federal offices of President, Vice President, presidential elector, Members of the Senate or Members of the House of Representatives, Delegates or Commissioners for the Territories or possessions, in any general, special, or primary election held solely or in part for the purpose of selecting or electing any such candidate.

D. The registrar-designate shall certify to the responsible State registration officials the names and fact of registration of all persons registered to him. Such certification shall permit all such registrants to participate in Federal elections previously enumerated.

E. Jurisdiction shall be retained until such time as the President determines that the presence of the appointed registrar is no longer necessary.

DISSENT BY COMMISSIONER BATTLE

I concur in the proposition that all properly qualified American citizens should have the right to vote but I believe the present laws are sufficient to protect that right and I disagree with the proposal for the appointment of a Federal registrar which would place in the hands of the Federal Government a vital part of the election process so jealously guarded and carefully reserved to the States by the Founding Fathers (p. 94-96).

PROPOSAL FOR A CONSTITUTIONAL AMENDMENT TO ESTABLISH UNIVERSAL SUFFRAGE

By Chairman Hannah and Commissioners Hesburgh and Johnson: "The Commission's recommendation for temporary Federal registration should, if enacted by Congress, secure the right to vote in the forthcoming national elections for many qualified citizens who would otherwise, because of their race or color, be denied this most fundamental of American civil rights. But the proposed measure is clearly a stopgap."

"In its investigations, hearings and studies the Commission has seen that complex voter qualification laws, including tests of literacy, education and 'interpretation,' have been used and may readily be used arbitrarily to deny the right to vote to citizens of the United States."

"Most denials of the right to vote are in fact accomplished through the discriminatory application and administration of such State laws. The difficulty of proving discrimination in any particular case is considerable. It appears to be impossible to enforce an impartial administration of the literacy tests now in force in some States, for where there is a will to discriminate, these tests provide the way."

"Therefore, as the best ultimate solution of the problem of securing and protecting the right to vote, we propose a constitutional amendment to establish a free and universal franchise throughout the United States."

"An important aim of this amendment would be to remove the occasion for further direct Federal intervention in the States' administration and conduct of elections, by

prohibiting complex voting requirements and providing clear, simple, and easily enforceable standards.

"The proposed constitutional amendment would give the right to vote to every citizen who meets his State's age and residence requirements and who is not legally confined at the time of registration or election.

"Age and residence are objective and simple standards. With only such readily ascertainable standards to be met, the present civil remedies of the Civil Rights Act should prove more effective in any future cases of discriminatory application. A court injunction could require the immediate registration of any person who meets these clear-cut State qualifications.

"The proposed amendment is in harmony with the American tradition and with the trend in the whole democratic world. As noted in the beginning of this section of the Commission's report, the growth of American democracy has been marked by a steady expansion of the franchise; first by the abandonment of property qualifications and then by conferral of suffrage upon the two great disfranchised groups, Negroes and women. Only 19 States now require that voters demonstrate their literacy. Michigan, New Hampshire, Pennsylvania, Tennessee, and Vermont have suffered no apparent harm from absence of the common provisions disqualifying mental incompetents. With minor exceptions, mostly involving election offenses, Colorado, Maine, Massachusetts, Michigan, Pennsylvania, Utah, Vermont, and West Virginia have no provisions barring certain ex-convicts from the vote, and of the States which do have such provisions, all but eight also provide for restoration of the former felon's civil rights. In only five States is the payment of a poll tax still a condition upon the suffrage.

"The number of Americans disqualified under each of these categories is very small compared with the approximately 90 million now normally qualified to vote. It is also small in relation to the numbers of qualified nonwhite citizens presently being disfranchised by the discriminatory application of these complex laws. The march of education has almost eliminated illiteracy. In a nation dedicated to the full development of every citizen's human potential, there is no excuse for whatever illiteracy that may remain. Ratification of the proposed amendment would, we believe, provide an additional incentive for its total elimination. Meanwhile, abundant information about political candidates and issues is available to all by way of television and radio.

"We believe that the time has come for the United States to take the last of its many steps toward free and universal suffrage. The ratification of this amendment would be a reaffirmation of our faith in the principles upon which this Nation was founded. It would reassure lovers of freedom throughout a world in which hundreds of millions of people, most of them colored, are becoming free and are hesitating between alternative paths of national development.

"For all these reasons we propose the following 23d amendment to the Constitution of the United States.

"ARTICLE XXIII

"SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State or by any person for any cause except inability to meet State age or length-of-residence requirements uniformly applied to all persons within the State, or legal confinement at the time of registration or election. This right to vote shall include the right to register or otherwise qualify to vote, and to have one's vote counted.

"SEC. 2. The Congress shall have power to enforce this article by appropriate legislation."

SEPARATE STATEMENTS REGARDING PROPOSED XXIII AMENDMENT

1. By Vice Chairman Storey and Commissioner Carlton: "We strongly believe in the right of every qualified citizen of the United States, irrespective of his color, race, religion, or national origin, to register, vote, and have his vote counted. We regard full protection of these rights of suffrage by both State and Federal Governments necessary and proper. Therefore, we have supported and voted for all recommendations of the Commission (except the proposed XXIII amendment) to strengthen the laws and improve the administration of registration and voting procedures. However, we cannot join our distinguished colleagues in the recommendation of the proposed constitutional amendment. These are our several reasons:

"1. We believe that our Commission recommendations, if enacted into law and properly enforced, will eliminate most if not all of the restrictions on registration and voting by reason of race, color, religion, or national origin.

"A recommendation proposing a constitutional amendment granting additional power to the Federal Government would be in order only if we had found a lack of power under existing constitutional provisions. Such is not the case.

"2. On principle, proposals for constitutional amendments which would alter longstanding Federal-State relationships, such as the constitutional provision that matters pertaining to the qualifications of electors shall be left to the several States, should not be proposed in the absence of clear proof that no other action will correct an existing evil. No such proof is apparent.

"3. The Constitution of the United States of America presently includes sufficient authority to the Federal Government to enable it effectively to deal with denials of the right to vote by reason of race, color, religion, and national origin.

"4. The information and findings cited in support of the proposed 23d amendment disclose that some illiteracy still exists, that authoritative State statistics and studies are wholly lacking to support such an important proposal, and that our staff has not had the opportunity to make a thorough study of such a far-reaching proposal."

2. By Commissioner John Battle:

"I heartily agree with the objections of Commissioners Storey and Carlton to the proposed constitutional amendment" (p. 97-99).

Notre Dame Civil Rights Conference— Part 27

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

PUBLIC EDUCATION

The problems (unanimous)

The Commission based its study of legal developments constituting a denial of the equal protection of the laws in the field of public education upon two fundamental premises:

(1) The American system of public education must be preserved without impairment because an educated citizenry is the

mainstay of the Republic and full educational opportunity for each and every citizen is America's major defense against the world threat to freedom.

(2) The constitutional right to be free from compulsory segregation in public education can be and must be realized, for this is a government of law, and the Constitution as interpreted by the Supreme Court is the supreme law of the land.

The problem, therefore, is how to comply with the Supreme Court decision while preserving and even improving public education. The ultimate choice of each State is between finding reasonable ways of ending compulsory segregation in its schools or abandoning its system of free public education (p. 131).

INFORMATION, ADVISORY, AND CONCILIATION SERVICES

Background

The Commission's studies, and particularly its conference with school officials from districts in border States and a few in the South that have in some measure desegregated since 1954, demonstrate that when local school officials are permitted to act responsibly in adopting plans that fit local conditions the difficulties of desegregation can be minimized. A variety of plans have proved to be successful, ranging from the merger of the former Negro and white school systems into one integrated system (particularly in communities where the Negro population was small and the cost of maintaining separate systems considerable) to the gradual Nashville plan that began in the first grade and is proceeding at the rate of one grade a year, with voluntary transfer permitted to any child assigned to a school where his race is in the minority.

In *Shuttlesworth v. Birmingham Board of Education* (358 U.S. 101 (1958)) the U.S. Supreme Court upheld as valid on its face the Alabama pupil placement law on the assumption that the law would be administered in a constitutional manner. Eight southern States have adopted pupil placement laws as a means of meeting the test of nondiscrimination. This is another possible method by which compliance may be achieved.

In many instances desegregation has been used by the local community as the occasion to raise its educational standards. In many instances remedial programs have been adopted for the handicapped, and advanced programs established for gifted students. Such programs were described to the Commission at its Nashville conference by the superintendents from Wilmington, Del.; Washington, D.C.; and San Angelo, Tex. St. Louis, Mo., has adopted a similar program. It is important that any transition should not result in the lowering of educational standards for either the white or Negro student. If possible, it should result in an improvement of educational standards for both; a number of school officials report that this has already happened in their communities.

In the transition to a nondiscriminatory school system, a carefully developed State or local plan is better than a plan imposed by a court for the immediate admission of certain litigants, or a plan imposed by any outside agency. The Supreme Court and the Federal lower courts have made it clear that they will consider sympathetically any reasonable plan proposed in good faith. This seems to be an area in which the principle of States rights can most effectively express itself through local option in meeting this problem. If State governments do not permit local school officials to develop such plans for good faith compliance, the effectiveness of the school system in the State as a whole will be impaired. By permitting such local option a variety of methods of transition can be developed that take into account the varying circumstances in different areas of the State.

FINDINGS

1. The ease of adjustment of a school system to desegregation is influenced by many factors including the relative size and location of the white and Negro population, the extent to which the Negro children are culturally handicapped, segregation practices in other areas of community life, the presence or absence of democratic participation in the planning of the program used or preparation of the community for its acceptance, and the character of the leadership in the community and State.

2. Many factors must be considered and weighed in determining what constitutes a prompt and reasonable start toward full compliance and the means by which and the rate at which desegregation should be accomplished.

3. Desegregation by court order has been notably more difficult than desegregation by voluntary action wherein the method and timing have been locally determined.

4. Many school districts in attempting to evolve a desegregation plan have had no established and qualified source to which to turn for information and advice. Furthermore, many of these districts have been confused and frustrated by apparent inconsistencies in decisions of lower Federal courts.

RECOMMENDATIONS NO. 1 (a) AND 1 (b) (UNANIMOUS)

Therefore, the Commission recommends: 1(a) That the President propose and the Congress enact legislation to authorize the Commission on Civil Rights, if extended, to serve as a clearinghouse to collect and make available to States and to local communities information concerning programs and procedures used by school districts to comply with the Supreme Court mandate either voluntarily or by court order, including data as to the known effects of the programs on the quality of education and the cost thereof.

1(b) That the Commission on Civil Rights be authorized to establish an advisory and conciliation service to assist local school officials in developing plans designed to meet constitutional requirements and local conditions; and to mediate and conciliate, upon request, disputes as to proposed plans and their implementation (pp. 131-133).

PROPOSAL TO REQUIRE EQUAL OPPORTUNITY AS A CONDITION OF FEDERAL GRANTS TO HIGHER EDUCATION

By Chairman Hannah and Commissioners Hesburgh and Johnson: "More than \$2 billion a year of Federal funds go for educational purposes and to educational institutions. The principal recipients of these funds are the Nation's colleges, universities, and other institutions of higher education. Whether tax-supported or privately financed, they receive Federal grants and loans both for their general support and capital improvements as well as for research projects, special programs, and institutes.

"Discriminatory admission policies and other practices are known to exist in a number of such institutions. None of the Federal agencies administering these educational assistance programs require proof or an attestation of nondiscrimination by the institutions as a condition for the receipt of Federal funds.

"With its duty to 'appraise the laws and policies of the Federal Government with respect to equal protection of the laws under the Constitution,' the Commission was compelled to ask whether it is consistent for the Federal Government to aid and support educational programs and activities in institutions of higher education which are not open to all citizens on an equal and nondiscriminatory basis.

"While Congress has not required such conditions for these grants, the operations of the Federal Government are subject to the

constitutional principle of equal protection or equal treatment.

"The Supreme Court has held racial discrimination in public education to be a denial of equal protection. In regard to public institutions of higher education the courts have required the immediate admission of qualified students without discrimination. The reasons for the gradual elimination of racial discrimination in elementary and secondary schools do not obtain in the field of higher education. There, immediate equality of opportunity for qualified students of all races is possible and necessary.

"Although the equal protection clause of the 14th amendment applies only to State action, 'it would be unthinkable,' the Supreme Court has held, 'that the same Constitution would impose a lesser duty on the Federal Government.'

"We believe that it is inconsistent with the Constitution and public policy of the United States for the Federal Government to grant financial assistance to institutions of higher education that practice racial discrimination.

"We recommend that Federal agencies act in accordance with the fundamental constitutional principle of equal protection and equal treatment, and that these agencies be authorized and directed to withhold funds in any form to institutions of higher learning, both publicly supported and privately supported, with refuse, on racial grounds, to admit students otherwise qualified for admission."

Additional proposal by Commissioner Johnson: "While joining in the above proposal, I recommend that the policy set forth apply to all educational institutions that receive Federal funds, including public elementary and secondary schools. My reasons are set forth in my closing statement at the end of this report."

SEPARATE STATEMENT ON CONDITIONAL FEDERAL GRANTS FOR HIGHER EDUCATION

By Vice Chairman Storey and Commissioners Battle and Carlton: "We oppose the recommendation that Federal agencies be authorized to withhold all public funds from institutions of higher learning (public and private) which refuse, on racial grounds, to admit students otherwise qualified for admission for the following reasons:

"1. The Commission has agreed that the preservation and improvement of education is a matter of great national interest, and is a fundamental principle within which the problems of equal protection must be evaluated. Therefore, we cannot conscientiously endorse a program which might well undermine that principle.

"2. Present problems of equal protection pertaining to education fall within the sweep of the 14th amendment, an area long since preempted by the courts. We cannot endorse a program of economic coercion as either a substitute for or a supplement to the direct enforcement of the law through the orderly processes of justice, as administered by the courts.

"3. Such a proposal by this Commission—as an agency of the Federal Government—would drastically affect the administration of privately owned institutions of higher education. Such action goes beyond the scope of the Commission's duties.

"4. Our staff studies were directed toward understanding and evaluation of equal protection problems in public and secondary schools, not private schools upon any level, and not institutions of higher education, whether public or private" (pp. 135-137).

HOUSING

Findings and recommendations

The Problem (Unanimous)

It is the public policy of the United States, declared by the Congress and the President

and in accord with the declared purposes of the Constitution, that every American family shall have equal opportunity to secure a decent home in a good neighborhood. Since the home is the heart of a good society it is essential that this aspect of the promise of equal protection of the laws be fulfilled forthwith.

From the Commission's study of housing two basic facts were found to constitute the central problem.

First, a considerable number of Americans, by reason of their color or race, are being denied equal opportunity in housing. A large proportion of colored Americans are living in overcrowded slums or blighted areas in restricted sections of our cities, with little or no access to new housing or to suburban areas. Most of these Americans, regardless of their educational, economic, or professional accomplishments, have no alternative but to live in used dwellings originally occupied by white Americans who have a free choice of housing, new or old. Housing thus seems to be the one commodity in the American market that is not freely available on equal terms to everyone who can afford to pay. It would be an affront to human dignity for any one group of Americans to be restricted to wearing only hand-me-down clothing or to eating the leftovers of others' food. Like food and clothing, housing is an essential of life, yet many nonwhite American families have no choice but secondhand homes. The results can be seen in high rates of disease, fire, juvenile delinquency, crime and social demoralization among those forced to live in such conditions. A nation dedicated to respect for the human dignity of every individual should not permit such conditions to continue.

Second, the housing disabilities of colored Americans are part of a national housing crisis involving a general shortage of low-cost housing. Americans of lower income, both colored and white, have few opportunities for decent homes in good neighborhoods. Since most suburban housing is beyond their means, they remain crowded in the central city, creating new slums. Since colored people comprise a rising proportion of the city dwellers with lowest income, these slums are becoming increasingly colored. The population of metropolitan areas, already comprising over 60 percent of the American people, is growing rapidly not merely by births but by migration. These migrants, many of them colored, most of them unadapted to urban life, form the cutting edge of the housing crisis.

Notre Dame Civil Rights Conference—
Part 28EXTENSION OF REMARKS
OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ADAIR. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of the proceedings of the civil rights conference at the University of Notre Dame on Sunday, February 14, 1960:

CITY AND STATE LAWS, POLICIES, AND PROGRAMS

In New York City, as in Pittsburgh and in four States—Colorado, Connecticut, Massachusetts, and Oregon—there are far-reaching laws against discrimination in the sale or rental of multiunit private housing.

and all publicly assisted housing. In New York State, as in 10 other States, there are laws against discrimination in publicly-assisted or urban renewal housing. Officials and community leaders in New York testified that these laws are having a valuable educational effect and that their enforcement, principally through mediation by the city Commission on Intergroup Relations and the State Commission Against Discrimination, is helping to promote equal opportunity in housing.

In Atlanta, the work of the Mayor's West Side Mutual Development Committee, representing equally the Negro and white people in the area of the city undergoing the greatest racial transition, has served to replace blockbusting and reduce racial tension and violence by means of expanding Negro residential areas through negotiation and consent. This has enabled Negroes in Atlanta, unlike those in most American cities, to gain access to good outlying land and to build new suburban neighborhoods.

In Chicago, which has neither New York's laws against discrimination nor Atlanta's policy of negotiating agreements for Negro expansion, the Commission found that the Negroes' primary method of securing better housing was through the mutually unsatisfactory system of blockbusting, with the consequent uprooting of adjacent white neighborhoods and with inevitable racial tension and occasional violence.

On the basis of its hearings in these three cities the Commission finds that, whatever the particular approach adopted, some official city and State program and agency concerned with promoting equal opportunity to decent housing is needed. Such programs and agencies can bring about better public understanding of the problems and better communication between citizens. Whether or not cities or States are prepared to adopt antidiscrimination laws, and even in areas where racial separation is the prevailing public policy, it is possible that through interracial negotiation practical agreements for progress in housing can be reached. Where public opinion makes possible the adoption of laws against discrimination in housing, this might contribute significantly to the work of the agency promoting equal opportunity in housing. Then the agency would have legal support in its efforts at mediation and conciliation.

Recommendation No. 1 (unanimous)

The Commission recommends that an appropriate biracial committee or commission on housing be established in every city and State with a substantial nonwhite population. Such agencies should be empowered to study racial problems in housing, receive and investigate complaints alleging discrimination, attempt to solve problems through mediation and conciliation, and consider whether these agencies should be strengthened by the enactment of legislation for equal opportunity in areas of housing deemed advisable.

OVERALL FEDERAL LAWS, POLICIES, AND PROGRAMS

The Federal Government now plays a major role in housing. Its participation in slum clearance, urban redevelopment, public housing and mortgage loan insurance amounts to billions of dollars. The Constitution prohibits any governmental discrimination by reason of race, color, religion, or national origin. The operation of Federal housing agencies and programs is subject to this principle. In addition, there is in effect an act of Congress adopted in 1866 and reenacted in 1870 that recognizes the equal right of all citizens, regardless of color, to purchase, rent, sell, or use real property.

While the fundamental legal principle is clear, Federal housing policies need to be better directed toward fulfilling the con-

stitutional and congressional objective of equal opportunity. Norman Mason, the Administrator of the Housing and Home Finance Agency, who is responsible for coordinating the various housing programs of the constituents of HHFA, testified before this Commission that he intends to develop policies that will further promote the principle of equal opportunity in all these housing programs. The Commission finds that there is much that the Administrator of the HHFA can do, through careful and determined administration, to assure that the principle of equal opportunity in Federal housing programs is applied not only in the top policies but at the operating levels in each constituent agency.

Because of the paramount national importance of this problem the Commission finds that direct action by the President in the form of an Executive order on equality of opportunity in housing is needed. The order should apply to all federally assisted housing, including housing constructed with the assistance of Federal mortgage insurance or loan guarantees as well as federally aided public housing and urban renewal projects.

There have been such Executive orders calling for the application of the principles of equal opportunity and equal treatment in the fields of Government contracts and Government employment, and in the armed services. Instead of establishing a new presidential committee, as was done in these other Executive orders, the President could request the Commission on Civil Rights, if its life is extended, to conduct the necessary continuing studies and investigations and make further recommendations.

Recommendations Nos. 2 and 3 (unanimous)

Therefore, the Commission recommends 2. That the President issue an Executive order stating the constitutional objective of equal opportunity in housing, directing all Federal agencies to shape their policies and practices to make the maximum contribution to the achievement of this goal, and requesting the Commission on Civil Rights, if extended, to continue to study and appraise plans to bring about the end of discrimination in all federally assisted housing, and to make appropriate recommendations.

3. That the Administrator of the Housing and Home Finance Agency give high priority to the problem of gearing the policies and the operations of his constituent housing agencies to the attainment of equal opportunity in housing.

FHA AND VA

The present policy of the Federal Housing Administration and the Veterans' Administration is not to do further business with a builder who has been found in violation of a State or city law prohibiting discrimination. However, waiting upon the appropriate State or city agency to make a finding of violation of State or city law may result in Federal assistance to a builder who is openly or manifestly evading such law. By the time any State or city action against such a builder has been completed the projects may well have been built and sold or rented on a discriminatory basis.

Recommendation No. 4 (unanimous)

Therefore, the Commission recommends that, in support of State and city laws the Federal Housing Administration and the Veterans' Administration should strengthen their present agreements with States and cities having laws against discrimination in housing by requiring that builders subject to these laws who desire the benefits of Federal mortgage insurance and loan guarantee programs agree in writing that they will abide by such laws. FHA and VA should establish their own factfinding machinery to determine whether such builders are violating State and city laws, and, if it is found that they are, immediate steps should be

taken to withdraw Federal benefits from them, pending final action by the appropriate State agency or court.

Public housing

The location of sites for public housing projects and the kind of housing provided play an important part in determining whether public housing becomes almost entirely nonwhite housing, whether it accentuates or decreases the present patterns of racial concentration, and whether it contributes to a rise in housing standards generally. A policy of "scattering" of smaller projects throughout the whole metropolitan area may remedy some of the present defects of public housing.

Public housing projects can serve as schools for better housing and homekeeping. A large number of the tenants are recent migrants from rural areas, unprepared for urban life. Placing them in decent housing units and requiring that decent standards be maintained will help them make a successful adjustment to city life. Locating these projects in better neighborhoods and making them less institutional in appearance will add to this educational process.

As a result of the large number of nonwhites in need of low-cost housing and the tendency of whites to avoid living in the midst of nonwhite majority, many projects are all or predominantly nonwhite. This may result in a proportion of nonwhite occupancy higher than that actually required under the Public Housing Administration's "racial equity" formula based on the estimated needs of the two racial groups. In one city the Commission found that the location of public housing sites within areas of Negro concentration resulted in de facto discrimination against low-income white citizens.

Recommendation No. 5 (unanimous)

Therefore, the Commission recommends that the Public Housing Administration take affirmative action to encourage the selection of sites on open land in good areas outside the present centers of racial concentration. PHA should put the local housing authorities on notice that their proposals will be evaluated in this light. PHA should further encourage the construction of smaller projects that fit better into residential neighborhoods, rather than large developments of tall "high rise" apartments that set a special group apart in a community of its own (pp. 180-185).

THE PROBLEM AS A WHOLE

Through its studies of three particular aspects of civil rights—voting, education, and housing—the Commission has come to see the organic nature of the problem as a whole. The problem is one of securing the full rights of citizenship to those Americans who are being denied in any degree the vital recognition of human dignity, the equal protection of the laws.

To a large extent this is now a racial problem. In the past there was widespread denial of equal opportunity and equal justice by reason of religion or national origin. Some discrimination against Jews remains, particularly in housing, and some recent immigrants undoubtedly still have to overcome prejudice. But with a single exception the only denials of the right to vote that have come to the attention of the Commission are by reason of race or color. This is also clearly the issue in public education. In housing, too, it is primarily nonwhites who lack opportunity. Therefore, the Commission has concentrated its studies on the status of the 18 million Negro American citizens, who constitute this country's largest racial minority. If a way can be found to secure and protect the civil rights of this minority group, if a way can be opened for them to finish moving up from slavery to the full human dignity of first-class citizenship, the America will be

well on its way toward fulfilling the great promises of the Constitution.

In part this is the old problem of the vicious circle. Slavery, discrimination and second-class citizenship have demoralized a considerable portion of those suffering these injustices, and the consequent demoralization is then seen by others as a reason for continuing the very conditions that caused the demoralization.

The fundamental interrelationships among the subjects of voting, education, and housing make it impossible for the problem to be solved by the improvement of any one factor alone. If the right to vote is secured, but there is not equal opportunity in education and housing, the value of that right will be discounted by apathy and ignorance. If compulsory discrimination is ended in public education, but children continue to be brought up in slums and restricted areas of racial concentration, the conditions for good education and good citizenship will still not obtain. If decent housing is made available to nonwhites on equal terms but their education and habits of citizenship are not raised, new neighborhoods will degenerate into slums.

In this complex picture there are, of course, other major factors that the Commission has not studied directly, particularly questions of discrimination in employment, in the administration of justice, and in public accommodations.

Equal opportunity and equal justice under law must be achieved in all sections of American public life with all deliberate speed. It is not a court of law alone that tells us this, but also the needs of the Nation in the light of the clear and present dangers and opportunities facing us, and in the light of our restive national conscience. Time is essential in resolving any great and difficult problem, and more time will be required to solve this one. However, it is not time alone that helps, but the constructive use of time.

The whole problem will not be solved without high vision, serious purpose, and imaginative leadership. Prohibiting discrimination in voting, education, housing, or other parts of our public life will not suffice. The demoralization of a part of the non-white population resulting from generations of discrimination can ultimately be overcome only by positive measures. The law is not merely a command, and government is not just a policeman. Law must be inventive, creative, and educational.

To eliminate discrimination and demoralization, some dramatic and creative intervention by the leaders of our national life is necessary. In the American system much of the action needed should come from private enterprise and voluntary citizens' groups and from local and State governments. If they fail in their responsibilities the burden falls unduly on the Federal Government.

This Commission would add only one further suggestion. The fundamental cause of prejudice is hidden in the minds and hearts of men. That prejudice will not be cured by concentrating constantly on the discrimination. It may be cured, or reduced, or at least forgotten if sights can be raised to new and challenging targets. Thus a curriculum designed to educate young Americans for this unfolding 20th-century world, with better teachers and better schools, will go a long way to facilitate the transition in public education. Equal opportunity in housing will come easier as part of a great program of urban reconstruction and regeneration. The right to vote will more easily be secured throughout the whole South if there are great issues on which people want to vote.

What is involved is the ancient warning against the division of society into Two Cities. The Constitution of the United

States, which was ordained to establish one society with equal justice under law, stands against such a division. America, which already has come closer to equality of opportunity than probably any other country, must succeed where other have failed. It can do this not only by resolving to end discrimination but also by creating through works of faith in freedom a clear and present vision of the City of Man, the one city free and equal man envisioned by the Constitution (pp. 191-194).

Tribute to Henrietta Szold

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the Members of the House a very excellent lecture given by Dr. Miriam Freund, president of Hadassah, before the American Jewish Historical Society in Baltimore on February 21.

Maryland has given many great and distinguished persons to our country and to the world—but none is really greater than the remarkable Henrietta Szold.

In calling attention to the centennial of Miss Szold's birth, Dr. Freund has reminded us of the great contributions Miss Szold has made to the betterment of our country. She was a distinguished educator, the organizer of a unique and dedicated society of women devoted to philanthropy, known as the Hadassah. She was also a great welfare worker and an even greater humanitarian. Thousands of people live today, well and happy, because of the deeds of this extraordinary woman.

In carrying on as president of the Hadassah, Dr. Freund has earned an enviable reputation in her own right and I am pleased to have her thought-provoking lecture inserted in the CONGRESSIONAL RECORD:

In every generation, in every land, among every people, unique personalities have been born who are destiny marked, leaving an imprint on time and on history. Henrietta Szold was of this noble community.

We shall mark the centennial of her birth in December 1960. As the years march on, the magnitude of her vision becomes ever more apparent. She was a woman who, by the force of her character and creative gifts, impressed both her personality and her purpose on all who came into contact with her, thus shaping time and events beyond her own mortal span of years. There are many ways to tell her many faceted life story—all true, all requiring volumes; she was the forerunner of the night school program in America; she was designated one of the 100 great American women of the century; she was the founder of the magnificent volunteer group of women, Hadassah, the Women's Zionist Organization of America; she was mother to countless generations although without child of her own flesh; she was originator of the education, child guidance, and social welfare concepts now practiced in the modern democratic State of Israel.

One phrase, her own, illumines all these achievements: "Make my eyes look toward

the future," a phrase which she uttered in her 84th year as she sat for a bust by Madame Batya Leshinska of Jerusalem. Always aware of today's immediacy, yet always conscious of the future, such was Henrietta Szold—daughter of Israel and the American dream, possessing both the riches of Judaism and of the American heritage, born in the city of Baltimore on December 21, 1860.

Her life was permeated by an insatiable search for knowledge and an equally burning need to take action on behalf of her people. Her great gifts of mind and heart helped create a rare personality. She was self-disciplined, yet she left thousands of letters full of fire and temper. There was no boundary or frontier to her pioneer spirit. What was her preparation for the fulfillment of her destiny? She was the daughter of a rabbi, rooted in the tradition of her people and in the land of her birth, personifying the noblest traditions of two cultures—American and Jewish. In her life and work were blended the Jewish ideals of freedom and justice—the ancient Jewish ethical and religious teachings—with the principles of democracy enunciated by the Founding Fathers. She worked unceasingly to help boys and girls to become whole human beings, physically, emotionally, and psychologically secure.

Daughter of Benjamin Szold and his wife, Sophia Schaar, who arrived in Baltimore from Hungary a year before Henrietta's birth, Henrietta, the eldest of eight sisters, was given the training and education usually reserved for boys. She learned Hebrew, and indeed sat at the right hand of her father. She was privileged to attend the Western Female High School of Baltimore and was chosen, at the age of 16, out of the 48 graduates, to give the honorary address entitled "Our Public Schools" at the 25th annual commencement. The newspaper of that day states, "She was applauded to an echo . . . only another evidence of the talent and studiousness which has placed Miss Szold at the head of her schoolmates."

For the next 15 years she earned her living teaching French, German, algebra, botany, and other subjects—preparing for that path which she would tread during a long and illustrious life. Her teaching philosophy, similar to that of John Dewey, is magnificently illustrated in a paper delivered at a conference of the Maryland State Teachers' Association in July 1887. Its title is "Elementary Schools—Training Schools," and gives a remarkably prophetic statement of our modern ideas of education. In this paper she questions the popular method of teaching which tested the facts acquired by young people. "Not knowledge, but the capacity to acquire knowledge, is power," she states. With her genius for projecting herself into the future, she says: "We are, in fact, drafting toward the solution of problems unique in the history of mankind, so far as the attitude of the masses of the people will have to assume towards them is concerned. These problems can be met through public training—training, not a mass of undigested and indigestible information." And she concludes, "Everywhere can be discerned prognostics of the fact that life in the 20th century will not be easy to live, that it will call for high courage to face the truth, steadiness in action, steadfast opinions, and unflinching purposes." Indeed, she found life in the 20th century not easy, but applying truth, steadfastness, and unflinching purpose, Henrietta Szold taught men and women by the very force of her example, where and how to find that high courage.

During these years of teaching, a number of external factors influenced her life. It was in these years that thousands upon thousands of immigrant Jews found their way to the shores of America as a result of the promulgation of the Russian anti-

Semitic May laws of 1882. Many of them came to Baltimore, encountering great difficulties because of their lack of language and "strange ways of living." Rabbi Szold, upright and compassionate, opened his home as a welcoming center to these Jewish refugees from czarist Russia. He, too, had fought at the age of 19 behind the barricades in Vienna. Henrietta, who believed that faith must be translated into reality, had faith in the potential of these men and women. She took the first step to help them "Americanize." With the support of the members of the Hebrew Literary Society, she took a room above a shop in Gay Street and opened a night school in November 1889.

On the first evening 30 men and women enrolled. As the word spread, each succeeding night more came, and very shortly after, with the aid of the Baron de Hirsch Fund, the school occupied a whole house on Front Street. By 1892 she moved to a still larger house on East Baltimore Street and when, 6 years later (in 1898) the Baltimore Education Authority took over this Russian school, there were 5,000 students who had attended classes. Christians, Slovak and Czech immigrants attended it as well as Jews.

Long years later in New York City (on Thursday, January 9, 1936), when Mayor Fiorella LaGuardia handed Miss Szold the certificate citing her for distinguished and exceptional public service, he hailed her as "A distinguished citizen of the world . . . who needs no key in the city of New York" and said, "You were the pioneer in this movement, which resulted first in educating the parents to avail themselves of the schools for their children. Through that pioneer effort, that inspiration, that group of immigrants who came at that time, many, many are holding today places of responsibility in the commercial, industrial, financial, scientific, professional, and governmental world. I would not be here, perhaps, in 1936 if you had not started your work in 1880."

In the doing, the doer was enriched. Contact with these minorities and with the history of persecution and degradation of the Jew throughout the centuries, quickened her mind and spirit to the need for a homeland wherein the Jew would be free and able to live a life of dignity and creativity. And thus she states, "I became converted to Zionism at the very moment that I realized that it alone supplied my bruised, torn, and bloody Nation, my distracted Nation with an ideal—an ideal that can be embraced by all, no matter what their attitude may be to other Jewish questions." She followed through by organizing in 1893 together with a group of her immigrant friends, the first Zionist Society in Baltimore (the Hebras Zion). Little did she know on what far path and to what great toll this conversion would lead her and how it would become the central and dominating motive of her life.

Overlapping her career as a teacher, confidant and literary secretary for her father, was a literary career of her own. At 18, she became the Baltimore correspondent of the New York Jewish Messenger using the pen name of Sulamith. Delving through the back numbers of this newspaper and of the columns as saved in her diaries and papers, one is astonished at the depth of understanding, at the pungent force and at the magnificent literary style in so young a girl. The range of topics upon which she wrote was amazing, and her deep Jewish roots were apparent in all her writings.

In pursuit of her firm belief that Jews must be rooted in Jewish history and tradition, she was one of that small company of far-seeing men and women who founded the Jewish Publication Society of America in 1888, serving as a volunteer on the publications committee. The Jewish Publication Society, acting on the principle that an in-

digenous, creative, cultural Jewish life must be devised for this country, sought to foster this end by publishing Jewish classics in English and by becoming the lodestone for contemporary writers. Miss Henrietta was fascinated by what she foresaw as the future of this organization and what it could mean for the unfolding Jewish life in this country. Thus, in 1893, she resigned from teaching and from the Russian School, said farewell to the religious classes and to her private students and became the professional literary secretary of the society and held this post for 23 years. She served as editor, translator, writer of articles for the Jewish encyclopedia and many learned journals, adviser to young people of talent. All the early volumes of the American Jewish Yearbook bear testimony to her editorial skill, to her knowledge of languages, and to her competence as a translator.

One of the most magnificent pieces of work during this period was the revised translation of the "History of the Jews" by Heinrich Graetz, in five volumes, with an index volume prepared entirely by Henrietta Szold. In 1898, volume VI, the index volume, made of the whole work not simply a history but a Jewish encyclopedia, for it is a compilation of events in chronological order. Miss Henrietta devoted herself for over a year to this tremendous labor. During this period too, there was fruitful collaboration with Prof. Louis Ginzberg of the Jewish Theological Seminary and she was extremely helpful in the translating and editing of volumes of his "Legends of the Jews."

"The Hebrew Journal" commenting on one of her lectures entitled, "A Century of Jewish Thought" (January 1896) says, "She demonstrates that the formation of a visible center as the acknowledged home of the Jewish people is required for the religion of Israel to assert its power and mission in the world."

The Journal continues, "With rare knowledge of the subject (almost too profound for an American woman) Miss Szold exhibits the beauties of the modern Hebrew literature. . . . (To our knowledge, the most learned Jewess in the United States . . . perfectly objective in her reasoning.)"

Rabbi Szold died in 1902 and Henrietta and her mother moved to New York in 1903. She became a student—a lady studying Talmud—at the Jewish Theological Seminary of America in New York City. She was extremely eager to publish her father's unfinished work and thus set about preparing herself to become his literary executor.

While attending the seminary as its first woman student, she commuted to Philadelphia to continue her work with the Publication Society. Reveling in the intellectual stimulation of the great minds at the seminary, her own horizons widened and she took on additional areas of work, which stemmed from her manifold interests. Her passion for Zion and for Jewish tradition and Hebrew as a living language was quickened at this time.

In New York she came into intimate contact with the Zionist masses as well as with its leadership and was impelled to positive action. Thus, in 1907, at the request of Dr. Judah Leon Magnes, then honorary secretary of the Federation of American Zionists, she and a group of young girls organized a study circle named the Hadassah Study Circle. For the next 2 years they studied under her guidance and became familiar with the ideas of the forerunners of the Zionist movement.

Toward the end of 1908 Miss Szold suffered from ill health and, therefore, she and her mother set out in 1909 for a leisurely trip to Europe and Palestine. In Palestine she saw the living reality of that which she had believed in and understood—namely, that Zionism was a movement of self-

emancipation, "a movement which epitomizes the finest Jewish impulses of the day." Her life took on new meaning and purpose.

When she returned from her visit abroad, she shared with the members of the Hadassah Study Group her concern for the mothers and children in the Holy Land, where the maternal death rate, as well as the death rate of the newborn, was shocking. And, thus, it came about that on Purim, February 24, 1912, this study group, meeting in the vestry rooms of Temple Emmanuel, declared itself "Hadassah," the New York Chapter of the Daughters of Zion, with the motto "Aruchat Bat Ami—The Healing of the Daughter of My People" (Jeremiah 8: 22), and elected Henrietta Szold as its president. Hadassah thus started with some 40 members with a twofold purpose—to establish and maintain a visiting nursing service in Palestine and to foster Jewish and Zionist education in the United States.

The concept of volunteer service which was incorporated in the constitution of this new group has been a major source of strength as the years marched on and the organization marched with it. Today Hadassah, more than 300,000 strong, has become a great movement in Jewish life, securely rooted in the American tradition, committed to a program of healing, teaching, and research and youth rehabilitation in a new democratic nation in the Middle East, Israel; respected and revered wherever men and women of good will live.

Justice Brandeis has said, "My life has been an analysis of organizations of all kinds. From that point of view, I have studied Hadassah and I am ready to say that there is no organization, political, economic, industrial, that I would put in the class of Hadassah."

The twofold purpose shines forth from its twin names, "Hadassah Medical Relief Association" and "Hadassah—The Women's Zionist Organization of America"—ministry of healing and service as well as educator of a large sector of American Jewry. Today, Hadassah represents a magnificent network of preventive and curative medicine encircling a nation and a state, crowned by a City of Healing—the Hadassah-Hebrew University Medical Center, paralleled by an equally magnificent women's group in the United States dedicated not only to its practical work in Israel but also to Jewish survival. Yesterday, the name "Hadassah" meant two nurses to give prenatal and postnatal care in a one-room hut in the Old City of Jerusalem and a small study circle in New York City. Indeed, her hands and her heart and her eyes looked to the future that day. Purim 1912, may be counted not only as the birthday of Hadassah, but also of Miss Szold's life work, for all else was "commentary."

In 1916, Miss Szold's friends, under the direction of Judge Julian W. Mack, made it financially possible for her to devote all her time and talents in the field of volunteer service. Therefore, Miss Szold tendered her resignation to the Jewish Publication Society and turned her energies and talent to the field of Zionist work. During World War I, as the magnitude of the problem facing Jewish life became ever more apparent, a Provisional Committee for Zionist Affairs, under the chairmanship of Louis D. Brandeis, to aid Jews abroad, was set up in America. Henrietta Szold became a member of the executive committee. When the pleas came from Europe for medical relief as well as other aid, and as the appalling situation of the Jews in Palestine became apparent, the provisional committee turned to Henrietta Szold and Hadassah to organize such assistance for the Jewish community of Palestine. Hadassah, then an organization of 47 chapters and 4,000 members, accepted the responsibility of organizing, financing and dispatching a medical unit to Palestine. Thus, on June 11, 1918, the first American Zionist

medical unit to Palestine set out from New York harbor in a British ship. This mission was composed of 45 doctors, nurses, sanitarians and administrative personnel, and arrived in Jaffa on August 17, 1918.

While Miss Szold labored to set up this mission, the Balfour Declaration was issued. Thus, "The medical unit was an advance guard of the builders * * * and became the advance and seminal instrument for a modern State with model health facilities and achievements."

In this first planning, her concern for tomorrow and her understanding that tomorrow must be built on the work of today, was evident. She believed in discipline, work and building, and communicated this to all who came into her orbit. "I see no sense in any movement which is not built up slowly, bit by bit."

Hadassah built slowly, bit by bit, under her guidance and direction, accepting the challenge of today, planning for the tomorrow that inevitably becomes today. From its very beginnings, Miss Szold taught that there are no frontiers to medicine and that all creeds and groups should be served. This has remained Hadassah's credo.

In 1920, in her 60th year, Henrietta Szold started her life anew. She went to Palestine to take her part in the medical program which Hadassah had taken on as its obligation in the building of a new nation. She remained in that land for a quarter of a century of unremitting work and awe-inspiring achievement. On May 10, 1944, she wrote to a cherished friend, "I have a great longing to visit America once more * * * I long for the Maryland woods. I long for an American autumn. I long—but dare I hope, with a war that must be won, no matter how long it lasts." She died in Jerusalem the following February 1945, without seeing the Maryland woods again.

The breadth of vision, the capacity for seeing the one step ahead, gave her the understanding that a healthy baby, a normal child, must be given proper education and training and so her interest angled out to include all the needs of the Yishuv (Jewish community of Palestine) in the fields of education, social welfare, vocational education, as well as in health. In 1927, the Zionist Congress elected her to the Palestine Zionist Executive and she became the director of education and health. In 1931, she was elected a member of the Vaad Leumi (the Jewish National Council in Palestine) and was appointed director of social welfare and she set out to organize the central bureau for social work for the whole country. She wrote, "When I came to Palestine I acted as though I were an expert on medical affairs. Fate made me pretend to be an expert in educational affairs in 1927 and now in 1931, having passed the Psalmist's turn of year, I dare go into another field in which to expertise is imperative."

The circle of her life had almost come full round, but not yet, not until that day in 1933 when she unpacked her trunks and knew that she would not return to live out her last days in the city of her birth, her beloved Baltimore. For in 1933 she had said her goodbyes, had packed her few belongings, and had set her feet on a path to fulfill her heart's desire of ending her life amid the fields of her birthplace and in the bosom of her beloved family. But in that year came the accession of Hitler to power and once again her life took on new dimensions. She who had started as a teacher and as the

friend of the newcomer into America, found herself again in the field of youth education and integration of immigrants.

German Jewry, in its anguish and effort to save its youth, had organized a movement called Judische Jugendhilfe and they and the Central Bureau for the Settlement of German Jews under the Jewish Agency, turned to Miss Szold to direct the work of receiving the young people, of integrating them in Palestine, and of giving them the opportunity for training and citizenship. In October 1933 Miss Szold went to London, as Palestine's representative, to attend a conference discussing ways of meeting the crisis facing Jewish life. En route she wrote to a friend, "Last spring I determined to cut loose from Palestine and return to America for my remaining years, to be coddled by my sisters. Hitler disposed otherwise. I should have felt like a renegade if I had not remained to do my bit." From London she went to Berlin to make her plans.

On February 19, 1934, the first group of Youth Aliyah boys and girls arrived in Haifa Harbor aboard the *Martha Washington*. Henrietta Szold was there to welcome each one, to talk of their home and their parents, to bid them Shalom, and to take them to their new home at Ein Harod, a kibbutz in Palestine. Slowly they came, and then faster and faster, the children and youth, as each year brought its own story of increased Jewish suffering. Each year brought new groups from various lands; from the concentration camps when they were opened up; from the partisan ranks; from the homes of foster parents who had taken them in; from the Orient and Arab countries; from lands numbering more than 70.

Now as plans are being made to mark the centennial of her birth in December 1960, the figures of World Youth Aliyah show that 100,000 children and youth should have come into Israel by that date. One million Jewish children cruelly done to death in the years of the Hitler massacre; 100,000 children—untold generations—to balance that awful score. The sages have said, "He who saves one life saves the generations."

One of the beacons of Jerusalem in the 1940's was the light that burned in her room at the Eden Hotel—a source of comfort and hope for all who passed that way during the dark days of the Hitler holocaust. In her own words, she described her workday to a friend, "My day extends from 4:30 in the morning until 12 at night and I am kept busy all the hours." Once when asked by a dear friend how was it possible to work this way, she answered: "There are two reasons: one, I keep the Sabbath; and two, my cast-iron stomach." A spiritual and physical blending. She went on to explain that Friday, when she lit her candles, she put aside all business and turned toward the delight of the Sabbath, renewing her forces for the work of the coming week.

Through all these years of service for the Yishuv, a vision was born in her mind and heart, germinating slowly, but one which developed towards a logical conclusion; namely, that there must be established in this new land a children's bureau comparable to that of the United States or of Switzerland. It must be an organization with the authority, the technical knowledge and the purpose of delving into various social problems attendant on the care, training, and future of the child as he grew into a mature and conscientious citizen.

She wished that a national fund similar to the great instruments of Israel's redemp-

tion—another national Keren, this time a Keren Haya'el, be set up. Thus, on her 81st birthday, December 21, 1941, the Mosad Szold, Keren Leman Haya'el v'Hanoar, or the Henrietta Szold Foundation for Child and Youth, was formally established through the initiative of Hadassah with the aid of the Vaad Leumi. The Mosad functions today as a research and coordinating body in the fields of social work, social welfare and youth work. It is indeed "Miss Szold's legacy and conscience, a project for this and future generations."

Today, we who love and revere her may not visit her last resting place on the Mount of Olives, for it is in Jordan territory. But we meet her in every corner of the Holy City and the Holy Land, on the docks of Haifa where she greeted the first group of Youth Aliyah boys and girls; in the City of Beer-sheba, which the genius of Hadassah helped to grow from a primitive market point in the desert to a city of 40,000 people; in Safad, in Tel Aviv, in Tiberias, where the former Hadassah Hospitals tell something of the story of its beginnings in the land; in the medical center which dominates the skyline of Jerusalem. She is seen too in the happy laughing children in the playgrounds; in the pink-cheeked schoolchildren having their midmorning snack and milk; in the Oriental girls studying sewing and homemaking. The ideas of education, social welfare and child guidance, which are now an integral part of an orderly democratic state, were born in the mind and heart of Henrietta Szold and became reality through her stubborn will, matchless integrity, and ceaseless activity.

How does one conclude this paper? For her who spanned centuries and crossed continents in her life and her work, there is no such word as conclusion. May I therefore quote from an essay written by Henrietta in October 1917, in memory of a beloved friend, (Hortense Guggenheimer Moses):

"To such as she was we say no farewell. The harmony of their being has stolen into the fiber of our consciousness. In part we are what we are because they have lived. In part we do what we do and as we do it, because they have done as they did. Remembering what they were and what they did, what she was and what she did, we consecrate our lives to life—life—full, complete, harmonious."

The Challenge of Higher Education

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. KEATING. Mr. President, while all of us are concerned—and rightly so—with the quantity and quality of secondary education in this country, we must also pay increasing attention to the onrushing problems involved in providing college training for our young people. According to reliable statistics, enrollment in institutions of higher learning will more than double within the next 10 years.

A principal dilemma posed by this avalanche of college students is how to prevent a diminution in the quality of the education provided. This problem and many others involved in the forthcoming crisis in our colleges was ably discussed recently by Dr. Homer D. Babbidge, Assistant Commissioner of Education.

In a speech at Sidwell Friends School here in Washington, Dr. Babbidge voiced an eloquent plea for greater public interest in the challenge of higher education, and pointed out the need for insuring that more and more of our young people receive college training. He said, "Society as a whole needs more people with education beyond high school," and I thoroughly agree, Mr. President.

Dr. Babbidge dealt with the need to take steps now to meet the coming tidal wave in higher education. While it is, of course, true that much of the financial backing needed for this great effort must come from private individuals and organizations, some help must be provided by governmental units at the Federal and State level. I am convinced that the Federal Government must more thoroughly explore means to assist in meeting the crisis in higher education.

There are a number of proposals now before Congress, several of which I have sponsored, to provide Federal help in this great cause. I am hopeful action will be forthcoming before long on these means to stimulate and encourage America's response to the need for improved quality and quantity in our institutions of higher learning.

Mr. President, the sooner we respond to the challenge outlined in Dr. Babbidge's address, the easier it will be to answer it. As he notes—

We are either going to do what needs doing, or we will relegate education to a lesser place in our national way of life.

And I might add, Mr. President, that if we do demote education in our national scale of values, we will be dooming America to a secondary place in the family of nations.

So that all my colleagues and a wider readership can benefit from Dr. Babbidge's cogent remarks, I ask unanimous consent that excerpts appearing in the Washington Post be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

[From the Washington Post, Mar. 5, 1960]

THE COMING CRISIS IN OUR COLLEGES

(By Mr. Homer D. Babbidge, Jr.)

(Excerpted from an address delivered recently by the U.S. Assistant Commissioner of Education at Sidwell Friends School.)

The most widely and confidently forecast tidal wave in all history is not a meteorological but an educational one. Based on accurate population data—the young people are already in school—it is estimated that demand for college enrollment will double within the next decade. This is a forecast fraught with significance for the Nation.

It seems to me that there are three possible basic courses of action that we can, as a Nation, contemplate:

1. We can turn away a larger number of applicant students at the college doors, making it relatively more difficult for an individual to get a college education.

2. We can increase educational resources to accommodate the numbers.

3. We can accommodate the numbers without a commensurate increase in resources, with a consequent decline in the quality.

This last course of action impresses me, I am afraid, as the course most likely to be followed by the American people, and at the same time the most frightening course. I regret to say that there is a worrisome amount of evidence that through lack of concern and lack of action, we are in danger of paying for growth in higher education by cheapening the product.

Parents are, individually, much concerned about the quality of the education their own children are likely to receive. But there is always the danger that parents will be concerned only for the fate of their own children, and that they will be lured into believing that they may be able to shoe-horn their children into an institution that is miraculously able to maintain the quality of its instruction in the face of enrollment demands.

That is dangerous thinking in the case of individual families, but it is even more so for society at large.

Let me enter a plea that you make common cause with other parents in this matter; that you be as concerned with the dilution of higher education in the large as I know you are concerned about it in the case of your own sons and daughters. Frankly, the kind of diminution of quality that I fear will be epidemic in nature; no institution and no family will be immune. I believe that only through concerted community effort can we have any protection, singly or as a society.

There is a specious appeal to the idea that we can keep the educational standard high by practicing higher education on a narrower segment of society. I think that it would be a false economy. In the first place, it may be your son or daughter who gets selected out. But more importantly, we must realize that a college education is increasingly a standard component of self-fulfillment in our society, and that self-fulfillment is an ideal too important in our way of life to be cast off for reasons of economy. And then, too, we need more people with college training—society as a whole needs them.

In my view the only honest and socially constructive response we can make to the so-called tidal wave is to prepare for it; prepare for it by building the facilities and training the faculties that are required to accommodate increased numbers of students. That preparation will come high. Our physical plant needs alone in the next decade may run to \$20 billion—and our present rate of construction would provide only about half that. In the area of faculty needs we face a troubling production problem: with needs for new staff rising, during the next decade, to 40,000 or 50,000 a year we are currently producing less than 5,000 Ph.D.'s a year who go into college work.

The decision to put much more effort and much more money into higher education is a hard one. The alternatives are easier, and unless I am mistaken, you will be hearing an increasing number of elaborate rationalizations designed to make the easy solutions seem sound. I believe there are economies that can be effected in our higher educational enterprise, and I think we can do a better job of seeing to it that those who go to college are those who will most benefit from the experience; but neither is going to let us off the hook of decision. We are either going to do what needs doing, or we will relegate education to a lesser place in our national way of life.

Address by Philip McCallum, Administrator of the Small Business Administration, Before the National Limestone Institute, Washington, D.C., January 20, 1960

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. SCHWENGEL. Mr. Speaker, one of the best summaries of the active role which the Small Business Administration is playing in today's economy was given by Mr. Philip McCallum before the National Limestone Institute at its annual meeting in Washington earlier this year.

Because I have a great deal of confidence in the value of the Small Business Administration in bolstering the backbone of every community—the small businessman—under unanimous consent I insert Mr. McCallum's remarks in the Appendix of the Record. His address follows:

I am happy to have the opportunity to meet today with you members of the National Limestone Institute, and your guests, to explain the services of the Small Business Administration.

Your president, Robert Koch, has assured me that most of the members of this institute are small, independent operators. In addition, I am well aware of the value of the products and services you have to offer. You are playing a vital part in the improving of our highway system, and equally as important is your production of agricultural limestone which does much to maintain the fertility of our farms.

Yours is an essential industry, and I have no doubt that in the years ahead you will continue to play an important role in our national economy.

Newspapers and magazines recently had a good deal to say about the "fabulous sixties" which we have just entered. The marvelous advances of the past few years are well known to all of us—atomic energy, space exploration, new products, new machines, new methods of doing just about everything under the sun.

But marvelous as these recent advances have been we are told that they are as nothing when compared to the promise of the next decade. And, indeed, it is not difficult to envision that this will be so.

Already, as a result of rocket and space research, industry is offered a wide range of new materials, light in weight, durable, and highly resistant to friction.

We have no sooner become used to the marvels of electronic computers, when we are told that in a few years we may well have available machines, perhaps no larger than a cigar box, that will approach human thinking processes.

Today, as every businessman knows, time and space are of increasing importance. To our forebearers, time moved slowly, sedately, leaving plenty of time for reflection, for decisionmaking, for correcting mistakes before the mistakes became important.

Now, time is packed full of action. More people have more things to do than they can find time in which to accomplish them. We are even more aware of the telescoping of space. Experimental airplanes have been flown at speeds of 1,400 miles an hour—but that was a few months ago. Perhaps that

speed has been exceeded by now, I do not know. I do know that there has been speculation of aircraft speeds in the near future of perhaps 4,000 miles per hour. We can move today between continents in less time than it took our fathers to travel from one county to the next.

Within this shrinking world of time and space, is it any wonder that the businessman has increasing problems of administration and operation, affecting not only himself, his employees, his sources of supply, but his customers as well?

Today, more than at any time in the past, the owner or manager of a business must keep up with changes in technology. Lacking that kind of knowledge, he will soon fall behind in the competitive race. To run and win that race in a time of rapid sociological changes, he must know about, or himself introduce, new and improved products, and new and up-to-date methods of production and distribution. With the consumer ready, and often eager to spend his money on a large variety of goods, the businessman cannot stand still. If he does, he will surely do himself irreparable harm.

One would hardly recognize the machinery used today in manufacturing as compared to even 20 years ago. Continued investment of capital has brought automatic control of looms, lathes, drill presses, cutting tools, oil refining processes, and countless other operations. The flow of materials, the testing of materials and components, the storage of parts, and even the whole operation of assembly lines can now be controlled by magnetic tapes or by one or two skilled operators.

Change is the order of the day; radical change, often swift and unexpected. And change appears certain to dominate our lives in the years ahead.

The businessman who is going to succeed in the fabulous sixties will be the businessman who anticipates the changes that lie ahead and prepares for them.

Certainly these are prosperous times now, and all the predictions for 1960 that I have seen forecast a further expansion in our economy, with the gross national product surging past the \$500 billion mark for the first time in history.

We in the Small Business Administration are concerned with the welfare of the Nation's 4 million small firms. We have developed a number of programs to help the small firms with their various problems, so they can keep up in the parade of progress and help strengthen the Nation's economy.

One of the common problems of small firms, particularly of small firms that are expanding or trying to expand, is the shortage of term financing. To help meet this need, the Small Business Administration has developed a program of financial assistance. We think this is a very effective program. Since the start of the program in September 1953 we have approved more than 18,000 individual loans totaling more than \$850 million to aid small firms.

Perhaps the best way to explain this program to you is to give you in some detail the story of one such loan we recently approved to a small firm engaged in crushing, hauling, and placing limestone rock on highways, and crushing and spreading agricultural lime for farmers.

The proprietor of this small firm visited one of our branch offices and told this story: He and his brother had organized the firm about 15 years before and they had done very well. They had about 35 employees and their net sales were about \$300,000 a year.

In order to keep up with technological progress, the firm has been obliged to go rather heavily into debt to purchase crushers, pulverizers, shovels, trucks, and other equipment.

Profits were also reduced by the necessity to make large set-asides for depreciation of equipment.

The proprietor's basic problem was this: In order to improve the efficiency of operations and handle an increased volume of business, he would have to spend an additional \$55,000 for new equipment. The equipment needed consisted of a link-belt shovel costing \$10,000; a jaw crusher costing \$20,000; and a roll crusher costing \$25,000.

He had been to his bank to discuss the problem with his banker. The banker explained that he was already helping the firm finance its past purchases of equipment and was helping with the firm's short-term financing and that was about as much as he could do at this time.

However, he suggested that the proprietor visit the Small Business Administration. He said his bank would be glad to consider a participation loan in cooperation with the SBA.

Accordingly, the proprietor of this firm had prepared the necessary financial records and he was now asking what help the Small Business Administration would be able to provide.

The financial specialist was impressed with the operation of this business. He noted that the management was experienced, competent, and well regarded in the community; he noted that the equipment the firm owned was maintained in very good condition and was checked regularly; the firm maintained a complete set of books and its future prospects appeared very good.

Accordingly, in a short while the SBA was able to approve a loan of \$87,000 to this small firm—\$55,000 to purchase the needed new equipment, and the remaining \$32,000 to pay off chattel mortgages on machinery and equipment previously purchased.

The loan was to be repaid in monthly installments over a period of 7 years. The bank agreed to take a 25-percent share of the loan, and to service the loan for the SBA. The interest was set at 5 percent.

I have given you details of this loan, because it is typical of the way the Small Business Administration operates. When we are convinced that the management is capable, the collateral adequate, and there is a good prospect for future earnings from which the loan can be repaid, the applicant stands a good chance of receiving financial help from this Agency.

In this case, the firm purchased the new equipment, expanded its operations, hired 15 additional employees, and at last report it was getting along very well.

Small businesses are eligible for SBA loans for these purposes: Business construction, conversion or expansion; the purchase of equipment, facilities, machinery, supplies or materials, or for working capital.

There are two types of Small Business Administration business loans—participation and direct. In a participation loan, the agency joins with a bank or other private lending institution in a loan to a small business concern. In a direct loan, there is no participation by a private lender—the loan is made entirely and directly by the SBA to the borrower.

By law the agency cannot make a direct loan if a bank or other private lending institution will join with it in a loan. The amount which may be borrowed from the Small Business Administration depends upon how much is needed for the intended purposes of the loan. The maximum amount which the agency may have outstanding to any one borrower is \$350,000. This maximum applies to the agency's share of a participation loan and to a direct SBA loan.

So much for our financial assistance program. Let us now turn to another program we have for helping small firms obtain

needed equity capital through the establishment of privately owned small business investment companies.

Under the Small Business Investment Act of 1958, the Small Business Administration licenses, regulates and may provide financial assistance to privately owned small business investment companies. These companies in turn make equity-type and long-term financing available to small business concerns.

Before it can begin operations under the act, a company must be licensed by the SBA and must have paid-in capital and surplus of at least \$300,000. However, in order to enable a company to get started, the SBA is authorized to purchase subordinated debentures from the company up to a maximum amount of \$150,000.

As a further step to encourage the formation and growth of these new sources of equity-type and long-term funds for small business, the Small Business Administration may also make loans to an investment company, up to 50 percent of the company's paid-in capital and surplus. The investment company also may borrow from private sources, subject to conditions prescribed by the SBA.

The Small Business Investment Act also authorized the Small Business Administration to make loans to State and local development companies to help them assist small businesses of their areas.

So far the Small Business Administration has licensed 67 small business investment companies. We expect that before long there will be at least one such investment company organized in each of the larger cities throughout the country and that these investment companies will become an important source of financing for small business concerns.

Let us turn now to another service of the Small Business Administration—disaster loans:

Loans are made in storm, flood and other major disaster areas to help repair or rebuild homes, businesses and nonprofit institutions, and to help replace lost furnishings or business machinery, equipment and inventory.

Loans are made in drought or excessive rainfall disaster areas to help small business concerns suffering substantial economic injury to overcome this injury and to continue in business until the disaster conditions end.

A small business concern may be considered for an SBA disaster loan provided it has suffered substantial economic injury because of a drought or excessive rainfall in its area, and provided the President or the Secretary of Agriculture has declared the area a major disaster area because of the drought or excessive rainfall.

The Small Business Administration has approved nearly 9,000 disaster loans for approximately \$95 million.

Another of our services is helping small firms who wish to sell their products or services to the Government. This is an important program because, as you know, the U.S. Government is the largest purchaser of goods and services in the world.

In the Small Business Act, Congress stated its intention that "a fair proportion of the total purchases and contracts for property and services for the Government (including, but not limited to, contracts for maintenance, repair, and construction) be placed with small business enterprises," and that "a fair proportion of the total sales of Government property be made to such enterprises."

The agency's regional offices maintain inventories or listings of the productive facilities of small firms in their areas, and use them to refer prime contract and subcontract opportunities to firms which can furnish the needed products or services.

The SBA's field offices serve as a meeting point for Government prime contractors and other business concerns in need of subcon-

tractors and small firms which have the required facilities.

The SBA helps small business concerns to undertake research and development work, including work for the Government, and to obtain the benefits of research and development.

The Small Business Administration has developed programs with major Government purchasing agencies under which purchases are set aside to be made from small business, and bidding for the contracts is limited to small business concerns.

The SBA has arranged cooperative small business set-aside programs with the Department of Defense, the General Services Administration, the Department of Commerce, the Veterans' Administration, the Department of Agriculture, the Department of the Interior, and the Post Office Department.

Small Business Administration representatives are assigned to the larger purchasing offices of these agencies to review proposed purchases with their purchasing officials and to reserve suitable ones for award to small business. The decision to set aside for small business all or part of a purchase, or class of purchase, is made jointly by the SBA and the purchasing agency.

Under this program, nearly 80,000 prime Government contracts have been awarded to small firms, and these contract awards amount to more than \$3 billion.

The Small Business Administration also assists small business concerns with their management problems; helps small business owners and managers strengthen their management skills and learn of new and improved business practices; and finances research into the problems of small businesses.

As part of this program, the Small Business Administration arranges with colleges, universities and State agencies for research and studies concerning the financing and operation of small business enterprises. So far we have made individual grants to educational institutions in each of the 50 States, the District of Columbia and Puerto Rico.

The grants range from \$7,000 to the maximum permitted by law, \$40,000. These studies, when they are completed, will be widely distributed and we believe they will be of great value to small business enterprises.

As part of its educational program among the small business concerns of the Nation, the SBA cosponsors with educational institutions administrative management courses designed to help businessmen fill the gaps in their knowledge and experience by acquiring a better grasp of overall business administration.

Since 1954, the SBA has cosponsored 653 management courses at 255 educational institutions, and the courses have been attended by more than 20,000 business owners and managers. They pay the cost through their tuitions.

We also publish several series of management and technical publications of value to established or prospective operators of small business concerns. These are:

Management Aids for Small Manufacturers, a series designed to supply needed information on sound business administration in small plants.

Small Marketers Aids, which are leaflets intended for owners and operators of small retail, wholesale and service enterprises.

Technical Aids for Small Manufacturers, a series designed for use by operators of small plants, discuss significant developments in such fields as materials, processes, equipment and maintenance.

The Small Business Management Series consists of booklets which cover important management subjects, and normally are prepared on a contract basis by recognized authorities in the fields covered.

The Starting and Managing Series, a new type of publication, will provide information

on starting and managing different types of small business concerns.

From this brief outline, it is apparent I believe, the Small Business Administration has developed a wide and effective program for aiding small firms.

In these prosperous times businesses of all kinds, small or large, have an unprecedented opportunity to expand their products and services and help provide new jobs and new opportunities.

Business is on the upsurge. The National Industrial Conference Board says that the Nation is going to continue to have a rapid rise in the standard of living, due to technological progress, a growing population, a very high rate of income, and large capital investments by industry.

Thus we have in our great Nation assurance of further economic growth and a solid foundation upon which we can build our future. All the signs indicate to me that alert, farseeing companies will find exciting opportunities for growth and prosperity.

The Last Days of J. Ernest Wilkins

EXTENSION OF REMARKS OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. MCGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an article appearing in a recent issue of Ebony magazine, written by Simeon Booker, entitled "The Last Days of J. Ernest Wilkins."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LAST DAYS OF J. ERNEST WILKINS—A
VICTIM OF POLITICAL BICKERING, UNBENDING
FIGHTER DIES A LONELY MAN

(By Simeon Booker)

On a balmy spring day 2 years ago in the Nation's Capital, the son of a poor Methodist minister who rose to become Assistant Secretary of Labor, the highest Government post ever held by a Negro, grimly set out to write a letter of resignation to President Eisenhower. For J. Ernest Wilkins, the administration's most celebrated Negro appointee and internationally known because of his position, the decision was heart rending. He had failed in the one job he wanted so badly, in which he had worked so hard to succeed.

Somehow, he did not write the letter—at that time. Perhaps, because of his objections to the methods used to oust him or because he felt he still could perform in a manner satisfactory to his superiors, he delayed the ordeal. The postponement, according to intimates, exposed the soft-voiced, gentle "prince of a man" to a hectic, bitter campaign against him and probably hastened the end of his life—only 10 months later.

In those months, however, the 64-year-old Phi Beta Kappa from the University of Illinois and a pacesetter for a brilliant family demonstrated a courage and perseverance seldom seen in U.S. politics. The man whom some Negroes described earlier as "ultra-conservative," launched a one-man battle that reached the White House level and ended in the pitiable death of "a broken-hearted Christian." Little has been written about the stormy episodes that capped his

spectacular career. Only in recent months have intimates started to discuss the fateful disaster of the man dubbed "The Puritan of Mahogany Row" and worshiped as the administration's headline race figure. The talk is reviving the memory of the former Chicago lawyer and could well give him the rightful and lasting place he deserves in civil rights.

When he was appointed to the subcabinet post in 1954 by President Eisenhower, Wilkins became the ranking Negro in a torrid, fast-moving, protocol-conscious Nation's Capital. He calmly accepted the honor, courteously rejected the frills and trimmings. A staunch Methodist churchman, he steered away from drinking, smoking, cursing, even turned social invitations down by the score. He made it clear from the start that his goal was carrying out his duties. Without press conferences or interviews, he regularly (though unwillingly) made news, becoming the first Negro to sit in on a cabinet session, head a U.S. delegation to International Labor Office meetings in Europe and Cuba.

But the buildup became a nightmare 4 years later that worried the architects of administration policy: How could they fire a Negro VIP whom they publicized so much? Especially since the country had been told that he had done a tremendous job.

What are the factors that provoked Wilkins to consider resignation? There was apprehension from the beginning in labor circles as to his qualifications for a post that dealt with international labor relations. Wilkins had no previous experience in labor, didn't talk the language, and, as one labor leader said: "He didn't know the difference between the AFL and CIO and just couldn't get on the level with working people." A man dedicated to what he believed was right, Wilkins was firm once he adopted a course. He took little advice, had few friends in labor areas and worked almost independently. Said one Negro laborite: "There were a lot of us who wanted to see him make good, but he never picked up the phone and called. And he never stopped by." Yet, despite this criticism, department officials admitted that Wilkins learned the ropes and within months was making a record on the job. He was acclaimed for his speeches to worldwide delegations of labor leaders, instituted exchange programs, developed a labor program in Africa. Said one: "When he made up his mind, he went all of the way."

Even though racism was not a factor in his predicament, it lurked in the shadows. Deep down, Wilkins was an uncompromising crusader. Here is an incident one labor leader related: When Wilkins led the delegation to Switzerland in 1957, a Russian took the floor at the ILO confab and in a rousing speech attacked the United States as a country spawning people such as Mississippi Senator JAMES EASTLAND. An American delegate turned to Wilkins, their leader, and urged him to object on the grounds that what the speaker was saying wasn't germane to the labor issue. Retorted Wilkins: "He's telling the truth, isn't he?" Wilkins refused to step in and another American did, finally getting the chairman to silence the speaker. Said the labor leader: "Wilkins just was too honest, too sincere to realize his role as a diplomat."

During the fall of 1957, Labor Department Secretary James P. Mitchell, according to reliable sources, indicated that he was displeased with Wilkins' role as head of the 80-person staff which handled relations with labor leaders in 79 countries. He told some aids that he "realized he made a mistake" in appointing Wilkins, but wanted to help him find another unique job. To gradually ease Wilkins out, he had the White House appoint him as the only race member of the newly formed Civil Rights Commission. But

Wilkins refused to quit, delayed his resignation and fell victim to a humiliating incident—and a heart attack.

Scheduled to lead his fourth ILO delegation to Europe in May of 1958, he packed his bags and canceled speaking engagements. Then, he got word he would be left home. The decision unnerved him and 3 days later, after the delegation departed, a secretary rushed into his office to find him groping at his desk, gasping that he could not see. He had suffered a heart attack. Rushed to Walter Reed Hospital, he was confined 3 months, losing his sight for a while. It was first feared that the heart attack had blinded Wilkins permanently.

For weeks, his life hung in the balance. His faithful wife, Lucille, stayed at his side but, like her husband, refused to summon outside help. Said a Negro Republican: "If we'd just known what was going on, we could have helped. But Wilkins was a self-reliant man."

Still ailing, Wilkins returned to his office where he found the pressures for his ouster at an all-time high. Newspapers hinted correctly that his successor would be 31-year-old George C. Lodge, son of the U.N. Ambassador. There was little work for Wilkins: he was stripped of responsibility and according to office help, he "merely shuffled papers all day." The man whom the GOP formerly headlined was a "forgotten man" without services of a full-time secretary. Crippled somewhat by the heart attack, he fought on, trying to retain his post. A year or so before, when he broke his leg in a fall in Flint, Mich., he astonished employees by hobbling to work in a cast—so enthusiastic was he about the job. This never-say-die spirit flourished and won the admiration and silent help of numerous white and Negro employees.

As the first Negro subcabinet member, Wilkins endeared himself early to staffers. He was responsible for the first Negro secretaries to accompany overseas Labor Department delegations and the appointment of top race aides in his section. It is said that even while walking down halls, he noticed all-white sections and complained to personnel. Yet, his own secretary was white and he made no effort to replace her. With use of a limousine, Wilkins often drove his own car and even ate in the public cafeteria in his building in preference to the exclusive executive dining room.

As resignation rumors persisted, prominent Methodist Church men offered their services to the defense of their first Negro president of the judicial council (the church's supreme court). But Wilkins turned them down. When it came to services, Wilkins' creed was "Believe in yourself and march forward." Said a friend: "He would charge into a lion's den and not know how to get out." Said another: "He knew church politics but he was lost when they hit from behind in national politics."

During the next weeks, Wilkins was the loneliest person in the building. No longer did he have communication with Labor Secretary Mitchell who wrapped his arm about him at the initial press confab. No more was he considered a man on the team. Aids said Wilkins prayed, read the Bible in his office, but that there was little relief. Aids for White House Chief Sherman Adams and Vice President Nixon tried to arrange meetings with their bosses to discuss the matter, but Wilkins spurned them. Said he: "The President appointed me and I want him to hear my case."

This attitude surprised the professional politicians. Never before had a colored man refused to talk to the Vice President or chief White House aid and stood his ground so firm, refusing to compromise on principle. When the conference, with President Eisenhower was arranged, Wilkins ducked in a side door of the White House and talked

face to face with the man who had uprooted him from his successful 35-year law practice. But the President was firm; Wilkins had to go because Labor Secretary James Mitchell had the right to appoint his top aids. Still, the President would find another job of equal importance. Wilkins replied that he would think it over.

When he left the White House, reporters said the soft-spoken, humble man had tears in his eyes. He did. But he wasn't crying. Since the heart attack, his eyes watered and he constantly had to wipe them. Friends said, however, that he was distressed and disillusioned.

At a White House press conference in mid-August, President Eisenhower denied reports that he was forcing Wilkins from the post. He admitted that he had "a congenial talk" and that Wilkins was considering resigning. The reporters were led to believe the reason was Wilkins' failing health.

The President's public pronouncement was the last straw. Wilkins, according to friends, realized that he had lost the battle. Daily for weeks he carted books and other belongings from his office in such amounts as not to cause comment. His resignation "for personal considerations" was announced during the first week of November and Wilkins, on his last workday, went home without saying goodbye to any of his superiors and turning down a proposal that he be honored at a testimonial dinner. He was through. Period. He wanted to forget.

A leading Republican said: "His leaving was the low water mark for us as far as Negroes were concerned. We feel embarrassed."

There was no uproar from the Negro community—just as Wilkins desired. But shortly after suffering perhaps his biggest setback—to be forced out of a history-making job, Wilkins, to his credit, refused to quit public life. As a member of the Civil Rights Commission, he concentrated his energies. His early accomplishments: appointments of Howard Law School Dean George Johnson as the Commission's legal director and Thomas Young on the publicity staff.

The stage was set for his debut in early November in Montgomery, Ala., former Confederacy capital. The Commission was launching its first probe of Alabama vote denial cases and there were some 45 Negroes, some white judges and members of registrar boards, slated as witnesses. The Commission members stayed at the Maxwell Air Force Base after downtown hotels rejected the entire group because Wilkins was a Negro.

Before a tense and crowded hearing in the Federal courthouse, Wilkins, alert and quick, tossed caution to the wind—and exploded. His questioning of witnesses, including the judges, brought gasps. A registrar refused to answer him. There was no argument that his questioning of witnesses laid the Commission's groundwork.

Said a Negro newspaperman: "There is not an ounce of fear in Wilkins. He is sharp. Where has he been all this time?" A white colleague remarked: "He plunged right in and hit the heart of the matter. Being a Negro, he upset the tradition in that area for years to come." But, said a Washington politician: "This was the turning point in Wilkins' life. Before, he'd been a quiet but powerful crusader. After he lost the job, he just started talking what he believed. He'll never get another U.S. post."

Meanwhile, there was little use in speculating whether Wilkins would have been named a Federal judge or a U.S. ambassador. In speeches throughout the country, he mentioned that there was a brooding look on the face of Abraham Lincoln in the Washington memorial. Then he always added, "In a few years we'll have to change that statue. With segregation on the way out, the Emancipator will be happy."

On January 19, 1959 (10 days after he appeared at the second Montgomery, Ala., hearing), J. Ernest Wilkins died alone in his Washington home. Friends immediately noticed the grimace on his face as he lay sprawled on the bedroom floor and were reminded of his remarks about Lincoln. Said one: "Now he belongs to the ages—the forgotten man." He lay in state at downtown Washington's Foundry Methodist Church, the first time a Negro has been so honored, and was funeralized from his beloved Chicago.

A year after his death, little has been written about the man who taught Washington VIP's the value of devotion to duty and integrity. It's understandable. They want to forget the way Wilkins was treated and how he died.

Social Security

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DENT. Mr. Speaker, during these days of uncertainty it is well to pause and consider the importance and the impact of social security on our economy and our way of life.

When social security was born it was heralded as a major prop in our economy against the devastating effects of unemployment, automation, and national business recessions.

Social security was held up as the answer to our need for security in old age, opportunity for youth and as proof positive that a democracy could meet the challenge of socialism and communism.

Recently much has been written but little has been said about the need for drastic changes and an updating of this law passed in 1934 becoming effective in 1935.

From the earliest dawn of history, advancing age has been one of man's greatest problems. Primitive tribes regarded age with superstition and fear. Often, the older men and women were driven from the tribes into the forest in the belief that their infirmities made them unfit to associate with others. Gradually, as family units were established, the elderly gained a better place in society. In the beginnings of most civilizations that remain today, the very old were the responsibility of the younger members of the families. In some societies, the aged were highly revered and the conduct of government rested in their venerable hands. But the family remained the basic foundation of their support.

Not until recent times has society as a whole accepted responsibility for the care of the old. Homes for the aged were established in Holland in the 16th century. Other nations neglected the elderly to a woeful extent until the beginning of this century. But gradually, as industrialization drove families into teeming cities and destroyed the last vestiges of tribal life in the Western World, it became clear that the people as

a whole would be forced to protect the old, or let them starve in lonely misery.

This gave birth to national pension systems in some European countries. Many had already established generous programs for the elderly long before the United States at last recognized its obligations to its senior citizens.

Not until the great depression did America act. But when it did, its action was aimed more at unemployment than the economic protection of the old. The Social Security Act first went into effect in 1935, when millions were jobless. With its rigid restrictions against earnings by beneficiaries the act was largely designed to drive older workers out of the labor market. That if offered some retirement benefits was an incidental feature. Thus, we see that social security came too late, with too little.

All efforts to broaden its provisions and enlarge its benefits have lagged far behind the exploding economy of this Nation. On every hand, we see evidence of the greatest prosperity in history. America has more factories, bigger cities, finer highways, and more devastating weapons of destruction than any other nation ever had. Most of our people are the richest, the best-fed, and most adequately clothed, the best educated in the world.

But millions dwell on the edge of economic slavery in the midst of fantastic wealth. These are the more than 14 million Americans of age 65 or older. Many receive a small social security benefit, pitifully insufficient to meet their monthly needs. Most augment this with State old-age assistance, if they are desperate enough and lucky enough to meet the restrictive requirements of State and local welfare regulations. Others, who do not qualify for social security, must depend entirely on State assistance.

Who pays for State old age assistance? The taxpayers of the State and the Nation. The Federal Government contributes matching grants to the States. The States are encouraged to add their funds. From these two sources, States establish their old age assistance grants, hardly enough to keep the elderly alive. The programs are makeshift in character, cumbersome in administration, and the constant target of attacks by so-called "taxpayer groups" and other special interests. Their narrow concern is the level of taxes, which they fight to reduce with total disregard of the people's welfare—especially the aged.

So America forges ahead toward a millennium of materialism, while clinging to an old age security system as outmoded as the buggy whip. With a social security program crippled in its infancy, and State old age payments that are only a slight improvement over the poorhouse system of a generation ago, this Nation has virtually abandoned its deserving aged.

PROGRAM RETIREMENT BENEFITS

First. Social security must be brought up to date. It must be reshaped to fit our atomic times, available to all who apply for it in an amount geared to the Federal minimum wage law. This now

stands at \$1 per hour for a 40-hour week, or \$173 per month.

If this Nation accepts the fact that a working man cannot live on less than \$173.33 per month, does it not follow that an aged person deserves the same amount?

Under present law, millions of oldsters are denied any social security benefits, or receive minimum payments. The Social Security Act must be amended to include all these aged men and women. They must be rescued from their plight as second-class oldsters and freed of the harassment and persecution they suffer under threadbare State old age assistance programs. Many of these unfortunate oldsters are widows who devoted their lifetimes to their families only to reach their later years with no provision for economic security.

Second. America's oldsters must be protected from the financial ravages of inflation. Too often, retirees have seen their hard-earned savings swallowed up years ahead of their retirement timetable as the value of the dollar drops with dizzy speed. After a realistic payment has been set by Congress, a cost-of-living amendment should be written into the Social Security Act, to increase benefits automatically in inflationary periods.

Third. To protect the sensitive economy of the Nation, social security eligibility ages should be made fluid. Benefits should be available at a lower age in times of widespread unemployment. The eligibility age for those able to work could be raised but not past 65, in periods of great labor demand, such as a war or other national emergency.

Fourth. Under existing law, several million Americans are totally neglected by the Nation they have helped to develop. These are men and women of 60 years and older. Once jobless at this age, these people find it well-nigh impossible to find new employment. There is no State old age assistance available. At age 62 women can obtain partial social security old age benefits but no State old age assistance. Men are not eligible for either form of benefits until they are 65. The Social Security Act must be broadened to include both men and women in the 60-and-over group, if they apply for benefits.

Fifth. The present, unrealistic limitation on earnings by old age beneficiaries under the Federal Social Security Act should be junked. Instead of prohibiting the elderly from making more than \$1,200 per year, the law should permit them to earn at least twice that amount, or \$2,400. All limits should be removed at age 70, instead of the present age of 72.

Sixth. The Nation's disabled should receive full benefits at whatever age they become physically unable to work.

Seventh. Adequate annuities must be provided for widows with families, enabling them to raise their children in dignity and decency.

Revolutionary changes? They may be, to some. But drastic action is necessary now to establish a real national retirement program. The Social Security Act provides a practical vehicle for this ob-

jective. Even Arthur Flemming, Secretary of Health, Education, and Welfare, admits the urgency of this program. He recently stated publicly that social security benefits should be offered to everyone at 72, whether or not they had ever worked in covered employment.

Tremendous savings would be possible under a "social security for all" system. Hundreds of thousands of State, county, and municipal social welfare workers could be dropped from the tax-supported payrolls. With a single check coming every month from the Federal Government, recipients would no longer be subjected to the humiliation of embarrassing investigations, quizzes and surprise visits by snooping welfare workers. The labyrinthine tangle of State and local welfare departments could be cleared and the taxpayers relieved of millions of dollars in annual administrative and other costs.

The present outdated system of requiring the employer and the employee to bear the full expense of social security payments should be abandoned and America should follow the example of many foreign nations. The Federal Government could participate in the program as a third-party contributor. This practice has proved successful in many other countries, some of which receive millions in foreign aid from the United States. Paradoxically, they use part of these funds to establish social security programs far more advanced than our own. Can America risk losing her position of world leadership by permitting less wealthy countries to widen their lead in this important area of social progress?

MEDICAL CARE

The elderly have more frequent and serious health problems than any other population group. They spend more time in hospitals and their chances of recovery diminish with every passing year.

In modern America, they find themselves in a hopeless squeeze, caught between steadily rising medical and hospital costs, and greatly curtailed income. No realistic private health or hospitalization insurance is available to the aged at a cost they can afford.

Congress must provide health protection to the aged to fill the medical vacuum left by private medicine and private insurance companies. Every person receiving social security benefits should receive medical care and hospitalization at no cost to him with the doctors and hospitals paid out of the social security fund. This is the only practical solution to the problem of protecting the health of our elderly. Payments could follow established rates and customs set up under Blue Cross, Blue Shield and other programs.

A bill by Representative AIME FORAND, Democrat of Rhode Island, now before Congress, provides for this protection to social security recipients.

HOUSING

Social scientists and public agencies throughout the Nation have repeatedly described housing as one of the most urgent needs of our aging population.

Severely limited financially, older Americans cannot compete with highly paid workers for rental dwellings. As a result, they concentrate in the slums, endangering their health and safety and perpetuating areas of civic blight.

Although Congress in 1956 established section 207—Housing for the elderly—as part of the Federal Housing Act, very little has been accomplished in the field. Nonprofit organizations can qualify under section 207 for federally insured loans to build housing for the elderly developments. But the financial hurdles are so high that no truly nonprofit corporations can surmount them. Consequently, housing for the elderly remains almost at a standstill while millions of worthy, elderly citizens stagnate in unhealthy—often dangerous—living quarters.

Congress in 1959 passed new legislation affecting housing for the elderly. Unfortunately, the provisions are so far largely meaningless. Congress did not appropriate the necessary \$50 million to activate the new legislation. And although the payback period for federally insured mortgage loans was extended from 40 to 50 years, high interest rates and large FNMA discounts virtually cancel this feature. The advantages of 100 percent mortgage insurance offered in the new law is illusory for the same reason.

Congress must further revise housing for the elderly provisions of the Federal Housing Act. One hundred percent financing must be made available on realistic terms to nonprofit organizations interested in building low-rent, high-quality facilities for the aged. The terms should be similar to those now available for military and other special assistance programs. Interest rates, paid directly to the Federal Government, should be pegged at a level no higher than necessary to process and service the mortgage.

Eight billion dollars of surplus foods lie sealed in warehouses across this great land of ours. The harvest of fertile farms in every section of the country, this precious food is denied to our elderly men and women, even though they desperately need it. Occasionally, large shipments are sent to foreign lands, to be distributed wholesale on a "no questions asked" basis. Meanwhile, private corporations fatten on the huge rentals charged to our Government for the use of the food storehouses.

Congress in 1959 passed an amendment to a foreign aid food bill, to permit distribution of surplus foods to hungry Americans, using a food stamp system. But Agriculture Secretary Benson arrogantly announced he would not put the system into effect, even after President Eisenhower signed it. This is an example of how far some of the President's appointees will go to prevent help from reaching those who need it the most.

The 1960 Congress should adopt a mandatory provision in a new, stronger food stamp bill, including a provision compelling the administration to put it into effect without delay.

These food stamps should be negotiable at any store or market, so that individuals could go to the store of his choice

and exchange the food stamps for any kind of food commodity.

In the interest of showing the inadequacy of the present law, I present a summary of the benefits obtainable under the present law.

BENEFIT AMOUNTS

Average monthly wage: In general, an individual's average monthly wage for computing his monthly old-age insurance benefit amount is determined by dividing the total of his creditable earnings after the applicable starting date and up to the applicable closing date, by the number of months involved. Excluded from this computation are all months and all earnings in any year, any part of which was included in a period of disability under the disability "freeze" (except that the months and earnings in the year in which the period of disability begins may be included if the resulting benefit would be higher). Also excluded from the computation are all months in any year prior to the year the individual attained age 22 if less than two quarters of such year were quarters of coverage. Starting dates may be the year of attainment of age 21. The closing date may be either (1) the first day of the year the individual died or became entitled to benefits or (2) the first day of the year in which he was fully insured and attained retirement age, whichever results in a higher benefit.

Applicable starting and closing dates are those which yield the highest benefit amount. The minimum divisor is 18 months.

Individuals can drop out up to 5 years of lowest or no earnings in computing average monthly wage.

The minimum primary insurance amount is \$33.

MAXIMUM FAMILY BENEFITS

Family maximum benefits are set by the new table and range from \$53 to \$254 (subject to rounding of individual benefits to next higher 10 cents). Though not specifically stated in the law, the table provides that the maximum amount payable on a single wage record is the lesser of \$254—twice the maximum possible primary insurance amount—or 80 percent of the individual's average monthly wage. The 80-percent limitation, however, cannot reduce family benefits below the larger of \$53 or 1½ times the primary amount.

DEPENDENTS' AND SURVIVORS' BENEFITS

First. Wife or husband of insured worker: One-half of primary insurance amount.

Second. Child of insured worker: One-half of primary insurance amount.

Third. Widow, widower, former wife divorced, or parent of deceased insured worker: Three-quarters of primary insurance amount except minimum benefit is \$33 if individual is sole beneficiary entitled.

Fourth. Child of deceased insured worker: If only one child is entitled, three-quarters of primary insurance amount, except minimum is \$33 if the child is the sole beneficiary entitled.

If more than one child entitled, each child gets one-half of primary insurance amount plus an equal share in an additional one-quarter of primary insurance amount.

Fifth. Lump-sum death payment: Three times the primary insurance amount with a statutory maximum of \$255.

Benefit chart

Average monthly earnings	Old-age benefits			Survivors benefits ¹	
	Worker	Worker and wife at age 62	Worker and wife at age 65	Widow, widower, child or parent	Widow and 2 children
\$50	\$33	\$45.40	\$49.50	\$33.00	\$53.10
\$60	59	81.20	88.50	44.30	88.60
\$70	65	89.40	97.50	48.80	97.60
\$80	67	92.20	100.50	50.30	100.70
\$90	69	94.90	103.50	51.80	105.60
\$100	71	97.70	106.50	53.30	112.90
\$110	73	100.40	109.50	54.80	120.00
\$120	75	103.20	112.50	56.30	128.00
\$130	77	107.30	117.00	58.50	139.20
\$140	80	110.00	120.00	60.00	146.50
\$150	82	112.80	123.00	61.50	154.50
\$160	84	115.50	126.00	63.00	161.60
\$170	86	118.30	129.00	64.50	168.90
\$180	88	121.00	132.00	66.00	176.00
\$190	90	123.80	135.00	67.50	180.10
\$200	93	127.90	139.50	69.80	186.20
\$210	95	130.70	142.50	71.30	190.10
\$220	97	133.40	145.50	72.80	194.20
\$230	99	136.20	148.50	74.30	198.10
\$240	101	138.90	151.50	75.80	202.20
\$250	103	141.70	154.50	77.30	206.10
\$260	105	144.40	157.50	78.80	210.20
\$270	108	148.50	162.00	81.00	216.00
\$280	110	151.30	165.00	82.50	220.10
\$290	112	154.00	168.00	84.00	224.00
\$300	114	156.80	171.00	85.50	228.10
\$310	116	159.50	174.00	87.00	232.00
\$320	118	162.30	177.00	88.50	236.10
\$330	120	165.00	180.00	90.00	240.00
\$340	123	169.20	184.50	92.30	246.10
\$350	125	171.90	187.50	93.80	250.20
\$400	127	174.70	190.50	95.30	254.10

¹ Survivor benefit amounts for a widow and 1 child or for 2 parents would be the same as for a man and wife.

INSURED STATUS

Fully insured: one quarter of coverage—acquired at any time after 1936—

for every two calendar quarters elapsing after 1950—or after quarter in which age 21 was attained, if later—and before

quarter of death or attainment of retirement age whichever first occurs.

No person can be fully insured unless he has at least six quarters of coverage.

Currently insured: six quarters of coverage within thirteen quarters ending with quarter of death or entitlement to old-age insurance benefits.

Also includes in the definition of "currently insured individual" an individual who meets the present coverage requirement in the quarter in which he becomes entitled to disability insurance benefits.

Quarter of coverage defined: quarter in which individual received at least \$50 in wages (other than for agricultural work) or was credited with at least \$100 in self-employment income.

Every quarter in any calendar year in which wages are \$4,800 or more, and every quarter in a taxable year in which combined wages and self-employment income equal at least \$4,800.

In the case of wages computed on an annual basis for agricultural workers, four quarters of coverage are credited for a minimum of \$400; three quarters for income of \$300 to \$399.99; two quarters for income of \$200 to \$299.99, and one quarter for \$100 to \$199.99 for a year.

A review of the law shows that the Congress has failed to keep the Social Security Act abreast of the needs and the times. Approximately 2 million young workers enter the labor market every year while automation increases production per man-day beyond consumption levels creating unemployment at both ends of the age scale.

Every statistic proves that unemployment is becoming greater amongst production workers while production is increasing. This means we are increasing surpluses of both goods and labor.

Consumption of goods produced and creation of non-production jobs is the obvious answer. Charity is not the answer. Social security and retirement pension systems paid for while working and earning income are the answers, at least until something better comes along.

Although the demands of political expediency in a presidential election year may well stall all but minor revisions and amendments this year, the demand for changes will increase and in the not too distant future a major overhaul of the Social Security Act will be the order of the day.

Mutual Security Program

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. BARTLETT. Mr. President, upon my request the League of Women Voters of Anchorage has submitted a statement of policy regarding technical cooperation and economic assistance under the mutual security program. The statement is signed by Mrs. Paul B. Crews, president of the League of Women Voters of Anchorage. Because the statement

demonstrates that the people of Alaska are concerned not only with the vital issues which affect the 49th State, but also with the worldwide situation of the United States, and because the statement reflects study and wisdom, I ask unanimous consent that the letter to me from Mrs. Paul B. Crews, dated March 3, 1960, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LEAGUE OF WOMEN VOTERS,

Anchorage, Alaska, March 3, 1960.

Senator E. L. BARTLETT,

Senate Office Building,

Washington, D.C.

DEAR SENATOR BARTLETT: We are most pleased to send our views on the technical cooperation and economic aid portions of the mutual security program because we hold the firm conviction that the security and economic health of the United States and the rest of the world are inseparable. Being convinced of this we recognize that the means of achieving and maintaining our own security and economic health are of increasing importance and will require perhaps decades of effort and discipline by our people before the goal is achieved. The arguments of the opponents of foreign aid reflect very real domestic problems which we must solve; however, if the narrower, isolated interests should prevail rather than the overall welfare of the United States, the problems we would have to face would be overwhelming.

The League of Women Voters believes that an effective overall plan for economic aid should embody long-range plans, involve joint participation by the United States, the other industrialized countries, and the developing countries; provide enough money at the right time to insure real progress; be well coordinated and efficiently staffed and administered.

Under these characteristics of a good mutual security program many phases of U.S. participation will need constant reappraisal, a few of which are: The ratio of United States to other participating countries' contributions to multilateral loan programs; the balance of payments deficit; how we allocate our aid for the development of those we aid as well as in our own self-interest; and measures to increase the efficiency and accountability of the foreign-aid programs. Decisions to these peacetime challenges are possible within the broader framework of our total commitment to world economic stability and reconstruction. While the interim answer lies in foreign aid and technical assistance and loan programs, we think that the ultimate answer to healthy economics is mutually beneficial trade. Toward this end the League of Women Voters for many years has supported reciprocal trade agreements and urged that the United States participate in GATT. We have opposed higher tariffs, quotas, escape clauses, and buy American provisions.

We see no particular merit in arguing the case for or against foreign aid on whether or not our domestic programs of schools, natural resources development and highways need public attention which they are not now getting inasmuch as the survival of our form of society depends upon how we meet our international challenges.

We do recognize the urgency of readjustment in some sectors of our American economy due to our own technological progress as well as highly competitive foreign markets. Toward this end we believe the American public would support congressional efforts aimed toward studies and pilot programs relative to conversion of industries and research into new uses of basic products. We have no position as the League of Women

Voters on any of the Federal aid to education programs, but we note that the administration has made recommendations for enlarging the National Defense Education Act to increase appropriations for grants to States for science, mathematics, and foreign language teaching equipment, and for vocational training in occupations requiring scientific skills. The present farm surpluses as they affect our domestic economy and their effect on the world commodity markets are crying for solution. In these three mentioned areas of domestic problems the critics cannot place the blame on our foreign aid programs—they are products of our own development.

The League of Women Voters of Anchorage does not think that foreign aid is an either/or proposition. And we do not think that political expediency has any place in the vital decisions affecting the international position of the United States. We would rather urge the individual solutions to our domestic problems and the statesmanlike approach to international relations. This includes the various phases of our foreign economic policy.

Thank you for the opportunity of expressing our thinking on this subject.

Very sincerely yours,

LEAGUE OF WOMEN VOTERS OF

ANCHORAGE,

Mrs. PAUL B. CREWS,

President.

Presidential Debates

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond as it appeared in the New York Herald Tribune of March 6, 1960:

PRESIDENTIAL DEBATES

(By Roscoe Drummond)

WASHINGTON.—How can we bring about a more meaty and exciting debate of the great issues at stake in a presidential election?

Political campaigning has been in a rut for a long time. The torchlight parade has given way to the whistlestop and the whistlestop has pretty much given way to the jet-prop stop. But this has affected mostly the mechanics of political discussion. There is not enough serious debate of the most vital matters. Too much of it is conducted under circumstances which repel, rather than attract, the at-home audience.

Admittedly new approaches to campaigning are uncertain and venturesome. Most politicians will shrink from them unless the reasons are compelling.

Perhaps the most compelling reason to develop something new and better in presidential campaigning is the need for the candidates to have regular, nationwide exposure on radio, and television which is becoming prohibitively expensive.

This may prove to be a blessing in disguise if it brings about these two consequences:

1. A change in the law which would permit the networks to give prime radio and television time to the nominees of the two principal parties without being compelled to give equal facilities to a host of lesser candidates who are obviously not in the contest.

2. An improvement in the substance and quality of presidential campaign speeches so that the networks could reasonably give the time as an act of public service.

One reason campaign speeches in the past have rarely made good radio and television is that they were delivered in the most hysterically partisan settings and with a kind of pep rally hoopla which appeal to none but the convinced and which demand a superheated oratory repelling most people.

We can hardly blame the networks for not wanting to give away their time for that kind of stuff.

Both the Republican and Democratic national chairmen have shown some interest, though rather skittishly, in the idea which Adlai Stevenson now develops further in an article in *This Week* magazine. Mr. Stevenson puts it this way:

"More than a hundred years ago my great-grandfather, Jesse Fell, an Illinois editor and friend of Abraham Lincoln, proposed the Lincoln-Douglas debates on a great issue—slavery. Imagine a debate, or, at least, a discussion, on the great issues of our time with the whole country watching.

"Suppose that every Monday evening, at peak viewing time, for an hour and a half, from Labor Day to election eve, the two candidates aired their views. They might on each evening take up a single issue. Each, in turn, might discuss it for half an hour, followed by 15-minute rebuttals of one another for the third half hour.

"There are other possibilities, including face-to-face debate. But the central idea is that in some manner the candidates for President appear together at the same prime time each week for a serious presentation of views on public questions."

The first step is for Congress to alter the law so that the networks could provide the facilities without running afoul of the equal-time provision which now prevents them from doing so. The equal-time provision is like stipulating that any newspaper which prints the full texts of the principal nominees must simultaneously publish the full texts of all the lesser candidates.

Senator A. S. MIKE MONROE, of Oklahoma, has written to me that he is ready to introduce the needed legislation at an appropriate moment. Frank Stanton, president of the Columbia Broadcasting System, has said that CBS will provide ample prime viewing time when Congress permits. The other networks would undoubtedly do the same.

Mr. Stevenson suggests that the time is at hand to establish a "new national institution, a great debate for the Presidency." I think he's right.

Vice President Richard M. Nixon Addresses the President's Conference on Occupational Safety

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, at the recent conference, held here in Washington on the subject of occupational safety, Vice President Nixon made an address which I am sure will be of interest.

The address follows:

ADDRESS BY THE HONORABLE RICHARD M. NIXON, VICE PRESIDENT OF THE UNITED STATES, BEFORE THE OPENING SESSION OF THE PRESIDENT'S CONFERENCE ON OCCUPATIONAL SAFETY, CONSTITUTIONAL HALL, WASHINGTON, D.C., MARCH 1, 1960

I appreciate the opportunity to be here personally in my capacity as the Vice Presi-

dent representing the President. As you have probably already been told by the Secretary, only the fact that the President is in South America has made it impossible for him to be with you; and I am most honored and delighted to express, on his behalf, his greetings to this group.

We know that you are unusual so far as groups of people who come to Washington on business affecting the Government even indirectly. We realize that this is an unsubsidized conference, that you come either paying your own way, or your various organizations are taking care of this matter. This certainly indicates your interest and the vital concern which the direct organizations which you represent have in this whole problem of industrial safety.

And so, may I express the appreciation of the Government of the American people for the contribution you are making to that tremendously important cause.

Now, in coming before this group, may I say that I did what I usually do before appearing before an important group of this type: I read over your agenda. One thing I decided right at the outset, was that I wasn't going to talk about the technical aspects of the work that you are going to discuss in the next few days. When I notice such people, not only as the Secretary of Labor, but Dr. Kaplan from my own State of California, who not only knows a lot about safety but about outer space and other things connected with the geophysical year, I am not going to get into the position of an amateur talking about matters in which experts behind me are much more proficient.

But it did occur to me that it might be worth while, and perhaps constructive, to relate what you are doing and the contributions which you are making to the whole posture of the U.S. economy and to this problem that we have heard so much about in recent months—particularly since Mr. Khrushchev's visit to the United States—of how we maintain our competitive position in the world economically with the totalitarian countries.

I don't need to tell you that the threat with which we are confronted is a real one. Any of you who saw Mr. Khrushchev on his visit here will remember how confident he seemed to be in the superiority of his own system; how he laid down the challenge to us in every city that he visited. He said that while we were ahead now, they were moving faster than we were economically, and that they were going to catch us and pass us. He even went so far as to say that their system was so far superior that, once they had passed us, we would have to turn their way, in fact, in order to avoid staying in the second position.

Now, I am sure that very few Americans, if any, were convinced by what he said. I am certain, on the other hand, that all of us recognized that he and the people over whom he has domination have one advantage that anyone running behind in a race has; he has the stimulus of trying to catch the front runner. And I can say, from having visited the Soviet Union, that one thing that does impress you is the determination not only of the hierarchy, but in some way it has been infused even among great segments of the working force as well, the competitive spirit which is theirs. And so we must not underestimate that challenge.

But, by the same token, in pointing out the strengths that they have and in examining, to be sure, in a free country, the weaknesses that we have, we must never lose confidence in our own system and our own principles.

Now, what does all of this have to do with industrial safety? Let me put it just exactly this way.

Today, economically, the United States out produces the Soviet Union, taking the gross national product figures as one standard, by

over 2 to 1, and we are ahead of them in every major area of production, and we can stay ahead. We can stay ahead, however, provided we avoid what I would describe as any unnecessary inefficiency or negligence in our economy, and this means efficiency on the part of management, of labor, of Government, where Government has any relationship to the economy, and it means all aspects of the economy. And, of course, I don't need to tell you that in this whole area of industrial safety this is an extremely important aspect of the total problem of productivity and efficiency of an economy.

For example, I was tremendously impressed and somewhat surprised by some statistics I read, that last year—perhaps partly because of an increase in the work force, the youngsters in the work force, and the like—the rate, as far as accidents were concerned, was the highest since 1953. I noted that we lost, in effect, through accidents, the work of over half a million men and women workers for the whole year. What they could have contributed, that much we lost through accidents alone. And so everything that we can do to reduce this loss, which has resulted from practices which could perhaps be corrected through improved safety programs, we realize has an effect which is necessary in keeping the American economy as productive as possible and keeping us on a competitive basis with those who challenge us abroad.

So much for that aspect of the problem. There is also another aspect. I think too often, when we examine these problems like safety on a national basis, we think in terms of half a million workers working for a year, or so many million man-hours, and the like, and oftentimes we overlook the very important individual involved, the human problem.

Let me illustrate. I recall when I visited Poland we went through one of their newest steel plants, which was still under construction. It was a very impressive plant. And the young Communist commissars who managed the plant very proudly escorted me through, showing me the machinery, and the like, not paying attention, however, to the workers themselves; very little, as a matter of fact. After we completed our tour, we were riding back to Warsaw—and in Poland there is a great deal more of freedom to speak, or at least the Poles do exercise more freedom to speak than in the Soviet Union—and a Polish foreign service officer, a career foreign service man, not one who apparently had been thoroughly indoctrinated in the Communist cause, made a very interesting comment. He said: "You know, one thing about these plant managers is that they know everything about factories and nothing about people." And I can think of no single anecdote that better illustrates the difference in approach of a totalitarian society to the problems of progress and of productivity than that statement: Everything about factories, nothing about people.

And so we are not only concerned about the work of 540,000 men and women working for a year, or a million or so of man-hours, we are concerned about the fact that every day, last year, over 300 men and women died or were permanently disabled as a result of accidents in plants throughout the country. We are concerned about the individual problem, the human loss individually, and we do not say that progress is something that we worship without regard to what the cost is. Our totalitarian competitors say, "We offer progress, but the cost will be freedom," and our answer is, "We offer progress, but with freedom and because of freedom." They say, "We offer progress whatever the cost may be in human terms," and we say, "It is possible to have progress but still to have a concern for the individual," and this, of course, is certainly directly related to the dedication of the people in this room, because everyone here is concerned about the

individual, the human cost involved, in a modern industrial society. Otherwise, you would, of course, forget the fact that a life here, an injury there, might be one of the costs of greater productivity which a totalitarian society would be willing to pay for. And I might say that when we compare the Soviet Union and the United States there are differences, but there is one area in which we are far, far ahead of them—a gap which I am sure they will never close—that is in this very area of safety. I trust that this is one that we will continue to maintain at a substantial advantage.

And finally, may I just leave this one thought with you. In the world today I think that sometimes we have a tendency, because of the challenge that has been laid down before us, because of the very understandable and constructive American attitude of examining our deficiencies, of advertising them, and doing so because we want to correct them, we perhaps sometimes have a tendency to overlook some of the very good things about America. And certainly, as I greet you at this conference, one of the things all of us in America can be proud of is that we have the most efficient economy in the world, the most productive economy in the world, and yet it is one that is always concerned, above everything else, with the problems of the individual, with human dignity. May it ever be that way, and may we thank you for your dedication to this fundamental principle.

Thank you.

Feminine Touch in Passports

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

[From the Harrisburg (Pa.) Evening News, Mar. 1, 1960]

FEMININE TOUCH IN PASSPORTS

If you're tired of looking at your eternally green passport, if you think it's too big to fit into a woman's pocketbook, and that there aren't enough pages in it—you're in for good news.

Miss Frances Knight, Director of the Federal Passport Office, is considering fundamental changes.

She is planning to reduce the passport's size but increase the number of pages from its present 20 to about 50.

Also, she wants to replace the cloth cover, which often frays and becomes unstuck from its backing in damp weather, with plastic material in blue, maroon, and gray, as well as the standard green. More women, she reasons, are traveling abroad than men and they should have a choice of color in their identification papers.

We're inclined to like the idea. Even more, we like the principle behind it. Here, for once, is a Government office that isn't content with having things stay in the same old groove. It wonders. It questions. It is willing to experiment with something new. It is trying to find a better way of doing things.

If this kind of spirit were to spread around don't-rock-the-boat, bureaucratic Washington it would be tremendous progress. It would also be something of a miracle.

Chessman's Challenge

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson as it appeared in the New Republic magazine of March 7, 1960:

CHESSMAN'S CHALLENGE

(By Gerald W. Johnson)

The latest American cause celebre, that of the man Chessman, in California, is acquiring an oddly satirical relation to that of Sir Walter Raleigh. Chessman has been in the death house for nearly 12 years. Raleigh lay under sentence of death for 15. Chessman's life was saved by the intervention of a foreign nation, Uruguay. Raleigh finally went to the scaffold by the intervention of Spain. Chessman has never been able to convince any court, or any pardoning power, of his innocence. Few people believed at the time, and almost nobody believes now, that Raleigh was guilty as charged.

But the reputation of American justice is suffering almost as much from the Chessman case as that of England did from the Raleigh case.

Perhaps the oddest circumstance in the Chessman case is that the question *cul bono*? does not arise. Ordinarily in such cases the sacrifice of the victim inures to the profit, or at least sates the bloodlust of some identifiable person or group. James I executed Raleigh to appease the King of Spain. Many people believe that Sacco and Vanzetti were offered up to placate the Massachusetts Red-baiters; and that Leo Frank fell to Georgia anti-Semitism; and that Tom Mooney almost died, and, indeed, did serve 20 years, to satisfy the enemies of organized labor.

But the crime of which Chessman was convicted was so revolting as to raise grave suspicion of the sanity of the perpetrator. One of its effects was to consign a young woman to the living death of a madhouse—a deed by comparison with which murder is almost benevolent. Nor was the criminal representative of any idea, or creed, or class. It was plain bestiality.

The successful efforts to prevent his execution therefore cannot be attributed to any organized fanaticism, unless hatred of capital punishment be accounted fanaticism. No person or cause stands to gain, regardless of the final disposition of the case. The movement in his behalf was an attack by certain determined persons on what they regard as a miscarriage of justice.

But to oppose what one believes to be a miscarriage of justice is wholly admirable. Thus we have the ironical situation that an effort to which it is impossible to attribute a sinister motive has nevertheless prejudiced American justice in the eyes of the world—prejudiced it to such an extent that foreign governments feel that they are justified in intervening in the name of humanity.

The trouble was the method. Time after time Chessman's appeals have been dismissed by the higher courts as being based on mere technicalities, without substantial merit. Nevertheless, for more than 11 years the man's life has been preserved solely by his ingenuity and that of his counsel in discovering loopholes in the law. Thus the alien observer may logically infer either that the man, for some unknown reason, is being persecuted with a ruthless ferocity that

passes all civilized bounds, or that the American system of justice is impotent to protect itself against pettifoggery. In neither case does our system of justice present itself in an admirable light.

The final touch was added by the bungling fashion in which Washington handled the message from Uruguay. A nation uncertain of its ability to protect a visitor from insult or injury is a nation that ought not to be visited. But instead of saying so promptly and firmly, Washington undertook to pass the buck to Gov. Edmund Brown, of California, giving rise to the suspicion that someone was trying to make political capital out of the case.

Was there ever another nation with such a fatal proclivity for doing what is basically the right thing in a way so wrong as to make it look downright criminal? The atrocity of the crime of which he was convicted does not affect Chessman's right to a rigorously fair trial; but every court that has reviewed the case agrees that his trial was fair. Perhaps capital punishment ought to be abolished, but if so it ought to be abolished for everyone, not merely for those lucky enough to have counsel so ingenious that they can tie up the courts for a span of more than 11 years.

Insistence on a fair trial for every man, no matter how dreadful the crime of which he is accused, is civilized. Opposition to capital punishment is also civilized. Yet on the basis of two admirable motives we have made such a mess of this case that it will stand as a reproach to us for many a year.

As a Nation we seem incapable of paying sufficient attention to how things look. We blithely disregard old William of Wykeham's motto, "Manners maketh man," and the repudiation is costing us money, reputation, and friends at a rate we can ill afford.

Good Citizenship—Mr. Edward Clark

EXTENSION OF REMARKS OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. THORNBERRY. Mr. Speaker, one of the best speeches of its kind that I have read in a long while is one delivered to the Prelaw Society of Southwestern University, Georgetown, Tex., on February 17, 1960, by a distinguished alumnus of that university, Mr. Edward Clark, of Austin, Tex.

I found his discussion of the qualities of good citizenship helpful and stimulating, and I went to share it with the Members of Congress. I ask that it be included with my remarks. It is as follows:

GOOD CITIZENSHIP

(Address by Mr. Edward Clark of Austin, Tex., before the Prelaw Society, Southwestern University, Georgetown, Tex.)

My good friend Grogan Lord aroused me early last Sunday morning and told me that another good friend, to wit: Dr. Hester, would like for me to come up here and make a talk. I asked him on what subject, and he said he didn't know, but since it was a prelaw group he thought something on citizenship would be in order.

Now, if we are going first class, we must give more thought and study to citizenship—basically, I state something that you

should know or learn here at Southwestern, and that is that our quality of citizenship is indicative of our quality as people. So, I find myself with an important subject but one without much glamour or compelling interest. I think I may know the reason for this situation. I have heard quite a few too many speakers say that we all ought to be good citizens because being a good citizen is good. Well, such statement ends right where it starts and gives me no help on my effort here in Georgetown tonight.

Why should I waste your time and my time in saying we ought to be good because we just simply ought to be good. It is not only dull, but it is not my place to tell you what you ought to do. Dullness does not go well with goodness or citizenship either. I'll guarantee you I am not promoting dullness and I hope you never do. It is a lot easier to do things exciting in this wonderful world—so many wonderful places to go, nice people to know, stimulating thoughts that we just don't have to be dull.

I have been trying hard for the last 36 years since I left the Southwestern campus to get all the fun and excitement out of life possible. Now believe me when I say I want the same thing for you; so I am going to try to talk for a few minutes about how we get the best out of life for ourselves. Perhaps it may be a little selfish to ask ourselves such a question. We must try hard to get the right answer. Surely some people sometimes do not understand just what is best for ourselves. We are going to be honest and not fool ourselves. We know there are many things we do not know. Will Rogers said, "We ought to admit that we are all ignorant—some men in different things and some in different degrees, but all men are still ignorant."

One human step further, we all make mistakes in judgment. Some are tragic.

Take the squirt who plays Russian roulette with a pistol, twirling one cartridge in the revolver and then snapping the hammer with the barrel pointed at his head. Does he get a kick out of it and impress his girl friend with his daring? But even so, if he shoots his head off, then I submit that he mistook his best interests. Who thinks he was brave? Was the act really exciting? No; only foolish.

Now, you take the college fellow who races his car 100 miles an hour down the highway on his way home to change his tie. This may be exciting as long as the boy is dumb enough to forget about the other considerations. Either he is ignorant about car wrecks and the resulting human agony, death, and sorrow, or else his mind is so shallow that he fails to comprehend.

Or what about the fellow who finds it convenient to take some kind of a goof ball or narcotic? That guy is really chopping off his own head. Surely we are not that silly.

I came across a fellow that had gotten in trouble with the law. I asked him why, and he told me that he just felt like he had not been counting for anything, that he wanted to be somebody and felt like he would become important and be somebody if he got a gun and went out and did a stickup.

To me that was a funny sort of wisdom. It takes a lot of know-how and a lot of personality to be a thief or a murderer or sneak around in the dark committing vandalism. The dumbest cluck who ever lived could pull the trigger on a gun. Now, what is there for a criminal to be proud and happy about? Perhaps someday people will have to cage him up somewhere in prison like an animal. The bully and the destroyer get the same thing out of life that they put into it—nothing. Soon they are out of the way because someone has to shoot them or lock them up, or maybe, after a lot of dull and

lonely days, they die. And when they are gone, it is just good riddance. Nobody misses them, nobody weeps for them, and nobody wants to remember them.

Another thing I will say right here. It has to do with sex. I will let you in on this: Nothing is so overrated as sex. You may not believe me, but the movies, magazines, and newspapers, or some of them, would cause you to think sex is the supreme element in all the world. That is overexaggeration. If you culture and nurture the sexual capacity of your body, it will bloom and bear fruit. But some, before they know anything about it, before they understand it—like morons out to prove that they have heard something about the birds and the bees—they tear up the flower and crush from it all the fragrance and beauty. All they have left then is bitterness and ashes and a mind hung with ugly pictures—when they could have had something fine and exciting and lovely and enduring.

How easy it is for one to be wrong, very wrong, about the things that mean the most to us.

So, we see that as all that glitters is not gold, so all that looks like fun does not always turn out to be fun. The wise man said that most of the cynicism of the world is the aftermath of counterfeit joys. There are many counterfeit joys.

Jump off of a building and you fly through the air with ease—and perhaps excitement—and very soon you arrive at the ground and you bust something. You did not get away from the law of gravity. It is a factor that exists and you cannot escape it. What you did not know about this law did not make you feel any better after you hit the ground.

So, we have learned, I hope, that if we stick our hand in the fire, it will be burned; if we don't eat, we will starve; if we are careless in the street, we will get run over; if we swallow too much poison, a funeral is in order, and so on and on.

The mind and spirit of man work on a system too. You have laws there too—causes and effects, just as dependable and predictable and just as inescapable. The things you think and the things you do, all bring about certain results in your personality—in your happiness and unhappiness. Every time you cheat, every time you steal, every time you lie or pretend to be something you are not—regardless of whether or not other people find out about it or catch you or take you to court—within you something happens. Something changes in your mind, in your spirit, in your soul—just as sure as that old law of gravity will work again and again.

You must go by the rule, by the law, if you please, if you want to be happy and get the most out of life. I have three rules or laws for you tonight. I know them to be important laws of life.

Point No. 1: Work is good for us. I will say that again: Work is good for us. I mean that, and I assure you that I have not been adjudged insane by a court of competent jurisdiction nor do I have a case presently pending.

This is my basic rule of life. When I am upset because things have gone against me, or dissatisfied with myself or others, and find that idle talk and wasted time only aggravate my great unhappiness in the depths of despair; whereas, plowing headlong and directly into my work and life ahead always very soon dispels the clouds, lifts my soul from where I have sunk, restores my interest and enthusiasm, and I find that I can again have a healthy and happy attitude toward life.

I regret to tell you that far too many people seem to think happiness comes primarily from fun, idleness, and play. It does not. I venture on the basis of experience and observation to say that happiness depends

promarily on achievement. Our thinking is limited to our own ideas and understanding of life. You have to know before you can be interested. If you never hear of them, you will never realize how many fascinating facts, inquiries, and contests exist all the time right at our elbows. The sheer joy in life is in being a part of these contests and adventures and in the use of some capacity of our own to think and act—in the use of our own hands and tongue and mind and personality in such a way as to be a part of this fascinating life.

Work can be like medicine. It may look and taste bad at first, but it may be the only thing that can make you feel good.

Point No. 2: Look up. It makes a big difference where you look. If it is your honest desire to be a fine person, you must look at the fine scenes of life.

It is like your diet. You pay attention to what you eat because you know that will determine something of your health and strength, the energy and tenor of your body. The selfsame thing is true of our minds. If we feed our minds with nothing but cheap movies and magazines and the lurid and sensational stories of the yellow press, if we watch nothing but drivel and shocking murder and violence on the television, if we have no hobby except collecting smutty stories—then pray tell me what kind of a mind for thinking purposes could you expect to have? You would have a completely perverted picture of life. You would be ignorant in the whole realm of the spiritual—you would have a mind incapable of having the ingenuity and power capable to think yourself out of a paper sack.

Quite a few people these days are going around shouting about and reveling in our freedom, and they boast about being free to know all about sex and all about the realities of life. I pause right here to comment that their emphasis has been on the freedom to look down. Why not look up?

You all know in truth, we live in a tremendous time. If we could but tune our vision and listening ear, we could not help but see and know the presence of forces of eternity, the hand of the Almighty God, all around us. We, all of us, can become a part of the continental movements. These forces can dwell in us and make us great.

Elizabeth Barrett Browning wrote a little poem in which she said:

"Earth's crammed with Heaven,
And every common bush afire with God;
But only he who sees takes off his shoes;
The rest sit around it and pluck blackberries."

For our own happiness and well-being, let us get our eyes up from the dirt and look up to see the burning bush—the kingdom and the power and the glory.

Point No. 3: We all need to make a very definite decision to do something constructive with our lives.

There are decisions which we cannot yet make about what we are going to be and what we are going to do. It interests me very much to so often hear college students complain about how they cannot decide what career they will follow. Some of you doubtless are worried about it. Some students seem to think there is something wrong with them in their inability to decide exactly what sort of profession or business they would go into. Well, all of that is nonsense. We need people looking for ways to render more service and not just stay in that old dull rut. I sure don't know what I am going to be or do before I hang up my derby for the last time.

I am a lawyer, but I am trying hard as I can to get out of the practice at the earliest possible moment consistent with my commitments. I want to have some time left to devote to my Government in honest, loving public service free of greed, vaulting

ambition, or political preferment. If I can't do this, I want to go into a business where I can find an opportunity for larger service than I have found in law. In addition to all the above, I have done just a little preaching and, like the others, I like this too and I want to do more in this field as well as law, government, and business.

The cold fact is, none of us is likely to know exactly what the circumstances will be next year or 10 or 20 years from now. I think I would like to be bold enough to advise you to do what I am doing myself, answer the questions you can answer; do not bother with the others. Just "bust" right on across the bridges as you get to them, and use 3 hours that are passing to the fullest advantage.

All of us need to learn something, and I suggest we start by realizing that we can accomplish nothing by worrying about the unanswerable questions of life. Surely there are uncertainties which are beyond our power to resolve. Time and space are beyond my mortal perception, they are endless. The plans of the Almighty just do not fit our minds. Now, until we get the facts on the situations of life, both present and future, we are in no position to exercise our judgment. Some questions we have to leave to a higher court or to the future.

There are other questions that we have to answer as the days go by. I submit one of these is this: Will it be your role in life to debunk and spoil and tear down—or will you be a helper, a lifter and a builder?

There is a lot of darkness in the world. There are heartaches, emptiness, loneliness, bitter disappointments, hate, misery, and sickness. I believe that we have people here tonight who will learn where the lights are and will turn them on. Don't you really want to be one who can find lights—isn't that what we are all about, here and everywhere?

Perhaps we cannot look at each other and see greatness. Everybody cannot always be popular, some seem a bit timid and shy, not willing to go along and get along, so to speak. But, if you have dreams in your heart and visions in your minds, then I know that someday your hands will light the candles and turn the switches.

What I am trying hard to say to you, my young friend, is this: Without any exception, there are important jobs for you—exciting and satisfying. As you grow older, one of the things about the world that will surprise you the most is how much it needs the work and friendliness and helpfulness of every little person. The world is not nearly so simple and even as routine as it seems. Everywhere there are problems. There are patent and boundary disputes between neighbors. There are machines that will not work. There are systems in government, private enterprise, hospitals, drawing boards, and laboratories that are cumbersome, messy, inefficient, and just waiting for your ideas and your touch. And if you could only know as I know, there are words of assurance and encouragement that need to be spoken.

Work is good for us; look up; decide upon the life of a builder.

So why be a good citizen? Because the world is full of hungry and desperate people. People cry out in the darkness for someone who knows where the lights are. There are mountains to be climbed, tunnels to be dug, seas to be harnessed, planets to be flown to, diseases to be cured, hates to be quenched, kingdoms to be won. Now, I am not trying in my own feeble way to be good in order to be called good, but rather to be a part of all of this. If at the end I make the grade and someone says so, well good enough, but the reasons that motivate us are what are important.

You people read Shakespeare. Things seem to me to come down to a bitter end in his plays. His characters moan about life

as being a tale told by an idiot, full of sound and fury, signifying nothing.

I don't like that, I prefer the platform of Pilgrim in John Bunyan's "Pilgrim's Progress" when he walked up to the keeper of the Book of Life and said in no uncertain terms: "Set down my name, sir."

This should be me and you, the only me and you there will ever be. Our name and being is our responsibility. Can we countenance the awful thought of our becoming nothing and leaving nothing when we are gone? For me I want to do and find that which was made for me. I want to join that company of great believers, thinkers, builders and doers, the real honest folks who have mended all the wounds, lighted all the candles, sung the songs, built the roads and bridges, and borne the crosses.

So I say, there, please God, set down my name.

Policy: The Harlem Story

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Post, March 7, 1960:

POLICY: THE HARLEM STORY

(By Ted Poston, with Alfred Hendricks, Irving Lieberman and Richard Montague)

The voices came from many places, but they blended together in a medley of common concern.

A Manhattan mother of four: "How can you expect them to have any respect for him [the cop on the beat]? They're not blind. There's hardly a day they don't see him taking money from that numbers runner. More often than not right here in this hallway."

A Brooklyn rackets grand jury investigating gambling: "Corruption produces disrespect for law and order and disrespect for those charged with law enforcement. This poisons the minds of many of our young people. It produces a contempt on their part for the law and those charged with enforcing it. It leads them to deride decency and good conduct and thus promotes juvenile delinquency."

A Bronx father of a boy in trouble: "I know he had no business sassing that cop, but the cop didn't have no cause to hit him either. All he asked that cop was: 'Why you always give us a hard time—even when we ain't doing nothing? Why don't you lock up that single action man that you so buddy-buddy with every morning?'"

A respected Harlem leader: "... so these two cops drove their patrol car right up to the curb on 125th Street and started badgering this white banker openly. He treated them like dirt under his feet and snapped: 'Let me alone. You got yours Monday, didn't you?'"

"And one of the cops whined, as if joking: 'Sure, boss, but that was Monday. We need a little taste now.' And the banker pulled two dirty \$1 bills out of his pocket and flung them contemptuously on the squad car floor. They reached down and divided up the money—a lousy two bucks—and then drove up the street laughing."

"But nobody else was laughing. Least of all three teenage kids who watched the whole incident."

The Brooklyn Grand Jury presentment on police corruption was made early last year at the end of a lengthy investigation of the

Brooklyn morals squad, which was finally dissolved as a result of the jury's recommendation.

The random comments quoted above were made by ordinary citizens in various parts of the city who discussed the subject with Post reporters investigating Representative ADAM CLAYTON POWELL's charges of collaboration between the police and police barons.

A young Negro lawyer in Harlem went a step further than mere talk. "Come along with me," he told a reporter, "I want to show you something."

Together they went to a bar on upper Eighth Avenue and ordered a couple of beers. The lawyer called attention to about eight other men assembled near the other end of the bar.

"The heat is supposed to be on," the lawyer said, "as a result of POWELL's revelations. But look what those guys are doing."

THE TUMBLE

The men were sorting out slips and small bits of paper, or copying other figures from the backs of envelopes, or counting money and shifting it to various pockets.

The Post man reported later:

"From their conversation, I gathered they were discussing the 'heat' and how it operates."

"It seemed that just a few days before the cops had hit a numbers drop several blocks up the street from the bar just when all the collectors or runners were arriving to turn in their action."

"One of the guys, describing the raid, chor-tled: 'Man, I mean they caught everybody on the scene.'"

"From what they said, it appeared that there was a long discussion between the cops and the controller and the runners in the drop. And the upshot was that the cops finally left, making only one arrest and letting everybody else go—including the man who had 'the works' for that day's business."

"One loud-mouthed guy, who was recalling the whole incident, concluded: 'And wouldn't you know who they picked out to arrest? The one cat that wasn't even in the joint when they hit it.' He was the lookout man who had been down on the corner. But you know how it is; somebody's got to take the tumble and he was it for the day."

The conversation drifted on to other subjects—like the make and colors of the cars the plainclothesmen were using that day. The word had been passed up from downtown early so everybody could be on the lookout.

Near the center of the bar, a woman was taking action on the Brooklyn number (which differs from the one for the rest of the city) and another woman kept coming in and out accepting single action bets.

But the young lawyer told the reporter:

"This isn't what I really brought you here for. Keep your eye on the guy sitting alone at the other end of the bar."

This man was also shuffling bits of paper and counting money, but periodically he conferred with several adolescent boys who would come in, hand him small envelopes or bits of paper, and go right out.

"Now that is what worries me about this whole thing," the lawyer said. "That guy is a numbers collector—not a controller—just like the rest of these fellows. But he doesn't even go out and do his collecting himself."

"He just sits here and hires these kids to do his running and collecting for him. And when he turns in his controller's book later today, he will get his regular 25 cents commission on every dollar he turns in. And then he'll slip a few bucks to the kids who do all the work and take all the chances."

The lawyer pushed his beer aside.

"My main concern is not about the economic exploitation of these kids," he said, "for exploitation is a built-in part of the whole policy racket. What particularly up-

sets me is this: these kids will start getting arrested when they are about 17 and 18 years old, and their policy records will later prevent them from ever getting any kind of decent job.

AND NEXT: NARCOTICS

"Worse still, many of these kids are going to wind up selling and using narcotics, for the dope racket has become very much a part of the policy game."

Although the fact had been glossed over during the airing of his charge that the police were helping Italian "and some Jewish" mobsters to run Negro bankers out of the Harlem policy business, Representative POWELL had also raised the question of the effect of mass numbers arrests on the community's future.

Citing Deputy Chief Inspector Burns' estimate that Negroes comprised roughly 82 percent of the 4,500 persons arrested for numbers violations in Harlem last year, POWELL told his congregation:

"This means that this community is being criminalized. Once a person is arrested for numbers, it is impossible to receive private employment any more.

"There have been many, many tragic incidents of those who have civil service jobs who were forced to resign because somewhere in the early years they had been arrested for the misdemeanor of being connected with the numbers."

It is an old problem, but it casts a longer shadow into the future. For, as policy has expanded, so has the number of arrests, and Negroes and Puerto Ricans, because of their lowly operating status as runners, writers, controllers, or lookouts for the game, constitute the vast majority of those arrested.

In 1954, the police listed 6,453 policy arrests for the whole city. Last year, the number had more than doubled, with 14,103 arrests listed. Manhattan arrests, mainly all in Harlem, rose from 6,391 in 1957 to 8,468 in 1959.

The police got 1960 off to a good start by throwing reinforcements into Harlem and arresting hundreds of minor Negro policy figures in the wake of POWELL's charges that the department was in cahoots with the white bankers.

A former Negro banker, who has spent 44 of his 61 years in the business, echoed part of POWELL's charges, saying:

"How can a man get a legitimate job if he has policy arrests on his record? Many Negroes who got these arrests were acting as 'stand-ins' for the real numbers operators. A lot of that started during the depression days when a Negro couldn't make money to feed his family any other way. Now, these men have become pawns of the policy game because they are no good for anything else.

LOOKING FOR WORK

"Besides, even if you don't have a long arrest record, how can you get a decent job when you are asked for references and you can't show any work record for 5, 10, or 15 years?"

This veteran, now a lowly employee of a policy bank he once dominated, predicted, on the basis of his long experience, that crime rates would skyrocket in most slum areas—not only Harlem—if the policy game was really suppressed.

In this, he was supported by the young Negro lawyer who had taken the Post man to the bar.

"I am willing to bet," he said, "that when the January and February crime statistics become available, you will find a rise in crimes other than those connected with gambling.

"Not that this supposed crackdown on the heels of POWELL's charges has really been effective. But any police activity is bound to affect certain peripheral employees of the racket—muscle-men, winos, junkies, ex-cons, and others who make a buck in the

numbers business one way or the other to keep going.

"Deprived of this, they've got to resort to other illegal activities—burglary, robbery, muggings—anything to turn a dollar until the heat (no matter how light) is off. For these men are the unemployables who can only make a 'legitimate' living through the policy racket."

Garland Marshall Appointed Executive Secretary to the Committee for Rural Development Program

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DOWDY. Mr. Speaker, a personal friend and constituent, Mr. Garland Marshall, was recently appointed executive secretary to the Committee for Rural Development Program.

Mr. Marshall has been working in this program in the Seventh Congressional district of Texas for several years, and is well qualified for his new duties.

Under unanimous consent, I include the news release on Mr. Marshall's appointment in the Appendix of the RECORD:

EXECUTIVE SECRETARY APPOINTED TO SERVE COMMITTEE FOR RURAL DEVELOPMENT PROGRAM

Secretary of Agriculture Ezra Taft Benson today announced the appointment of Garland Marshall, former Texas Extension Service official, as executive secretary to the committee for rural development program.

As a member of the Texas Agricultural Extension Service, Mr. Marshall has been working in the rural development program at the county and area level in east Texas for the past 4 years.

Mr. Marshall takes over the duties of Dr. Kenneth L. Bachman, Agricultural Research Service economist, who has been serving as interim executive secretary to the committee. Mr. Marshall's appointment was effective February 1.

One of the first rural development agents in Texas, Mr. Marshall helped develop the Cherokee County program from 1956 to 1958. Later he moved up to coordinator of the newly established area program covering 22 counties in east Texas, with headquarters at Nacogdoches. This was the position he held before his appointment as executive secretary to the Federal committee.

Mr. Marshall's work in the Texas program included assistance to local farm, business, and other groups in setting up rural development committees, supervision of resource studies in program areas, planning agricultural and other programs especially suitable for small farms, and liaison with State agencies taking part in rural development activities.

Before joining the Texas Extension Service, Mr. Marshall had broad experience as a farm manager and operator of small businesses in the State. During World War II he served as an Army Air Force liaison pilot in the United States and Japan.

He is 42 years old and holds a degree in agricultural economics from Texas A. and M. He was born near Snyder in Scurry County, Tex.

Secretary Benson also pointed out that Dr. Harry J. Reed, former Purdue dean of

agriculture, who has been serving as coordinator for the rural development program, will continue in this position. Dr. Reed's primary responsibility is to assist State leaders where the program is going forward, Secretary Benson said. He also frequently meets with private groups and leaders at the State and local level to explain the program and advise on contributions they can make.

Mr. Marshall will also be meeting with rural development program leaders and committees of the various States in cooperation with Dr. Reed.

Under Executive Order 10847 issued by President Eisenhower October 1959, six departments and agencies of the Federal Government were directed to "make the fullest possible contribution to the objectives of rural development."

The following Federal departments and agencies are contributing to the program: Interior, Agriculture, Commerce, Labor, Health, Education, and Welfare; the Small Business Administration, and the President's Council of Economic Advisers.

Each of these departments and agencies has assigned responsibility for the program to a senior official who reports to his Under Secretary or Administrator. The latter in turn is a member of the Committee for Rural Development Program, chaired by Under Secretary of Agriculture True D. Morse.

The President's 1961 budget, now before Congress, includes increased funds for the rural development program. In addition, participating agencies are redirecting some of their programs to be of greater assistance to low-income families in rural areas.

Started in 1956-57, the rural development program has as its aim improvement of incomes in rural areas through farm, industrial, community, and educational development.

Senator Lyndon B. Johnson and Rights

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. PATMAN. Mr. Speaker, the Marshall News Messenger, Mr. Millard Cope, editor and publisher, Marshall, Tex., in its issue of March 4, 1960, contained an editorial on "Johnson and Rights." It is as follows:

JOHNSON AND RIGHTS

Senate Majority Leader LYNDON B. JOHNSON took the lid off a boiling kettle on February 15. He did so in his announcement to the Senate that so-called civil rights amendments could be appended to a minor bill exempting a Missouri school district from paying for use of a Government building.

The announcement served to erupt the long-expected battle. The first salvos, however, were fired at the majority leader himself, an unexpected target. Extremists on both sides of the political ranks brought cries of "treason" from some segments of the South and shouts of "trickery" from some southern Senators.

There is reason to suspect the protests of Senator JOHNSON's colleagues from the South were strictly for public consumption back home.

Despite the cries of his colleagues, it was a highly known and publicized fact that an agreement had been made between the Senators on both sides to bring the civil rights question before the Senate on February 15. It has been known as far back as September 14 last year. The agreement was announced to the full Senate on September 14 and

printed in the CONGRESSIONAL RECORD. The announcement made headlines in the press. There was repeated discussion in the newspapers.

It would have been a surprise had Senator JOHNSON not acted as he did on February 15. Had he not done so he would have broken an honorable pledge and would have opened the floodgates of chaos in the Senate.

Those familiar with Senate procedure know that had he not brought up a minor bill, any other Senate Member could have done so. What kind of a bill would have been brought up by one of the liberal Democrats from the North? What would the Republicans have offered? Critics of the Texan's action might ponder the type of measure the liberals might have brought up on the day to which all had agreed last September 14. The bill to which their amendments would have been offered likely would have been the tobacco measure, which preceded Senate consideration of the Missouri school district bill. The South wouldn't have liked that, either.

From his vantage point Senator JOHNSON obviously saw the inevitable—that a majority of Senators intend to pass a "civil rights" bill.

They have the numerical strength to do just that.

They have the votes to force through the Senate a harsh measure that would bring irreparable damage to the South.

Facing this reality, the News Messenger is grateful to the Texan for his continued efforts and achievements to prevent punitive legislation. His record is proof of his opposition to efforts to punish Southern traditions. Remember, that during the 1957 "civil rights" debate, he voted against the infamous title III, which would have revived the worst of the Reconstruction laws.

Furthermore, his current action against punitive legislation also is a determined effort to assure that State laws will be applied equally to all persons within that State. The State's Righters have a right to be appreciative of such leadership.

When all the sound and fury have subsided, and Lyndon Johnson's efforts are understood, we firmly believe his leadership will have calmed the shouting extremists who want to hurt the South and that he will have steered through the storm a reasonable voting rights bill that can be supported by reasonable men.

Why Not a Day for American Dream?

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. KING of Utah. Mr. Speaker, in a March 5, 1960, editorial, the editors of the Salt Lake Tribune have suggested that our Nation should make the traditional Washington's Birthday observance something more than just another holiday for the schoolchildren. And I heartily agree. I strongly feel, as does the Tribune, that more of our holidays, particularly the February 22 holiday, should be devoted to special programs on the meaning of Americanism. Such programs would give not only the schoolchildren, but the American citizens generally, the chance to reflect upon the lessons of history, to renew their spir-

itual appreciation of the priceless liberties which they enjoy and to appreciate the great sacrifices which made our freedoms possible.

Under unanimous consent, I commend the Tribune editorial entitled "Why Not a Day for American Dreams?" to the attention of all my colleagues.

The editorial follows:

WHY NOT A DAY FOR AMERICAN DREAM?

Boards of education in many American communities will set school calendars for the 1960-61 academic year at routine meetings this spring. Following recent precedent, most of them will make February 22, Washington's birthday, a school holiday. But we hope some thoughtful school boards will substitute for the usual day off a special program during February devoted to the meaning of Americanism.

The need for a real patriotic holiday in the United States should be apparent. Most of such holidays have lost much of their original meanings. The old-fashioned Independence Day parade, for instance, is now a procession of cars chalking up mileage on the highways. And the patriotic orations have been replaced in a tragic number of instances by funeral sermons.

Coming as it does at the low point of winter, Washington's birthday finds many families unable or disinclined to answer the call of the open road. It, therefore, would be a good time to unite in pondering America's heritage, to retell the American story and to commemorate the ideals to which Washington, Lincoln, and the other great patriots of American history devoted their lives and pledged their honor. This commemoration could take many forms, with student participation in panels and pageants, showing of special films and stimulating talks by qualified adults.

Last February 22 roving groups of school boys were observed in downtown Salt Lake City.

Most of them clearly were at loose ends. Because the weather was cold and stormy, some of them took refuge in lobbies of business buildings, where they created disturbances or otherwise were a nuisance. Many children doubtless spent the day watching television. Few heard or thought about the reason for the holiday or their heritage from Bunker Hill and Valley Forge.

Modern information media bring us many worthwhile things but there is a troublesome void in the meaning of the American Revolution. We do not doubt that American history is being taught conscientiously but many Americans have forgotten—or never learned—the historical roots of their liberties.

Edward R. Murrow has pointed out that in times of crisis nations customarily go back to their folklore, to their history, even to mythology, for comfort and inspiration. Even the Russians did this in the darkest days of World War II. They shelved orthodox Marxist doctrine momentarily and went back to their old time heroes.

We are in crisis today. Our public schools well could take the leadership in setting aside Washington Day or some other day during the birthday month of many American heroes to turn the spotlight on our old, but young Republic. Thus a day of idleness could be turned into a day of pride and understanding.

If we are to compete successfully with the dedicated, often intelligent and hard-working Communists—bent on plowing new ground—we must do more than continue our defeatist retrospection and condemnation.

This is not a call for patriotic demonstrations of the flag-waving, see-how-wonderful-we-are type, but for a higher patriotism, a regeneration of the arsenal of ideas

and institutions, for an honest examination of history. And history need not be dull and repetitious. It is as new as this morning's newspaper. Fresh and important information is constantly being brought to light and evaluated.

We realize that schools must devote all possible effort to the education fundamentals and that academic time is already infringed upon for the Christmas programs and the annual spring music festivals. It is also vitally important, however, that we recapture the spirit of '76, that we learn what makes America tick.

The Policy Racket: The Cops Had a Share in the Old Days, Too

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Post, March 6, 1960:

INSIDE THE POLICY RACKET: THE COPS HAD A SHARE IN THE OLD DAYS, TOO

(By Ted Poston, with Alfred Hendricks, Irving Lieberman and Richard Montague)

Violence is no stranger to the numbers racket—neither to the ruthless operators who have fattened on the swindle for more than a century here, nor even to the outraged citizens who have tried in vain to suppress it.

For it was just 61 years ago this month that the Anti-Policy Society sent roving bands in horsedrawn hacks and streetcars around the city, armed with sledgehammers, axes and crowbars, to demolish several hundred number drops operated by Al Adams, New York's first policy king and the first man to become a multimillionaire out of a game which had existed here as early as 1832.

Why did the citizens take the law in their own hands? They acted because the police wouldn't.

"In 11 precincts," said a contemporary article in the old Metropolitan magazine, "Al Adams spent an average of \$1,500 monthly for police protection—and got what he paid for. . . . He had more than 400 policy shops below 59th Street, yielding a total gross revenue of \$10,000 to \$12,000 a day."

"There the man stood in the midst of millions made, and daily added to, in spite of the criminal laws; a public spectacle, yet no one touched him."

The citizens' raids on Adams establishments continued for more than a year before the police themselves moved against Adams.

On December 14, 1901, just 2 days after he had made his monthly payments to his 11 precincts, rumor had it, the police broke into Adams' elaborate office on East 33d Street, and hauled him off. (He eventually served 21 months in jail.) Today's policy racket, of course, has a much bloodier history. The late Dutch Schultz beat and blooded a dozen Negro policy barons into submission when he muscled himself into control of the game in Harlem. Some men died, too.

No one can recall that period more vividly than a slender, fashionably dressed woman in her 60's who discussed it at length with Post reporters investigating the current policy game and its attendant police protection.

Mme. Stephanie St. Clair, once Harlem's most flamboyant "policy queen," is a property owner and prosperous businesswoman now, but around 1930 she was the scourge of Schultz and the police.

"I fought Schultz from 1931 to 1935," she recalled the other day, her eyes flashing behind bejeweled harlequin eyeglasses, her long earrings jangling. "It cost me a total of 820 days in jail and three-quarters of a million dollars. And not one bit of help did I get from my own people."

The "policy queen" was the first Negro operator of that period to blow the whistle on grafting cops. A lieutenant and 13 men were suspended in December 1930, after she testified that she had paid them \$7,100 protection money.

Sitting in the living room of her expensively furnished Sugar Hill Apartment (she owns the four-story building), Mme. St. Clair recalled how other Negro numbers bankers refused to join her in her fight on Schultz because "they said Schultz had police and the politicians, too."

"To my knowledge," she said, "Schultz killed about seven Negroes in taking over the Harlem policy business. By 1935, I was running for my life. One time when the Dutchman's killers were chasing me, I had to hide in a cellar while the super, a friend of mine, covered me with coal." As it happened, she had the last word in her war with the gangster, for as Schultz lay dying in a Newark hospital on October 23, 1935—victim of gangland bullets—a telegram was delivered to his ward. It read:

"As ye sow, so shall ye reap." It was signed "Madame, Queen of Policy."

THE NEW KINGS

It is a long cry from old Adams to Dutch Schultz, and, in some respects, a longer cry from Schultz to the East Harlem mob which now controls the numbers game over most of the city, and especially in Harlem.

But, as the Post investigation has revealed, the police have been with it all the way.

The operation is smoother now. The multimillion-dollar extortion device known as the pad has made it possible for the new policy kings to accomplish with graft what Schultz had to do with strong-arm stuff.

"Nobody got beat up like in the old days," a recently retired Negro numbers banker told the Post. "The East Harlem boys just got together with the cops, raised the price for protection, and then got the right to say who could get on the Pad and who couldn't."

"There were at least 30-odd Negro banks doing a good business when the mob moved in. I doubt there are a half dozen left now—if you don't count the boys trying to make a living with single action."

Other Negro operators observed that the take-over had not been wholly without violence. They cited the case of Roy McGregor, 27, who had been fined \$750 on five policy arrests and had served 4 years in prison for assault.

McGregor opened up a numbers spot in the 143d Street sector of Lenox Avenue, in a territory controlled by one of the more powerful Italian bankers. When the cops knocked him out, he went to the white banker to get an OK for the pad (the official list of police-protected spots). The banker refused, and McGregor, angry, floored him.

Older heads, hearing of the incident, urged McGregor to leave town for a while and he went to Florida for 2 weeks. Then, back in Harlem, and still unable to operate, he planned a daring revenge. Hearing that one of the white banker's spots, operated by two men called Butch and Tony on West 144th Street, had been hit by a lucky player for \$6,000, he moved into action.

Trailing the "payoff man" to the spot, McGregor walked in and seized the \$6,000

for himself. "And this isn't the end," he reportedly told his victims.

It was the end for Roy McGregor, however. Two days later—on March 9, 1955—the young hoodlum was found dead in his brandnew 1955 convertible, parked in front of 7 West 129th Street. He had been shot twice through the back of the head.

The police questioned the white banker who had all that trouble with McGregor, but the case is still marked unsolved.

A similar murder, also unsolved, was the more recent slaying of Bernard Bratton, another young tough, in Jack Carter's Bar & Grill just off 116th Street on 7th Avenue.

Bratton was standing at the crowded bar talking to a girl when the killers walked in and riddled him. His sudden end came as no surprise to the more knowledgeable people in Harlem.

For several months, Bratton had been suspected as the leader and "finger man" of a bunch of young Negro holdup men who had been "knocking over" a series of Lenox Avenue policy spots from 110th to 125th Streets.

"The holdups stopped immediately after Bratton got done in," one observer said. "I guess everybody got the message."

But the message came too late for Charlie Copeland, righthand man of one of the biggest white bankers in the Bronx, and an operator of some ingenuity in his own right.

Bronx sources told the Post that Copeland decided to "run a game" (swindle) on his boss, and he worked for months to set it up.

On the day of the big deal, Copeland waited near the last stop the bank's pickup man would make before returning to the bank with the day's "works"—policy slips collected from the various spots.

He "fingered" the pickup man to two pals. While they trailed him and took the "works," Copeland sped back to the bank to be with the boss when the pickup man reported the holdup.

After hearing a description of the hijackers, both Negroes, he said he thought he knew them and offered to get the "works" back before the seventh race, on which the last of the three digits is computed. He already knew that the "lead"—first figure for the day—was 6.

Being on the inside, Copeland also knew before the hijacking the slips had been divided into 10 envelopes. The numbers 000 to 999 were in one, from 100 to 199 in another, and so on up the line.

The boss was elated when Copeland returned an hour later with the envelopes, but his approval lasted only until the envelopes containing numbers from 600 to 699 was opened.

It contained several big bets on every possible combination of numbers starting with a 6. Immediately suspicious, the boss accused Copeland of "trying to run a game." Copeland slapped him in the face and demanded an apology.

None was forthcoming, and Copeland stormed angrily from the bank.

The story spread swiftly through The Bronx and Harlem, but no one could check it with Copeland. He was missing from his usual haunts.

A couple of kids solved part of the mystery 3 days later. They pecked into a car parked on a deserted section of Bruckner Boulevard and found a man with three bullet holes in the back of his head.

Charlie Copeland had "run his last game." There have been other murders, of course, including six unsolved homicides in Brooklyn which a rackets grand jury there last year attributed to policy and bookmaking.

One of the most spectacular killings occurred on August 17, 1958, when "Spanish Raymond" Marquez (co-owner with Henry

Lawrence of a Negro-Puerto Rican bank in Harlem's 8th Avenue sector, shot to death David Peters, 28, hoodlum son of a Negro minister, at 113th Street and 8th Avenue.

Marquez fled after the shooting, which insiders said grew out of a feud over Peters' numbers-writing activities in an area where Marquez and Lawrence maintain about 10 "protected" policy spots, but surrendered the next afternoon and claimed self-defense.

Police, meanwhile, had rounded up Marquez' brother, John, 27, and 12 companions and stripped them of 4 revolvers and 2 dismantled rifles to head off suspected gang warfare in the wake of the killing.

ONE MORE BODY

A grand jury failed to indict "Spanish Raymond."

Still another slaying took place last January 16, on the eve of Representative ADAM CLAYTON POWELL's second pulpit blast alleging police cooperation with white policy barons to drive Negro operators out of the business.

The body of Erby Turpen, 55, a longtime single-action banker, was found in the basement of 152 W. 118th Street between Lenox and 7th Avenues, numbers territory controlled by the East Harlem mobs. He had been garroted with his own belt.

Turpen normally operated in the area around his home at 371 W. 126th Street and insiders said he had been warned to stay out of the 118th Street territory.

Old Al Adams could hardly have envisioned all this as he raked in an estimated \$10 million from policy, bought extensive real estate, got himself elected a director of a half dozen legitimate banking institutions, and departed the numbers game for the more refined atmosphere of Wall Street.

Adams came to a sorry end, however. Contemporary newspaper accounts recorded it this way on October 2, 1906:

"Hated by the general public, separated from his family, lonely and despondent—Al Adams took what he regarded as the only step yesterday.

"He shot himself through the head."

And one headline read:
"Every Dollar That He Made Was Wrung From the Mites of the Ignorant and the Lowly Poor."

The 110th Birthday of Thomas G. Masaryk, Founder and First President of Czechoslovakia

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. BOGGS. Mr. Speaker, national heroes are men who at one and the same time embody the national character of a country and are individuals who contribute in a concrete way to the life of their country.

George Washington is an example of the national hero in our Nation.

Thomas G. Masaryk embodies all that is Czechoslovakia. He was the "Father of his Country." He served as its first president. He was a man who felt deeply for democracy and the dignity of his people. He made his nation one of the world's true democracies.

Today, his memory lives still as the embodiment of the free spirit that still

lives in Czechoslovakia. This is the 110th anniversary of his birth. The United States is issuing a postage stamp honoring him as the first in a series of "Champions of Liberty."

This is entirely fitting, that our great country, a stronghold of liberty and democracy, should honor a man who dedicated his life to these ideals. By doing so, we are showing again that we honor and believe in these ideals and the national heroes who have sought to make them come true for their people throughout the world.

It is especially significant and salutary that we honor Thomas G. Masaryk because we will be paying tribute to the free spirit of democracy which still exists in Czechoslovakia. The homage we pay to Masaryk will surely hearten the people of that country as they live under the tyranny of a Communist dictatorship, and give encouragement to the Americans of Czechoslovakian descent who are trying to keep the flame of Masaryk's spirit alive.

The Challenge of Safety in a Changing World

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, Labor Secretary Mitchell's address at the President's Conference on Occupational Safety is of real interest. Under leave to extend my remarks in the Record, I include the address, as follows:

THE CHALLENGE OF SAFETY IN A CHANGING WORLD

(Address by Secretary of Labor James P. Mitchell before the President's Conference on Occupational Safety, Washington, D.C., March 1, 1960)

Ladies and gentlemen of the President's Conference on Occupational Safety, I would like to welcome each of you to the President's Conference and thank you for giving so generously of your time, your talent and your resources for improving the safety of American working people.

The figures that are before you—an 8 percent rise in the number of disabling work injuries, a 4 percent rise in the number of work deaths—are indeed sobering.

They result, in part, from the evolutionary changes taking place in American industries and occupations, changes that involve the assimilation of untrained workers, and the shifting of trained workers, in an atmosphere of experimentation, exploration and competition.

This Conference, occurring as it does at the beginning of a decade in which the world will see more change than ever before, can be a milestone. Our industrial system, if the job done here by you is done well, may look back to this Conference as the decisive event in shaping change to suit the safety of the individual.

The theme, "The Challenge of Safety in a Changing World," could not be more well chosen.

You will hear, before this Conference ends, from a number of distinguished experts who will discuss with you the facts and the im-

plications of the three challenges set before you.

I would like to take these few minutes this morning to survey these challenges in a broad context.

The first, the changing nature of work, brings us directly to what has been called "the industry of discovery," so radically different in method and technique than the production processes of a few years ago that it constitutes a kind of revolution.

At the heart of it is man's increasing knowledge of the true nature of nature, and the application of that knowledge to practical, productive enterprises. From the quiet research laboratory, from the experimentation of the scientist, come the ideas and discoveries that emerge as new materials, new machines, new methods.

Our investment in basic research has grown from \$2.5 billion a year in 1950 to over \$10 billion today. Some of its fruits are dramatic—they reach into space and into the depths of the oceans, communication by satellite, chemical products emerging at the rate of one new one a day that wash our dishes, grow our vegetables, kill our germs, electronic systems that remember and solve problems for us, and so on.

Ironically, there is danger in change.

The more rapid and fundamental the change, the greater the danger to those men and women who must control and utilize it. Industrial change has always increased occupational injuries, and while the "industry of discovery" may relieve the labor force of many hazardous manual and physical jobs, it does not remove the danger element from work; it merely moves it to a different plane where it assumes different forms.

For those of us here this morning, I think the lesson is plain: We must better anticipate where the danger will be.

The safety engineer of today and tomorrow must be able to judge every new scientific advance destined for practical use in the light of its potential danger to human life and limb. That means he must acquaint himself with the work of the research labs and be familiar with the concepts and practices it involves.

We can no longer wait until an accident occurs to discover that a new machine, a new practice, a new element may contain a danger element.

Nor can we comfort ourselves that exposure to new hazards may be small. If there are only seven astronauts preparing for their incredible adventure in space, there are hundreds of thousands of engineers, technicians, and skilled craftsmen designing, making, testing, and using the equipment, fuels, construction facilities, and test sites that contribute to such an adventure—and this kind of activity will increase in great measure.

We cannot shift work injuries from one place to another and pride ourselves that they have been eliminated from the first place.

I would like to pose a series of questions regarding the changing nature of work:

Have you taken a hard, objective look at the hazard element in new equipment you have introduced or plan to introduce?

Are the present safety standards keeping pace with the changes made possible by the researchers?

Are your operations as safe and safer than they were 10 years ago, or have you only shifted the danger zone to a different level?

Finally, and perhaps most importantly, have you compared the training of your new workers with the experience of your older ones, and made sure that training gives the same protection that experience teaches?

This last question poses, in part, the second challenge of this conference—the changing nature of the work force.

Recent studies, released by the Department of Labor only a few weeks ago, leave

no room for doubt about the manpower challenge that confronts this Nation.

For this Conference, one aspect of that challenge is especially compelling. In the decade ahead there will be a surging increase in the number of young and inexperienced workers, just as we experience a shortage of men in their working prime, the group between 35 and 44 years of age, to which we ordinarily look for the highest experienced skill, supervision, and leadership. The proportion of older workers and working women will also rise sharply.

Measured against this trend in the labor force toward a volume of younger workers is the occupational trend toward job growth in occupations requiring the highest skills and the greatest amount of education and training.

The evolutionary changes explicit in the first challenge to this Conference illuminate the nature of the second challenge:

New discoveries will increase the demand for scientists to teach and research in fields like electronics, nuclear energy, medical research, and space exploration. Mathematicians, physicists, biologists, and chemists will be in demand. So will technicians, programmers for computers, medical personnel, skilled building craftsmen, skilled maintenance men, teachers, tool and die makers, and clerical personnel adept at handling automatic instruments.

The dilemma, then, is how to meet the increasing demands—indicated by the sketch of demand occupations I just gave—for highly skilled personnel from a growing supply of less experienced workers.

Certainly we must improve educational facilities and opportunities. We must increase individual competence across the board. We must make a wise and just use of our manpower without regard to race, sex, age, or physical handicap.

And we must make certain that the waste of accident and work death is eliminated.

The only formal safety instruction that millions of our new young workers will receive before they go on the job is that given to them as a part of their education.

Safety should be a conscious effort in education from the earliest years.

This evening you will hear a report of progress made in this area under the leadership of the U.S. Commissioner of Education—one that we can all applaud.

For our society in general, the changing nature of our work force calls for greatly increased attention to the teaching of safety. The investment by the worker, by his employer, and by the Nation in the acquisition of competence and skill by an individual is far too great to afford to lose it by a preventable work injury.

And because of the configuration of the labor force in the next decade, the heaviest burden will fall to the educational system to prevent that loss and guarantee the full use of a talent for its full period of service.

Our educators should be aware that safety in terms of "working safely on the job" is a concept becoming obsolete rapidly. When split-second decisions are required to protect life and limb, when hazards become so subtle they can be detected only by special skill and instruments, then safety becomes a part of general instruction.

One of the things this Conference might explore is how to integrate safety education at every level of schooling.

The third challenge posed for us by the planners of this Conference is the unchanging nature of man.

I believe that this is a simple challenge for us to understand better the psychological factors that can sometimes be hazardous to a man working at a job.

Mr. Ben Fairless, in an address to the National Safety Council, recently indicated the kind of problem we face in this area. In an industry in which machine operators

may increasingly be replaced by machine watchers, maintenance experts standing at the ready, how is one to prevent boredom from becoming dangerous? How is one to assure the constant alertness that is a part of a working habit?

It is possible that one of the products of a crowded, urbanized, industrial society may well be increasing danger at the work place, danger due not so much to exterior factors as to the stability and awareness of the worker himself.

Man goads himself. He makes changes and then finds he must adapt to them in order to survive. Progress and danger often go together—progress more profound and danger more subtle as science develops.

I am sure that Dr. Carmichael of the Smithsonian Institution will have some illuminating remarks on this specific challenge.

These three challenges, skillfully chosen by the planners of the Conference, should elicit positive and creative responses. From what I know of the imagination and ability of the people gathered here, I am certain they will.

We can read the new figures, the sobering figures of increasing accidents and deaths, and see that the changing nature of work and the work force is already resulting in higher rates.

This belief is supported by the analysis of the injury statistics made by the Bureau of Labor Statistics, which relates the upswing in part, and I quote, to "increasing employment, with untrained workers entering employment and the shifting of regular workers to changed procedures and activities."

The challenge of change before us this morning has already been faced in the Nation's work places—and the first reports of that confrontation are not encouraging.

This should certainly add urgency to the work of this Conference, and make all of us fully aware that what we see as titles on a program are, in fact, the very real situations of men and women today.

The President has called upon us to "devise a program of voluntary action to bring about a better safety record in all places where Americans are at work."

I am confident that such a program will emerge from your meetings and discussions, and that the "Challenge of Safety in a Changing World" will be remembered as the theme that awakened our Nation to the problem, so that we might fully fulfill the promise of life in a world of new adventure and new hope.

Resolution Commending the People of the United States Upon Granting Statehood to Hawaii

EXTENSION OF REMARKS OF

HON. DANIEL K. INOUE

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. INOUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a resolution adopted by the Hawaii chapter, World Brotherhood on February 24, 1960, commending the people of the United States upon granting statehood to Hawaii:

Whereas on March 12, 1959, the people of the United States of America, acting through their Representatives in Congress, did invite the people of Hawaii to become a member of their Union; and

Whereas on August 21, 1959, pursuant to the enabling act, the President of the United States of America proclaimed Hawaii as the 50th State of the Union; and

Whereas as a result of this action, the people of Hawaii have become joined to those of the mainland as "one Nation under God, indivisible, with liberty and justice for all"; and

Whereas such union magnificently demonstrates to the world America's fundamental belief in the brotherhood of man with its attendant hope for a peaceful world based upon love and understanding; Now, therefore, be it

Resolved, That the Hawaii Chapter of World Brotherhood extends to the people of the United States, through their Representative in the 86th Congress, its most sincere appreciation and aloha for their magnificent expression of brotherhood; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the President of the U.S. Senate, and the Speaker of the U.S. House of Representatives.

Done in the annual meeting of the executive board, this 24th day of February 1960.

HAWAII CHAPTER, WORLD BROTHERHOOD,

J. RALPH BROWN, Chairman.

DOROTHY B. SHIMER, Director.

Jobs for the Handicapped: A Passport to Dignity

EXTENSION OF REMARKS

OF

HON. TOBY MORRIS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. MORRIS of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following prize-winning essay by Mamie Richardson, a student of Ringling High School:

JOBS FOR THE HANDICAPPED: A PASSPORT TO DIGNITY

(By Mamie Richardson)

(English literature, Irene E. Mitchell, Ringling High School, Nov. 20, 1959)

I. INTRODUCTION

- A. Who are the handicapped?
- B. Progress that has been made toward helping the handicapped.

II. BODY

- A. Reason employers do not hire the handicapped.
- B. What we can do for the handicapped.

III. CONCLUSION

- A. Organizations for the handicapped.
- A man sits in his wheelchair at home. From his window he watches the world walk by. His strong, skilled hands rest folded in his lap.

He does not sit there by choice. Time after time he has made the rounds of employment offices. Time after time he has heard the polite murmur, seen the lowered eyes afraid to meet his: "Sorry, nothing at all right now." "We have a high physical standards. Can't risk accidents, you know." "No. No openings."

This man is not a statistic in a labor force report. He is a human being who dreams and aspires. He doesn't wish for the moon. He asks merely for his birthright: to hold his head high in independence; to support his family; to know that he is part of the living, thriving land that is America.

It is this man we talk about when we tell employers, "Hire the handicapped; it's good business."

It is impossible to tell exactly how many handicapped men and women are today seeking jobs. Experts agree the number is not small; it must run into the hundreds of thousands.

Over the years much progress has been made. There are approximately 30 million handicapped in our population. Some 10 million of them are severely disabled; yet more than half of these now hold jobs. But the silken curtain of prejudice still stretches between the handicapped and employment. With what strands is it woven? A recent President's Committee survey revealed many:

One is the fact that many larger industries maintain such high physical standards for employment that few handicapped applicants can make the grade.

Another is the excuse that the handicapped lack flexibility to be transferred from job to job.

Another is the belief that the handicapped cannot produce as well as the able bodied.

Another is the feeling by employers that handicapped workers might seem unsightly to squeamish fellow employees or to the general public.

And so it goes. Myths and misconceptions, all of them. Out of these are woven the fabric of the curtain of prejudice—a fabric that can be ripped asunder by truth, by light, and by constant educational and promotional efforts.

"The truth can set you free." The truth, proclaimed to the far corners of our land, can free the handicapped from the shackles of unfounded prejudice.

A man sits in his wheelchair—but not at home. Every day from 9 to 5 he can be found—surrounded by blueprints, sheafs of computations, and reams of wiring diagrams—in the busy plant of an electronics manufacturer in New York State.

He develops electronics brains that control guided missiles. Without the massive computers which this man masterminds, no missile could get off the ground.

Paralyzed from the waist down; yes. Physically handicapped; yes. But his employers say they could use more like him.

In this case, and in the case of all the handicapped, it's ability that counts. Opportunity to display ability; that's all the handicapped ask.

The records show we are making tremendous progress, but until every American is given full opportunity to display and utilize all the capacities he has, considering his physical conditions, we still have more work to do.¹

Our goal is for full and equal job opportunity for the handicapped. How do we achieve it? It can't come by wishing for it. It can't come from Washington or from the State capital alone. It must come by a surge of activity throughout the country and in each community. It can come through intensified never-ending promotional activities to create the proper climate of opinion. It can come through intensified effort to form active local public relations subcommittees throughout the land, to spread the word to the grassroots, where men and women are hired—or are not hired.

The first step for us in helping the handicapped is to help him face his problem squarely. Every day, someone can be seen helping a handicapped person. Along the roads, in store windows, or almost any place one looks, there is a sign saying, "Help the Handicapped." Do help them, to a certain extent, but don't over do it.

One of the biggest dreams of the handicapped is to be accepted by society as a normal person, which he really is. Often,

¹ Dwight D. Eisenhower, "Program Guide," 1958-59, p. 2.

not being accepted will turn him into a hard, bitter person. Part of being accepted is to have the feeling that people aren't staring at him as he attempts to do something. That is why it is best not to overhelp them.

When a person with a defect goes out into public, one should never go too far beyond the limit of courtesy they would use when with a normal person. Special treatment of any kind will make the handicapped self-conscious and cause him to retire more and more, eventually never going out. By waiting on himself, the handicapped will have a greater feeling of security and independence.

In order to help the handicapped obtain this feeling, there are centers established around the country where trained personnel work with these people, teaching them to do things any normal person could, or should do. Their methods will be slightly different, maybe a little awkward, but in the end, the same thing is accomplished. The fact that they can do it is the most important thing.

One of these rehabilitation centers is located in Okmulgee. The center is designed so that the handicapped have almost everything placed at their convenience. One of the first things they learn is to care for themselves. The center is also adjacent to the Oklahoma State Technical College. This gives the people an opportunity to choose and train for a vocation. The ones that do take advantage of this opportunity are usually a success in their chosen fields.²

There are many organizations to help the physically handicapped. They may have various names in different cities, but their function is the same everywhere. In Fort Worth, Tex., there are two such organizations. One is known as Goodwill Industries. People all over Fort Worth and surrounding areas donate articles, such as clothes, shoes, furniture and electrical appliances, which are in some way used or damaged. The men and women of Goodwill Industries take these articles and make whatever repairs are necessary. They are then sold in Goodwill Industries stores throughout the city. In this way the physically handicapped are encouraged to use their talents, not only for their own benefit but to help the community also.

The Lighthouse for the Blind is another such organization. As the name implies, this is an organization designed specifically to help those who have lost their sight, the blind. These handicapped people are taught to use their hands to create household articles, such as brooms, mops, etc., for sale. They sell these from door to door to housewives.

This is using only one city as an example. There are other similar organizations in cities throughout the United States, that help the physically handicapped face his problem—and overcome that problem.³

Maj. Gen. John S. Mills, USAF

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FOGARTY. Mr. Speaker, on January 29, 1960, Gen. Samuel E. Anderson, USAF, commander of the Air Materiel Command, presented Maj. Gen. John S. Mills, USAF, with the second

award of the Distinguished Service Medal on the occasion of General Mills' retirement after 32 years of active duty.

I have come to know of his outstanding work in the development of special requirements for nuclear air weapons, through my service on the Appropriations Committee. It is indeed a grievous loss to the Air Force, the Department of Defense, and to the Nation that General Mills elected to retire at 54 from active military duty. His knowledgeability, his compassion for individuals, but most importantly, his integrity, will long be remembered in the annals of American defense. The following is a short account of General Mills' biography and achievements.

Maj. Gen. John S. Mills, recipient of two Distinguished Service Medals, was born in Appleton, Wis., July 17, 1906. He was graduated from the Appleton High School and after attending Lawrence College for 1 year, entered the U.S. Military Academy in July of 1924. He was commissioned a second lieutenant, Field Artillery, June 9, 1928.

In the fall of the same year, General Mills entered primary flying school at Brooks Field, Tex., completed this course, and was transferred to the advanced flying school at Kelly Field, Tex., where he was rated pilot in October 1929. The following month he was transferred to the Air Corps with duty assignment at Rockwell Field—now the North Island Naval Air Station—San Diego, Calif., as a pilot of the 11th Bomb Squadron. In September of 1930 he entered the Air Corps Technical School at Chanute Field, Ill., graduating the following April. He then rejoined his organization at Rockwell Field, transferring with the squadron to March Field, Calif., in October of 1931.

In the early months of 1931, General Mills participated in the Air Force project of flying the U.S. airmail subsequent to the cancellation of civil contracts for the operation. During this period he flew from the Salt Lake City, Utah, airport over some of the most rugged terrain of the country. In November, he received orders transferring him to Nichols Field, Philippine Islands, as adjutant of the 28th Bomb Squadron. In January 1937, he returned to the United States with assignment at Langley Field, Va., where he served initially as flight commander in the 29th Bomb Squadron and later as navigation officer of the 2d Bomb Group, the first organization equipped with the B-17 bomber.

In July 1939, General Mills was reassigned to Wright Field, Ohio, as Chief, Instrument and Navigation Unit, Air Materiel Command. He also attended the 3-month course at the Air Corps Tactical School, Maxwell Field, Ala., that year, returning to his permanent station in Ohio after graduation.

In June 1943, General Mills was selected to organize, train, and lead the 450th Bombardment Group in combat. He flew 25 combat missions in the Mediterranean theater in B-24 aircraft including the first high-altitude mission against the heavily defended Ploesti oilfields. He was awarded the Silver Star medal for this action.

In mid-1944, General Mills was appointed Chief of Operations for the Mediterranean Allied Air Forces, leaving this assignment in December to become Chief Technical Assistant in the Materiel Division at Army Air Force Headquarters. He subsequently became Deputy Director of the New Development Division of the War Department General Staff in April 1945.

The general's next assignment, in July 1946, was at Quarry Heights, Panama Canal Zone, with duty as Deputy Chief of Staff of the Caribbean Defense Command. He returned to the United States in mid-1948 and, in August of that year, entered the National War College, graduating in June 1949. He was then assigned as Deputy Assistant for Atomic Energy at U.S. Air Force Headquarters.

In October 1959, General Mills was transferred to Albuquerque, N. Mex., as Commanding General, Special Weapons Command. It was during this tour of duty that he devised methods for dropping the hydrogen bomb from bombardment aircraft, developing the USAF capability for use of this weapon and thus augmenting the deterrent strength of the USAF. His accomplishment in this project was recognized by the award of the Distinguished Service Medal on July 15, 1954. The citation reads:

Maj. Gen. John S. Mills distinguished himself by exceptionally meritorious service to the United States of America in a duty of great responsibility during the period January 1951 to January 1954 as Commander, Air Force Special Weapons Center. His efforts have contributed materially toward the successful development of the nuclear weapons program which has greatly enhanced the Nation's security and is of international significance. General Mills' successful execution of major military operations of this magnitude reflects great credit upon the U.S. Air Force and upon his ability, outstanding leadership and mature judgment.

In mid-1954, General Mills returned to Headquarters, United States Air Force, as Assistant Deputy Chief of Staff, Personnel, a position he held until the summer of 1956 when he became the Assistant Deputy Chief of Staff, Development, USAF. In 1958 he was named as Commander, San Bernardino Air Materiel Area, where he assumed command on November 1958.

The second citation, the Oak Leaf Cluster to the Distinguished Service Medal, reads as follows:

Maj. Gen. John S. Mills distinguished himself by exceptional meritorious service to the United States in a position of great responsibility as Commander of the San Bernardino Air Materiel Area, Norton Air Force Base, California, from 1 November 1958 to 31 January 1960. In this important and challenging capacity the technical leadership and extensive executive ability of General Mills were instrumental factors in furthering the important role of Air Logistics in the Space Age. The singularly exceptional accomplishment of General Mills culminates a distinguished career of more than 31 years in the service of his country, and his dedicated efforts reflect the highest credit upon himself and the U.S. Air Force.

General Mills has been awarded the Distinguished Service Medal with one Oak Leaf Cluster, Silver Star, Legion

of Merit, Distinguished Flying Cross, Air Medal, with two Oak Leaf Clusters, French Croix de Guerre with Palm and the Army Commendation Medal. He is rated Command Pilot, Combat Observer and Aircraft Observer.

General Mills married the former Alice Gilbert of Los Angeles on December 23, 1933, and has two children. He is a member of the Congregational Church.

How Pennsylvania Is Working To Increase Employment

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the Honorable William L. Batt, Jr., Pennsylvania Secretary of Labor and Industry, which appeared in the Catholic Charities Review of February 1960:

HOW PENNSYLVANIA IS WORKING TO INCREASE EMPLOYMENT

(By William L. Batt, Jr.)

Unfortunately, we are experts on unemployment in Pennsylvania. Unemployment is our No. 1 problem. We consistently have one of the highest rates of unemployment of any State in the Nation. We have more areas of substantial labor surplus within the State. With about 6 percent of the total population, we have about 10 percent of the total unemployed.

But we are not depressed. There is no such thing as a depressed area in Pennsylvania. We have been hit hard by forces which were largely out of our control. But we have hit back with intelligence, with persistence and with strength. We are realistically optimistic. We are gaining important new industry. Our cities are being redeveloped. Our highway system ranks with the best. Our natural resources are magnificent. And our people are skilled and industrious.

Pennsylvania's troubles stem from the fact that in the past its economy relied on several basic industries. All of these industries are employing fewer people now than they did before, but for different reasons. Thirty years ago, 150,000 men were at work in the anthracite mines. This year, the count is less than 20,000. Consumers have turned to oil and gas for heating. Bituminous mines employed 85,000 in 1950. In 1959, the figure was about 38,000, largely because of mechanization, but also because of competition from other fuels. Employment in railroads dropped from 132,000 in 1950 to 84,000 in 1959, partly because of competition from other forms of transportation and partly because of the change to diesel engines. As recently as 1950, about 145,000 were on textile payrolls in the State. The average in 1959 was about 80,000, largely due to the movement of plants away from the area. And automation is making it possible to produce more and more steel with fewer and fewer employees.

As a result of all this, recessions in Pennsylvania are worse than they are in the Nation as a whole, and booms are not quite as good. Unemployment in Pennsylvania was 2 percent higher than the national average at the height of the 1950 recession, 3 percent higher at the height of the 1954

recession, and 3½ percent higher at the height of the 1958 recession.

One result of all this unemployment is that our unemployment compensation fund was slowly depleted, year after year since 1950, and the severe recession of 1958 put such a strain on the fund that we were forced to borrow money from the Federal Government to insure our solvency for 1959. Fortunately, the economy recovered in time so that we did not have to use this borrowed money, but we have had to revise our law to provide for higher payments by employers in order to build up the fund to a point where it can withstand another recession.

This will be used as an argument in some quarters to bolster a claim that adequate unemployment compensation benefits in Pennsylvania will discourage industry from locating in the Commonwealth. Our experience does not bear this out but we do think it is shameful for States to compete against each other on the basis of which State has the cheapest system of unemployment compensation benefits. Therefore, we are strongly in favor of a uniform system of unemployment compensation benefits for all 50 States under prescribed Federal standards.

Pennsylvania has fought back to lick its unemployment problem, principally through an imaginative and aggressive program to bring new industry into the State and to help industry which is already in the State expand and prosper. Pennsylvania communities have raised more money than those of any other State to help finance the construction of new plants for industry. In 11 years from the end of World War II to 1956, 52 communities financed 51 plants in this way, creating approximately 31,000 job opportunities.

This program took on a statewide aspect with the advent of the administration of Governor George M. Leader when the Pennsylvania Industrial Development Authority was created. In the 3 years since then, 53 communities have financed 104 new plants employing over 20,000 workers, at least 70 percent of whom were men.

Of course, many additional businesses have expanded or come into Pennsylvania without such assistance. One of the reasons for this is that the Pennsylvania tax climate for industry has improved considerably in the past 3 years so that it now compares favorably with the climate in other States.

The core of the Pennsylvania program is the fact that it is possible for an industry to move into a modern factory building without the expenditure of its own funds for the building. One hundred percent low interest, long-term mortgages are made available to the industry, with the local community, the Pennsylvania Industrial Development Authority, and private sources sharing in the mortgage. In some cases plant shells are constructed before a prospective tenant has been located. These plants become available to industry without undue delay.

While these efforts have been productive, they have fallen considerably short of the goal of providing enough new jobs to replace those which have been lost. This is one reason why Pennsylvanians are so anxious for a Federal area redevelopment bill, which would provide additional Federal assistance in the form of loans to the States to help finance additional construction for new industries. It also should make provision for community facilities essential to industrial development and for vocational training of the unemployed.

We believe that expanded training programs are another essential aspect to economic recovery. During the height of the recent recession we estimated that there were many thousands of jobs unfilled be-

cause qualified people could not be found to fill them.

Pennsylvania has a unique program of training for the unemployed. It enables the State to reimburse local school districts for the full cost of training unemployed persons to accept employment. This is valuable for prospective new industries, because Pennsylvania is in a position to offer not only a plant, but also a trained labor force without capital investment by the new industry. In some cases we have trained new employees for industry in the employer's plant on the machines which will be used for regular production, and at no cost to the employer. (There is relatively little cost to the State for such programs in some cases, because the items produced in the training program, such as shoes or clothing, can be used in State institutions.)

Many other unemployed persons have received training under such programs to accept employment in already-established businesses or institutions. We have trained unemployed persons to become self-supporting as truckdrivers, practical nurses, food service supervisors, welders, painters and paperhangers, power sewing machine operators and stenographers. The only fault we find with this program is that we are not doing enough. We have about 30 courses throughout the State, turning out graduates at the rate of about 2,000 a year, and we find jobs for about 85 percent of them. We believe that if we had enough money, we could put 10,000 people a year back on the employment rolls.

It should be kept in mind that all of the persons trained under these programs are unemployed. Many of them are taken off unemployment compensation or public assistance rolls, and all of them pay taxes on their earnings. Consequently, the cost of training is repaid in less than 2 years.

Industrial peace is another important aspect of our approach to solving unemployment problems in Pennsylvania. To promote industrial peace we have reorganized our State Mediation Service so that it can move promptly and intelligently to help bring industrial disputes to a satisfactory solution. Qualified professional mediators are available virtually on a 7-day-a-week, 24-hour basis, on call from either side to an industrial dispute. This service has proved very valuable, because we have been able to prevent quite a few disputes from reaching the stage where the employer would decide to shut down and move away.

But settlement of disputes is only one aspect of industrial peace. We are trying at all times to create the kind of industrial climate that makes intelligent collective bargaining possible without serious conflict. To that end, we promote labor-management cooperation on a wide range of matters, including industrial safety, training, and retraining, a good business climate, productivity, legislation, etc. As labor and management continue to work together on other matters outside the sphere of work contracts, we feel that they will be able to work together more cooperatively when they turn to collective bargaining. This does not mean that either side gives up any of its rights, but rather that both sides deal with each other in good faith and in full realization of the other's point of view.

These programs are the core of our approach to the problems of chronic unemployment in Pennsylvania. They include a fair tax climate for business, vigorous industrial promotion, low-cost full financing for new industrial plants, training programs for workers for new industry, training of the unemployed for unfilled jobs, and the promotion of industrial peace.

We feel we are doing everything within our power to help ourselves in our communities and in our State as a whole. We are hope-

ful that Federal help for areas of chronic unemployment will be forthcoming in 1960. With such aid, we are confident that Pennsylvania will once more make its full contribution to the prosperity of the Nation.

Men of Maine: Herbert W. Kitchen

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. McINTIRE. Mr. Speaker, Herbert W. Kitchen exemplifies the tradition of the farmer in northern Maine who by combining personal initiative with good business judgment not only builds a career as a businessman but also seriously assumes his obligations as a citizen by serving his State and community in elective offices.

It is my privilege to claim Mr. Kitchen as a friend, and this is a rich treasure. This friendship and the counsel he has given are, for me, highly prized possessions.

As a tribute to this first-class citizen and my good friend, I insert into the RECORD an article from the March 5-6 issue of the Bangor Daily News:

MEN OF MAINE: POLITICS HIS AVOCATION FOR 50 YEARS, HERB KITCHEN STILL ACTIVE ON HIS FARM

(By Dean Rhodes)

PRESQUE ISLE, March 4.—For more than half a century, politics has been a driving force in the active life of Herbert W. Kitchen of this city.

He ranks it next to potato farming, his first love. But he says with a wry smile:

"If I had kept out of politics I would be a rich man today. It costs a lot of money to be in politics, but I've always been interested in community affairs."

It is difficult, however, to detect any real regret on the part of this tall, angular farmer who played a major political role in county and State politics for more than 50 years.

In fact, only a quirk in the State constitution prevented him from becoming his party's candidate for governor.

Kitchen was born in Canada and the State of Maine constitution requires U.S. birth as a qualification for office.

STILL ACTIVE

Although in his seventies, Kitchen is still active on his 175-acre potato farm.

He says it isn't the biggest potato farm in Aroostook, but he boasts, with a smile, "I haven't missed a potato crop on it since 1903."

This Aroostook County farmer has also taken the time to serve in the Maine Legislature six times—four times in the house and twice in the senate. He has served a 6-year term as Aroostook County commissioner and was chairman of the county's first potato tax committee.

But he pointed out: "I've led a pretty simple life. My highest ambition when I started was to have a bathroom and a fireplace. I worked hard until I was 60."

Kitchen continued, "I raised Aberdeen Angus cattle for 30 years here. Also I used to raise hogs. Farming and hogs go together. You feed cull potatoes to the hogs and it's meat. About 10 years ago the price of labor became too high and I went out of the meat business."

"I started in here as a pretty young man and began to farm, in 1903, the year I was married."

Kitchen explained that in 1912 he remodeled the family homestead, adding a piazza "around the whole of it"—100 feet. "It's quite a job just keeping the snow off it in the winter," he stated. Then he told of how the roof of the old house was raised and of how a story-and-a-half farmhouse was made into a two-story home. Elm trees were planted along the drive and along both sides of U.S. Route 1, he said.

The Kitchen farm is composed of land on both sides of U.S. 1, about 4 miles north of Presque Isle.

LOT OF WORK

"I did a lot of work when I was a young man and spent a lot of money," said Kitchen. "That windmill out there was built to let folks know where the Kitchen farm is."

He confided that he and a colleague, the late A. T. C. Wilson of Presque Isle, inspired legislation which changed Presque Isle from a town into a city, in 1940. "It got to a point where you couldn't handle a town meeting here," he explained.

He mentioned the years in which he served as a member of the Maine House of Representatives—1923, 1925, 1927, and 1929. And he spoke of being a State senator in 1931 and 1933, and of later becoming county commissioner.

"You should have heard the first speech I made in the Legislature," he went on. "I was green and I thought I represented quite a community. I got up and looked around and saw that large gathering of lawmakers and became stage-struck. I couldn't say a thing."

"Well, they used to say: 'Put Kitchen in; put Kitchen in.' A Lewiston paper approached me on the subject of being Governor after I retired from the Legislature, about 1936. They had quite a campaign on to get a man from up here as Governor. They thought I was a great fellow."

"But I was Canadian born. I was born in Jacksontown, N.B., near Woodstock, and according to the Maine constitution you have to be a U.S.-born citizen to run for Governor."

He concluded: "I'm interested in everything yet. I'm not as active as before."

FAMILY AND FARMING

The talk was now about his family and farming. Kitchen said: "In 1839 my father brought a large family—4 sons and 5 daughters—to this place from Canada. He began a farm. The original farm was about the size of today's farm, but only 70 acres were cleared. Back over the hill were stumps and cutover land. It is a very convenient farm to work. It's easy to get about walking."

He said that in 1901 his father died on the day President McKinley was shot. Kitchen soon began farming for his mother. In 1903 he bought the farm from his mother and married the former Annie Greenlaw of Presque Isle. After obtaining ownership of the farm he paid off two mortgages. His mother died in 1924.

When he was 21 he became a naturalized citizen of the United States and began to vote Republican. He attended a Portland business college for two terms.

Kitchen's daughter, Alice, is married to Charles A. Towle, who helps run the farm. A grandson, Herbert W. Towle, has completed 2 years' service with the Army and is home. Kitchen hopes to form a farm corporation with his son-in-law and grandson.

"I've grown up in the potato business," said Kitchen. "The farther I go in it the less I know about it."

"We've lost the spirit of speculation," he said, "partly due to the operation of hedging. But it's been an interesting game."

The Real Castro—III

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the third in a series of articles by Joseph Martin and Phil Santora currently appearing in the New York Daily News. This installment is in today's issue, March 8, 1960.

The more I read this series about Fidel Castro, the more I am puzzled as to our whole attitude in these matters. For example, I should like to know why this Communist stooge was allowed to take over Cuba? Where was our intelligence? Why did we not have someone join Castro's forces in the Sierra Maestra so that we could learn of his Communist background and affiliation? Why can we not try to prevent things? Why do we always wait for something to happen before we act? If such questions had been raised before, we could have saved ourselves many headaches today.

The article from today's issue is as follows:

THE REDS' BOY LOLLED IN LUXURY

(By Joseph Martin and Phil Santora)

The traditional portrait of Castro the revolutionary is that of a bearded hero with a rifle tucked underneath his arm, silhouetted against the blue sky of his native Oriente and peering keenly at the next mountain top for evidence of Batista patrols.

It's a nice, dramatic picture beloved by photographers and picture editors. But the picture painted of Castro by the men who lived with him in the Sierra Maestra, who knew him better than anyone else, is somewhat less flattering.

The News team interviewed four men who knew Fidel in the mountains. They were questioned at different places, at different times, and only two of them were acquainted with each other. However, each gave practically the same story of the real Castro, the Latin fuhrer who inspired other to do his fighting for him while he lolled around exercising his massive intellect.

HE FOUND CASTRO WORSE THAN BATISTA

"I joined his forces," said an ex-revolutionary, "because I was against Batista. Now I see that Castro is worse than Batista. I thought Castro was going to be good for our people. Even after I knew he was a physical coward, a glutton and a tool of the Reds, I stuck with him in the hope he would be content to sit back and allow a man with character to run the government."

"I was wrong—as were so many others who fought for him and died in the mountains."

"He had a high-powered rifle with a telescopic sight and he would aim it down a mountainside, fire it a couple of times and shout—like a child, 'I got him. I got him.' We never found the body of the so-called victim."

"He sent us to fight, but he rarely fought himself. He acted like a scared man underneath the bravado. He used men as carelessly as he used bullets for his rifle. He was a pitiless, two-faced man who cursed his followers, and took away any dignity they might have had, and even sacrificed them for propaganda purposes."

"I remember vividly one man who was Castro's personal professional killer. He obeyed orders without question. At the time, Castro's popularity was waning with the local farmers, whose support he needed. He had to do something spectacular to show them he was a friend.

"A mountain girl became pregnant and Castro accused his pet assassin of having a romance with her. We all knew it was someone else, but that made no difference. He had the man tried and executed. In this way, he showed the farmers he would kill his boys if they got out of line."

There were few men in the mountains in the early days of the revolt. Newspapermen came to see Castro and, to impress them with the size of his forces, he would order a troop of his bearded followers to march by a half dozen times or so.

A CURIOUS CAMP AND LOTS OF MONEY

It was a curious camp. Castro was accompanied everywhere he went by Celia Sanchez, a cold-faced woman who resembled a Rasputin in skirts. She kept tabs on the money. And there was plenty of money.

"Once," said a man who was close to Fidel, "Carlos Rafael Rodriguez, an active member of the Communist Party in Cuba, arrived with a dozen men loaded with money. It came to \$800,000 and Fidel hugged him and shouted: 'Now we're ready to win the war.'"

Rodriguez also brought him books—"Mein Kampf"; the life of Maceo, a great Cuban patriot; a manuscript on Chinese guerrilla warfare written by Mao Tse-tung, and a history of the Russian Revolution. These he read avidly.

Castro read other things too. The News team uncovered a letter to Fidel by his old Red mentor, Alberto Bayo, the highly professional Spanish Communist who had trained Castro and his men in Mexico. It is one of several sent to Fidel by Bayo. It is dated March 8, 1958.

A BLUEPRINT FOR AGITATION

It states: "Start activating a program of agitation on a large scale to encompass the most important cities (in Cuba). Begin with your active groups to terrorize the population, using bombs, petards (stink bombs), Molotov cocktails, lighted matches in public vehicles, etc.

If this fails, or if you see that the people don't respond, begin a wave of sabotage aimed in particular against the sugar centers of the interior. If this also fails, then start with personal attempts on the lives of individuals belonging to the armed forces and the police.

"Endeavor to use for this task minors, because the police are scared of being tough with them for fear of public criticism. When this happens, use the written propaganda. Have the women in your group wear black dresses to impress the people further—this always gives a good result."

The effect of this last was felt when the chief of the women's groups, Dr. Martha Prada Barraque, organized such a demonstration to convince U.S. Ambassador Earl Smith that Batista's men had butchered Castro followers in Oriente Province. Most of the weeping widows were phonies.

Microfilmed copies of the letter, as well as others, were delivered to Castro in the mountains by a newspaperman close to the revolutionary forces.

HOW TO IMPRESS THE MULTITUDES

Another letter from Bayo advises Castro that, if he should win, he should wait until all his men occupied key positions in the capital's civil and military command and then tour the backward and impoverished areas of the country so that the multitudes would acclaim him.

Castro, as any student of recent history knows, carried out these instructions to the letter.

Castro mistrusted his men. The money he received from outside sources was always kept near his bed. As usual, he was drinking a great deal—the inevitable Castro cocktail—benzedrine washed down by cognac.

"When we moved," said an ex-aid, "he would remind us not to forget the bottle. He had an insatiable appetite—eating enormous amounts of food with his hands and wiping his mouth on his sleeve. Occasionally, he received a shipment of caviar and would gorge himself. Cigars were flown in by helicopter.

"He flew into terrible rages at the least provocation. In April, 1958, a general strike was to be called. It fell through. Faustino Perez was the chief of the 26th of July group in Havana and it was his responsibility.

"Castro said things to him that would make your flesh crawl. He called him names no man could possibly take in front of others. He even wanted to execute Perez, as well as Vilma Espin, who later was to marry Raul Castro. She was at that time a chief of the 26th of July movement in Santiago."

WAR—WITH WHISKY FROM A HELICOPTER

It was a strange war, Maj. Gen. Eulogio Cantillo, a Batista aid, was currying favor with Castro by sending cigars, whisky and American cigarettes in a helicopter.

Cantillo apparently was playing both sides. He and Fidel reputedly made a deal under which Cantillo would surrender after the revolution took place and be freed. He's in jail now, serving a 10-year sentence.

Raul Castro was with his own troops on a parallel mountain range during these months—on the Sierra Cristal. He often made deals to get munitions earmarked for his brother.

"Castro and his rifle were a joke," said an ex-Fidelista. "He would get a new shipment of rifles and insist on testing them personally. On such occasions pigs, sheep, cattle—anything that moved and didn't wear a Batista uniform—were in great danger.

"He would pot them from easy distances. Once, he shot a dog belonging to a little farm girl. The peasants in Oriente don't have much in the way of personal possessions and the child's heart was broken. Castro airily waved at one of his aids and told him to give the girl \$20—as if that could pay for the loss of her pet."

SOME MONEY CAME FROM THE SUGAR MEN

Some of the money Castro was getting for the munitions his agents were purchasing in Mexico, the Miami area, New York and Belgium came from a "squeeze" on sugar mill owners. It was the old protection racket—you pay 25 cents a bag to the boys and they'll see you don't have fires and other accidents.

Another source was the shopkeepers throughout the island, who had cups underneath the counters for "extra change."

And there were the Red groups headed by Dr. Ernesto (Che) Guevara, today the top brain truster of the Castro government.

The communism with which Fidel had been flirting now became the seducer. The affair began to bear fruit. Months later it was to involve an unsuspecting Catholic clergyman, Father Maximiliano Perez, a Don Camillo sort of Cuban priest, who had real cause of anger against Dictator Fulgencio Batista.

The priest's father, Catalino, was leader of the Authentic Party in the town of Guirade Melena in Havana Province. During an argument at election time, he was beaten to death by two Batista men at a polling place.

THE PRIEST BELIEVED IN CASTRO THEN

Father Perez contributed \$100 a month to the Castro cause which he cajoled from his poor parishioners. He hid and transported arms for the revolutionists in the mountains. He harbored Castro agents in the rectory. He believed in Castro without reservations.

Father Perez recalled:

"After Batista fell, I became temporary mayor of Managua, at the request of the townspeople. I was there only 15 days. During that time I became disillusioned. I saw Castro soldiers rape girls in the street. I witnessed all kinds of brutality."

But his disillusionment was only beginning.

Last August, Father Perez drove to the town of Trinidad on church business. He was stopped at a roadblock set up by soldiers called to quell a threatening rebellion. The stocky, 41-year-old priest showed his 26th of July identification card, assuring the men he was a Castro follower.

"The guards were Spanish, not Cubans," he said. "There were also Chinese, French, and Americans in the groups I saw in the town. I completed my mission and was on my way out of town when I was stopped. I again showed my card, but they took me to headquarters set up in a police station.

"Celia Sanchez, Fidel Castro, and Camillo Cienfuegos (chief of the army, whose later strange disappearance has never been officially solved) were in the headquarters. I pointed out that for years I had been helping the movement."

Several days later, Father Perez said, Castro insisted that he accompany him in his private plane to Havana.

"In the plane" said Father Perez, "he finally came to the point he wanted had to make. He's a devious man and he thought I was off guard. He said to me: 'How would you like to head a national church?' Nationalization of the church is the most common of totalitarian tactics.

"I told him, 'Fidel, you build the Cuban Catholic Church, I won't.' He changed the subject but came back to the original topic many times during the short trip. He told me that the church should have certain changes, that there was a great deal of corruption, that the church was decadent.

"He was disgusted when I flatly refused to have anything to do with his plan. At the airport, I was permitted to walk away."

Father Perez finally got back to his parish in Punta Brava, but it was under different conditions. He was constantly under guard, his telephone was tapped.

On December 12, 1959, he left Cuba. The last mass he celebrated was before a small group. Two bearded rebel soldiers stood guard.

"Several years of my life were gone," he says sadly. "I had committed the grave error of disagreeing with Castro. I should like to appeal to the Catholics of the United States to meditate on the great danger of this madman—my former idol—establishing a Communist government in the Americas."

Another supporter of the Castro revolution had bitten the acid dust.

Religion in the Public Schools

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

MR. MULTER. Mr. Speaker, I commend to the attention of our colleagues the remarks of Rev. Jay M. Logan, of the First Presbyterian Church of Decatur, Ill., to the Decatur public school administrators with respect to sectarian religious observances in the public schools, with special reference to the 1959 all-city high school vespers of Sunday evening, December 13, 1959.

Reverend Logan's remarks were as follows:

I apologize for interrupting your busy lives. It could be said that I should adjust to the situation as I find it in and around the Christmas season, especially wherein I find conflicts with the public school in programing and personnel.

It was not my intention to be stumping again about the popular observances of Christmas in Decatur. Very few will feel that I am pursuing a fruitful effort. It is possible that it would be hard to find ministers who agree with me. I have no assurance of any support for these views.

Feeling that I must accept the inevitable and keep off the stump, I projected fall vespers for the six Sunday nights prior to Christmas. That was exactly the wrong thing to do. The community's (and our church's) mind was elsewhere. The climax came last Sunday night when I tried a presentation of "The Search for Meaning" over against the annual high school vespers. We got whipped to death. Even my own family was caught by the school program and not one of them could be at his own church on a Sunday evening.

Following our service, I drove around Decatur to see if the other churches which cooperate actively and philosophically with the public schools were alive. Each, as far as I could observe, was as dark as a tomb. I assume that there was not one youth meeting held among these churches last Sunday evening. Very likely, most all regular observances were canceled.

Consequently, chaffing under the situation, I wrote and destroyed two letters to Miss Charlotte Meyer and finally called by phone. This meeting is a result of that phone call.

It would seem to me wise to look at this matter from three directions—the church, the school, and most of all, the youth with his family.

I. THE CHURCH

Decatur's church Christmas is a sad one. The association of commerce, the junior chamber of commerce, the downtown merchants' association, and the public schools all assume the office of theologian at this season. Each, with his own reasons, does so at an early date.

When the church's turn comes the spirit of the season has been sapped, the songs have been sung out, the youth have already been to Bethlehem; an anticlimax is insured.

No church can begin to do what the school, with the truant officer and tax funds, has already done. The church's effort at pageantry seems meager and inadequate—even when it does its very best. The church turns to ludicrous outside displays, frantically searches for newness, and enters the new year defeated at its own business. Some churches get on the bandwagon and point to the State-supported pageant as their own. But, deep in their hearts, they wish for a truly significant chance at their own bias within their own sphere.

I doubt if there will be a significant expression of Christmas among high school youth in any Decatur church this year. For them the occasion is now done. The annual Christmas Eve vesper under the youth council will be weak and poorly attended. At First Presbyterian, as the vesper at Decatur High drew nigh, all our youth dropped out of choir work. When Westminster Presbyterian together with Millikin, put on its Christmas vesper service, there was not one high school student involved.

These two churches have full-time ministers of music, trained in the music of the church. Both have their youth volunteers absorbed by a sister institution which has a huge number of captive participants, extensive hours of practice, and tax funds for both leadership and supplies. The competi-

tion is simply unfair and, in my opinion, disastrous for the church.

The Christian church has two possible festival seasons: Christmas and Easter. They are of life and death dimensions to us. In many respects Christmas is our most colorful time for pageantry. It is a witness to our basic doctrine—the incarnation. Our future depends upon a serious and joyful witness to this belief. If we fail here, our future is truly problematical.

Our treasury from the past is the scriptures, the carols, the wise men, the stable, etc. We have nothing else if this is taken from us. It has shocked me to observe other institutions walking right over to take this treasury away; and, unbelievable, often with the approval of the appointed treasure-keeper—the church.

Undoubtedly, it can be charged, and the charge supported, that the churches do a poor job. Certainly, we do not do a perfect job. We need the help of the public school to undergird our use of language, music, reading, group experience, etc. But, it has been our understanding that the public school would not attempt to replace our unique area of service to the community. We believe we are better trained to do it and that we have the responsibility for the total religious requirements of the individual; the sacraments, marriage, a regular worship throughout life, and the final burden of taking the person to the gates of death.

It seems inconsistent and inconsiderate that you should dip into our material at its most colorful point to make a public presentation and then turn your back on the much more demanding tasks involved in the total religious experience of the person. I shudder at the results achieved in other countries where the state has taken over responsibility for religion. Our church health depends upon a struggle to win people. But we need a fighting chance without the kind of competition the public school represents.

II. THE PUBLIC SCHOOL

Religious affairs in the public school inevitably create tension. The school's function is not in the direction of sectarian faith. The public school serves people of every religious persuasion. To choose one and intimate that this is the position of the school is to embarrass the constituents of the school.

It is unlikely that the public school is ready to support the doctrine of the virgin birth of Christ. It might rightly teach that some Christians believe this to be true, but no school, dealing objectively with a mixture of pupils from all kinds of families, can be the spokesman for even the Christians at this point. The presentation of the Nativity scenes throws the school right into the middle of theological controversy on which the churches themselves are not agreed.

Further, having done this much, it must be clear that Christmas should not be held in suspension by itself. It is part and parcel of a total theological involvement which no public institution in America is in a position to handle.

If the school wishes a winter festival, there are many places to get material which will not create community tensions. The choice of a month other than December for a production would also seem better. It would take some of the clutter out of the Christmas season. Certainly the school would not then choose a Sunday evening to present its program. The fact that high school vespers are held Sunday night is further evidence that the school is mixed up on its true function in society.

During December, I have had occasion to inquire into the college work of three youths who graduated from Decatur public school

this past spring. Each is an above-average person. Each is finding college over his head and is embarrassed over college class results. Could it be that while working on public productions the basic job of the school has been neglected?

Each of these three is an inadequate reader. Each is stumped by the amount of material required to be read by the college professors. Would we not all be happier and better equipped for life if the public school stuck more closely to its basic educational job?

There is always the question of the legality of sectarian programing in an American public institution. There is a place in our philosophy of public education for courses about religion. The history of the world would be strange and untrue if religion were left out. However, it is not the history of one religion. We are a nation of religious pluralism and this is one of our national glories. To program as though this were a Christian nation with a state church is to run counter to our best tradition and to step over the line of the Constitution.

III. THE CHILD AND HIS FAMILY

This is probably the most important side of the matter. A child comes to school to get the basic tools for intelligent living. During his limited time he must be prepared to the fullest of his capacity to meet the crises of his future. Regardless of the religion of his home, he does not come to school for indoctrination.

If he is a Christian, he will get the religious nurture he needs at his church. This will include whatever his church believes is a well-rounded religious diet. He may refuse to follow his parents' religion. He may not care for the majority religion. His Nation insures him freedom at this point. This freedom is one of his most precious possessions.

If he comes from a family with no religion and the school involves him in Christmas and Easter festival occasions, he gets a fragmented view of Christianity under involuntary circumstances. His religion must be in the permissive realm. He must choose it. He will be weakened whenever faith is imposed upon him by an agency he cannot escape.

Further, he is not thereby prepared for full church life. When the public school puts him into Christmas and Easter functions, it prepares him to be a Christmas-Easter churchman. The church has an overabundance of these. If the school is to help this young person, it should hold the many choices before him in comparative fashion so he may see the full scope of any one faith, the many differences, and the costs of full participation. He may then choose where to put his lot if he wishes to be involved at all.

If he is of a minority faith, it is unkind to produce a setting in which, as a young person, he must choose between his religious loyalty and the school function. The social and educational pressures imposed on a minority people by our present school religious observance are both unnecessary and harmful.

The family which goes along with the program as now administered assumes that sectarian religion is the business of the State-supported institution. This cannot possibly prepare such persons for the best kind of church stewardship. The church prepares, at heavy expense, a well-rounded program of regular worship, sacraments, church school, missions, group participation, stewardship, etc. When anyone feels that the school has done an adequate job, the church must, sooner or later, give him a complete reeducation.

What is needed is some vital and objective information about the program of the church in relationship to the community, the Nation, and the world.

In closing, the Nation needs each of us at our own posts doing the best we know how. We should encourage and supplement each other. We will each see weaknesses in the other's program. But, we should both resist with all our beings the temptation to take over the field of service for which the other is best qualified and for which society has called the other institution into existence.

The community has a right to expect that those of us who administer these areas of life will be far out head of the people in understanding what is needed for the welfare of society as a whole. It also has a right to expect that we will stake our lives, at least our positions, on the truth as we see it. If the people cannot count on our sincere leadership, even when we run counter to their wishes, we have no right to our leadership.

Again, I regret absorbing your time. I value your friendship and think highly of the Decatur Public Schools. I have no intention of withdrawing my support from your overall excellent program. If, in your sincere judgment, these thoughts are in error, we at First Presbyterian are prepared to adjust ourselves away from the conflicts we have experienced this year.

I cannot promise to forget my dream of what seems to me to be right. Nor can I promise to feel good when I see the "wise men" of today riding away from Bethlehem with our treasure.

The Juvenile Court: Past, Present, and Future

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. KEARNS. Mr. Speaker, under permission to extend my remarks in the Record, I wish to include a copy of the talk given by Judge Oram Ketcham, Judge of the juvenile court, at a dinner of the Federation of Citizens Associations, which I attended at the Mayflower Hotel, Saturday, March 5, 1960. I enjoyed it so much that I thought it should be called to the attention of others not privileged to attend. His remarks follow:

THE JUVENILE COURT: PAST, PRESENT, AND FUTURE

Mr. Norwood, distinguished guests, ladies and gentlemen, it is truly a pleasure for me to be asked to speak to such a large and representative group of citizens about the juvenile court. And I am especially glad to participate in this 50th anniversary celebration of the Federation of Citizens Associations. You are, I'm sure, justly proud of the record of civic endeavor and community achievement which you have compiled in the half century just passed.

A 50th anniversary is always a propitious moment. It reminds us of many accomplishments already achieved, of obstacles met and surmounted. But its significance should not be limited to the past. There is also a need to look to the future. And with an organization like the Federation of Citizens Associations it is reasonable to look to the future with the confidence and hope derived from prior success. Such an anniversary is, in short, an appropriate vantage point from which to scan both backward and forward. By way of contribution to

this celebration I should like to share with you not only the satisfaction of accomplishment which another agency of civic action is experiencing as it plunges into its second half century of operation, but also the fervor of its promise for the future. The juvenile court of the District of Columbia was 50 years old on July 2, 1956. I would like to illustrate to you how the current operations of the juvenile court differ from those in the past, and what you may reasonably expect it to contribute to the improved Washington of tomorrow toward which we all look.

My story begins less than 4 years prior to the founding of the Federation of Citizens' Associations. According to the first annual report of the court, it was on Monday, July 2, 1906 that the Juvenile Court of the District of Columbia was put into operation. No. 1816 F. Street, NW. was the location of the court. The report recites the names of a number of the Washington dignitaries attending the festivities of the first day. In addition to the details of the inauguration ceremonies, the report includes the announcement of appointments to the court, as made by Judge DeLacy, the first juvenile court judge. There were appointed a clerk, a chief probation officer, an assistant probation officer and, as those of you with a practical turn of mind will have already guessed, a janitor. Since then, two world wars, enormous technological advance and substantial change in patterns of schooling, church and family life have intervened. And, as you will presently see, the jurisdiction and the responsibilities of the juvenile court have been steadily growing ever since it first opened its doors.

Even with its sole judge and small staff, the newly created juvenile court represented (in 1906) a significant step forward in the public's procedures for dealing with juveniles. As all of you will recall from the novels of Charles Dickens in past centuries, the treatment of children and adults charged with criminal offenses was substantially identical. Whether prankster or hoodlum, the child was subject to the same laws, held to the same level of responsibility, and could be committed to the very same jail or prison. The conditions of filth, drudgery, brutality, vice and other forms of criminal contamination to which children were subjected in those days shocked the conscience of the community. It was largely for the purpose of correcting such things by providing a separate method of handling children who violated the law that the juvenile court was established.

The first juvenile court in this city was given jurisdiction over two categories of children—those who, prior to their 17th birthday, committed misdemeanors, and those who were neglected, abused or dependent. As a logical corollary, the court was also given jurisdiction over adults who mistreated children, refused to provide for them or contributed to their unlawful behavior. Thus, the earliest statute made it clear that the court had a dual purpose—to correct the illegal activities of children and to protect children from paternal and adult abuses. To effect these purposes, Judge DeLacy was authorized to commit a child to one of the available houses of correction, to transfer custody to the Board of Children's Guardians for placement in a foster home, or to place the child on probation.

Although quite commonplace even in adult courts today, probation was a novelty in 1906. Judge DeLacy, in his annual reports, laid great stress on the value of probation as a method of strengthening the child's family tie, which in his opinion was the most important influence in a child's life. Commitment to a house of correction necessarily severed that important tie, sometimes forever. Moreover, probation was then and is now an economical procedure. In those days of harder currency, it only cost \$150 a year

to keep a child in a reform school. Today it costs about \$2,700 per year. Nowadays it costs about \$250 a year to supervise a juvenile while on probation—less than one-tenth of the cost of maintaining him in an institution at public expense.

We do recognize, however, that probation has its limitations. Some months ago I placed a boy on probation for auto theft. One day he was late for his probation appointment. So he stole another car in order to drive to the court in time. For him probation was not a success. It was revoked and he was committed to the National Training School for Boys.

To summarize the situation in 1906, the juvenile court represented a true innovation in traditional legal methods of dealing with children. It was a court physically and jurisdictionally separate from adult criminal tribunals; it possessed the functions of protection and care as well as that of coercive regulation; and it provided the judge with flexibility and discretion in disposition which was the beginning of "individualized justice" as we now practice it.

During the three decades following the establishment of the court in 1906, not only did the city of Washington grow but so did the court's jurisdiction and responsibilities. The growing awareness of the profound influence exerted by adults, particularly parents, upon the actions of children resulted in Congress giving to the juvenile court the duty of administering a variety of laws regulating adult-child relationships.

Bringing my story up to date, the court in 1938 was overhauled and the original organic law replaced by a statute based on the model Juvenile Court Act recommended by the National Probation and Parole Association and the U.S. Children's Bureau. Experience has shown this law to have been drawn with both wisdom and imagination. The significant innovations made when the juvenile court was first established were further implemented in the new, noncriminal act of 1938. The court's jurisdiction was expanded to include all types of law violations committed by children prior to their 18th birthday as well as truancy, incorrigibility, and other dangerous or disruptive activities. The court was made a court of record, instead of a police court, and was given the authority to transfer felonies committed by older juveniles to the U.S. district court. Its probationary powers and staff were increased. And the new act gave the court added criminal powers for dealing with adults whose actions affected the lives of children. In summary, the 1938 Juvenile Court Act provided all the jurisdiction necessary to permit individualized justice for children.

Later, in 1951, the Congress further added to the court's adult jurisdiction by enacting the Child Born Out of Wedlock Act, which gives at least economic protection to the illegitimate child. This legislation requires the court to establish the paternity of children born out of wedlock and, thereafter, to insure their economic support and education until the age of 16. As the result of this statute nearly 5,000 fathers are currently on probation to the juvenile court.

Many of these cases provide us with pathetic problems. But, as I'm sure you are aware, pathos is one of the chief ingredients of humor. So I am reminded of one of my occasional additional duties—the performance of marriage ceremonies. Frequently the request comes from two of our clients who already have several illegitimate children. In one of my most carefully reasoned decisions I have ruled that children shall not be invited to the wedding of their parents.

So today—54 years after its creation—the juvenile court has grown in many ways. From a police court for children with jurisdiction over misdemeanors committed by those under 17, it has become a plenary

court of record with jurisdiction over all offenses committed by children under 18—from mischief to murder. It has also acquired a wide range of jurisdiction over adults whose acts affect the lives of children; so much so that today more than 40 percent of the court's time is devoted to such adult cases. And the court, like the Federation of Citizens' Associations, has watched Washington grow from a quiet town of 300,000 people to its present urban population of 830,000, and the population of the total metropolitan area population has increased from about 350,000 in 1906 to over 2 million persons today (a sixfold increase). To meet the increasing demands on its services, the court's staff has grown from the original 5 to the present 97.

But one feature of the juvenile court remains the same as when it was first organized. The juvenile court was created in 1906, with one judge. It was revamped and reorganized in 1938, with one judge. And in 1960, there is still only one judge. During the same period of time, the judicial manpower of the municipal court has gone from 7 to 16 judges, plus the addition of a 3-judge municipal court of appeals. The district court of the United States has increased from 5 to 15 judges, and the U.S. court of appeals has tripled in size, from 3 to 9 judges. As a final measure of comparison, the strength of the Metropolitan Police Department of the District has risen from 731 men in 1910 to 2,508 in 1958.

Therefore, it is with regret, but candor, that I must report to you tonight that the Juvenile Court of the District of Columbia is no doing all that it should or could do to assist this community in its fight against delinquency, dependency and neglect. In the last few years we have resorted to a variety of devices in an effort to reduce the number of court hearings before the judge. But there is an absolute limit to what one judge can do to stem this tide; and that limit was reached long ago. The sad fact is that the absence of additional judges has created a bottleneck which seriously hinders the progress of the juvenile court as well as the many other agencies and organizations which are trying to make our city a safe and wholesome place for adults and children alike.

What has this bottleneck meant? It has meant a substantial failure of justice and law enforcement where it is most needed—in training the youth of the community to be the law abiding citizens of the future. In at least five ways is this evident.

First, juvenile court justice, under present circumstances, is not swift. The court has a large and growing backlog of cases awaiting adjudication. On January 1, 1960, there were 1,390 cases (401 juvenile cases and 989 adult cases) awaiting hearing. In juvenile cases this means a delay of 2 to 3 months before their cases are heard; and with adult cases, the delay is in the neighborhood of 7 to 9 months.

Secondly, because of the backlog and its accompanying delay, the court's justice is sometimes uncertain. The recollection of witnesses grows dim as the months pass and in many instances complainants cannot be located by the time of the trial.

The third point is that the court's justice is often unequal as between different juveniles who are awaiting a court hearing. Since the trial will be months away, the court must choose between detaining the child in the receiving home for a long period (at substantial public expense) even before it is determined whether he is delinquent or not—or releasing the child to the custody of his parents while waiting for the hearing. If the first course is taken, there is always the possibility of unjust confinement. If the latter course is taken I am always aware that the juvenile may again

violate the law before his trial can be reached.

Fourthly, a single judge cannot give enough time to each court hearing to allow for normal judicial reflection or analysis. When you must adjudicate and dispose of over 100 cases a week the process is similar to that of an assembly line in proceedings which, more than in any other court, warrant individual treatment and compassionate understanding. With such hasty determinations there is always the possibility of ill-considered justice.

And finally, the present situation means costly justice for you as citizens and taxpayers. If, on the one hand, the court commits to a public institution a youth who might have been corrected while still at home, you citizens foot the bill of \$2,700 per year for his care while at the institution. While I fervently hope that none of them is unjustly committed, the fact that there are now over 1,400 children in our public juvenile institutions bears tribute to the fact that the court is not unmindful of its responsibility for protecting the law-abiding citizens of Washington. I estimate that the maintenance of these 1,400 children is costing the District of Columbia over \$3½ million each year. On the other hand, if the court mistakenly permits a child to remain in the community who should be in an institution, one or another of you may be yoked on a dark street or have your car stolen and wrecked. I sincerely believe that there will be a great saving for all if such decisions are made with greater deliberation and more certainty than is now possible.

Thus, it can be said that, as a result of the present judicial bottleneck, the juvenile court does not afford the type of swift, sure, equal, and positive justice which sets a good example to the youth of this city. This seriously handicaps the administration of justice, hinders the court in its efforts to inculcate in children and their parents a proper respect for the law, and often denies the citizens of the community the protection to which they are entitled.

Turning then to the future, we find that the basic tools are at hand. But their cutting edge awaits the honing of an enlightened Congress. A noble and vastly promising concept has been embodied in the law. Community agencies, both public and private, designed to rehabilitate and wisely correct children have been created. Among these much credit goes to the youth aid division of the Metropolitan Police Department which was established in 1954 and to the child welfare division of the Department of Public Welfare which provides for most of the children committed by the court. But, to a large degree, the juvenile court is—and of necessity must be—at the hub of this wheel. I have the highest praise for the wise and devoted work which is being performed daily by the dedicated staff of my court. However, a judicial bottleneck exists and until the juvenile court is, by legislation, made adequate to the task assigned to it the community will never fully reap the benefits of this concept.

It is a pleasure to know that this powerful organization of Washingtonians is in the forefront of a host of civic groups who have endorsed the legislation passed by the U.S. Senate and now pending before the House District Committee to add additional judges to the juvenile court. Let us all fervently hope that this legislation will become law during this session of Congress.

In conclusion, the half century since the founding of the juvenile court in the District of Columbia has been a period of experimentation and progress. We are, I think, substantially closer to the goal of achieving a judicial tribunal which will adequately provide for children and protect the community.

The appellate courts have clearly established the fact that, however compassionate its approach, the juvenile court must operate as a court and not as a social welfare agency. Its function is to adjudicate legal issues which concern the rights and liberty of children and their parents. At the same time the court is also responsible, as a court of law and justice, for protecting the rights of citizens of the community to live in peace and safety. We at the court welcome the dual responsibility which these interpretations of our statute place upon us. Much has been learned, facilities have been expanded and improved, and more and better trained staff members have been obtained. Though much remains to be accomplished, given sufficient judicial personnel, I believe that the prospects are good.

Thank you for listening to me. It has been a pleasure for Mrs. Ketcham and me to share this celebration with you. I wish you and your fine organization even greater success during the next 50 years.

Six-Star Rank for General MacArthur

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. CURTIS of Missouri.—Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the St. Louis Globe-Democrat as follows: which I believe deserves everyone's thoughtful consideration.

SIX-STAR RANK FOR GENERAL MACARTHUR

General of the Army Douglas MacArthur has received virtually all the honors which a grateful Nation can bestow—with one exception.

He holds the five star rank of a general of the Army, the highest, along with three others of similar rank and four fleet admirals, ever bestowed to an officer during his active career.

He has been awarded the Congressional Medal and all of the Nation's other decorations. He has received the thanks of the Congress and innumerable decorations from other governments, as well as honorary degrees and citations by the score throughout the world.

He should, however, receive an even higher though honorary rank by having bestowed upon him the title of General of the Armies.

There is ample precedent for this in that this title was conferred upon General Pershing some years after the conclusion of World War I in recognition of his great services as our military leader in that conflict, and a similar rank of admiral of the fleets was bestowed on Admiral George Dewey following the Spanish-American War, although Admiral Dewey's services, without disparagement to that great naval commander, were completely trifling compared to later wars.

General MacArthur is, by common consent, the greatest general produced by America in this century and perhaps in all our history.

While he unquestionably has many years of life ahead of him, the Nation should not wait for his monuments in the future, but should bestow its recognition on him while the general can take satisfaction in this climax to a brilliant career unparalleled in our military annals.

The six-star rank for General MacArthur would in no way be a derogation of the

superb careers of Fleet Admiral Nimitz or of General Eisenhower whose places in history are entirely secure, nor could it be interpreted as a rebuke to President Truman who relieved General MacArthur of his command.

It is simply a past-due and merited recognition of the services of this great man who was the youngest general officer in World War I and cited for conspicuous gallantry, the Chief of Staff of the Army during the difficult days of the depression, the redeemer of the Philippines, the Supreme Commander of the Allied Forces which fought back to final victory against overwhelming odds in World War II, and culminating in Japan following the surrender, when he, by the force of his personality and the wisdom of his acts converted, in an administration entirely without parallel in the world's history, a fallen and embittered foe into a strong ally and devotee of democracy and a partner in the continuing battle for a free world.

We hope that the Congress will enact a bill giving General MacArthur the title of General of the Armies before it adjourns in the current session. This recognition will meet with universal acclaim.

Eisenhower Reassures the Nation

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. MCINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. MCINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include two articles from the Bangor Daily News of February 24, 1960:

EISENHOWER REASSURES THE NATION

President and Commander in Chief Eisenhower has relieved the uneasiness of the American people by declaring that U.S. defenses are a strong and trustworthy shield of peace. He assured his fellow countrymen that the nuclear-armed planes and ships and the missiles of United States are a solid deterrent against attack.

Surely none could speak with greater authority. He is a military man in his own right. And, as Chief Executive of the Nation, is in a position to appraise better than anyone the overall military picture.

Much of the criticism leveled at the administration's defense program comes from the Democrats in an election year. Thus it should be heavily discounted.

The Democratic Party is poorly qualified to pose as a preparedness party. Woodrow Wilson was going to keep United States out of war in 1916. He failed to do so and, moreover, the country was not ready to fight when war came.

The Roosevelt administration was caught with its guard down when the Japs struck at Pearl Harbor in 1941. And, again, our military forces were not in shape to strike back. United States took a drubbing before it could muster strength and reverse the tide of battle.

Then there was 1950, when the Truman administration fell asleep and Red North Korea invaded South Korea. Much American blood flowed in regaining the lost ground.

Some able and sincere military men feel that the Nation's defense program is not all it should be. It seems to us that the President has answered them as far as missiles and other defenses for large-scaled war are concerned. But what about preparations for deterring and extinguishing brush fire wars?

The Communists may not dare start a global holocaust but they have been successful with small piecemeal aggressions in the past and we assume they will try more in the future, whenever they see the opportunity. We'd like to hear the Commander in Chief's views on this phase of free world defense.

WHY SHOULD THE UNITED STATES STAND BY? EDITOR, BANGOR DAILY NEWS:

Communism, only now, is actively seeking to penetrate this hemisphere with an initial foothold in Cuba. At present, American and Cuban relations are steadily deteriorating to a point where it would have been better had Fidel Castro never come to life or power. Premier Castro is trying, and apparently with great success, to make a "people's republic" out of his country. He has rejected our friendship over and over again by doing such things as siding with the Communist bloc countries in the United Nations, by confiscating nearly \$1 billion worth of American capital by American investors. Those persons losing their property will get nothing more than a mere token from Castro.

What is Castro doing to us, the country that liberated Cuba in 1898? He has just recently made an agreement with the Soviet Union to sell her something like 345,000 tons of sugar at \$2.98 per hundred pounds which is much less than the world's market price for sugar. The United States buys nearly 3 million tons yearly of Cuban sugar at \$5.50 per hundred pounds, which is almost double what the world's market price (\$3.62) is and also what Russia will pay Castro for her sugar.

President Eisenhower has outlined a policy of "nonintervention" which is good to a certain extent but which is a poor example of how to answer the threat of a Communist complete takeover on our back doorsteps. Why should the United States stand by and treat Castro with smooth, polite diplomatic talk while he continues to work in the Communist cause which is to destroy the United States and all other democracies? This country doesn't have to buy sugar from Cuba and continue to pour millions into the Communist coffers. There are several other countries like the Philippines, Puerto Rico, and Peru from which we can buy our sweet stuff.

The United States has lost much prestige around the world, especially in Latin America, since Castro began lying, cheating, and stealing from us. But still our policy continues to be of nonintervention. At present there is much difference of opinion in Congress as to how to handle this situation. But some legislators are in favor of cutting all trade with the Cuban island. We must write our Congressmen urging immediate steps to halt any further trade with the Cuban Government. This is exactly what Congress needs to know: What the people back home are thinking, and if the people don't take more interest in what is happening in Cuba and elsewhere, then Cuba shall be wholly red.

LAWRENCE DOUGHTY II.

The Size of the Problem

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following

article by Walter Lippmann entitled "The Size of the Problem," which appeared in this morning's New York Herald Tribune.

The article follows, and I would certainly commend it to my colleagues:

THE SIZE OF THE PROBLEM

(By Walter Lippmann)

Here at home the overriding question is how to pay for the public needs of our growing population in an era when our social order is relentlessly challenged. These public needs include not only the rising costs of the race of armaments and the competition among the underdeveloped nations. They include also the rising costs of scientific research, of better public schools, of more adequate hospitals and public health services, public works, roads, water supply and sewage disposal, slum clearance and urban renewal.

There are some who will say that we cannot meet all our public needs without abandoning the freedom of our society. There are others of us who say that we must meet these needs, that we can meet them without sacrificing our liberty, and indeed that by meeting them we shall strengthen our liberty. This is the central issue of our time, and no one who is interested in public life can ignore it.

An excellent newspaper, which I read regularly and greatly respect, "The Wall Street Journal," said recently in an editorial that to argue, as I have done, that our public needs have to be met is to invite us to start surrendering our liberties in panic. For to meet the needs will cost a lot of money, and this will put us on the dreary road of statism and when the individual must face the faceless state, he has only as much free choice as the state chooses to grant.

This would indeed be monstrous if it were allowed to happen. How are we to make up our minds whether it will happen if we decide to devote to defense and to other public needs enough of our wealth to pay for them? One way to go about deciding it is to look at the problem quantitatively and concretely, and not abstractly and in generalities. Let us then look at some figures.

I am taking my figures from the Fourth Report of the Rockefeller Brothers Fund which was issued in 1958. It covers all Government expenditures, Federal, State and local, which are for the purchase of goods and services. It omits transfer payments which, like the interest on public debts, "do not make a direct claim on our production of goods and services." The report contains figures for the year 1957 and estimates for the year 1967. The report is, by common consent, I believe, expert, disinterested, and obviously it is not partisan.

In 1957 all Government purchases of goods and services came to \$86.4 billion. In 1967, if we meet the public needs for defense and other things which the authors of the report are agreed upon, the cost will be \$153 billion (in 1957 dollars). This gives us an idea of the dimensions of the problem. The question then is whether the expenditure for public purposes of \$153 billion in 1967 would revolutionize our society.

In 1957, when we spent \$86.4 billion publicly, we were taking 20 percent of our national production, leaving 80 percent in private hands. What would be the situation in 1967 if we carry out the programs to meet public needs which are recommended in the Rockefeller Report? The answer to that question will depend on our rate of growth in the next 10 years.

The Rockefeller estimates show that on the feasible assumption that our gross national product can grow at a rate of 4 percent per year, the share taken for public purposes in 1967, if their recommendations as to what is desirable are followed, would be only 24 percent, and the share left in private hands would be 76 percent. This would mean that

the rise in private consumption, which on the average has been 2 percent per year, would drop to 1.4 percent. We would not be raising our private standard of life quite so fast as we are now. But we would be raising our public standard and we would be doing it with three-quarters of our product still in private hands. No one can say that on these fairly conservative assumptions we would not still be a free society.

These figures make the assumption that we can grow only at a rate of 4 percent. If, however, we could raise the rate of growth to 5 percent, the position would be changed substantially. We would then be spending for public purposes 22 percent, which is not much more than the present share of our spending, and there would still be left in private hands 78 percent. At the same time consumption would be rising at 2.8 percent, which is above the average.

It is evident then, that the argument of the Wall Street Journal is based on an assumption which is not stated. The assumption is that the U.S. economy, in this age of automation, cannot increase its productivity fast enough to support our growing public needs. The figures I have cited indicate that if we can now achieve a growth rate equal to that of the years 1947 to 1953, that is to say, an annual rate of growth of 4.7 percent, instead of the 2.3 percent rate of the years since then, we shall be able to provide the needed public services while maintaining approximately the same ratio of public to private spending as we have today.

I am sorry to use so many figures. But they are necessary in order to put in its true perspective the size of the great problem of our era. When we look at this problem quantitatively, comparing our growing needs with what can be our economic growth, we may conclude that our tasks are big, which makes them interesting, but that they are quite within our capacity.

Thomas G. Masaryk

SPEECH
OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ADDONIZIO. Mr. Speaker, it is fitting that the 110th anniversary of the birth of Thomas G. Masaryk be commemorated by the issuance of a new postage stamp in the "Champion of Liberty" series issued in tribute to leaders in the cause of freedom everywhere.

The name of Thomas Masaryk will ever stir the emotions of those who love liberty, democracy, and learning. The emotions of inspiration, joy and sadness are mixed when the name of this statesman and philosopher bring to mind the struggle and the triumph which were inextricably his own and those of his beloved Czechoslovakia, but which for his country were to succumb to tragedy so soon after his death.

For the name of Thomas Masaryk and Czechoslovakia are in a sense synonymous. Not only was the Czechoslovakia which rose from the ruins of World War I almost wholly the result of his efforts. His writings had been the inspiration for the incipient movement for independence. His persistence at home and abroad brought about its very creation. Not only was his presidency simultaneous

with the beginning, the rise, and the peak of achievement of this new and truly democratic country. But the democracy which he had almost literally himself created, and which flourished under his leadership—the democratic era of the young republic Czechoslovakia—was to come to an untimely and tragic end just a year and a half after his death.

Was there ever before in all history a country so completely forged at the anvil of one man, so closely identified with his life, his thoughts, and his ideals? It was he, Thomas Masaryk, whose ideas gave birth to the movement which became the independent country Czechoslovakia. It was he whose efforts at home and abroad were responsible for the genesis of the new freedom loving country which was to become a model of democracy during its all too short span of independence.

This one human being who in the span of a single life accomplished so stupendous a feat, in his own origins and his life typified the rise of the democratic spirit at its finest. The son of a coachman, he rose through his own love of independence, his own diligence and learning to the presidency of his country. From a paucity of background he became renowned not only as a statesman, but as a sociologist and a political philosopher. It was the originality of his ideas, the independence in his written word, and his defiance of domination that were actually responsible for the origin and growth of the democracy he was chosen to lead until his resignation at the ripe old age of 85.

As he is remembered and revered today, so is cherished and honored that memory of what Czechoslovakia was, what it potentially is, and what it may be again. Not only Czechs the world over, but all who love freedom and true democracy find in the memory of Masaryk an inspiration and a hope for the future of his beloved country.

National Defense Student Loan Fund

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. AVERY. Mr. Speaker, the following is a letter received from Mr. Irvin E. Youngberg, executive secretary, the Kansas University Endowment Association, University of Kansas, Lawrence, Kans., concerning a report of the national defense student loan fund account at the University of Kansas.

I feel this letter merits the attention of every Member of Congress. The letter follows:

THE KANSAS UNIVERSITY
ENDOWMENT ASSOCIATION,
Lawrence, Kans., March 1, 1960.
The Honorable WILLIAM H. AVERY,
House of Representatives Office Building,
Washington, D.C.

DEAR CONGRESSMAN AVERY: We have just completed a cumulative report of the na-

tional defense student loan fund account at the University of Kansas for the Department of Health, Education, and Welfare, and I thought that some figures from our report would be of interest to you, especially since I understand that a supplemental appropriation of \$9.7 million has been requested for the current fiscal year by the President.

We have received a total of \$286,044 as a Federal contribution to the program. This has been matched, on a 1-to-9 basis, by \$31,789 contributed by alumni and friends for student loans.

Of the total of \$317,833 available to date in this way for the national defense student loan program at KU, loans totaling \$300,454 have been made to 518 of our students. The average is approximately \$585 per student.

We have \$17,479 on hand for the remainder of the current school year, the summer session, and commitments to new freshmen for next fall. Our request for the current year was reduced by \$63,687, an amount which I believe would take care of our needs quite satisfactorily for the rest of this year, summer school and for freshmen students entering next fall, and also the amount which we will receive if the requested supplemental appropriation is approved.

Representatives of the big eight schools meet at the time of the conference indoor track meet in Kansas City each year to discuss matters of mutual interest related to alumni and educational fund raising work. I was pleased to learn at such a meeting last week that our enthusiasm about the Federal student loan fund program seems to be shared by all of our sister institutions. Translating the dollars that we have received into terms of assisting Kansas boys and girls with a higher education makes the program, in my opinion, a most worthwhile one.

I might add that we feel that the program is being well administered by the Department. The people concerned with the program seem to understand and appreciate the problems involved from our point of view, and reporting and redtape have been kept at a minimum.

With best wishes, I am,
Sincerely,

IRVIN E. YOUNGBERG,
Executive Secretary.

The Economic Impact of Tight Money

EXTENSION OF REMARKS
OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ULLMAN. Mr. Speaker, I believe that all of the Members are aware of my strong feelings on the matter of tight money. We are all soon to be faced with an important measure which relates directly to this issue. Under leave to extend my remarks, I desire to enter into the Record an excellent address on this subject, made before the recent annual convention of the National Rural Electric Cooperative Association, by Dr. Horace M. Gray, of the University of Illinois. Professor Gray is a nationally known and respected economist who is a coauthor of the book, "Monopoly in America." I commend his remarks to all in the confidence that increased awareness of the facts relative to this

issue will assist this House in making the decision which is required by the best interests of our Nation and its people.

The address follows:

THE ECONOMIC IMPACT OF TIGHT MONEY

(By Horace M. Gray, professor of economics, University of Illinois, before the National Rural Electric Cooperative Association, St. Louis, Mo., February 22, 1960)

Tight money, as rationalized by its defenders, is a natural phenomenon, which arises from an excess demand for money operating against a limited supply. Under such circumstances the interest rate, or price of money, naturally increases. This being a natural development, nothing can be done about it, except to conform and wait patiently for natural corrective forces to redress the imbalance. Moreover, if properly understood, this natural tightness of money is actually beneficial and salutary. It will restrain excessive spending, investment and speculation; stimulate increased saving; force people to be more prudent and efficient; stop inflation; preserve the integrity of the dollar; and improve the public credit. By submitting to the stern discipline of tight money, the Nation will be purged of its economic sins and emerge from the ordeal cleansed and strengthened.

Those who expound this doctrine of economic salvation conveniently overlook certain important facts:

1. There is nothing natural about tight money. It is the direct consequence of human folly and mismanagement of our monetary, fiscal, and economic policies.

2. Tight money, whatever its other results, yields large and unjustifiable profits for bankers and money lenders.

3. Monetary policy is merely one of many control devices by which the economy can be regulated and stabilized. Those who place sole reliance on monetary policy, because it is profitable to them, generally reject all other pertinent controls on the specious ground that they would interfere with private business.

4. The alleged benefits of tight money are largely spurious.

5. The argument omits all reference to the evil effects of tight money.

Let us examine briefly some of the deleterious effects of the tight-money policy on various sectors of the national economy.

A. THE IMPACT OF TIGHT MONEY ON SMALL BUSINESS AND AGRICULTURE

Certainly, no one would argue that small-scale, competitive business or the independent family farm are guilty of promoting inflation and, therefore, need to be restrained. Their spending and investing have not been excessive; they have not raised prices; they have not made extravagant demands upon the credit system nor wasted resources in wild speculative ventures. Because they labor under the restraint and discipline of competition, they could not promote inflation even if they were so minded.

Nevertheless, the anti-inflationary tight-money policy hits them with special severity. Small business and farmers must borrow in order to operate; hence, they cannot avoid the impact of restricted credit and high interest rates. Interest is a large and unavoidable cost to them; it increases their cost of production, reduces their margin of profit, jeopardizes their financial security, limits their opportunity to expand and to improve their efficiency, and places them at a disadvantage competitively. Restriction of credit and high interest rates are a sure way to destroy thousands of small businessmen and independent farmers. Their liquidation can scarcely be regarded as a public benefaction. Yet, it is the bitter fruit of a tight-money policy.

B. LARGE-SCALE, MONOPOLISTIC BUSINESS

In sharp contrast, the giant corporations which dominate our basic industries are al-

most completely immune from the adverse effects of tight money. They escape largely because they don't have to patronize the banks or the money market.

Consider their alternative sources of funds:

1. Monopoly power over prices.
2. Government procurement contracts on a negotiated, noncompetitive, cost-plus basis.
3. Direct subsidies.
4. Indirect subsidies in the form of Government-fixed prices.
5. Indirect subsidies in the form of tax writeoffs and immunities.
6. Tax deduction for interest charges on debt.
7. Accumulated reserves of short-term securities.
8. Retained profits.

As a result, their command over funds is so ample that they are relatively independent of the banks. Tight money and high interest rates are to them little more than minor irritants—about as effective in controlling their conduct as a mosquito on an elephant. Even in those cases where borrowing from banks, or in the open market, is necessary, the tax writeoff of interest charges reduces the effective cost of borrowing by roughly one-half. Thus, a very high interest rate—say of 8 percent—would not deter them from any undertaking that promises to be profitable.

The Federal Government is in the ridiculous position of trying to stop inflation by a restrictive monetary policy which falls almost completely to deter inflationary decisions by big business. By sheer market power, based on privilege and monopoly, big business is independent of monetary control. Its decisions about spending, investment, output, prices, and expansion, whether inflationary or deflationary, are taken without regard to the feeble and ineffective actions of the central monetary authority. If big business is to be compelled to behave responsibly, it will require stronger controls than monetary policy.

C. IMPACT ON CONSUMERS

Durable-consumption goods, such as houses, autos, furniture, and appliances, are sold largely on credit. The volume of such credit is very large—some \$50 billion of installment credit and some \$120 billion of home mortgage credit, or a total of \$170 billion. Obviously, the interest charge on a debt of this magnitude is a significant item in personal and family budgets. An increase of 1 percent would impose an additional burden of \$1.7 billion per year on consumers.

Some restraint in this volatile area is probably desirable, both to prevent inflation and to protect people against imprudent involvement in excessive indebtedness. High interest rates, however, are the worst possible way to do this. They fail to restrain unwise and imprudent expansion of consumer debt, while imposing an added burden on consumer purchasing power, especially among the poorest and most insecure members of the community. Control of downpayments and amortization periods would be far more effective and yield more socially beneficial results.

D. IMPACT OF THE PUBLIC ECONOMY

Perhaps the most calamitous effect of tight money is on the public economy. If the public economy were in good condition, and the finances of government stronger, this would not be the case. It so happens, however, that the tight money policy emerges at a time when the public economy is in most distressful circumstances. The impact, therefore, is abnormally severe.

For some 20 years, roughly since 1940, we have failed to allocate sufficient resources to the development of the public economy. As a result of this protracted malnutrition, appalling deficiencies have accumulated in almost every area of our public economy. In the meantime, rapid increases in population, urbanization, and industrialization

have aggravated the shortages. As a rough measure of present needs, it has been estimated that over the next 25 years, and in anticipation of a population well over 200 million, we should spend some \$40 billion per year for public capital and social services. This is a large order but well within our national capability if we put our minds and ingenuity to the task.

Unfortunately, however, we have allowed our fiscal and monetary institutions to fall into such disarray and confusion that sufficient funds cannot, under prevailing conditions, be had to build up the depleted and inadequate public economy. The public debt, in all categories, amounts to some \$350 billion, excluding publicly guaranteed private debt of some \$50 billion. The interest charge on this public debt amounts to about \$12 billion annually and is increasing rapidly; each 1 percent increase in the overall interest charge imposes an additional \$3½ billion annual burden on taxpayers. Clearly, the limits of debt financing at ever increasing interest rates are near at hand; some other way must be found to finance the urgent needs of the public economy.

Three alternatives are available, if we would only use them:

1. Increase the revenue of the Federal Government by closing the scandalous tax loopholes now operative.

2. Reduce Federal expenditures in areas of conspicuous waste, such as: Foreign aid, defense, subsidies to big business and big agriculture, and excessive stock piling.

3. Restrict private credit for nonessential purposes, such as speculation in capital values, inventory accumulation, building of excess plant capacity and financing of trivial, low-value personal consumption.

The combined effects of these measures would be to divert resources from the inflated and wasteful private economy into the impoverished public economy. The resources so diverted would yield far greater social utility than they now do. A collateral effect would be to restrain private demands for money and thus to reduce interest rates. This would permit public debt—Federal, State, and local—to be refunded on favorable terms, thereby substantially reducing the tax burden on account of interest charges.

It is preposterous for the public economy to be forced into the private money market and to be compelled to compete against private traders and speculators for funds with which to maintain essential public service. These public services have a first claim on the resources of the Nation, and Government should take, through the tax power, whatever is needed to sustain the public economy. The progressive income tax is the key institution in this operation; borrowing in the private money market is justifiable only in limited instances of revenue-producing, self-liquidating public enterprises. Tight money is now strangling the public economy only because we refuse to learn this elementary lesson of political economy, and foolishly persist in subordinating public needs to the vagaries of the private money market.

President's Conference on Occupational Safety

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FRELINGHUYSEN. Mr. Speaker, on March 1, Dr. Joseph Kaplan, from the University of California, made a

provocative talk at the President's Conference on Occupational Safety.

Under leave to extend my remarks in the RECORD, I include his address as follows:

THE CHANGING NATURE OF WORK

(By Dr. Joseph Kaplan, department of physics, University of California at Los Angeles, March 1, 1960)

When Mr. Hunt wrote me last November to invite me to participate in this plenary session, one sentence in his letter struck me and has stayed in my mind ever since. It is the theme of this conference: "The Challenge of Safety in a Changing World." Now it must be clear to you that I don't intend to pose as an expert on the problem of safety for the American worker, even though I could somewhat immodestly recall that after World War II I received the War Department's Decoration for Exceptional Civilian Service, in part, for my work in decreasing aircraft accidents in the heavy bombers of that day, particularly the new B-29's that played such a significant part in the war in the Pacific.

Also, taking a line from one of the excellent fact sheets that have been issued in preparation for this conference—I don't even want to pose as an expert on the interaction of man and his environment in a period of explosive technological change. In contrast, I would rather approach this very challenging assignment as a scientist, who has had the good fortune to play some part in one of the areas of science which promises technological changes hard to overstate even if one lets his imagination run riot. I refer, of course, to the International Geophysical Year and to the scientific discoveries that led to it.

Now I am quite certain that most of you in this audience have heard much about the International Geophysical Year or the IGY as it is more conveniently called. Here I cannot resist telling you of the outstanding work that the Astrophysical Observatory of the Smithsonian Institution has done in the observation of satellites, since I am sharing this platform with my distinguished friend, Dr. Leonard Carmichael, the Secretary of the Smithsonian Institution. In fact, I could spend the afternoon on that topic alone to demonstrate how science works in order to understand and to extend man's environment.

Instead, in spite of the temptation to talk to you about some special and exciting aspect of the recently concluded IGY, or to tell you about the many programs of great practical and scientific significance growing out of the IGY, I want to talk to you about this changing world from the point of view of a scientist and then let you, during this conference and afterward, draw your own conclusions regarding the possible effects of these changes on occupational safety.

Because of the recent widespread recognition of the importance of science in determining the future status of our Nation, I'd like first to talk about some of the ways in which science and its technological impacts operate. As I develop this theme, I believe that you will recognize how relatively recent are the discoveries that have led to such profound changes in man's way of life. Recognizing this, you will then certainly become aware of the difficulties that face all of us, scientists, engineers, and others, in understanding and reacting to the discoveries that lie ahead.

I have had many opportunities during the past 5 years to think and to talk about this relative recency of scientific discoveries and to try to predict some of the future impacts of science. To illustrate how difficult and dangerous such predictions can be, let me quote from "The Nature of the Universe," a most remarkable book written by my good friend, Prof. Fred Hoyle, of Cambridge Uni-

versity, in 1950, who said that "It is now important that we should leave the earth, and I say this in some sense literally, for I think that within 100 years it may indeed be possible to leave the earth, or at any rate for rockets containing radio-operated cameras to do so. When this does happen, astronomy is certain, I believe, to make marked changes in our whole outlook on life; changes that are likely to be as far reaching as those that followed the Copernican theory of the planetary motions."

I am quite certain that all of you will recognize a note of conservatism in Professor Hoyle's remarks. To show you how conservative he really was, I quote from the proposed agenda of the 10th International Astrophysical Symposium organized by the Liege Astrophysical Institute, to take place this summer in Liege. Prof. Fred Whipple, Director of the Smithsonian Astrophysical Observatory and the leader of the IGY satellite optical tracking program will be the chairman. Three of the items relate to U.S. plans for space telescopes for planets, stars and nebulae; U.S. plans for space solar telescopes; U.S. plans for space radio telescopes—in other words, U.S. plans to leave the surface of the earth—and this only 10 years after Hoyle's prophecy.

Here I will go back only 140 years to 1820 when the Danish Physicist Oersted discovered that when a wire connecting the terminals of a battery of cells, such as you have in your automobiles, is placed in the magnetic meridian directly over or under a magnetic needle mounted on a vertical axis, the needle is deflected from its north-south orientation and tries to place itself at right angles to the wire. This was the discovery of a magnetic field which is associated with a current-carrying wire.

It was only natural to inquire whether, since it is possible to produce a magnetic field by means of a current, it is not possible to create a current by means of a magnetic field. This is a question which led to much scientific investigation during the years after Oersted's fundamental discovery. It was not answered, however, until the epoch-making experiments of Faraday in London in 1831 and the more or less simultaneous experiments of Henry in the United States. The experiments of Faraday and Henry were so simple that any child can perform them today without spending more than a fraction of his or her allowance.

One simply brings a bar magnet and thrusts it into a coil of wire the ends of which are connected to an instrument capable of measuring an electric current. So long as the magnet is moving, the needle of the instrument shows a deflection and therefore a current of electricity. Out of these discoveries of the relationship between magnetism and electricity have come scientific and technological advances that have changed man's way of life and work. The development of physics and its applications in the 130 years that followed Faraday's discovery depended profoundly on the results of this simple experiment—one that I could perform for you even with our present-day prices for less than \$25. Without Oersted and Faraday's discoveries there would have been no electrical industry to speak of, no radio or television, no cyclotrons and other accelerators that led to the age of atomic power. It is hard to overstate the impact of these discoveries on the history of the last century and the effects they had in changing man's way of life and work. And let me remind you that all of this took place a little over a century ago, when relatively few people did scientific research and long before such things as electrons, protons and neutrons were part of the everyday conversation of young people.

At this point I can't resist making the remark that some high-level English governmental official—possibly the Prime Minister

himself—might have visited Faraday's laboratory in 1831 and asked him to predict the practical significance of his experiments on electromagnetic induction. Since even Faraday could hardly have predicted the fantastic future developments growing out of his experiments—he might have been forced to satisfy the Prime Minister by telling him that someday England would be taxing his discoveries. As a matter of fact, something like this did happen to Faraday and has been happening to pure scientists ever since. Quite a few of them might have added that someday this discovery will save the nation. Faraday and his successors could hardly have dreamed of a day when aeronautical scientists would be studying the properties of electrically charged gases, moving in magnetic fields, in an effort to achieve faster flight, higher in the atmosphere or to understand some of the current problems of the intercontinental ballistic missile. Scientists who were experts in ordinary fluid dynamics have been forced by recent events to study electromagnetic theory and to develop the new science of magnetofluidynamics.

Let us turn now briefly to the International Geophysical Year in order to illustrate the character and recency of other basic scientific discoveries and the unexpected origins of technological advances and the changing nature of work. But before doing so, let me go back to 1882 when the conference of directors of weather services which was one of the first groups ever formed to promote international scientific cooperation—organized the enterprise known as the International Polar Year. Eleven nations joined to send expeditions to different parts of the Arctic region, to observe the weather, the northern lights and a phenomenon long known to be associated with the northern lights, the disturbances of the earth's magnetism.

These nations had worked out a common plan for the 13-month period of the IPY—from August 1882 to August 1883 inclusive. Two nations sent expeditions to high southern latitudes.

Now the meteorological directors had a very practical motive for organizing the first IPY. Most of their regions surrounded the almost unknown Arctic region and thus it was only natural to believe that this region might seriously influence weather changes in the surrounding countries. But I am quite certain that none of those who organized the IPY realized even to a small extent the ultimate effects of the coordinated observations of aurora and geomagnetism. They did know that magnetic disturbances disturbed the working of the newly invented electric telegraphs, but not much more than that.

Let us recall that in 1882 no one had any knowledge concerning the composition of even the simplest and most abundant element in the universe—hydrogen. They could not have known that an atom of hydrogen consists of a negatively charged electron and a positively charged proton, held together by some strange forces—since neither the electron nor the proton had as yet been discovered. The positively charged proton came along a few years later and not until 1932 did the discovery of the positively charged electron occur—by C. D. Anderson of the California Institute of Technology in cosmic rays. To complete this family of discoveries, this year's Nobel Prize in Physics went to two of my University of California colleagues, Professors Segre and Chamberlain for their recent discovery of the negatively charged proton.

Where today when we study the northern lights or aurora borealis, or the southern counterpart, the aurora australs, we use the latest tools of spectroscopy and photography, combined with radar, these tools either did not exist in 1882 or were in their infancy. Furthermore, the vast knowledge of matter that is now at our command did not

exist in 1882 as illustrated by the fact I pointed out earlier—that we did not even know the true nature of an atom of hydrogen. You may wonder then what the scientists of 80 years ago could find out from observations made on the ground of a phenomenon now known to occur from 60 to 1,000 miles above the surface—high in the thin atmosphere that slowly blends into space.

Remember too that no high altitude meteorological balloons existed, capable of ascending to more than 100,000 feet and sending back by radio their messages regarding the physical conditions of pressure, temperature and humidity that they encounter. Yet observations were made; observations of the distribution of auroral displays, the discovery that there was a zone in which they occurred most frequently—a zone that had a striking relationship to the magnetic forces surrounding the earth. A strange fact indeed; a puzzling fact—but one that was destined to guide man again and again into the high atmosphere; first with better observations from the ground, backed up by increasing knowledge of the nature of matter and of the characteristics of the atmosphere. Later, with the invention of radio and the discovery that radio signals can be reflected back to earth by the electrically charged regions above us—these signals were used to probe the auroral regions.

Then came rockets, with their exquisite instrumentation, fired during the IGY from shipboard and from rocket launching facilities on land, one in the far north and others in more temperate regions. These were used during the IGY and they performed well by taking instruments into the aurora itself, reporting back by radio the results of a chemical analysis of these strange, thin regions of our atmosphere.

You may ask why I tell you this story, as fascinating as it may be, or what has all of this to do with the changing nature of work. There are many answers to these questions. Out of our knowledge of the thin regions of our atmosphere, in all of which only a microscopic fraction of the air resides, have come many of the facts needed to maintain our long distance radio communications; also the knowledge that will enable us to protect a nation against an otherwise unforeseen attack by ICBM's. There are real indications that some of this knowledge might someday help us to understand the relationships that exist between the sun and the earth and possibly to understand and control some important aspects of our physical environment.

Continued curiosity about the aurora, the earth's magnetism and the upper atmosphere; the need to know more and more about the weather as man flew faster and higher, led to a second International Polar Year, which took place in 1932-33, for the same 13 months as 50 years previously. By this time the well-organized group of meteorological directors were helped by the relatively new international associations that brought together experts in geomagnetism, aurora and in the scientific study of radio. It is tempting to digress even more than I already have, and to tell you about the development of international scientific co-operation; but this is a long story. I do want to say the geophysicists, astronomers, and the students of scientific radio have been the most active scientists involved in international programs, because only by co-operation on a regional, planetary and now even on an interplanetary scale can these studies make real progress.

Following the second polar year came the IGY. Because it was very much broader in scientific and geographical scope than its two predecessors, the 2 polar years of 1882 and 1932, the IGY has brought out many new facts about our planet and has inspired much future work on it and in space. It is interesting to none, too, that the aurora and

the earth's magnetism again played important roles, with the IGY leading us ever closer to a complete understanding of these two phenomena—no longer esoteric, but increasingly connected with matters of great national and international importance.

I make these statements because out of the IGY—inspired from its very beginning by students of the aurora, the earth's magnetism and scientific radio—have come many of the forces which have already changed man's relationship to his environment. Among these are the notable advances in our knowledge of polar regions, particularly of the Antarctic; the advances in the studies of the oceans, with ambitious plans for the future; new meteorological data and future plans that might literally create a new science of meteorology and finally the realization of research in space.

No modern scientific development can quite compare with space research in the suddenness and scope of its impact on mankind. Although it is true that rockets had been used both for military and scientific purposes 10 years before the U.S. National Committee for the IGY asked for the support of a scientific satellite program, it was the IGY program that brought the word "space" and the phrase "space research" into the daily language and thought of all of us. What Fred Hoyle predicted for 2050 has already happened—and even more. Only the most conservative among us now talks about things that will happen 100 years from now. Even the pioneers in space research expect to see man's landing on the moon and the nearby planets.

It is less than 3 years since the launching of the first scientific satellite during the IGY by the U.S.S.R., and a little more than 2 years since we launched our first satellite, yet the amount of direct and related scientific activity that goes under the heading of space research is bewildering even to those of us who helped start these developments. In universities all over the world, departments of aeronautical engineering are now called departments of aeronautical and space engineering. I've already mentioned the pioneering work of Dr. Whipple and his Smithsonian colleagues on platforms in space. Whipple and I talked about these things 10 years ago when with several others, we wrote a book called "Across the Space Frontier." We were visionaries then—we are the old men of the business now.

Scientific and engineering societies, international scientific groups, industries of all kinds—all associate themselves with the word "space." The distinguished organization known since its start as the National Advisory Committee for Aeronautics is now the National Aeronautics and Space Administration—and so it goes—rapidly. Yet it's only the beginning; and only in one general area of science and engineering.

Were I an expert in nuclear physics, I could tell a similar story there, one that many of you are familiar with. One of the newest fields of modern physics is the one generally referred to as the physics of the solid state. Here too are the beginnings of a major revolution, one aspect of which is already known to most of us—the discoveries leading to the development of the transistor. It is not long ago that my good friend, Dr. William Shockley, and his colleagues, Dr. John Bardeen and Walter H. Brattain, were awarded the Nobel Prize in Physics for the invention and development of the transistor.

I have said nothing about the life sciences and medicine. These are fields in which explosive possibilities exist, in great part due to the remarkable advances in physics and chemistry, in high-speed computing and in technology in general. In all of these areas and in others, the story will be repeated. At the focus of all of these great efforts stands the American worker, the builder of this changing world.

One fact stands out above all others as we examine the position of the American worker in this changing world. It is that as time goes on, he will be outnumbered by the skilled workers in other parts of the world, notably in the U.S.S.R. and in Red China. In fact, as far as the U.S.S.R. is concerned, this time may already be here and if that is not so, then it is not far in the future.

The American worker, like the rest of us, scientists, engineers, managers and bankers, students and teachers, must all realize that to overcome this advantage in numbers, we must develop our skills and our effectiveness. When we are outnumbered two to one, each American must be the equal of at least two in other countries. This challenge places a burden on all of us—but a particularly important one on this conference. We can no longer afford millions of disabling injuries and thousands of occupational fatalities. The safety and future of this Nation, the maintenance and improvement of our way of life, depends on the decisions that we make during these 3 days.

The Futile Filibuster

EXTENSION OF REMARKS OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the Record, I would like to include the following editorial which appeared in today's New York Herald Tribune, entitled "The Futile Filibuster":

THE FUTILE FILIBUSTER

How long can the 18 southern Senators carry on their filibuster?

Well, unless they choose to yield on their own, which no one expects, the only immediately clear alternative is for the majority to insist by two-thirds vote on stopping the so-called debate and getting down to business on civil-rights legislation.

But it is equally clear that as of now the votes are lacking for cloture. So for the moment the Senate has no choice but to persist in round-the-clock sessions. This is what LYNDON JOHNSON calls clearing the air. And doubtless all parties concerned are also interested in seeing how goes the impending debate in the House on civil rights.

If, however, cloture isn't attainable just now, it certainly does not follow that the filibusterers can interminably prolong their spectacle. Why? Because the overwhelming majority is determined, in greater or lesser degree, on strengthening civil rights. The more the Southerners huff and puff, just so does their windy exhibition inspire increasing public disgust and fortify the necessity of meaningful legislation.

While Senator JOHNSON talks of getting a "reasonable" bill and rejects cloture at this time, the danger is that this will make the filibusterers think they can somehow drive through a compromise. But that for which the Southerners might settle, which probably means a circumscribed version of voting rights, can be assuredly described as so much dishwater.

The problem of the Senate majority, the 82 nonfilibusterers, is to see to it that the final bill is in fact strong. The heart of the argument, of course, is to insure the Negro's right to vote. That, surely, is not a matter for days and weeks of gumbeating.

There can't be any compromise here; indeed it ought to be, ideally, a nonpartisan

matter. On this the Senate majority must stand. And if the only way to act forcibly in the right is to stop the present parody of debate, it is high time for action. Because even the filibusterers know they are contesting an irresistible force.

I would like to admonish my southern friends that in the House, too, they will be "contesting an irresistible force." As inevitable as it is that night follows day, so it is with this issue. There can be no compromise on civil rights, and the majority of the Members of the House will stand firm on a strong and adequate bill.

May I call to mind at this point the old political maxim—"If you can't lick 'em, join 'em." That might be most appropriate at this time.

**Editorial Quoting Maurice H. Stans,
Director of the Budget Bureau**

**EXTENSION OF REMARKS
OF**

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the March 4 edition of the Tinley Park Times, a community newspaper in my district, is, I believe, a most thought provoking commentary on a topic of grave concern to us all:

Officials, candidates, writers, and John P. Public lose thousands of words from time to time on Government spending. The subject has been the theme of countless editorials about the country and probably will continue to serve as such for many years to come.

We have written on it on various occasions and wish to refer to it again now. However, we will not use our own words. Instead we give you the words of an expert—quotes from Maurice H. Stans, Director of the Bureau of the Federal Budget:

"WHAT WE DO

"We spend great sums on interest charges on our national debt, but we do not reduce the principal.

"We carry on massive Federal programs which State and local governments could do better.

"We devote large amounts of money to farm price supports to reduce surpluses, with the opposite results.

"We lend money to benefit special groups at rates below those which the Government must pay to its own creditors, when private sources could do the job.

"We perpetuate Federal programs which have long since met the objectives for which they were created.

"FUTURE CASH ON DELIVERY OBLIGATIONS

"It will cost between \$25 and \$35 billion to complete the Interstate Highway System after this fiscal year.

"Federal civil public works projects already started will require expenditures of about \$8 billion before they are completed.

"The Federal Government is committed to contribute \$6 billion in the future for public housing.

"Merchant marine subsidies and ship replacement constitute a Federal liability of \$4.4 billion."

These and a variety of other obligations, when added to huge unexpended balances in the defense program, total \$98 billion of commitments for future Federal spending.

Geographical Center

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ULLMAN. Mr. Speaker, since Alaska and Hawaii have been added to the Union, there has been some controversy as to where the new geographical center of our Nation is located. I will, if pressed, admit to a slight bias in this matter though I have no desire to reflect unfavorably upon Kansas, South Dakota, or the U.S. Coast and Geodetic Survey. I merely wish to enter the following news release in the RECORD and let the facts speak for themselves. I would also add a personal invitation to all to come and visit eastern Oregon. It has much to recommend it in addition to its unique geographical status as described below:

NORTHEAST OREGON VACATIONLAND,

Portland, Oreg., February 1960.

If all residents of the 50 United States were evenly distributed over the Nation's surface, and if they all started walking in a straight line toward its center, they would meet in northeast Oregon vacationland.

That's what the "fellas" say, and "vacationland" boosters certainly won't argue with them.

The fellas in question are W. O. and B. J. Holmes of Research Publications, Inc., San Carlos, Calif. A pair of professionals in geography, astronomy, and navigation, they became intrigued with the center of America problem after Alaska and Hawaii were added to the Union.

Addition of the two new States probably wasn't popular with folks in Lebanon, Kans., the mythical geographical center of our country for 46 years. When the 48 States became 50, a new center was obvious.

But how was it to be determined? These new United States aren't even in one piece. Much of Canada and much of the Pacific Ocean lie between our new States and the old, one-chunk 48.

If you should weigh the new 50 States on the same scale as the old 48—and this would include the intervening ocean and Canadian territory—the center isn't even in the United States. Lines drawn from the extreme corners of the new 50 show the center either in Canada or far out in the Pacific Ocean.

The U.S. Coast and Geodetic Survey cut out a cardboard map of the 50 new States, left out great gaps for the Pacific Ocean and Canada, and came up with a new center near Castle Rock, S. Dak. But this spot is not equidistant from anywhere, and isn't accepted, at least not in Northeast Oregon Vacationland. Holmes & Holmes found the answer which is accepted in these parts.

They mathematically constructed a box of the 50 States. For the north line they used 71 degrees, 23 minutes north latitude, the parallel which passes through Point Barrow, Alaska, the northern tip of the 50 United States.

At the south they chose 18 degrees, 54 minutes, 45 seconds north latitude—the

parallel at Cape Lae, southern tip of the main island of Hawaii. On the east, they used the parallel of longitude that passes through Quoddy Head, Maine, and on the west the line through Attu Island.

However, this didn't work. It placed the geographic center out in the Pacific Ocean.

As a compromise, they sliced off the Aleutian chain of almost uninhabited islands which straggles out toward Russia's Siberia, and accepted the line running through Cape Prince of Wales, Alaska, the westernmost point of the continental United States.

The center of this box turned out to be a point among the pines on China Cap Mountain, 11 miles northeast of little Pondosa, Oreg. It's at 117 degrees, 32 minutes, 10 seconds west longitude; 45 degrees, 8 minutes, 53 seconds north latitude.

This isolated pinpoint is 2,478 miles, 2,463 feet, 2 inches from the western boundary, and exactly the same distance from the eastern edge. It is 1,813 miles from the northern boundary, and the same distance from the southern line.

Fame thus hit Pondosa at an unlikely time. The little lumber town at the foot of the Wallowa Mountains is a ghost town—what is left of it after a public sale of its buildings last spring and a disastrous fire last summer.

But the Northeast Oregon Vacationland organization aims to bring Pondosa its due fame as the center of America. Signs are up in the area to this effect. The spot on Highway 203 from where the Catherine Creek forest road leads to Pondosa has been marked. A 3-mile hike from the end of the road and an old trail over China Cap Mountain leads to the center of America.

A spire marking the spot is planned, and action has been taken toward getting congressional action to make it official.

Resolution Commemorating the 42d Anniversary of the Declaration of Independence of Lithuania

**EXTENSION OF REMARKS
OF**

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD the resolution unanimously adopted at a mass meeting of Detroit Americans of Lithuanian descent on February 14, 1960, commemorating the 42d anniversary of the declaration of independence of Lithuania.

These loyal citizens of America of Lithuanian descent express their belief in freedom and their hope that the United States will not trust the dangerous doctrine of "peaceful coexistence" with Russia. I join them in their hope that the United States will continue working for the freedom of the people of Lithuania.

The resolution reads as follows:

Whereas Lithuania formally declared herself a free and independent nation on February 16, 1918; and

Whereas in violation of international law, and unlawful, forcible occupation of the Republic of Lithuania, against the will of the Lithuanian people, the Kremlin rulers annexed her to the Soviet Union; and

Whereas the people of Lithuania were and still are suppressed by tyrannical Communist dictatorship, her culture distorted, and thousands of her people were deported yearly into prison camps; and

Whereas our Government has never recognized the fraudulent and violent annexation of Lithuania by the Soviet Union: Therefore be it

Resolved, That this gathering of loyal Americans of Lithuanian descent of Detroit and vicinity calls upon the Government of the United States to stand firm against the expansion of Communist imperialism in the free world; be it further

Resolved, That this meeting asks the Government of the United States not to trust the Soviet "peaceful coexistence"; and finally be it

Resolved, That this meeting asks the Government of the United States to refrain from signing any new treaties with Soviet Union until the latter agrees to restore freedom, sovereign rights, and independence to Lithuania and other enslaved Eastern European nations.

DETROIT LITHUANIAN ORGANIZATIONS

CENTER,

IGNAS SKIRGAUDAS, *President*.

STASYS GARLIAUSKAS, *Secretary*.

FEBRUARY 14, 1960.

A Bill Needed To Increase Teachers' Salaries

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. METCALF. Mr. Speaker, in the following letter a schoolteacher in Michigan, much more eloquently than I can, expresses the need for passage of a bill providing not only for Federal support of school construction but also for teachers' salaries:

DEAR SIR: I am an elementary school-teacher in Michigan. I have 4½ years of college training and 3 years of teaching experience. My salary is \$4,700 a year. My fiancé has the same amount of college education and no years of experience. His salary is \$5,700. He is a senior clerk who accepts applications for work. I am responsible for the training of 36 young minds and the keeping of their academic and health records; he is responsible only for pieces of paper. He has coffee breaks. I have none. His workday finishes at 4:45 and he takes no work home with him. I am required to go to meetings after my regular workday ends at 4 o'clock. My time after 4 o'clock is used in preparing lesson plans and attending college classes for additional training which is required to keep my job. It costs \$13.50 for each credit hour I take each semester. The lowest number of hours allowed is 2 which amounts to \$27. The two books for this class totaled \$8.25 or a total of \$35.25. I am required to pay this total cost. He is taking a class in which General Motors pays two-thirds of the cost and furnishes all the books. I am not complaining about the time and effort I spend over my regular workday, but I do think this should be considered as well as the cost of additional training when teachers' salaries are being considered or reviewed.

My principal and supervisor rated me as a superior teacher. People say that if I am

not satisfied with my present salary that I can always go into industry. Children need superior teachers, not just average teachers. I enjoy my job, but I do more work and work more hours than I am paid for. All I ask is that I am paid for the responsibility I feel I assume in helping to develop young minds. I have only taught 3 years, but perhaps in another 3, I, too, will realize the little importance the general public and those in a position of power and influence such as in government, attach to what I consider an important job. I do a job which requires a great deal more human understanding, professional know-how, ingenuity, creativity, and knowledge of human relation techniques than a senior clerk, yet I am paid \$1,000 less a year. I teach ballet 3 days a week after school and on Saturday to make enough money to live in a decent manner. Should I have to hold two jobs to make as much as a factoryworker or senior clerk? Is a senior clerk's job \$1,000 more important than that of a teacher?

Why am I paid \$1,000 less a year than a factoryworker with no experience?

Please express my positive vote for the Federal school aid bill providing funds for both school construction and teachers' salaries.

Thank you for taking time to read my letter.

Yours truly,

Address of Hon. Adlai E. Stevenson at the National University, Bogotá, Colombia, February 23, 1960

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMÁS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. BRADEMÁS. Mr. Speaker, I am pleased to draw to the attention of Members of Congress an address delivered by the Honorable Adlai E. Stevenson at the National University in Bogotá, Colombia, on February 23, 1960.

I believe it is fair to say that there have been few speeches on Latin America this year which can match the splendid address of Governor Stevenson.

The award to Adlai Stevenson of an honorary degree by this great Latin American university is an indication of the high esteem in which this distinguished American is held by our neighbors to the south.

Governor Stevenson's address follows:

ADDRESS OF ADLAI E. STEVENSON AT THE NATIONAL UNIVERSITY, BOGOTÁ, COLOMBIA, SOUTH AMERICA, TUESDAY, FEBRUARY 23, 1960

I am grateful for the honor this ancient and famous university has done me. I have been honored far beyond my merits by many great universities in my own country and abroad, but I doubt if I have been more flattered and pleased than I am today. And I am sure I have never had a warmer welcome in any country than I have had here in Colombia and from all manner of people. The demonstration in the Plaza de Toros, the friendly greetings in the streets, the messages and visitors have moved me deeply. If I had always been welcomed with the same enthusiasm at home—especially during

recent political campaigns—I think I might be a less carefree tourist this winter.

One of the messages from Colombians which awaited me here in Bogotá said:

"I hope that when you touch Colombian soil you will feel that it is your own country."

Well, I do.

My journey to Latin America is one of a learner, for I have never had the opportunity to travel widely among our Spanish- and Portuguese-speaking neighbors. North Americans know too little about Latin Americans. We must know more, because we are dependent on one another and because by history and deep commitment we Americans, North and South, are bound together by the strongest ties in the great contest of our century. For we are on the side of the democratic forces—of individual freedom, of national independence, of government by consent of the governed, of honest elections, of integrity in public life; and our solidarity and common purpose to defend these convictions is the mightiest weapon of the free world.

So, I hope to return to my country from this long journey around your continent a better citizen of our hemisphere with a better understanding of your problems.

The amazing progress Colombia has made since its exhausting troubles in the direction of these goals of free, democratic and responsible society is one of the great achievements of our time. It is due, I know, in no small measure to President Alberto Lleras Camargo, and I am proud to have this opportunity to pay my public homage to a great leader and an old friend.

In my few days in Medellín and Bogotá, I have come to understand some of the awesome problems that confront modern Colombia. And I have also developed a great admiration for the realism and courage of your leadership in the struggle to narrow the gap between rich and poor, and to win the race between your resources and the explosive growth of your population.

These encouraging developments add to the gratification of this honor in the land of the first permanent European settlement on the American mainland. The early emigrants wrote that even the heavens were different; here in the words of your own Juan de Castellanos: "Our standard sees other stars and our flag a new sky."

For a while it was thought that the seat of utopia lay across the Atlantic and in those days one heard the refrain: "Oh My America! My New Found Land"—a phrase which signified a new hope for mankind.

In contrast to utopia was a burning desire to find El Dorado. I have read of the religious festival held near this spot, in which a Cacique covered himself with gold dust, and of the expedition from Bogotá of Jimenez de Quesada which started out to see the fabled kingdom in 1596. And, of course, the dualism in our nature of idealism and materialism still persists.

Fortunately, even as the conquest was going on, some of those who came to the New World began to ask themselves whether the Indians could justly be enslaved. Mankind is indebted to those great representatives of your culture, Bartolome de las Casas, Francisco de Victoria, and Domingo de Soto, the champions of liberty for the native inhabitants. And let me pay tribute here to an early Colombian, the Apostle of New Granada, San Pedro Claver, who protested so violently against the enslavement of defenseless Africans.

While it is not for me to remind the cultured audience of its past, yet as an expatriate I cannot overlook the extraordinary relationship between letters and government in this country—the eloquent political verse of some of your writers and the literary abilities of many of your Presidents. No other country in the hemisphere

can compete with Colombia's record, and I say that a little wistfully in view of the anti-intellectualism which so often afflicts public attitudes in my country.

But, speaking of the United States, let me turn to a happier, more constructive theme that is even more true of my countrymen, and is also the first concern of all mankind.

The people of the United States want peace—everywhere and with everybody. There can be no security or real safety in this world as long as mankind is threatened with nuclear destruction. You can't make peace with the hydrogen bomb.

"The world," someone said, "is now too dangerous for anything but the truth, too small for anything but brotherhood." In that sense we have a desperate physical solidarity. But, alas, moral and social solidarity in the family of man is still to be found.

Not so long ago I visited Dr. Albert Schweitzer in his primitive jungle hospital in Equatorial Africa, and he told me he considered this the most dangerous period in history, not just modern history, but all human history. Why? Because, he said, heretofore nature has controlled man, but now man has learned to control elemental forces of nature—before he has learned to control himself.

We are all part of a human experiment that may founder. We have set our hands to a science we cannot control. We stand on the edge of the mysteries of outer space. We live under judgment before an infinite godhead. It behooves us, therefore, to express in all our dealings with other peoples our sense of belonging to one endangered family and sharing with it our part of hope and aspiration.

I think Latin America can help us. I think Latin America has an opportunity and a duty to take the lead in arms limitations. I would like to see all the Latin American Republics declare as one their intent and determination to avoid an arms race, and to progressively reduce the arms burden in this continent.

It would be a moral and practical example of what wise, bold statesmanship can do to restore sanity to the world.

I believe the Americas can and should lead us out of this nightmare. And the resources that disarmament would release would go a long way toward the economic improvement which is so imperative in Latin America, as it is in Asia, the Middle East and Africa.

In some ways we can congratulate ourselves. The system of organized friendship and cooperation between the American nations is an achievement in a torn and unhappy world. There has been criticism of our inter-American system, and some of it is justified. But we must not forget that it has, by international action, given peace to more people, over larger territory, and extending for a longer time, than any system of peace in modern history. This peace has not been imposed by any empire. It has been maintained by a community of peoples like your own, like my own, working with fellow peoples from the Atlantic to the Pacific and from Cape Horn to Canada. And, with my country's defensive military potential, I see our hemisphere's greater peril not from lethal arms but from lethal ideas taking root in soil cultivated by frustration and misery.

In 1933, President Franklin Roosevelt said to the United States that all of it must prosper together, and that his country could not continue half boom and half bust. In 1960, I say that the hemisphere cannot long continue if half of it is rich and the other half poor. In the United States, since President Roosevelt's time, we have made steady progress toward abolishing poverty. With intelligence, courage, and social vision, we should be able in the next generation to

go forward toward eliminating poverty in the entire hemisphere.

Fortunately, political conditions are more favorable to a great hemispheric advance than they have been for many years. In most of the American countries, the governments are now democratic. This permits a higher degree of confidence between peoples than prevailed a few years ago. In my own country, we have confidence only in those governments which represent the expressed will of their people, and which can be changed to correspond with that will, peacefully, and without force.

To me it is clear that we shall not solve the problems of poverty by separate, nationalist approach. My country tried that, and without success. The United States perhaps could, for a time, preserve her prosperity at the expense of her neighbors—but not for long. Unless a way can be worked out to share the prosperity, and to share the burdens, no one's position can be safe. This will require economic agreements, covering all of the American nations, more detailed and more widespread than has been the habit of most of us up to this time. Happily, the American nations are coming to recognize this need.

Western Europe has been moving toward economic union for the past 10 years, with the result that her industrialization has grown, and her prosperity has increased. There is no reason why a common market should not be organized here, as has been done in other parts of the world. A beginning has been made toward a continent-wide capital banking system, though it needs to be developed with courage and speed. It is entirely practicable to assure that the capital built as each of the American countries develop, shall be directed towards the development of these countries.

No program of economic development will be sufficient unless the social policies of each country in credit, taxation and welfare legislation assure that the income in each country is equitably distributed to substantially all of the inhabitants in it. In final account, men and women and their welfare as individuals are the important consideration. This is true in all situations. Businessmen seeking a market must find it among men and women able to buy. Statesmen and politicians seeking the welfare of their people, must find it in the growing comfort and education of the peoples. Teachers and intellectuals, seeking a higher level of intellectual achievement, must find it in the increasing capacity of the public to read, to learn, to think, and to contribute to the civilization of their time.

All these tasks, however, must be accomplished for each people by their own thinkers and leaders. The form of social organization they choose in each case must and will be their own. Some lessons, I think, are the same in all social systems. There must be schools; and they must be supported by the whole of society, and available to everyone. There must be reasonable wages, so that industrial life is worthwhile. There must be reasonable access to the land, so that its products are available first to the men and women who work on it, and second, that the food the land produces shall be available to the cities. Credit must be available on reasonable terms. There must be skills available, so that the worker can know how to achieve the largest return for his toil.

We have learned, too, that capital does not come chiefly from outside, but is made by and from the enterprises which serve each country. Part, but only a small part, of such capital can be borrowed from abroad or can be provided by foreign aid. And when capital is built, it must not be locked up, or spent in luxury for a few, but must be devoted to the further development of the country. Businessmen who handle

enterprises, great and small, cannot regard themselves as private money makers. They are economic servants of their people. That is their task, and those who do not perform it, must give place to others who will. And if native capital seeks greater security in foreign countries then why should foreigners bring their capital here?

By honest, competent government, by organized international action, by good economic planning, by careful investment, and by technical assistance, the stronger countries in the American hemisphere can help the less-developed countries. I have steadily advocated that my country, the United States, should do more than it has yet done. And one of the things we can do is to encourage, by scholarships and loans, more young Colombians, for example, to study abroad to acquire better work habits as well as technical proficiency.

But I know, and you do too, that in most of these things each country must act for itself, in its own ways, with its own men, seeking to make its own particular contribution. In cooperative union there is economic strength. In cultural differences there is great richness. Each of us, learning from the other, can move towards the next era with unlimited hope for beauty as well as for well-being.

The nations of the American community which we are building will all be different. But to work together in friendship and trust, we must agree on, and make effective certain basic human rights. Our peoples agree that they must struggle to make effective the equality of human beings of whatever race or color, religion or inheritance. Our peoples agree upon the right of every individual to an opportunity to learn, to work, to develop. And freedom of information is a powerful means to that end.

All this was said, years ago, by President Franklin Roosevelt in his declaration of the four freedoms. Like all ideals, such freedoms are not realized at once. But they are, and must continue to be, the guidelines of all policy and action, public and private. Men devoted to them will serve well the American community of nations. In the words of the Charter of Bogota, under which the American community of nations is bound to act:

"Social justice and social security are bases of lasting peace.

"Economic cooperation is essential to the common welfare and prosperity of peoples of the continent.

"The American States proclaim the fundamental rights of the individual without distinction as to race, nationality, creed or sex."

Twelve years ago, representatives of all our 21 Republics signed that charter. Now it is for us to make of it, not merely a treaty, but a reality, on the mountain sides, the plains and the coasts of our hemisphere.

Kiss Those Shores Again for Me

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, as Members of the Congress of the United States, we are ever mindful of the contribution that the men of our Armed Forces played in various international conflicts in which our Nation has been forced to participate. We have great

respect and always try to cooperate with the veteran organizations who represent Americans who served our country in time of war.

A friend, neighbor, and constituent, John Summers, a member of VFW Post No. 8774, Calumet Park, Ill., is the author of a song, "Kiss Those Shores Again for Me," which has been adopted as the State song of the VFW, State of Illinois. The VFW Department of Illinois will submit this song to their national organization, asking for its adoption as the national song of this great veterans' organization.

KISS THOSE SHORES AGAIN FOR ME

Said this lonely young teen
On a far distant scene
To his buddy sailing cross the sea:
So I'm telling you, Mac,
When you ever get back,
Please kiss those shores again for me.
There's a lassie back there
Who's so tender and fair,
My only true girl in the world.
It's been many the day
Since we sailed far away,
And it's changed our plans for happiness.
So I'm telling you, Mac,
When you ever get back,
Please kiss those shores again for me.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman),
Russell, Magnuson, Anderson, Kerr, Symington,
Stennis, Young of Ohio, Dodd, Cannon,
Bridges, Wiley, Mrs. Smith, Messrs. Martin,
and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of
South Carolina, Holland, Eastland, Hum-
phrey, Symington, Talmadge, Proxmire, Jord-
an, Young of Ohio, Hart, Aiken, Young of
North Dakota, Hickenlooper, Mundt, Schoep-
fel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell,
Chavez, Ellender, Hill, McClellan, Robertson,
Magnuson, Holland, Stennis, Johnson of
Texas, Pastore, Kefauver, Monroney, Bible,
Byrd of West Virginia, Dodd, McGee, Bridges,
Saltonstall, Young of North Dakota, Mundt,
Mrs. Smith, Messrs. Dworshak, Kuchel,
Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Vir-
ginia, Johnson of Texas, Stennis, Symington,
Jackson, Ervin, Thurmond, Engle, Bartlett,
Cannon, Saltonstall, Bridges, Mrs. Smith,
Messrs. Case of South Dakota, Bush, and
Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright,
Sparkman, Frear, Douglas, Clark, Proxmire,
Byrd of West Virginia, Williams of New Jersey,
Muskie, Capehart, Bennett, Bush, Beall, and
Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear,
Hartke, Beall, Case of South Dakota, and
Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr,
Frear, Long of Louisiana, Smathers, Ander-
son, Douglas, Gore, Talmadge, McCarthy,
Hartke, Williams of Delaware, Carlson, Ben-
nett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green,
Sparkman, Humphrey, Mansfield, Morse,
Long of Louisiana, Kennedy, Gore, Lausche,
Church, Wiley, Hickenlooper, Aiken, Cape-
hart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson,
Ervin, Humphrey, Gruening, Muskie, Mundt,
Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson,
Jackson, O'Mahoney, Bible, Neuberger, Car-

roll, Church, Gruening, Moss, Long of Hawaii,
Dworshak, Kuchel, Goldwater, Allott, Martin,
and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore,
Monroney, Smathers, Thurmond, Lausche,
Yarborough, Engle, Bartlett, Hartke, McGee,
Schoepfel, Butler, Cotton, Case of New Jersey,
Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver,
Johnston of South Carolina, Hennings, Mc-
Clellan, O'Mahoney, Ervin, Carroll, Dodd,
Hart, Wiley, Dirksen, Hruska, Keating, and
Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy,
McNamara, Morse, Yarborough, Clark, Ran-
dolph, Williams of New Jersey, Goldwater,
Dirksen, Case of New Jersey, Javits, Prouty,
and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chair-
man), Monroney, Neuberger, Yarborough,
Clark, Jordan, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNa-
mara, Neuberger, Randolph, McCarthy,
Young, Muskie, Gruening, Moss, Long of
Hawaii, Case of South Dakota, Martin,
Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden,
Green, Mansfield, Jordan, Cannon, Curtis,
Keating, and Brunsdale.

UNITED STATES SUPREME COURT

taker. Colorado, Kansas, New Mexico, Okla-
homa, Utah, Wyoming.

Appendix

Military Translingua

EXTENSION OF REMARKS OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. MARTIN. Mr. President, I ask unanimous consent that an unusual article by Capt. E. E. Waller, U.S. Army, which appeared in the February 1960 issue of Signal, be printed in the Appendix of the Record.

Captain Waller and his brother served on active duty throughout World War II and the Korean war, and his father in addition to serving on active duty throughout World War II and the Korean war served throughout the Mexican campaign and World War I. They are a highly patriotic family. I am proud indeed to present for the Record Captain Waller's excellent article so that the Members of the Senate may have the opportunity to read it.

There being no objection, the article was ordered to be printed in the Record, as follows:

18.201-1.778 | 19.500 - A 1.432-121-5.628:

MILITARY TRANSLINGUA

(By Capt. E. E. Waller, AS/SigC)

(The author is stationed at the U.S. Army Security Agency, School and Training Center, Headquarters Co., 1st Battalion, Fort Devens, Mass.)

One of the fascinating recent developments in linguistics has emerged after several years of research at the University of Iowa. Seven years ago Dr. Erich Funke, head of foreign studies at the State University of Iowa, began work on a method for interlinguistic communication. A practical application of Dr. Funke's method is Military Translingua, which is designed for multilingual military commands and international commercial correspondence.

Since the dawn of history, the military leader has been faced with the problem of precise communication with allies and elements of his command who use different tongues and dialects. The clarity of modern warfare and the need for all the allies that the free world can muster in these challenging times impinges heavily on the efforts of the soldier to explore every new vehicle that may help him find a meaningful, simple, precise, unclassified method of interlinguistic communication.

The translingua script offers interesting possibilities to alleviate this age-old military problem. It recognizes the validity of the sage advice of Sun Tzu: "He who has a thorough knowledge of his own conditions as the condition of the enemy is sure to win in all battles."

Translingua divides all human knowledge into some 35 numerical categories (for example, 15 denotes "medicine and health," and 26 refers to the "Armed Forces"), which are, in turn, broken into subconcepts to make up a basic vocabulary of 25,000 words of a numerical language.

How is this used?

Take the title of this article. Its teletype equivalent would be 18.201-1.778:5-19.500:4-1.432:18-121-5.628. Assume that the originator is a West German commander, Gen. Karl von Rhein. Without needing a knowledge of English or any other language used in a NATO command, he has been able, by the use of his German-translingua dictionary, to prepare this translingua numerical sentence from the following German: "Der Feind griff die Stadt überraschend von Süden an." The English-speaking recipient, just the same as a Portuguese, Dutch, Italian, or other language group, without leaving the domain of his own language, can simply obtain his own tongue by the use of his translingua-English dictionary (or translingua-Portuguese, translingua-Dutch, etc.) to obtain: "The enemy attacked the city surprisingly from the south."

When dealing with the more exotic languages of the East and the concomitant problems of translation, the use of translingua comes into closer focus, especially in preventing the tyro linguist from making serious mistakes stemming from a lack of precise knowledge of idioms or technical military terminology. Anyone who has heard a story repeated several times readily understands the possibility of distortion when many people are involved. It may seem humorous that "jack up" in Spanish could be literally translated as "to raise with the cat," but the exigencies of the military situation in modern conflict may not give us the luxury of enough well-trained language personnel to prevent a modern version of the Tower of Babel. The following passages may point up the ease of using translingua if a dictionary is available:

You, as an English-speaking recipient, may receive the following sentence from an Arab originator, General Abdullah: 7.1805-6.1000:2-5.400:17-5.625-5.626-5.429:4-6.103:2. The Arabic original of "Algutru 'lmisriyu yuksueinu 'zzswiyata 'shshamōāyata 'shihargiata min afrigiyyatin" may be rendered into: "The land of Egypt forms the northeast angle of Africa," by learning the simple translingua grammar and by quickly looking up each number, as separated by dashes. Other examples could be given in languages ranging from Spanish to Indonesian and Swedish to Chinese.

Translingua, by itself, is no more safe than ordinary English. Its vocabulary needs more revision for military use. It is no more difficult to use than a telephone directory and its vocabulary numerical equivalents do not change, though they may be added to at any time by new words or new concepts. The following exercise evinces the preciseness of translingua grammar in action:

8.1-1.162-7.312:4 for, "The man drinks water."

8.1-1.162:5-7.312:4 for, "The man drank the water."

8.1-1.162:8-7.312:4 for, "The man will drink the water."

8.1-1.162-7.312:4 for, "The men drink the water."

8.1-1.162-2.35-7.312:4 for, "The man drinks cold water."

8.1-5.770-1.162-7.312:4 for, "The man drinks the water today."

8.1-4-1.162-7.312:4 for, "The man does not drink water."

8.1-29-1.11:5-119-31.1-1.162:5-7.312:4 for, "The man who came into the house drank water."

11-41-1.162-30-7.312:4 for, "You can drink this water."

11-4-41-1.162-30-7.312:4 for, "You cannot drink this water."

11-35-41-1.162-30-7.312:4 for, "You can drink this water now."

Note the simple sequence of words and the use of "1" for the plural concept and "4" for the direct object.

Research into the nuances of translingua usage and practical applications thereof is continuing at the State University of Iowa (Iowa City) under direction of Dr. Funke. In a day when our free world allies speak languages ranging from Norwegian to Turkish and Portuguese to Siamese, any meaningful multilingual concept becomes useful for considered study. As Bacon has noted, "Knowledge is power."

Amerigo Vespucci

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RODINO. Mr. Speaker, today we celebrate the birth of the man whose name was given to the two great continents of the Western Hemisphere—Amerigo Vespucci.

We owe a great deal to this courageous Italian navigator, as well as to those other early explorers who accepted the challenge of the high seas and who ventured out into the unknown to make their great discovery. Their fearless spirit can well serve as an inspiration to us as we chart other unknown seas in the turbulent world of the 20th century.

Amerigo Vespucci was born in Florence in 1451. He spent his early years as a clerk; subsequently he outfitted several expeditions to the New World; and, finally, determined to see for himself, he set forth on several voyages of his own.

On his third voyage—in 1501-2—he is reported to have reached the Canaries and Cape Canaveral, Fla.; then he sailed south and reached the coast of Brazil, which he called "The New World." The terms "The New World" and "America" came to signify the two continents along whose coasts Vespucci courageously sailed.

It is particularly timely that we note the strong historical tie which binds together the two Americas. In a very real sense both we and the Southern Hemisphere have common ancestors. And, as the President has stressed on his tour, we have reinforced those bonds by cen-

turies of mutual good will and friendship. It is certainly of vital importance that people of both hemispheres work toward a still firmer relationship of trust and understanding.

Retirement Nightmare

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FORAND. Mr. Speaker, a Washington Post editorial of February 20, 1960, so well supports my bill H.R. 4700, providing health insurance for the aged, that I am including it in my remarks so that it will be available to any Member of Congress who may have missed reading it.

Here is the editorial:

RETIREMENT NIGHTMARE

Everywhere in its travels around the country, Senator McNAMARA's Subcommittee on Problems of the Aged and Aging heard anxiety expressed by older citizens as to how they would pay for medical care in their retirement. How can anyone with foresight, old or young, fail to be anxious about this problem? While a man is employed, he can enjoy the protection of some sort of group or private insurance program to cover medical and hospital bills if he becomes ill. The chances are, however, that when he retires he will no longer enjoy such protection; yet this is the time, obviously, when he will need it most—when, indeed, he is certain to need it sooner or later, which is what makes the cost of such private insurance prohibitively high for the aged.

The McNAMARA subcommittee came to the conclusion that this problem "should have top priority for legislative consideration in 1960" and recommended in its report an expansion of the system of old-age, survivors, and disability insurance to include health service benefits for all persons eligible for OASDI. We think this conclusion is inescapable. The essence of it is embodied in the Forand bill which would cost about \$1 billion a year to be financed with one-fourth of 1 percent increase in social security taxes. Like other old-age benefits, this would be paid for by a citizen throughout his wage-earning years, with a matching contribution by his employer. It would relieve retirement of one of the worst of its nightmares.

That the American Medical Association would offer its usual doctrinaire opposition to this proposal was as much to be expected as a bill from a doctor after a visit to his office. Senator McNAMARA has observed that the AMA had nothing to offer but tired abuse. This is not, by the wildest flight of the most neurotic fancy, socialized medicine or political medicine. It is simply a system, if the AMA could but calm its nerves enough to realize it, which, like Blue Cross or Group Hospitalization or any other insurance program, would enable a patient to go to the doctor and the hospital of his choice and pay the bills resulting from the care he needs in old age. It would help doctors, hospitals, and medicine in general. And it would enable American men and women to retire in their old age with more security and self-respect.

Good Cooks Everywhere Serve Rice

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. GATHINGS. Mr. Speaker, it was pleasing to read in the March 8 issue of the Christian Science Monitor the splendid article written by Mrs. Eleanor Richey Johnston from Bangkok, Thailand, about the widespread use of rice in the diet of our Far East friends and neighbors. Mrs. Johnston's interesting article also presents some intriguing rice recipes that gourmets and fine cooks will desire to add to their menu.

This article comes most appropriately on the eve of National Rice Week, which will be celebrated throughout the Nation during the week of March 13 through 19. At that time it will be my privilege to issue additional rice recipes which the ambassadors of foreign nations now stationed here in Washington have secured for our use as indicative of their favorite national recipes using wholesome and nutritious rice.

May I point out that the consumption of rice by American citizens falls far short of the world average, and if the people of the United States would double their consumption of this fine food it would create the need to increase our national rice acreage allotment by some 300,000 acres.

It is my hope that our citizens everywhere in the Nation who enjoy tasty and delectable foods will try these rice recipes. It will benefit their diet and their health and strengthen the economy of our Nation.

The article follows:

GOOD COOKS EVERYWHERE SERVE RICE

(By Eleanor Richey Johnston)

BANGKOK, THAILAND.—Everywhere in the world women are interested in foods and ways to prepare them. Their interest goes far beyond their own native dishes in many cases. Thailand—which is Siam—is no exception, as I learned before I had been in Bangkok many hours.

Upon arriving about noon, I learned that there was to be a colorful pageant on the Chao Phya River that very afternoon, a pageant that was held only every 30 years. I was invited to go. Seats were arranged in certain places along the river bank, and the section where I sat was canopied to keep off the too warm sun. When there was a lull in the activities on the river, the woman seated next to me asked about some typical American foods and, in return for my information, told me about some Siamese favorites.

"The most typical local dish that I know about is *kai pot*," she said. "It is made with shrimp or crabmeat usually, with bits of chicken and pork added. The foundation of *kai pot* is fried rice—and it must be fried in oil. Add onion and a little garlic (some Thai cooks add tomato sauce), eggs, and saffron.

"When *kai pot* is served, it is often decorated with sliced cucumbers all around it, and with green onion tops stuck in it, for a sort of climax to the decoration of the dish."

In my hotel here, the dining room is run by Chinese and I learned by talking to several that much of the Thailand food is similar to that of the Chinese. The people eat a great deal of rice, of course, and raise what is considered the best in the world. They like such exotic dishes as bird's-nest soup and those made with shark's-fins as well as dishes using many other kinds of fish.

"If we speak of meatballs in Bangkok, we usually mean balls made of pork and fish—about twice as much pork as crab or other fish is used. Then we add some water chestnuts and mushrooms. We chop all this very fine and season with salt and pepper.

"Add a tiny bit of sugar, too. Make little balls of this mixture, roll in flour and then in egg and then cook in deep boiling oil," a woman instructed me.

OYAKO DONBURI

Six chicken breasts (frozen, if you like).
Two cups water.

One and one-half teaspoons salt.
One-half teaspoon monosodium glutamate.

Three mushrooms, sliced.
Two small bamboo shoots, sliced.
One small carrot, sliced.
Three green onions, sliced.
Six eggs, lightly beaten.
Six cups cooked rice.

Remove skin and bones from chicken breasts. Simmer skin and bones in the two cups water for 30 minutes and strain. Season broth with salt and monosodium glutamate. Cut chicken into thin slivers. Add chicken, mushrooms, bamboo shoots and carrots to broth. Simmer 15 minutes. Add green onions. Pour eggs gradually into vegetable mixture, stirring constantly. Cook over low heat until eggs begin to set. Serve over hot rice.

In this country, curry is used often to season various dishes. Here is a baked dish of curried rice that is good to serve with roast lamb, chicken, or pork.

CURRIED RICE

Two and one-half cups boiling water.
One teaspoon salt.
One and one-fourth cups uncooked rice.
One-fourth cup butter or margarine.
One and one-half teaspoons curry powder.
One box frozen peas.

One pimiento, cut into strips.
Mix first 5 ingredients in casserole (or in a Dutch oven). Cover. Bake at 400° F. about 45 minutes. Cook and drain peas; mix peas lightly into rice with a fork. Top with pimiento strips. Serves 6.

I have often been asked for the recipe for yellow rice, and here is a simple way to cook this dish.

YELLOW RICE

One cup uncooked rice.
Two cups boiling water.
One teaspoon each salt and turmeric.
Two tablespoons butter or margarine.
Put all ingredients in a 1½-quart casserole. Cover and bake at 350° F. about 1½ hours. Serves 4.

Have you ever eaten chicken served in a rice ring with cheese in it? Here is a recipe for chicken supreme in this rice ring.

RICE RING

One-half cup grated cheese.
Two tablespoons butter or margarine.
Seven cups hot cooked rice.

Add cheese and butter to rice; toss lightly with fork until cheese and butter are melted. Pack rice in buttered 8 or 8½-inch ring mold. Cover with waxed paper. Set in pan of hot water. Keep warm until ready to serve. Loosen edges with spatula, invert onto platter and fill with cream chicken or chicken supreme. Garnish with parsley, pimiento, and egg slices.

CHICKEN SUPREME

Two small onions, sliced.
Two small carrots, diced.
One-fourth bay leaf.
Eight peppercorns.
Two sprigs parsley.
Two cups chicken broth.
One-fourth cup butter or margarine.
One-fourth cup flour.
One-half cup heavy cream.
Two cups cooked dice chicken.
Two cups hard-cooked eggs.
Salt and pepper to taste.
Add onions, carrots, bay leaf, peppercorns, and parsley to broth; simmer 10 minutes; strain. Melt butter in saucepan; stir in flour. Add broth all at once, stirring constantly until smooth. Add cream; cook until thickened, stirring frequently. Fold in chicken and eggs. Heat thoroughly. Add salt and pepper to taste. Pour into center of above rice ring.

United States-U.S.S.R. Trade—Plus Trickery

EXTENSION OF REMARKS OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the Members of this body, the following article by Mr. George Todt from the March 4, 1960, Valley Times, North Hollywood, Calif., wherein reference is made to remarks of my good friend and colleague, GLENARD P. LIPSCOMB:

UNITED STATES-U.S.S.R. TRADE—PLUS TRICKERY

"Commerce is the equalizer of the wealth of nations."—Gladstone.

What's the score on commerce and trade with the Soviet Union? Would it relieve international tension? Bonanza—or boon-doggle?

Much has been said pro and con, on both sides. Few things are either all black or all white in any case. There is usually something to be said in favor of any position which is seriously advocated by intelligent men and women.

However, life is made up of a series of choices. I see the matter in much the same light as recently advocated by GLEN LIPSCOMB, a serious-minded young Congressman from Los Angeles. He said:

"The U.S.S.R. is not interested in trade as we know it. What buying the Soviets are interested in is whole factories, production machines, technical data and skills, and other items in this general category. The trading they wish to do is for the purpose of building up Soviet production facilities.

"After they obtain the factories, the skills, the machines, or copy our production machines and goods, the goods produced can go to build up Soviet armament—and to dump goods around the world for political and economic purposes. These dumping activities could be in direct competition with our firms from whom they bought the factories, machines and skills in the first place. There is no mutually beneficial intention behind their trade proposals."

LIPSCOMB thinks the efforts to engage in trade with the United States along such lines ought to be viewed with alarm. He says we

must never lose sight of the grim purpose behind the Soviet negotiators in their trade talks.

One item not making friends here and influencing people for Ivan is his obtuse handling of the correct settlement of World War II lend-lease agreements with the United States. This is largely a matter of principle.

Despite our offering the Soviets terms which would amount to less than a nickel on a dollar, the Kremlin's trade diplomats repeatedly have been coming close to agreement in principle—only to renege as soon as it came time to sign up. This is a friendly game?

Following the discussions at Camp David in 1959 between President Eisenhower and Premier Khrushchev, it was the understanding of the United States that negotiations on lend-lease would be resumed thereafter, as a separate and independent problem.

Negotiations, scheduled for January this year, turned out a complete dud. For, lo and behold, the wily Soviets came to the conference bearing unacceptable gifts: Now they said they could not treat the lend-lease question separately and independently unless it was simultaneously accompanied by a new trade agreement. The gimmick, of course, was that we should make the Soviet Union favorable trade concessions and extend long-term credits.

This is comparable to having one's cake and eating it too. It's always nice work if you can get it, but this time we turned the U.S.S.R. down flat. It's enough that we are financing most of our allies, but to ask the American taxpayer also to support our chief enemy in the cold war is really asking a little too much.

The President Should Proclaim Hungarian Independence Day

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. McDOWELL. Mr. Speaker, on March 15, all Hungarians will celebrate the 112th anniversary of the victorious Hungarian Revolution of 1848, which was then crushed by the czarist army just as the Soviet Union crushed the 1956 Hungarian revolt against Russian domination and control.

It would be highly regrettable if the United States failed to keep firmly in mind at the forthcoming summit conference the plight of the heroic Hungarian people who have so often sacrificed their lives for freedom and national independence.

Consideration should be given at this time by the Congress to the matter of authorizing the President of the United States to proclaim October 23 of each year Hungarian Independence Day. It was on that day, in 1956, that the Hungarian people rose as one man against their Soviet and local Communist oppressors, and this step would give hope to the heroic Hungarian people that the freedom-loving American people will not forget their suffering under foreign colonial domination.

I include as part of my remarks a letter and a proposal sent me by distin-

guished officials of the Hungarian committee for the information of my colleagues:

HUNGARIAN COMMITTEE,
New York, N.Y., March 1, 1960.

HON. HARRIS B. McDOWELL,
U.S. House of Representatives,
Washington, D.C.

MY DEAR MR. McDOWELL: On March 15, all Hungarians will celebrate the 112th anniversary of the victorious Hungarian revolution in 1848, which was then crushed by the czarist army just as the 1956 revolution was crushed by the tanks of the Soviet Union.

This year the celebration of this national holiday will precede the East-West summit meeting which might be as fateful for the future of the Hungarian people as were the Teheran and Yalta Conferences.

Knowing that your honor has consistently raised your voice in favor of the Hungarian people who had sacrificed their lives for freedom and national independence so often in their thousand-year history, we would be very grateful if you would have the kindness to say a few words of remembrance on the heroic struggles of the Hungarian people and in expressing your hope that the Hungarian question may be discussed at the summit meeting.

It would be highly regrettable if the West would fail to raise this question at the very first East-West summit conference following the adoption of not less than 12 U.N. resolutions on Hungary which have been consistently defied by the Soviet Union.

Thus, apart from other considerations the prestige of the U.N. also calls for the placing of the Hungarian question on the agenda of the summit meeting.

Finally, we would be extremely appreciative for any initiative in the U.S. Congress aimed at authorizing the President of the United States of America to proclaim October 23 of each year as Hungarian independence day. It was on that day in 1956, that the Hungarian people rose as one man against their Soviet and local Communist oppressors, and we think that this would be the most dignified way to pay tribute to the world-shaking Hungarian freedom fight and to give hope to the heroic Hungarian people that the freedom-loving American people will not forget their immense suffering under foreign colonial domination.

For your kind information I am attaching to this letter a memorandum dealing with various aspects of the Hungarian problem. We would be deeply thankful for its eventual inclusion in the CONGRESSIONAL RECORD.

Being convinced that your honor will do what is the best to commemorate in this sense the Hungarian independence day, we convey to you the expression of our warmest thanks.

Sincerely yours,

MR. FERENC NAGY,
Chairman, Foreign Affairs Committee,
former Minister of Hungary.

MSGT. BELA VARGA,
Chairman of the Hungarian Committee,
former President of the Hungarian
Parliament.

MEMORANDUM ON THE HUNGARIAN PROBLEM TO BE PRESENTED TO THE HONORABLE MEMBERS OF THE U.S. CONGRESS

After World War II, the democratic political leaders did their utmost to establish a truly democratic system of government in Hungary in accordance with the will of the people as manifested in the free elections of November 4, 1945, when the Communists were not able to muster more than 17 percent of the votes, despite Soviet occupation and Communist terror.

However, unfortunately, the Hungarian people were not duly sustained by the Western allies in their efforts of developing and

preserving the democratic institutions of the Hungarian Republic. The sad fact that the Western Powers had tolerated that there be no rotation in the chairmanship of the Allied Control Commission in Hungary, had enabled the permanent Soviet chairman to intensify gradually the direct Soviet interference in all domestic matters of the country.

Despite this direct Soviet interference which was virtually sanctioned by the mere presence of the two Western members in this Control Commission and following the elimination of the leading democratic politicians in the Hungarian Republic, the Hungarian people made another desperate demonstration of their unshakable will to reestablish a democratic system of government. In the elections of August 31, 1947, ordered to be held by the Communist Party chief, Matyas Rakosi, the Communist Party polled only 20 percent of the votes. It was Rakosi's aim to erase the non-Communist majority by fraud and terror, exploiting the psychological effect of the presence of Soviet troops.

Transformed in 1949 into a so-called People's Republic whose institutions were set up on the Soviet pattern, Hungary's entire public life, economy and territory was placed under the Kremlin's control in striking defiance of the agreement on liberated Europe and the Hungarian Peace Treaty, both signed by the Allied Powers and the Soviet Union.

The nationwide Hungarian revolution of October 23, 1956, left no doubt that the Hungarian people, even the youth and the working class, in spite of 10 years of indoctrination, rejected the Communist system and foreign domination. However, while they were ready to sacrifice their lives for freedom and democracy, they very realistically stressed in their political manifestations the necessity of good-neighborly relations with the powerful Soviet Union. The authentic spokesmen of the revolution had many times declared that they were not intent on converting Hungary into an anti-Soviet state. On the contrary, they emphatically advocated the idea of an internationally recognized neutrality as this was officially proclaimed by Premier Imre Nagy's Government.

All these facts have been established by the United Nations Special Committee on the Problem of Hungary, and accepted by the United Nations General Assembly as trustworthy evidence of the bad faith of the Soviet Union which did not shrink from the assertion that the spontaneous Hungarian revolution was the result of a plot of Hungarian Fascists and foreign secret services.

This Soviet version was completely reversed by Khrushchev himself when he bluntly declared in an off-the-cuff speech delivered in the Ganz factory in Budapest on December 2, 1959, that the revolution was crushed because the Soviets wanted to preserve by force the Communist regime in Hungary. He also openly admitted that the revolution was due to the extreme despair of the Hungarian people as a reaction to Rakosi's terror regime. His third sensational revelation was that even his colleagues in the party presidium had misgivings that the Soviet military intervention in Hungary might be "misconstrued" abroad.

Thus, these revelations have strikingly confirmed, even on the part of the Soviet Union, the facts established by the United Nations factfinding organ on the real causes of the revolution and the brutal crushing of the uprising by the Soviet tank divisions.

The United Nations General Assembly has, since 1956, successively adopted 12 political resolutions on Hungary, demanding the with-

drawal of Soviet troops and free elections under international control, while condemning the Soviet Union for the brutal crushing of the victorious Hungarian revolution. The Soviet defiance of these resolutions has gravely affected the prestige of the world organization by creating a dangerous precedent for the impunity of members who do not comply with the General Assembly resolutions.

Although the political actions of the United Nations could not be enforced, the mere discussion of the Hungarian situation during the periodical debates of the General Assembly on Hungary kept alive the Hungarian people's spirit of resistance under a seemingly quiet surface. However, it was shocking for Hungarians at home and abroad that 3 days after the adoption of the latest U.N. General Assembly resolution on Hungary (December 9, 1959), the very same high U.N. body accepted Hungary as a member of the committee for the peaceful exploration of outer space (December 12, 1959).

By this totally unexpected and inconsistent move the General Assembly accepted the Kádár regime as an equal international partner, although the Hungarian delegation's credentials were not approved, with the motivation that it was issued by a regime which was placed in power by the Soviet armed forces in 1956. This move, which was supported by the Western Powers, virtually amounts to the rehabilitation of the Kádár regime and thus means a complete Western capitulation in the Hungarian case, which is now noisily exploited by the Communist propaganda in Hungary and abroad.

It is the most revolting injustice in the 20th century that the Hungarian people with a record of a thousand years of independence is languishing in the most ruthless colonial bondage of the Soviet Union, while even backward peoples are attaining nationhood and independence, one after another, thanks to the help of the Western Powers.

The present situation in Hungary may be briefly illustrated as follows: Increasing persecution of the patriots, secret trials and executions, a ruthless drive for the collectivization of agriculture, institutional violation of the basic human rights, psychological exploitation of the presence of Soviet troops, overcrowding of the forced labor camps, control and persecution of the clergy.

Speeches of Communist Party leaders delivered at the party congress in December 1959, clearly indicate that Moscow wants to tighten the regime in Hungary despite the period of thaw in East-West relations. This mirrors the Soviet determination to present Hungary as a completely socialized state as soon as possible in order to eliminate one of the most outstanding problems in Eastern Europe, and to make it, thus, disappear from the United Nations General Assembly agenda, also.

For all these reasons the Hungarian people who had not received any Western diplomatic or political assistance in the victorious days of their life-and-death struggle for freedom, now rightly expect that the Western Powers seize the very first East-West summit meeting to be held after the adoption of 12 United Nations resolutions on Hungary, to pose the grave problem of non-compliance with the United Nations resolutions to the Soviet Union.

Both the juridical and moral obligations of the Western Powers and the preservation of the prestige of the United Nations equally demand that the Western Powers bring up forcefully the Hungarian question at the forthcoming summit meeting.

New York, N.Y., March 1, 1960.

Problems Facing the Livestock and Food Distribution Industries

EXTENSION OF REMARKS OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. SHORT. Mr. Speaker, I recommend to your attention, and ask permission to insert following my brief observations a speech given by Mr. H. R. Davidson, president of the American Meat Institute, at a dinner last evening where the board of directors of the institute and some Members of Congress from agricultural States were present. Mr. Davidson's speech, it seems to me, points up realistically the problems facing the livestock industry, and the food distribution industry in the years ahead. We hear a great deal of the spread between prices received by the producer and prices paid by the consumer. As Mr. Davidson points out in his remarks, additional costs came about as the housewife asks for more service, such as trimming, packaging, freezing, and preparation for the table. The producer perhaps should be giving more attention to providing part of the service asked for by the housewife in order that he might have a greater share in the dollar spent by the consumer.

Of even greater importance to the livestock industry, as Mr. Davidson points out, is the problem of proper control by Government of the use of some of the chemical additives in food and feed. The livestock industry and the processing and distribution industry, I am pleased to report, are aware of the threat posed by improper use of additives and have been working quietly, but strenuously to devise ways and means to completely assure the consumer of the continued reliability of our meat supply. A wonderful job has been done in the past by producers and processors of providing the consumer with clean, wholesome, healthful, completely dependable meat products, regardless of grade or price. The industry dedicates itself now, and in the future, to carry out this responsibility. Our existence, Mr. Speaker, depends upon our continuing to do a good job.

The speech follows:

This is the third year that we have had the opportunity of visiting with many of you. We are beginning to feel that we know you better and that you are perhaps more familiar with us and some of our business problems than you may have been formerly. In addition to its social values, this meeting is basically an effort to improve our communications. In the next few minutes, I hope I can make a contribution along this line by talking briefly about where meat packing fits in this complicated economy of ours.

We are an old industry. We deal with a perishable product. We take all the livestock raw material that is offered, make it edible and useful by many complicated processes, and move it to the retail dis-

tributor. While this sounds pretty basic, this is a big job. Millions and millions of livestock broken up into billions of small pieces and transported all over the land under the watchful eye of management, aided by hundreds of necessary technical controls, prove the point. It is axiomatic in our industry that the average beefsteak travels at least a thousand miles from where it is produced to where it is consumed.

The very nature of agriculture in America is such that there is a tremendous variation in the quality and kind of raw material. It is a technical fact that no two head of livestock are identical. We work with young livestock and old livestock, fat livestock and thin livestock, livestock of such quality that it produces cuts suitable for the broiler or the roasting pan, or livestock producing products that must be processed extensively to gain palatability. Fortunately for agriculture, the so-called less tender meats are even more nutritious, from a protein standpoint, than the products of broiling quality, such as we have enjoyed this evening. In fact, there is no such thing as a really undesirable piece of meat in this country, provided it is handled properly. A pot roast from the chuck of a Low Grade steer or Good cow becomes a delectable dish when properly braised. Many of us were raised on this kind of good solid food.

It is said that the trick of tenderizing the more flavorful but less fat meat products of American farms is a lost art. I do not share this view. A check I made the other day indicates that 21 million American homes—more than half—are equipped with pressure cookers and thus have the facilities to prepare properly these lower cost cuts. Nevertheless, steaks and chops, which don't require moist cooking, remain in brisk demand in relation to other cuts. A large part of this demand comes from the working housewife who represents nearly two-thirds of the 22 million women in the labor force. The working housewife usually wants a meat cut that she can slap in a skillet and serve a few minutes later. She not only doesn't have the time to prepare other cuts—too often she doesn't know how to do it properly.

Practically all of the studies we have made indicate that there are two things which the housewife wants most in return for the 25 percent of her food budget that she spends for meat: One is tenderness, and the second is a minimum of fat. This presents agriculture with a sharp dilemma.

To provide the eating quality the consumer wants, we must have young animals for tenderness, plus some fat for flavor. Now, I am sure many people have wondered why we take a dim view of Government grading and of most other grading systems now in use. The reason is, of course, that grading is based on a 100-year-old, now outmoded, concept that the fattest animal is the best. From the consumer standpoint, the fattest animal is not the best, but the Government graders still tell her that it is.

Our grading systems also set up a target for the producer which doesn't really reflect the consumer's desires. The retailer complains about fat, but he still tends to use the magic words "Choice" or "Prime" to describe his product because they are terms that are firmly rooted with the image of quality among consumers.

In some areas of the country, particularly the Far West, where the fattening of cattle is a new business and where most packers are also feeders, this same vested interest is apparent. However, most meat packers realize that except for some addition to flavor and some contribution to tenderness, excessive fat production is an economic waste. Being in the middle between the producer and the consumer, the packer finds it difficult to do too much about it except to "raise the flag" and try to get better thinking

and better interpretation of consumer preferences to filter through the entire industry. I am sure that most of you this evening left the fat from your steak on your plates.

This problem is complicated still further by the fact that American agriculture grows great quantities of feed grains which, when fed heavily to animals, are efficient producers of fat. The meatpacking industry, extremely conscious as it is of the responsibility of merchandising products which constitute approximately one-third of the farmer's income, has sought to meet this problem in the case of pork by trimming pork cuts drastically before they reach the retail trade. This practice is now quite general throughout the country. In addition to making poor products more acceptable to the consumer, the fat trimmed off at the packinghouse can be more economically utilized there than elsewhere on the trip from farm to market.

In addition, we have in the past and presently are engaged in extensive research to try and find artificial methods of tenderization. Some methods, based on the application of enzymes, are already a commercial success. On a relatively small scale, many restaurants are now offering beef that has been tenderized by soaking in vegetable enzymes. These products are frozen to arrest the action of the enzymes and cooked before they are completely thawed. While not yet sufficiently practical to be offered on any scale to the general consumer, the chances of extensive use of enzyme tenderizers is probable in the future.

The meatpacking industry is in the midst of and has ahead of it many difficult problems. While this is true of industry generally, we are plagued by many special difficulties, all of which result from circumstances that are not easy to appraise. For example, to what extent will livestock production patterns change during the next decade? Will livestock be increasingly produced by fewer and large specialists in the effort to meet changing demands? Will livestock production, for example, approximate the course which the poultry industry has demonstrated? Poultry has, by virtue of a mass production sequence, standardized its product and increased its market. If so, where should one build a packing plant to take the place of obsolete equipment which he may now possess? Should a packer think in terms of a small packinghouse which runs around the clock and thus keep his machinery in constant operation, or should he favor a large operation? Should a packer set out to automate his operation, running it on a continuous line, and if so, can his buying and selling operation be synchronized with such a machine? Should the packer take a leaf from the book of the grocer and prepack and presell his products on a franchise basis through mass media?

I am sure the answers to some of these questions are gradually emerging. About 6 weeks ago I had the opportunity to sit in on the unveiling of an extensive study which had been completed by the Raymond Loewy Co. for the Super Market Institute. I was most interested in these findings and I would like to share some of them with you. This study was made for the purpose of trying to determine better methods for merchandising perishables. Included in the study were methods of presenting meat food products, fresh fruits and vegetables, dairy products and bakery goods to the public.

While this study resulted basically in recommendations for changes in store arrangement and more merchandising prominence for perishables, and included recommendations for increasing the space devoted to nonfood items, there was one point which ran all through the study that I believe is significant: That was the evidence of greatly increased demand on the part of consumers for more service and convenience. For ex-

ample, it was pointed out that fresh fruit and vegetables have lost from 25 to 35 percent of their acceptance during the past 10 years to the frozen food counter. They have lost ground to the convenience of the frozen package, despite the fact that operators have tried to package and present their fresh produce in more convenient form.

It was pointed out that meats, while offered in infinite variety, need to be sorted out for the consumer. In other words, the housewife should be in position to go to the stew section to get stewing meats; to the breakfast counter to buy breakfast meats; to the beef counter to buy beef; to the sausage counter to buy sausage; and to the variety meats' counter to buy variety meats. It was also recommended that the package should show the product; carry a picture of it as it should look when cooked, and list a recipe on how to do it. By way of emphasis, this study pointed out that a decade from now most housewives won't know how to shuck an ear of corn.

The study said that the use of anatomical terms for descriptions of meat cuts are confusing; that grading systems were complicated and meaningless to consumers; and that people relied on the store to provide quality. What was wanted was that the job of service and know-how should be laid out with the package. The institute's sales and merchandising committee is already at work in an effort to appraise this basic study. Like all studies, the Loewy study represents the gathering together at one point the known facts about a problem and then drawing conclusions from these assembled facts. I mention this by way of illustration of the changing role which our industry will be playing in servicing agriculture and its customers in the decade ahead.

For a moment let us come back to the present. There are other problems in communications which have political as well as economic and market undertones. We hear a great deal about the increasing spread between the producer and the consumer. This is true and very real. However, the impression sometimes given that the farmers' share is being squeezed because of some malfunctioning of the marketing system is decidedly unfair. In the first place, it is unfair to farmers in misleading them into the belief that there is a culprit somewhere that should be chastised. And secondly, it is unfair to food processing and distribution firms because it implies that the increased spread is largely bloated profits or unnecessary added costs or both.

In the case of meatpacking, our gross margin widened by 30 percent in the 10 years 1948-58. The margin between selling prices and cost of raw materials went from about 18 percent to about 24 percent of our total sales dollar. At the same time, our industry's average profit after taxes included in the gross margin actually declined—from 0.9 to 0.6 of 1 percent of the sales dollar—in this 10-year period.

Meatpacking, like most other industries, has very little control over its operating expenses such as labor, transportation, electricity, supplies and taxes, all of which have gone up significantly. I do not need to talk to this group about taxes. As a matter of fact, the present tax and other increasing costs has placed American industry and agriculture in a position similar to that described by the queen in "Alice Through the Looking-Glass":

"Now, here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that."

And that's just about what we have to do to keep ahead of this cost problem today.

We certainly have every sympathy for the Presidents' concern and your concern over the built-in inflationary problems that have developed in our post-war economy.

The increased spread we hear so much about is a matter of simple arithmetic that harbors no great mystery and no evidence of skulduggery. The meatpacking industry has been doing what it can to offset these increasing costs by improved efficiency. A number of the older, outmoded plants have been replaced by new, modern operations. The result is that the industry has actually lowered its total operating expenses since 1956, despite continued advances in wage rates, freight rates, taxes and other costs of doing business.

While the increased spread between the producer and the consumer is a fact in our business, it is also a fact in practically every other business in the country.

Another problem and perhaps the most potentially explosive issue we all face is the use of chemical additives in food and feed. There is also the problem of insecticide residues—a byproduct of man's eternal struggle against the pests of nature.

We in this industry, of course, have been extremely sensitive to what has happened in this area recently. Without debating the right or wrong of methods used, the results of the cranberry and caponette situations have dramatically pointed out to us, and I'm sure to you, that this subject needs firm, intelligent, and constructive handling on the part of government, manufacturers of chemicals, and pesticides, the users of these products, the food industry, and the press and other communications media. We want you to know that we are fully aware of our responsibilities in this field and have been quietly, for a period of years, bending every effort we know how to find solutions. There is no need to dwell here on the tremendous and growing importance of chemicals in the production of both the quantity and the quality of our food supply. The American Meat Institute takes second place to none on the insistence that the most paramount issue is the preservation of the wholesomeness of the food supply and the confidence of the American people in the agencies of government and the food industry responsible for this wholesomeness.

The meat industry is very fortunate in this situation from the standpoint of public protection. The Federal Meat Inspection Division, in particular, and other meat-inspection services over the country have done and are doing a magnificent service in the public interest. For 50 years the Meat Inspection Division has not only inspected animals before slaughter and after slaughter but on a piece-by-piece basis. Approximately 100,000 pounds of meat are condemned every working day by the Federal service alone. This has been done quietly and without fanfare, and with a dedication that I think finds no counterpart anywhere else in the world. This service is necessary and needed to protect the health of the Nation. It is obviously a public function and it should be paid for by the public.

The meat and livestock industry absorbs the loss of the tonnage which is condemned as unfit for food. The public should absorb the small additional cost of meat-inspection services.

You know better than the rest of us that it is common, of course, for a citizen to complain about the tax bill and at the same time make the point that the tax which protects him is the exception, usually suggesting, as I have done, that the amount is very small. The actual cost of the Federal meat inspection service is something less than a penny a month—about a dime a year—per person. Nevertheless, we are talking about the public health and the food supply, which is as basic a Government responsibility as is defense or any other fundamental public need which helps all the people.

As I near the end of this report, I am proud to point out that the American Meat Institute is the only nationwide association of

meatpackers which represents and serves the interest of all classifications of meat processors—the smallest and the largest, slaughterers, processors, sausage manufacturers, canned meat manufacturers, jobbers, and others. Our members—who number about 700—do business in every State.

As I noted earlier, we are primarily concerned with communications. I don't need to belabor this point with you who are in the business of dealing with people that one of the biggest problems in our industry, as well as in others, is the problem of communications and of getting better public understanding.

In conclusion, let me say that we believe these meetings are good for us; we hope that they are informative and interesting to you. We firmly believe they are in the public interest. It is part of our responsibility as a trade association to keep the leaders of Government informed of the basic, everyday problems of this great industry which makes a real contribution to the national well-being and is of direct interest to the 250,000 men and women engaged in this business, the 5 million farmers who grow livestock, and the whole Nation that depends on it for its meat supply.

We welcome, as you do, the apparent maturity that is developing in Government and industry relations. We want to encourage this mature and sound development.

What the Aged Need

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FORAND. Mr. Speaker, under leave to extend my remarks I include an article that appeared in the February 13, 1960, issue of *Business Week*. I believe that all who are interested in the health care of the aged will find that it represents sound thinking on a most pressing problem.

The article follows:

WHAT THE AGED NEED

It's obvious that the swift increase in the number of older people in our population poses new economic and social problems. These problems are now undergoing the most thorough and searching examination ever.

There was a time when providing a basic pension program was the great need—a need fulfilled in the main by establishment of social security in 1935 and by the widespread development of private plans in later years. Now the most pressing need of this population group is medical care, especially assistance in case of major, crippling illnesses.

Medical expenses of older people are at least three times those of younger citizens. While many can cope with the normal run of illness, few oldsters have the financial resources to meet the cost of catastrophic illnesses.

Many had hoped that the private health insurance companies and medical groups could meet this problem by coming up with some sort of health insurance plan at rates older people could afford. But they haven't, and even President Eisenhower and Health, Education, and Welfare Secretary Flemming, who were so anxious for just such a solution, now feel there's no recourse but for the Government to step in to provide coverage against catastrophic illness.

The cost would probably be financed by a supplement to the social security payroll tax. At the same time, individuals would be encouraged to continue their basic health insurance policies on into retirement to defray normal medical costs.

If the Government steps in to provide insurance against catastrophic illnesses of the aged, it will not be moving in where private industry can do the job. It will be assuming responsibility in an area where industry has found it cannot offer the protection needed.

Taxation of Cooperatives

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MOORE. Mr. Speaker, I respectfully request permission to insert into the RECORD the statement of Mr. Edwin J. Putzell, Jr., corporate secretary and director of the law department of Monsanto Chemical Co., made before the House Committee on Ways and Means on the subject of taxation of cooperatives.

I should like to call the attention of my colleagues to his statement for I feel they will find it to be a most intelligent approach to this matter.

The statement follows:

STATEMENT OF EDWIN J. PUTZELL, JR., BEFORE THE COMMITTEE ON WAYS AND MEANS ON THE TAXATION OF COOPERATIVES

My name is Edwin J. Putzell, Jr. I am corporate secretary and director of the law department of Monsanto Chemical Co. Today, I appear, with your kind permission, in support of the request from a growing number of quarters for some type of proper income taxation of the earnings of cooperatives.

For over 30 years Monsanto and its predecessor companies have manufactured fertilizer ingredients. Today, we are substantial producers of nitrogen and phosphorus, two of the three basic components of plant food. Along with others of the fertilizer industry, we are confronted with an ever-increasing kind of grinding competition against which no amount of cost cutting, increased operating efficiencies, accelerated sales effort, or better research is, or can possibly be, effective. It stems from the failure of basic tax concepts to keep up with developments and the resulting gap in our income tax system. It results in an inequitable and unfair situation where certain corporations whose earnings go largely untaxed compete for customers and sales with increasing effectiveness against other corporations which pay a 52 percent tax on their earnings.

At the outset, let me emphasize that we have no desire whatsoever to destroy cooperatives and certainly no quarrel with the present exemption from tax of income from traditional service activities. These traditional types of cooperative activities are important to our rural economy; they are desirable for the welfare of a large segment of our people. In addition, Monsanto has no desire to be free of competition; on the contrary, we welcome it and believe our society is the benefactor of keen, healthy competitive effort by all types of organizations, partnerships, corporations, proprietorships, and cooperatives. But at the same time, we believe in and want to perpetuate our free enterprise system in which, under our Con-

stitution and established rules of fair play, commercial endeavors which compete are subject to the same governmental and tax burdens. We, therefore, would like to direct special attention to those recently acquired activities of cooperatives which are competitive with tax-paying industry when engaged in business unrelated to the original concept of cooperative endeavor, namely, that of being service organizations for the joint marketing of farm produce and joint purchasing of farm supplies.

From many witnesses during the panel hearings in mid-December, as well as those appearing before you now, you have heard of the rapid growth of cooperative enterprise in this country. Such startling development is not just the result of increased activity in the purchasing of farm supplies and the selling of farm produce. A very large part of it is the product of the movement of cooperatives into areas of activity which widely depart from the concept of their traditional service function. Nowhere is this departure more noticeable than in their use of retained earnings for investment purposes and in manufacturing, mining, and processing. Some of the effects of cooperatives' tax-free competition with tax-paying industry in such unrelated activities are known, but other effects are less patent and not as well understood. Let me give an illustration. In 1952, a cooperative was formed to manufacture nitrogen fertilizers in competition with Monsanto and others. Now, 7 years later, it has built a net worth of \$12 million, with total assets of \$21 million. Manufacturing costs at plant capacity for it and for Monsanto in producing a similar fertilizer product of the same chemical constituents are within 2-3 percent. In selling the product to a customer equidistant from both plants, the cooperative sells its product at \$68 a ton which price becomes \$50 a ton after an \$18 per ton benefit differential is repaid as a patronage rebate. No corporate tax goes to the U.S. Treasury from the co-op. If Monsanto sells at the same market price and nets the same differential as the patronage dividend, one-half, or \$9, is paid in taxes to the Treasury Department and the other half constitutes funds for expansion and returns to Monsanto investors. Thus, ultimate benefit to the cooperative investor is obvious.

But, who gets the fertilizer business in such a situation? Certainly it is not Monsanto, and just as certainly, it is the cooperative. There isn't even a race for the customer. But, then what happens? Up to the capacity of its plant, the cooperative takes all of the business in its marketing area. Beyond that area, Monsanto vigorously competes in the usual way with other taxpaying companies, but with this major difference. From the differential of \$18 per ton, an average of as much as 45 percent must be deducted for extra freight costs to put the product beyond the marketing area of the cooperative. This cuts the differential to \$10. Now, instead of one-half of \$18, or \$9, in tax revenues for the Treasury, there is only one-half of \$10, or \$5, for the Treasury and the remainder, or \$5, for expansion and Monsanto investors.

The conclusions from this perhaps oversimplified illustration are clear: (a) A group organized as a cooperative and employing extensive amounts of capital in their business pay no corporate tax on the profits of their investment; (b) other taxpaying enterprises competing in the same field now earn less and, therefore, pay less in taxes; and (c) of equal importance, the inducement for new risk capital in taxpaying enterprises will become increasingly unattractive with the consequent drying up of Federal tax revenues from this type of business.

You have heard excellent reviews of the history of income taxation of cooperatives.

To me, that history is clear in two respects:

(a) The original tax exemption was intended for and expressly granted to associations organized and operated as purchasing agents and as sales agents for farmers, and (2) the economic impact of granting the exemption in 1916, when the income tax rate was 2 percent, was almost nil. Indeed, it was not even possible in 1921, when the first amendment to the cooperative exemption was adopted, to forecast the economic force which tax exemption, granted in an era of low tax rates, could have when continued into an era of the extremely high rates which exist today—and when used in connection with earnings from totally unrelated business activities. The mounting anticompetitive effect of the tax provisions resulted in repeated investigations and hearings by this committee. Then, in 1951, the Congress adopted legislation designed to tax all cooperative income either at the cooperative level or in the hands of its patrons. The subsequent frustration of congressional intent by a series of court decisions is well known. Equally clear are the two results of such court action: (a) The U.S. Treasury is being deprived of taxes not only at the patron level, but at the cooperative level as well, by the use of paper allocations, or so-called patronage rebates or dividends, and (b) there is the consequent accumulation of untaxed earnings by the cooperative enterprise. The importance of such paper allocations was apparent, for example, in 1954 when the Department of Agriculture's survey of 1,157 cooperatives showed that even then over 60 percent of those cooperatives' net margins had been retained tax-free by such means.

There is also a corollary effect resulting from the loophole in the present tax law. It is the acquisition of taxpaying businesses by co-ops which then pay for them over a period of time out of tax-free earnings. One of the more recent of an increasing number of such cases was the acquisition by the Maryland & Virginia Milk Producers Association of the Embassy Dairy here in Washington. In this case, the Milk Producers Association, a cooperative, was able by loans to obtain the assets of the Embassy Dairy. Then, by paper allocations, it retained its earnings tax free and used such funds to retire its loans. Such a method of financing acquisitions enables any cooperative to pay a price which is in excess of that which could be paid by a competing business paying normal taxes, and then to retain earnings from the acquired enterprise tax free.

The effective reenactment of the principle sought to be established by the 1951 amendment would go part way toward correcting the situation by bringing some added revenue to the Government from taxes levied on cooperative earnings allocated to patron members and would tend to prevent the accumulation of tax-free funds in the cooperative Treasury. However, it is not in my opinion the answer to the basic problem. Likewise, the Simpson bill (H.R. 7875) is only partly corrective. While it, too, would provide some added tax receipts, it would not relieve today's increasingly serious subsidized competition with taxpaying industry.

An analysis of the elements of a patronage dividend or rebate helps to indicate an answer. It also shows clearly the part which unrelated business income now plays in cooperative earnings. From the origin of co-ops in this country, patronage dividends have consisted of price adjustments arising from the traditional purchase and subsequent sale of farmers' products in the case of a marketing cooperative and from savings resulting from large-scale joint buying on the part of farmers' purchasing co-ops. A part of the patronage dividend has also resulted from the natural and inevitable benefits of cooperation, such as profits generated

by a reduction in transportation, storage, and other costs or from the averaging of gains and of losses. Today, however, patronage dividends include an additional element: profit from the investment of capital and from the extensive use of it in the co-op's business. This is customary now with most large cooperatives and with almost all regional ones. For example, such cooperatives may own elaborate facilities to manufacture milking machinery, paper, and boxes and to process and can produce before marketing the farmers' products. They also own well-integrated nitrogen-manufacturing plants, phosphate mines and furnaces, oil wells, refiners, and distributing facilities.¹ Others have substantial investments in the securities of other cooperatives or of taxpaying corporations. In all such cases, patronage dividends contain the element of profit, either that attributable to the direct manufacturing, processing, or mining activities or to the return on one's investment in securities or other types of capital assets. Such extensive use of capital and the resulting tax-free earnings is a departure from the historical concept of exempt cooperative service activities. Such can also plainly be designated as unrelated business activity and income.

Congress dealt with a similar situation in 1950. Certain charitable and nonprofit organizations, exempt from Federal income taxes, had been actively engaged in businesses competitive with taxpaying corporations. In the Revenue Act of 1950, income from such business activities of charitable organizations was properly made the subject of income taxation. This committee's report on the bill states:

"The problem at which the tax on unrelated business income is directed here is primarily that of unfair competition. The tax-free status of these section 101 organizations enables them to use their profits tax free to expand operations, while their competitors can expand only with the profits remaining after taxes. Also, a number of examples have arisen where these organizations have, in effect, used their tax exemption to buy an ordinary business. That is, they have acquired the business with no investment on their own part and paid for it in installments out of subsequent earnings—a procedure which usually could not be followed if the business were taxable."²

Therefore, we would recommend taxation on a current basis and at corporate rates of all earnings of cooperatives which result from investment income, rents, and royalties, and earnings from manufacturing, processing, and mining activities. These are unrelated businesses as contrasted with the traditional service functions of cooperatives. It is in this unrelated business area where the effort ceases to be joint purchasing and selling and becomes the accumulation of capital, its joint investment, and the receipt of profits resulting therefrom. It is also in the manufacturing, processing, and mining areas that the competitive advantage of tax-free operation at the cooperative level is most marked.

This proposal is not in any sense a departure from existing law. Today, co-ops

¹ For example, with respect to regional cooperatives during 1956-57, of 2,582 employees on Southern States Cooperative, Inc.'s payroll, 1,188 were engaged in manufacturing and processing operations; of 2,047 employees on Consumers Cooperative Association's rolls, 837 were involved in oil production and refining and 404 in manufacturing plants; and 754 of Eastern States Farmers' Exchange's 1,834 employees were engaged in manufacturing and processing.

² H.R. Rept. No. 2319, 81st Cong., 2d sess., 36-37 (1950).

pay a tax on unrelated income, such as rentals, interest, etc., even though such earnings are distributed to patrons. In our thinking, the manufacture of fertilizer and of milking machinery and the operation of an oil refinery are as much unrelated to the basic service function of a cooperative as is the rental of income-producing properties.

A tax on profits from specified unrelated business activities necessarily requires a clear definition of such activities. Surely, income from investments, whether in securities, real estate, or other capital assets not used in the trade or business of the cooperative, should be included in any such definition. So should income from manufacturing, mining, and processing. To reach profits derived from the extractive industries, sections of the present Code can easily be utilized. A definition of "mining" could be based on the provisions under which a deduction for depletion is currently allowable. Defining "manufacturing and process activities" is not difficult either. The definition in the regulations under the manufacturer's excise tax can serve as a starting point.

The determination of earnings attributable to these categories will, under generally accepted accounting principles, be a relatively easy matter. The only factor that might significantly distort the accuracy of such determinations of earnings would be the cost of goods sold or gross sales price in transactions with members. A price policy could be established by a cooperative with respect to transactions with members which would leave the co-op with no taxable income; that is, to the extent that the cost of goods sold with respect to products purchased from members is overstated, the manufacturing profits of a cooperative would be understated.

In the case of manufacturing, mining, and processing cooperatives, the possibility of distorting income through unrealistic pricing does not constitute a serious problem. The existence of equity or outside creditor interests would compel realistic pricing policies. Additionally, cooperatives should be subject to statutory provisions similar to those of section 482 of the Internal Revenue Code which has for many years successfully prevented the distortion of income from transactions between related businesses through unrealistic intercompany pricing policies.

Our second proposal is the same as existing law. It deals with cooperatives' earnings which derive from their traditional services and related activities because we recognize that (a) certain elements of the patronage dividend should inure to the patron, free of tax at the co-op level, as they result from joint effort, and that (b) the use of some capital is necessary for the co-op to perform those services for all of its members which the farmers would normally perform themselves. Therefore, such earnings as are not distributed in cash or its equivalent would be taxable to the co-op in the year earned at the usual corporate rate. On the other hand, all such earnings should be excluded from taxable income at the cooperative level to the extent that distribution of them is made in cash or its equivalent. Distributions in the form of paper without a fixed maturity date or fixed obligation to pay should be taxable to the recipient if he has consented both to that type of distribution by the cooperative and to having its stated value treated as cash in his hands for tax purposes. Where the cash or paper is taxable to the patron, it would be deductible by the cooperative.

In addition, we would recommend an annual \$25,000 deduction from tax of income from the cooperative's traditional service operations. At panel hearings before this committee last December, reference was made to the Department of Agriculture's 1954 survey on cooperatives. The survey in-

cluded 1,157 cooperatives, or 12 percent of the total number then existing. Those 1,157 cooperatives had combined annual net margins, or earnings, of \$132 million which amounted to nearly one-half of the \$275 million total net margins of all cooperatives. Your committee was then told that analysis of the data showed that the average net margins per cooperative in the 12 percent group amounted to \$114,000 per year,¹ while the average net margins for all of the remaining 88 percent of the cooperatives surveyed amounted to \$16,600 per year. The very substantial number of small cooperatives, whose average earnings were \$16,600 per year, do not engage in unrelated business activities and, therefore, do not have income from such sources. The recommended \$25,000 deduction from the income of service activities would, therefore, leave untaxed the earnings of the smaller co-ops which represented 88 percent of all cooperatives in 1954, and would permit their accumulation of capital.

In summary, our proposal is, briefly, that co-op income from all sources be subject to the usual corporate tax. However, in computing taxable income, a cooperative would be allowed a deduction for all patronage dividends, including paper allocations, to the extent that they are taxable to the patron. The co-op would also receive an annual \$25,000 deduction. But in no event should the sum of these two deductions exceed the co-op's income from service activities.

With regard to the patron, his taxable income should include his pro rata share of amounts deducted by the cooperative as patronage dividends (except where such amounts are considered as a reduction in his personal expenditures). All other co-op distributions to the patron, as such, should be treated as dividends in his hands for tax purposes.

The foregoing proposals are fair. In our view, they would correct, in major part, the abuses and inequitable results which now flow from the present tax treatment of cooperatives. The traditional service concept of cooperative groups operating in the field of marketing and purchasing would remain undisturbed. Government revenues would be increased and competition waged on a fair basis by levying taxes on income from cooperative activity such as investment and manufacturing, processing, and mining, which are unrelated to the traditional service concept of such group enterprises. Likewise, Government revenues would be increased by preventing the accumulation of tax-free funds at the cooperative level and by closing the present tax loophole through requiring tax collection on allocations from either the cooperative or the patron.

In closing, let me express my sincere appreciation for this opportunity to express my company's views on this important subject. Thank you.

¹This average net margin figure would have been significantly greater had 898 local co-ops not been averaged with the 259 regional ones. In that same year, the assets of regional co-ops averaged \$4,050,000 and those of local co-ops averaged \$198,000.

Soviet Cars in the United States

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MACHROWICZ. Mr. Speaker, it was recently reported in the press that

an American importer has contracted with a Soviet Government-controlled trading agency for the importation and sale in the United States of 10,000 Russian built automobiles over the next 2 years. If the American people find these cars to be satisfactory, there is of course nothing to prevent them from buying them. This is in the American tradition of free enterprise, and freedom of choice for the individual.

However, the Soviet Union itself is not able to provide all the automobiles which its own citizens would like, and freedom of choice for the individual in the U.S.S.R. is limited to the choice the Soviet Government feels like giving.

Against this background, we see the difficult position of the United States in its present trade policy. We are not selling American automobiles in the Soviet Union today. American products are excluded from many markets of the world. And yet, we in the United States must leave our domestic market open to the goods of other nations in order to remain consistent in our liberal trade policy.

On February 15, Dr. N. R. Danielian, president of the International Economic Policy Association, wrote a letter to Anastas Mikoyan, Deputy Premier of the U.S.S.R. Dr. Danielian's association is comprised of American business corporations, including automobile manufacturers. In his letter to Mr. Mikoyan, Danielian suggests that the Soviet Union favorably consider granting permission to American auto manufacturers to open up American dealerships to sell American-made autos to Soviet citizens on the installment payment plan.

This would certainly benefit the Soviet people, in helping them to obtain the consumer goods its Government says they should have. With Russian cars being sold here, and American cars being sold in Russia, we would have reciprocal trade in consumer goods.

Directors of the IEPA are, in addition to president N. R. Danielian, Mr. H. Robert Diercks, Cargill, Inc.; Mr. E. V. Huggins, Westinghouse Electric Corp.; Mr. Nicholas Kelley, Jr., Chrysler Corp.; Mr. George N. Monro III, National Bank of Detroit; Mr. Murray Preston, American Security & Trust Co. of Washington, D.C.; Mr. Walter C. Skuce, Owens-Corning Fiberglas Corp.; Mr. Philip H. Watts, Alex. Brown & Sons, and Mr. F. Hugh Burns. Mr. Rodney W. Markley, Jr., manager of the Washington office of the Ford Motor Co., is adviser to the board of directors.

Mr. Speaker, under unanimous consent, I include in the RECORD the text of the letter sent by Dr. Danielian to Mr. Mikoyan:

INTERNATIONAL ECONOMIC POLICY
ASSOCIATION.

Washington, D.C., February 15, 1960.

MR. ANASTAS I. MIKOYAN,
First Deputy Chairman, Council of Ministers,
the Kremlin, Moscow U.S.S.R.

DEAR MR. CHAIRMAN: It has come to our attention that a U.S. automobile dealer has signed a contract with Avtoeksport, a U.S.S.R. Government-controlled foreign trade corporation, to import 10,000 Moskvich cars, manufactured in your country, into the United States, during the next 2 years.

You are quite aware, of course, that under our free enterprise system and our national trade policies, there is nothing to prevent the sale of these Soviet manufactured cars in the U.S. market, except the taste preference and the free choice of the individual U.S. purchaser.

We are wondering whether, in the interest of expanding mutual trade in the area of consumer goods, your Government would entertain the establishment of agencies and dealerships by U.S. automobile manufacturers in key metropolitan centers in the U.S.S.R. for importation and sale direct to Soviet citizens of cars manufactured in the United States? We suggest specifically your giving favorable consideration to the following proposals:

1. Authorization for the establishment of dealerships, sales, and service organizations in market areas in the U.S.S.R. to be selected by U.S. automobile manufacturers, including, of course, the importation of assembled cars and parts.

2. The establishment of consumer credit or installment selling facilities to make these cars more widely available to a large group of U.S.S.R. citizenry.

3. Authority to transfer in gold, dollar exchange, or other convertible currencies, the earnings of the U.S. corporations from their sales of cars and service in the U.S.S.R.

We believe that permission to U.S. manufacturers to make available American-made cars to an ever increasing number of Soviet citizens, at reasonable prices and with easy payment arrangements, would immeasurably add to their standard of living, and establish reciprocity of trade in consumer products, an area in which U.S. industry has much to contribute to the improvement of living standards and happiness of the Soviet people. This, we take it, is consistent with the stated objective of your Government, to make consumer goods more widely available to your people.

Sincerely yours,

N. R. DANIELIAN,
President.

Growth of the Liberty Tree Project

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. HARRISON. Mr. Speaker, last spring we were visited by members of the Junior Chamber of Commerce of Strasburg in the Shenandoah Valley of Virginia, who brought us pine seedlings planted in soil gathered from historic sites as a reminder of our heritage of Patriotism.

Previously, I have had the pleasure of reporting to the House that this project, developed and carried out by a relatively small unit of the Jaycees, won the highest national awards of the U.S. Junior Chamber of Commerce.

Now, the liberty tree program has been adopted as one of the 1960 State projects of Virginia Jaycees, and the Strasburg members have opened a special office to carry it forward.

Under leave to extend my remarks in the Appendix, I include an article which appeared in the February 1960 issue of

Future, the official magazine of the U.S. Junior Chamber of Commerce:

Last spring a comparative handful of Jaycees from Strasburg, a small community in the Shenandoah Valley of Virginia, launched a program that would ultimately bring them nationwide acclaim.

Their program was to be cited in the CONGRESSIONAL RECORD four times, have members rubbing elbows with the top House and Senate leaders, put them on the White House lawn, and finally see Strasburg sweep the national awards competition by taking honors in Public Affairs Division I, the National Sweepstakes in Public Affairs, Project of the Year in Division I, and Grand Project of the Year in the 1958-59 Jaycee awards program.

This program, which has become one of the Virginia Jaycee State projects for 1960, is called Liberty Trees.

Strasburg Jaycee Jack Marsh, local attorney who was the project originator, first program director and now State chairman, describes Liberty Trees as being a tangible symbol of our heritage. Liberty Trees are small American white pine seedlings planted in red, white, and blue pots, containing soil from historic spots such as the Shenandoah Valley, Jamestown, Yorktown, Bunker Hill, Valley Forge, and the Alamo.

The project was designed as a countermeasure to the Communist celebration of May Day and encourages Americans to learn about America. The Strasburg Jaycees sold about 400 trees and the proceeds went to the Nathan Hale Fund, which will be used for scholarships and as a fund for financing patriotic endeavors.

In addition to selling the trees locally on May 1, the Strasburg Jaycees loaded nearly 600 in a truck, formed a Liberty Tree caravan to Washington, D.C., and gave each Congressman and Senator a tree. In addition to presenting them to members of the legislature, two were given to Homer Gunther, Presidential staff assistant, who accepted them on the White House lawn in behalf of President Eisenhower. Other notables receiving trees included Secretary of State Herter, FBI Director J. Edgar Hoover, and Governor Almond of Virginia.

Charlie Adlis, a local industrial plant manager who worked out the scheme which enabled Jaycees to distribute the trees to every legislator in both the Senate and House Office Building in a little over an hour, said the response from official Washington was overwhelming. Over 200 Congressmen and Senators sent personal acknowledgments to the Jaycees.

When the program swept the USJCO awards program at the national convention in Buffalo this fact was carried on two different occasions in the CONGRESSIONAL RECORD. The program had been outlined twice previously in the CONGRESSIONAL RECORD, and on the day the trees were presented Seventh District Congressman BURR P. HARRISON explained the project to the House while the Jaycees observed from the gallery.

The Strasburg Jaycees are now implementing the program on a statewide basis, and have a Liberty Tree office. The trees will be offered in packets of 100 which will include all materials necessary for a local club to conduct the program in their community. Of the money received for packets or trees a portion will be used for promotion and establishment of a scholarship fund. Chapters participating in the program must agree that their profits will be used for patriotic endeavor in their community. The recommended sale price of Liberty Trees at the local level is \$1 per tree.

Further information concerning this program can be obtained by writing "Liberty Trees," Box 252, Strasburg, Va.

Representative Curtis Proud To Be on Hoffa's Purge List

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. AYRES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Globe-Democrat, March 6, 1960:

REPRESENTATIVE CURTIS PROUD TO BE ON HOFFA'S PURGE LIST—WARNS OF RUGGED FIGHT AHEAD

(The author, a Member of the House of Representatives for 10 years, is one of 56 Congressmen whom Jimmy Hoffa has pledged to defeat. His congressional district is one of the strongholds of the Teamsters Union.)

(By Representative THOMAS B. CURTIS)

WASHINGTON.—Fifty-six Congressmen have been marked for political purge by James Hoffa, president of the International Brotherhood of Teamsters.

I am one of those Congressmen, representing St. Louis County and South St. Louis, home of Harold Gibbons, teamster executive vice president, and Sidney Zagari, director of Hoffa's purge campaign.

Most of us on the Hoffa purge list will run in the November 8, 1960, elections. Forty of us have banded together in the Committee to Re-elect Hoffa-Threatened Congressmen to offer a solid front to the threats of Hoffa and to delineate a choice for our citizens:

Shall Hoffa or the American voters have the final voice in choosing a Congress?

To "qualify" for the Hoffa purge list a Congressman had to have voted for the Landrum-Griffin Labor-Management Reform Act and have won an election victory in 1958 by less than a 5 percent majority.

AYRES ON LIST

Fifty-three Republicans and two Democrats made the list in this way. The fifty-sixth, Representative WILLIAM AYRES, of Akron, Ohio, despite his convincing 36,000-vote victory in 1958, was marked for purge because of his membership on the House-Senate conference committee which drafted the final version of the law.

The purge campaign is based on the fallacy that the act is "union-busting" and that those who supported it are antilabor.

This is patently untrue. The 56 named, plus 173 other House Members who supported the Landrum-Griffin bill, did so to curb abuses in the labor-management field, revealed to the Congress and to the public. As its name plainly states, the law aims at the unscrupulous employer as well as the unscrupulous labor leader.

Since most of the abuses exposed were perpetrated by Hoffa and his close associates, it is clear why they were angry at the Congress for protecting the public interest and the rights of workingmen and women.

Propaganda opposed to the Landrum-Griffin Labor-Management Reform Act characterizes those who voted for it as either blind in their disregard of labor or servile in yielding to the pressures of big business. I object to this attack on the motives and integrity of Congress.

VOTED OTHERWISE

Had I any reason to feel that this law was a vindictive assault on the labor movement, as it has been called by its opponents, I would have voted, worked and spoken against it, just as I have from 1954 to the present against the "right to work" proposals that

have been presented in Missouri during that time.

There is nothing in this law requiring the overwhelming majority of properly run unions to do anything which they were not previously doing nor to prevent them from doing anything that they were.

Response to the creation of the Committee to Reelect Hoffa-Threatened Congressmen has been spontaneous, widespread and encouraging. Civic leaders, editors and commentators have commended the committee's formation.

Many people throughout the Nation have responded. Letters are flowing into the House Office Building offices of the temporary committee cochairmen, Representatives AYRES and CARROLL KEARNS of Pennsylvania. These letters offer voluntary services and money to offset Hoffa's huge slush fund, his main weapon for waging political war.

The public response has highlighted the Hoffa purge list as an honor roll on which my colleagues and I are all proud to be named.

Surely no one wishes to deny Mr. Hoffa his right to engage in political activity. To flourish, our system of government requires a maximum of political activity and our committee would not strip anyone—an individual, union or corporation—of his legitimate right of political advocacy.

We do not condemn Hoffa for his exercise of this right; rather we commend him. We urge, however, that our citizens also exercise their rights in this field and prevent a special interest from usurping the powers of the public at large.

ONLY WAY

This is the only way to counter the Hoffa purge. The hundreds of thousands of interested, thinking citizens who refuse to let their rights be snatched away by a special interest group must act.

Those who cared enough to demand the Landrum-Griffin Labor-Management Reform Act by an unprecedented deluge of mail, those who resent the threats of a bully can help. To show this interest they must support those Congressmen Hoffa would purge.

We honestly believe we are right. We were right to work for a law curbing a small but dangerous element in labor leadership that has perverted the movement for personal power. We are right in banding together against the purge of a well-heeled special interest. We are opening the way for popular participation in a drive that will show it is not Hoffa, but the voters, the American people, who will name their Members of Congress next November 8.

This is the crux: Do the voters indorse our action or do they not?

If those who agree with us do not register their convictions at the polls, then we are doomed to the purge Hoffa has decreed.

Have no doubts, Hoffa with his huge slush fund for this purge will succeed unless the people rise and prove that they are the true rulers under our form of government.

Why Move to Natick, Mass.?

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. PUCINSKI. Mr. Speaker, I would like to call attention to an editorial which appeared in the Chicago Sun-Times of March 8 and which pre-

sents so clearly an argument against moving the Quartermaster Food and Container Institute from Chicago to Natick, Mass. I should like to call attention particularly to that part of the editorial which emphasizes the fact that the Illinois Institute of Technology has offered to give the Army more than adequate facilities for its research installation on food and food packaging.

This editorial, I think, certainly calls the shots on the Army, and it would appear to me that in view of the offer made by the Illinois Institute of Technology to retain the Quartermaster Food and Container Institute in Chicago, it would be unconscionable on the part of the Army to persist in its efforts to remove this facility from Chicago, under the guise of economy.

The Chicago Sun-Times has performed a fine public service with this editorial, which follows:

WHY MOVE TO NATICK, MASS.?

The storms that battered the East last week canceled a trip to Chicago of two Congressmen assigned to investigate the Army plan to pull its Quartermaster Food and Container Institute out of this city.

For the taxpayers' sake and the Army's we hope that the Congressmen—Representatives VAN ZANDT, Republican, of Pennsylvania, and DOYLE, Democrat, of California—are still planning to come here. We are confident that they will be convinced that the Army is off base in proposing to move its food research agency from Chicago to Natick, Mass. The Congressmen were assigned to make the study by the House Armed Services Committee.

The Army has asked for \$3,628,000 to build new quarters for the research agency in Natick. It estimates it would cost \$687,000 to move. The Army's stated reason for the change is economy—the Army says it can save \$1 million a year by moving to Natick and reducing space and personnel.

We are happy to see the Army expressing concern about economy but we take its thrift talk with a grain of salt. It can make a considerable saving, obviously, by merely reducing space and personnel in Chicago. How much it would save by moving to Natick hasn't been mentioned by the Army. We suspect the Army's motive is not economy but is dictated by the Government's concern over unemployment in New England.

The purpose of the Food and Container Institute is to do research on food and food packaging for the Armed Forces and not to provide jobs. It should be located wherever it can best do its research. It was located here when it was organized after World War II because Chicago is the home of the military procurement agency, it is the heart of the food industry and excellent research facilities are available in Chicago's universities and food and packing industries.

If the Pentagon really is on the level about saving money on the research operation by moving into smaller quarters it should consider an offer by the Illinois Institute of Technology. The institute will finance a new building for the Army on its own campus and make it available on terms that will cover only the costs involved.

Such a location would give the Army access to the manpower of thousands of science and engineering students, excellent research and technical facilities, large computers, a nuclear reactor and the new John Crerar Library, largest technological library in the United States.

If the Army is interested in saving money and doing a proper job of food research it can hardly turn down this offer.

Collection Agencies for Medical and Dental Bills

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FORAND. Mr. Speaker, shortly after I received my copy of the December 28, 1959, issue of the AMA News, official publication of the American Medical Association, which carried in their "Editorial Viewpoint" an article stating that, "no person with a legitimate need for a doctor's services needs to forgo that care because of inability to pay," I received a letter from a private citizen which literally explodes the myth of this type of propaganda. Enclosed in that letter were two letters from collection agencies.

The manner in which these collection letters are written is brutal and vicious. They state that notices will be sent to all businessmen in the area thereby "black-balling" that person for future credit.

The following letters speak for themselves, and for a true and fair evaluation I am inserting both the AMA article and the letters I received. They follow:

[From AMA News, Dec. 28, 1959]

EDITORIAL VIEWPOINT—MEDICAL CARE FOR ALL

A common argument used by forces pushing Forand-type legislation is that many elderly persons now are being denied a physician's care because they are unable to pay for it.

There may be isolated instances of such cases, but if there are the person involved has not explored the facilities available to him.

Actually, no person with a legitimate need for a doctor's services needs to forgo that care because of inability to pay.

The prime object of the medical profession is to serve humanity, regardless of reward or financial gain. And since time immemorial, doctors have given professional advice to the indigent without compensation.

Many county medical societies, however, hesitate to put advertisements in newspapers or publicize their program to guarantee medical services to those who are unable to pay. They feel it is not necessary since the medical profession traditionally takes care of those who cannot pay—modestly and quietly.

The question is not whether physicians actually will provide care to those who need it. According to the code of ethics, a doctor is honor bound to give free care in such instances. The important factor is that some people mistakenly believe that doctors' care is not available unless it is paid for. And apparently the only way to correct this dangerous misconception is to remind the public of the medical society's efforts to provide such care.

A number of county medical societies have publicized through paid advertisements in newspapers their programs "guaranteeing the services of a physician to all who need him, regardless of ability to pay." Thus, those counties have conclusively answered any loose talk about "all the poor folks in this county who are going without needed medical care."

There also is a concerted effort to follow through on the program. When the physicians hear an occasional remark of that kind,

the M.D.'s immediately get in touch with the individual or group who made the statement, and ask them to produce the name of at least one of those poor folks. The medical society keeps after them, even if it takes weeks, until they either confess that they had no one particular in mind or come up with someone who really does need help. "Either way it is a great satisfaction to us," one physician said.

Seven years ago AMA's house of delegates encouraged constituent State medical societies to make these programs known to the public through every effective medium of communication.

Today, medical public relations is better in those counties that have regularly publicized their guaranteed medical-care-for-all plans, the round-the-clock availability of physicians, emergency call systems, and grievance committees.

And where the public generally is aware of the extent to which the profession of medicine has responded to this public need, loose talk by do-gooders is labeled for what it is—loose talk.

CONGRESSMAN FORAND,
Washington, D.C.

DEAR SIR: Following is a plea that we on social security may get some relief from the high cost of drugs, doctors, and medicine. Both I and my wife are on social security drawing a total of \$99 per month. My wife is a paralytic and has high blood pressure and other ailments. My wife needs special food which costs three times the price for a healthy person's food. I called a doctor 1½ years ago for my wife. The doctor gave her 1 month to live. I brought her home and I have taken care of her since. I cannot pay the doctor and the enclosed letters will show you that I cannot even get a doctor to do my wife any good. Sure the doctor will come but none of them will take the time to diagnose my wife's case. I owe one doctor \$40 which I cannot pay, so I am on the blacklist of the medical profession in Hot Springs. I need medical attention myself but can't get it. Local government won't help me so I am appealing to my National Government. My great grandparents fought the wilderness, disease, and Indians to build our Nation, into a country we call a democracy. It was meant that none of us would suffer, but some of us can't get the bare necessities of life. I wasn't in any war so I do not receive \$250 per month. I was rejected in the First World War. I have been a cripple all my life. Must I be punished for that?

ARKANSAS MUTUAL
CREDIT ASSOCIATION,

Hot Springs, Ark., November 28, 1958.

DEAR MR. AND MRS. —: An account against you has been turned over to us for collection.

We believe that this is a just account, but if an error has been made, please contact us at once. We would much rather protect a good name than to put a name in our monthly report of bad accounts. These monthly reports are used by Hot Springs businesses in granting credit.

The account to which we refer is with hospital, Hot Springs, Ark. Amount past due: \$15.65.

If this account is in dispute for any reason, we urge you to take it up at once with the firm named above.

If you pay or otherwise settle this account within 10 days, you will not be listed in our monthly report. Payments should be made to us, but if it is more convenient, they may be made direct to the folks with whom you had the account. If this matter becomes a law case, payment should be made to the court in which the case was heard.

If you are unable to pay your account at one time, we will be glad to discuss a regular payment plan with you.

Please let us hear from you right away.

Yours truly,

A. R. McCoy.

MEDICAL AND DENTAL BUREAU,
Hot Springs, Ark., April 18, 1959.

Re Dr. —. Amount \$40.

DEAR MR. —: The above delinquent account has been submitted to our office for handling and collection.

We do not know why you have allowed the matter to reach this degree of seriousness, but it is now necessary that immediate and satisfactory disposition be made of this account.

We can help you protect your credit for the future. Cooperation costs less than embarrassment and additional expense, and we are here to help you, rather than to inflict any undue hardship upon you.

In the event that you have made satisfactory disposition of this account within a 10-day period, your name will not be recorded in our master files.

We ask that you place your check or money order in the enclosed envelope, or come to the office and take care of this matter.

All payments must be made to this office.

Yours truly,

I. MITCHELL, Manager.

Family Housing Units at the Alameda, Calif., Naval Air Station

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

MR. GEORGE P. MILLER. Mr. Speaker, the Department of the Navy has requested, and the Bureau of the Budget has approved, authorization to construct 900 family housing units at the Naval Air Station, Alameda, Calif.

Existing military-controlled housing was built during the war emergency as a temporary measure and has been declared substandard under section 407 of Public Law 84-241. It is to be eliminated from housing use by July 1, 1961.

I am personally familiar with existing housing and can attest to the fact that much of it is a health hazard and a fire hazard. It should have been eliminated long ago. It is so inadequate that outside studies show that rehabilitation to bring it up to required public standards would be completely infeasible.

The Navy reports that various investigations and surveys in the bay area have established that private support housing is simply not available. Joint factfinding surveys made by the Federal Housing Administration and postmasters of Alameda, Oakland, San Francisco, Berkeley, and Daly City, disclosed a family housing vacancy rate of only 1.3 percent, where as a 5-percent vacancy rate is considered normal.

The Naval Air Station in Alameda is one of the largest naval air stations in the country. It is the home port for

five aircraft carriers: the *Ranger*, in the *Forrestal* class; *Ticonderoga*, *Hancock*, *Bon Homme Richard*, and *Midway*.

Unless action is taken immediately to construct these family housing units a serious military personnel housing shortage will develop with its consequent effect on the morale of our servicemen as well as the economy of the area.

I urge my colleagues to support the authorization for these critically needed family housing units so that construction can begin at the earliest possible date.

South Dakota Editor Answers Secretary Benson's Claim That Price Supports Have Caused the Farm Surplus

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

MR. McGOVERN. Mr. Speaker, Secretary of Agriculture Benson has justified his lowering of farm price supports on the grounds that this was necessary to discourage farmers from producing surpluses. Actually the price support program prior to Mr. Benson's administration was used effectively to regulate production so that farmers could keep supply in line with market demands. Farmers have consistently shown their willingness to adjust production to demand when they were assured through the price support program that they would receive a fair price on their reduced crops.

By lowering price supports Mr. Benson has forced farmers to increase production to survive. Thousands of them have abandoned the crop control programs because they knew that they could not accept both lower prices and reduced volume. That is why the farm surpluses which Mr. Benson deplores have been built up under his unsound administration of the farm program.

There was no farm surplus when the present administration took over in 1952. We had a small food reserve of about \$1 billion in Commodity Credit Corporation inventory in 1953; today that inventory is seven times that amount. Likewise, the Department of Agriculture budget in 1952 was approximately \$1 billion; today after 7 years of maladministration by Mr. Benson the cost of running the Department of Agriculture is \$7 billion.

Yet, Secretary Benson persists in blaming his disastrous policies on the Congress. Fortunately there are clear-headed observers in the Farm Belt who know better and who are saying so. One such highly competent observer is the editor of the *Huron* (S. Dak.) Plainsman who has written an excellent editorial answering false statements made by Secretary Benson in a recent speech at Yankton, S. Dak. I urge my colleagues to read the following editorial from the

Huron Plainsman of Monday, March 7, 1960:

WHY DO WE HAVE SO MUCH WHEAT?

Secretary of Agriculture Ezra Taft Benson in his speech at Yankton last week told a farmer-businessman audience the trouble with wheat is that too many farmers are growing this grain under the 15-acre exemption from controls.

Since 1939, he said, South Dakota has lost 200,000 acres of wheat allotment and North Dakota has lost five times that much. At the same time, he added, other areas have increased wheat acreage with the total number of wheatgrowers rising from 538,000 to 690,000 in the last 3 years.

"Why did this happen?" Benson asked. "Because we lost large portions of our cotton and tobacco markets by pricing ourselves out of competition. . . . Those farmers who produced cotton and tobacco had no choice but to divert acres to corn, wheat, and livestock."

Secretary Benson's analysis of the wheat situation is open to some challenge, as a look at the figures of his own Department of Agriculture will show.

If there were 152,000 new wheatgrowers in 1959 and each of them grew an average of 10 more acres of wheat that would make a total of 1,520,000 acres in this crop. If we assume further that they had an average yield of 20 bushels per acre—slightly more than the actual 1959 yield—that would make a total of 30,400,000 bushels of wheat.

Now, if that total is subtracted from the total production of wheat in 1959—1,128,151,000 bushels—the remainder is 1,097,751,000 bushels. This, then, is the amount of wheat the Nation's farmers would have produced in 1959 if there had been no 15-acre exemption.

It should be noted that this 1,097,751,000 bushels is almost exactly equal to the 1,098,415,000 bushels produced in 1949—long before the exemption was in effect.

And it should be noted, too, that the number of acres seeded to wheat in 1959 was only 58,043,000—including the acres seeded under the exemption—whereas in 1959 wheatgrowers seeded 83,905,000 acres.

What then caused the great increase in wheat production? The 1,520,000 new acres under the exemption hardly can be blamed when it is realized that farmers in other areas had cut their plantings by almost 26 million acres.

The answer, it would appear, lies in the fact that the price of wheat last year was about 20 cents a bushel below what it was 10 years earlier and the yield per acre was up from 13.1 bushels per acre in 1949 to 19.4 bushels per acre in 1959. Had there not been serious drought in some of the wheat-growing areas, wheat yields might again have approached the record 26 bushels per acre achieved in 1948.

Thus, farmers were pushing their land harder to produce more wheat per acre just to keep even with where they were on income 10 years earlier—and their costs had risen tremendously during the same period.

Now, as to Secretary Benson's argument that it is the high price of tobacco and cotton that is causing southern farmers to shift to wheat production.

It is true, southern farmers have increased their production of grains. This has been due in part to increased livestock production in that area. But the southern agriculture has been shifting mainly from cotton to grass because of the invasion of that high-rainfall area by southwestern ranchers seeking new pastures for their breeding herds. The tremendous increase in feeder-calf sales in that area bears this out.

As for the tobacco belt, it hardly seems likely that farmers who had taken a half-acre or even an acre out in their tobacco

bases would hope to make up the difference by growing wheat. An acre of tobacco produces about 1,600 pounds of leaf worth about 50 cents a pound. Obviously, \$800 an acre is not the equivalent of \$40 per acre. Thus, reduced tobacco acreages have not been much of a "force" in the changeover to wheat.

There are problems in the tobacco belt, it is true, but high prices are not the major problems. The high prices on much of our tobacco result from the tremendous demand for lower grade tobacco which has developed from the filter-tip cigarettes and not from the price support program.

This has been called to Secretary Benson's attention many times in the past. It is significant that he doesn't use this argument when he speaks in the Tobacco Belt.

The Western Stake in the Spirit of Resistance of the Captive Nations

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement by the Assembly of Captive European Nations dated February 19, 1960. As one who hopes that the fate of the captive peoples will be raised at the forthcoming summit meeting between the leaders of the free world and Mr. Khrushchev, I am pleased to call to the attention of this body the above-mentioned document:

THE WESTERN STAKE IN THE SPIRIT OF RESISTANCE OF THE CAPTIVE NATIONS

There is a school of thought in the West which holds that the nuclear stalemate renders obsolete any active concern for Eastern Europe and that it would make little sense to raise at the summit a question which cannot be solved. The only practical result of such action, the supporters of this theory say, would be to poison the atmosphere and render impossible any agreement even on the limited issues under consideration, such as the Berlin question for instance.

Another school of thought—with which the Assembly of Captive European Nations finds itself in agreement—holds that whether or not Western ability to help captive nations recover freedom and independence has been adversely affected by the so-called nuclear stalemate the raising of the question by the Western Powers far from being dangerous would be a realistic move. It would present both short-range and long-range advantages for the West and the captive countries.

I

From the short-range point of view, the first and most evident advantage the West could derive from raising the issue of the freedom and independence of the captive nations at the coming summit meeting would be the positive impact of such official demonstration of Western concern and purpose on the morale of the people of central and Eastern Europe. The deterrence represented by the spirit of resistance of these nations would thus not only be preserved but further strengthened. Such result would be an undeniable contribution to the security of Western Europe in the period of nuclear stalemate, when the diminished effectiveness of the nuclear deterrent against superior Soviet ground forces confronts the West with

the problems of assuring the defense of Western Europe at a lesser cost than an all-out nuclear war.

Soviet statements and actions have clearly indicated that in the calculation of the Kremlin a nuclear stalemate would decisively tip the balance of power in Europe in their favor; will enable them to demonstrate to the nations of Western Europe that they can no longer depend on the NATO sword, that is the protective umbrella of American strategic nuclear power, and induce these nations to take the realistic course of seeking shelter in neutrality. All indications are to the effect that the Soviet rulers count that once their preliminary objective is achieved, they will be in a position gradually to take control over Western Europe by a combination of pressures and subversion.

It is safe to postulate that in order to cope successfully with such Soviet strategy, the Western Powers will place increasing stress on the NATO shield with a view of replacing the strategic nuclear deterrent and, in case such deterrent failed, to be able to repel a Soviet nonnuclear forward thrust without having to resort to the increasingly prohibitive strategic retaliation. Since the West is not contemplating a buildup of its non-nuclear defenses to a level commensurate to the opposing Soviet forces, it will have to find another way of mitigating the coming imbalance. It is precisely as a balancing factor that the aspirations of the captive nations to freedom and independence, their resolute hostility to Soviet domination, are meaningful to the West. For paradoxically enough, at the very time when the ability of the West to help these nations to recover their freedom has been greatly curtailed by the nuclear stalemate, their potential as deterrents and, in case of an actual Soviet onslaught, as allies, become vital factors in the security of Western Europe.

As long as the spirit of resistance in the captive countries remains alive, the Soviet Union must count not only with the forces the West can oppose to her in the field but also with the unreliability of the satellite armies and the insecurity of its westward lines of communications. And they consequently must allow in their planning for the possibility that a substantial segment of the Soviet armed forces will have to be assigned to security duties in the captive countries.

The point is, however, that the spirit of resistance of the captive peoples and its deterrent effect should not be taken for granted. It must be bolstered by a continuous effort on the part of the West. This entails not only the refusal to sanction, directly or by implication, the political status quo in Central and Eastern Europe and occasional friendly statements, but also positive steps indicating that the freedom and the independence of the captive nations are a political objective of the Western Powers which they are determined to pursue by all nonmilitary means. Raising the issue of the captive nations at all important international conferences, beginning with the coming summit meeting, and before the United Nations, is a minimum requirement to this end.

It hardly needs stressing that such action would have a very solid foundation in the inalienable right of the captive nations to live under governments of their own choice, in the wartime and postwar agreements to which both the Western Powers and the Soviet Union are parties, not to speak of the moral principles of the free world and the right of self-determination which is now being recognized even to underdeveloped peoples with no record of nationhood.

II

In raising the issue of the captive nations at the coming summit meeting the West may reap further short-range advantages.

(1) It would enable it to counter Soviet efforts to confine negotiations to their demands on Berlin and on Germany with an overall plan of a European settlement based on the universally recognized principle of self-determination and designed to remove the major causes of the international tensions by the liquidation of all the dangerous consequences of the Second World War.

(2) It would give the West the moral benefits that should accrue to it from the emancipation of the colonial peoples. For as long as the West does not stand squarely and consistently on the principle of self-determination, the liquidation of the colonial empires will not be viewed as an unselfish course of action, founded on principle, but would be unjustly regarded as a necessity due to weakness and to the successful "liberation" struggle conducted by international communism.

III

In bringing up the issue of the captive nations at the summit meeting, the West would also serve the long-term mutual interests of the free and captive nations.

The captive nations have come to realize that as an effect of the nuclear stalemate their liberation has become a long-range aim. They are aware that the Western Powers are no longer prepared to negotiate from a position of strength. They have also learned by the tragic experience of Hungary that even in the event of a successful internal revolt they cannot depend on the West as a deterrent to armed Soviet intervention against victorious internal forces of freedom.

Still they have not given up hope. They know that materially the West is stronger than the Soviet Union and it also has the moral argument on its side. They are more familiar than the free nations with the internal weaknesses of the Soviet empire and of the forces that slowly but inexorably work for its disintegration. But they also know that all these advantages can be brought to nought if Soviet boldness and purposefulness are not matched by the Western Powers. They therefore trust that the Western Powers will remain strong, united and determined. They trust, in particular, that these powers will succeed in holding all their positions in Europe and that they will never abandon the vital objective of a Europe free and united in its natural confines—which in the long run is the only guarantee of a secure peace.

There can be little doubt that if the West will successfully prevent the Soviet Union from further expanding and if, at the same time, the ultimate purpose of a free Europe is kept alive and pursued by all peaceful means, opportunities will arise for the assertion of freedom throughout the Soviet empire.

The potential contribution of the captive nations to both these essential tasks in the struggle for the survival and ultimate victory of freedom can hardly be exaggerated. It is for the Western Powers to help make sure that this contribution will be forthcoming and the summit meeting affords a first opportunity for useful action to this end.

IV

It has now become perfectly clear that even if efforts to avert war in the coming years will be successful, the world will not enjoy for a long time peace but a precarious co-existence. The Soviet rulers have unambiguously declared their determination to pursue relentlessly their political, economic and ideological drive for the worldwide victory of communism. And their actions fully match their words.

To begin with they work tirelessly for the consolidation of their hold over the captive nations. Both the process of total economic integration of the captive area in the Soviet economy and the efforts to complete the structural changes—political, economic, so-

cial, cultural and administrative—which would transform each captive country into a replica of the Soviet Union have been greatly accelerated and expanded. More than ever before the Soviet rulers are set to break the spirit of the captive peoples. They proceed with their efforts to induce the Western Powers to admit, by their silence if not by a formal act, the finality of the status quo in central and Eastern Europe. And their propaganda misses no opportunity to persuade the captive peoples that the balance of power has so decisively been upset in their favor that the worldwide triumph of communism has only become a matter of time.

At the same time they are conducting an intense political offensive in every corner of the earth. In Western Europe the objective, undermining NATO, is being advanced both by missile-rattling and by subtler approaches. The recent announcement of a reduction in the Soviet ground forces which is designed to create a psychological obstacle to any attempt at stepping up the defense efforts—is a case in point.

In Asia, Africa and Latin America Communists work day and night to disrupt the existing order and prepare the ground for the eventual establishment of Communist regimes.

Confronted with this type of competitive coexistence the West can hardly hope to hold the ground if it confines its efforts to combatting Communist infiltration on its own territory while refraining from any action on territory controlled by the Soviet Union. In so doing the West would comply with the Soviet invitation that it cease conducting any kind of cold war operations and thereby help the Soviet Union consolidate its rule over the eastern half of Europe, while Moscow would remain entirely free to carry on what Premier Khrushchev calls the ideological struggle.

Such compliance is too replete with disastrous consequences to be even conceivable.

The West possesses in the peoples under Soviet captivity valuable allies. Because of its democratic structure it may not be able and prepared to wage political warfare with the same methods the Soviets are employing. But unlike the Soviets it has on its side the majorities, not mere minorities, like the Communist parties in the West. There is, therefore, a wide scope for a Western political offensive by methods available and acceptable to the Western democracies. International negotiations and international forums provide fitting platforms for such offensive and the issue of the captive nations represents the best possible political battle issue. It certainly represents the most promising way to push the Soviets on the defensive.

The struggle for the preservation of freedom in the western half of Europe can no longer be separated from that for the recovery of freedom and independence in the eastern half of the old continent. The sooner this will be recognized, the more important will be the contribution of the captive peoples to the world-wide contest between tyranny and liberty, and the greater will be the chances of freedom to achieve victory.

The Right Direction

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. IRWIN. Mr. Speaker, in the years since the end of World War II,

American air transportation companies have rapidly been losing their position as leaders in the field of international airline operations. Companies which a dozen years ago transported some 75 percent of all transatlantic air passengers, for example, carry less than 40 percent today. A foreign airline, which calls itself the largest in the world, serves more American cities than one of our own international carriers. Another foreign airline is permitted to transport passengers across the United States while such authority is denied an American international carrier. This trend has resulted from concessions to foreign airlines at the expense of our own carriers.

Fortunately, the Department of State, upon recommendation of the Civil Aeronautics Board, has recently issued a decision reversing the pattern. KLM of the Netherlands, was denied permission for a route to our west coast. I commend the decision and hope it is indicative of the future direction of our decisions in similar cases in the future.

American carriers should certainly share in international air traffic generated by American business and travel abroad. While it may be necessary to make concessions to foreign airlines to maintain our international services by obtaining foreign operating rights, it appears that there have been too many concessions.

Correspondence with airline pilots who live in my district makes it fully clear that the detrimental effect of the current trend in international air travel is borne by American airline employees to an increasing degree. Let us hope that improvement is on the way.

Undertakers Oppose Health Care for the Aged

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FORAND. Mr. Speaker, since 1957 when I first introduced my bill, H.R. 4700, providing hospital and surgical services for persons eligible for old-age and survivors insurance, I have learned of opposition to my bill by such groups as the AMA, the chambers of commerce and the insurance companies. I expected this, but I was surprised to receive a few days ago a resolution opposing my bill from the Indiana Funeral Directors Association, Inc.

Could it be that undertakers are opposed to good health?

Here follows the resolution:

Whereas legislation has been proposed that would amend the Social Security Act to provide for the Federal purchase of certain health care services for social security beneficiaries; and

Whereas such legislation would further increase social security taxes—which are already scheduled to reach 9 percent of payroll—up to \$4,800 income; and

Whereas care for the older citizen calls for a flexibility of medical approach and tech-

nique; not the rigidity inherent in Government-controlled programs; and

Whereas the proposed legislation is a political approach to a health problem; and

Whereas a nationalized program of this sort would weaken the patient-physician relationship; and

Whereas a bureaucratic system for solving individual health problems of the aged would result in political abuses and administrative waste: Now, therefore, be it

Resolved, That the Indiana Funeral Directors Association, Inc., does hereby go on record against adoption of H.R. 4700 introduced in the 86th Congress by Representative A. J. FORAND, of Rhode Island.

Let's Terminate the "Temporary" Luxury Tax on Telephone Users

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. HERLONG. Mr. Speaker, in this month of March the people of this Nation paused to honor the memory of Alexander Graham Bell who was born March 3, 1847, and who, 29 years later on March 10, 1876, gave to the world that vitally essential and indispensable servant of mankind called the telephone.

Things were different then. To quote a contemporary writer of historical prose:

The old enemy of distance prowled everywhere. And people were separated by the bigness of this land.

That was what started young Alec Bell thinking. He knew well what it meant to be shut off from the sounds of familiar voices. You see, he was a teacher of the deaf.

It wasn't easy—explaining sound to those who knew only silence. He had to take hold of sound and pry loose her secrets. He had to find out what she looks like. What she's made of. And then he learned that sound was willing to learn from him.

So he taught sound to change herself into a new form—electricity that wiggled up and down along a wire and carried with it all the laughter and sadness and anger and love of men's everyday conversation. Wherever they strung Alec's wire, distance just shriveled away. The plain, friendly speech of the western farmer could be heard, clear and distinct, in Boston. A man in New York could find out how things were going in California without even raising his voice. Alexander Graham Bell's telephone was talking their language.

Some inventions change the way people live all over the world. If so many of them have happened in America, it's because in this country there's always a dream of doing things better. And part of that dream is that each of us can make it come true.

And so we have seen how the telephone, in a little more than half a century, has grown from a laboratory curiosity to a necessity numbered by the millions. The manifold uses it has today scarcely need be told. Electronic engineers tell us the time is coming when a person anywhere in the world will be able to dial anyone else on the face of the globe without the intervention of an operator and in a few seconds have his party on the line. A vast, new field is

opening up in communications. When the whole world can talk over telephones, the benefits will be multiplied. Perhaps, then, nations will understand each other a little better. Perhaps—and who can tell—the telephone may be one of the avenues which will help establish permanent peace in the bright new world we are still hoping and praying for.

We scarcely need be told that the people of this country and our own Government rely heavily on communications facilities and services not only in pursuance of our peacetime activities but in defense of our Nation. I point up all these things to remind us that the telephone is not a luxury but an everyday necessity. Yet, it is one of the most heavily taxed of any necessary service. Water, gas, electricity, heating fuel and other utilities are not taxed. Why then should we continue to single out and penalize the telephone user with a 10-percent levy every time he calls the corner grocery and every time he calls a sick relative in some far-distant State?

Actually, the Federal excise tax on communications services is unfair and discriminatory. It is a luxury sales tax on an essential service. The same kind of a tax that we assess against jewelry, furs, and liquor. Why should the telephone be put in the luxury class? When a housewife telephones for groceries or when she needs to call the family doctor about her baby's illness, she does not regard the telephone as a luxury. Nor does the businessman when he picks up the transmitter to order more merchandise for his customers. When farmers and others resident in rural areas need to summon a doctor or a veterinarian or to call the fire department, they do not feel that telephone service is a luxury. Yet, Congress has continued to impose this luxury tax upon one of the most essential services we have. I repeat, to continue this tax is unfair and discriminatory.

This tax was imposed as a temporary wartime measure to restrict civilian use of the telephone and to save materials in the interest of defense. Telephone users have been paying this temporary tax for more than 18 long and heavily burdened years.

Last year this Congress voted to drop the excise tax on local telephone service on June 30, 1960. We decided that the tax—the only such tax on a household utility—was an inequitable levy. The discontinuance of this tax would mean a 10 percent cut on local telephone bills for everybody. But now President Eisenhower has asked us to rescind the repeal action of last year and to continue the tax on both local and long distance service. In bringing these facts before the House I want my colleagues to understand I am as fully aware as they are of the problems involved in obtaining tax revenue for the country's needs. We know these needs must be met and that the money must come from somewhere. But telephone companies and their customers already are paying more than their fair share. I wonder how many of you realize that approximately one-third of every dollar spent for telephone usage goes for Federal, State, and

local taxes. I am reliably informed that this is the amount of the tax against telephone companies and telephone users in most localities.

The millions of people who depend upon the telephone and the telephone companies themselves are seriously concerned should there be a continuance of this Federal excise tax on telephone service. I share that concern. They fear that the longer this tax on communications service is continued the greater is the danger that it will become a permanent part of the tax structure. Telephone users long have complained, newspapers the country over have demanded repeal of this tax, and the entire communications industry long has urged elimination of the tax. Are we going to continue to ignore their pleas? Telephone users and telephone companies are not alone in seeking repeal of this tax. State and Federal agencies which regulate the rates and charges for telephone service are fully aware of the impact of these excise taxes on the cost of service. These regulatory authorities repeatedly have advocated repeal of taxes on telephone service. The regulatory commissions know that the cost of providing telephone service has been constantly increasing due to the inflationary trends that have raised the cost of nearly every product and service. Commissions have found it necessary to allow a net increase of \$2.08 in gross revenues to allow an increase of \$1 in the net income of a telephone company. This comes about as a result of the Federal income tax. But, in addition, the customer must pay another 21 cents to cover the 10 percent excise tax on the increased rate. Thus, in order to increase a telephone company's net income by \$1, the customer must bear a total increase of \$2.29. Regulatory commissions are opposed to this added cost because they regard it as unsound, unjust, and inequitable to the maintenance of a reasonably priced communications service.

In view of these things I ask the Congress when the proper time comes to allow the tax on local telephone service to terminate on June 30, 1960, as scheduled. The wish to keep Federal tax revenues at present high levels should not blind us to the need of eliminating this discriminatory and unfair assessment upon our vital communications services. It would be a practical way of providing a general tax reduction which would stimulate our economy and which would benefit everybody.

In the language of St. Paul, I urge you to think upon these things.

Thomas Masaryk

SPEECH

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. RODINO. Mr. Speaker, we have this week celebrated the birth of a great Czech patriot, Thomas Masaryk.

Much of the work for Czechoslovak independence was accomplished by Thomas Masaryk, the "father" of the Czechoslovak Republic. Much of his work, indeed, was accomplished in the United States, where, as an exile from tyranny and oppression, he not only persuaded the Allies of the righteousness of his cause, but he also learned the patterns and workings of democracy and determined to put them to work in his own republic.

The greatness of Masaryk's contribution is that he did succeed in establishing his nation as one of the foremost democracies in Europe.

One hundred and ten years have passed since Masaryk's birth, and 42 years have passed since his republic was established. Today, Czechoslovakia is no longer free. Soviet oppression has replaced the democracy which Masaryk struggled so valiantly to insure. But the memory of Thomas Masaryk lives on in the hearts of the people; they remember his teachings, and they remember the day when they lived in freedom. The people of Czechoslovakia are subjugated and oppressed, but they remain faithful to the heritage which Masaryk left them.

Yes, Peace and Friendship, but First Justice and Freedom

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. IRWIN. Mr. Speaker, the peace and friendship campaign initiated and developed by Moscow has unfortunately caused too many of our fellow Americans to lose their bearings as concerns the nature, scope, and depth of the titanic world struggle. We are rapidly losing ground in the politico-psychological area of this struggle, which is the most essential and fundamental area. The concrete results of these losses are unquestionably in the making and in the future might well shock us even more than the Sputniks.

Those who rightly perceive and understand the present maneuvers of Moscow as instruments of the Russian cold war are now being slandered by Khrushchev as cold-war mongers. The simple fact is that the cold war is an established Russian institution and the deceptive peace and friendship campaign is only another phase of it.

This basic fact is well brought out in an address delivered by Dr. Lev E. Dobriansky at the recent 10th annual meeting of the All American Conference To Combat Communism, held in Columbus, Ohio. Dr. Dobriansky, who is a professor at Georgetown University and also chairman of the Ukrainian Congress Committee of America, gives a background to this essential fact and presents some incisive cases of the empire-building methods employed by Khrushchev's czarist predecessors. Titled

"Yes, Peace and Friendship, But First Justice and Freedom," the address defines the cold war concept and shows the significance of the Captive Nations Week resolution passed by Congress in 1959.

Because of the lessons pointed out in this address and their striking pertinence to the forthcoming summit, I believe that every Member will find it of profitable reading, and I request that it be printed in the RECORD:

YES, PEACE AND FRIENDSHIP, BUT FIRST
JUSTICE AND FREEDOM

(By Dr. Lev E. Dobriansky)

Mr. Mayor, reverend clergy, and fellow cold war mongers. If you don't believe that, in a way, we are "cold war mongers," then I would urge that each of you read, if you haven't as yet, the speech that was given by Nikita the Sanguine to fellow Muscovites upon his return to Moscow after his trip to these United States. In that particular speech, there is a very illuminating paragraph. Mainly, it calls upon Muscovites, the Communists throughout the empire, and even upon many sources in the free world, including the United States, to detect the patriotic cold war mongers—the ones that, in behalf of the advance of freedom, would want to continue with the cold war, that show an avid interest in such real themes as protracted conflict—and to publicly expose them. And, not only that, but to publicly whip them. So, we are all exposed to them and we are all liable to be whipped.

It is a singular pleasure for me to be given this opportunity to speak before you on this occasion, the 10th annual meeting of the All American Conference to Combat Communism. Ten years, really, of sustained effort and work on the part of this conference have been due to the wonderful efforts of Dr. Dan Poling, Mr. "Tom" Sawyer, and numerous others in this audience. Their steadfast aim has been to keep the American public aware of the continued danger and threat that confronts these United States. And I think it is particularly significant, also, that we meet in, as the mayor has said, the great city of Columbus. The name itself indicates things that are associated with our interpretation and understanding of the protracted conflict: venturesomeness, courage, will, and the determination to see a thing through.

I hope that we won't ever see the day when recourse would have to be taken to methods that are being used in many parts of the Communist empire. I'm reminded of this incident that occurred at the American exhibit in Moscow this past summer. As you know, many Muscovites clamored to get in to see the numerous wares and goods at the American exhibit, and this elderly Russian who just managed to get through the crowd yelled out, "Thank God." At that moment a security captain came to her, nudged her and said, "Now, you don't say thank God. For this opportunity, if anything, you say, 'Thank Khrushchev.'" And she nodded meekly and went on. But apparently that disturbed her a bit. Later on, after having observed the exhibit, she met the same security officer, and said, "Well, all right, but what do I say when Khrushchev is dead?" And he looked about and said, "Well, then you say thank God."

RESURGENCE OF APPEASEMENT

Now, we fortunately don't have to use these methods. We have the blessed opportunity in this Nation of ours to examine this matter of protracted conflict. Dr. Poling, I think, has given an excellent review of the many contemporary events that have taken place. I would just like to add this, that about a year ago much of what he has related here had been confined pretty much to many a dark alley, and ever so often

would come to the surface. It can be said quite truthfully that since last January, especially since the Mikoyan visit to this country, many of these appeasement forces have been pressing on, and with increasing confidence. When one looks back over these months, one finds some openly stating that there are no slave labor camps today in the Soviet Union, others telling us that Khrushchev was simply appalled by the crimes committed by Stalin, as though Khrushchev had never committed a crime. As a matter of fact, it could be pointed out that only last month, a very reputable and famous Ukrainian patriotic leader, Stefan Bandera, was assassinated in Munich by Khrushchev's agents. And the pattern of his assassination conforms with the many examples under Stalin's rule.

At the same time we have numerous other Americans, in economics, in science, and in education, who are actually peddling, whether they are aware of it or not—advertently or inadvertently—the very things that Moscow would want them to peddle. Many of them are really doing Moscow's propaganda work at no cost to Khrushchev. And, in addition, when one looks at this period, the period of the spirit of Camp David which seems to mystify even our own press, Moscow is handsomely exploiting the occasion in the same way that it exploited, at the end of 1955 and into 1956, the spirit of Geneva. Indeed, when one looks at the record of events just in the past month, one finds, for example, that when we support an ally, a very trusted and faithful ally, such as Turkey, in the United Nations, we are condemned for violating the spirit of Camp David and blasted for attempting to protract this conflict, this cold war.

When we show concern for Laos, again representatives of the Soviet Union condemn us for continuing the cold war. And just the other day the free people of West Berlin were sternly warned not to establish a radio station of freedom because that, too, would be against the thawing of the cold war.

It is perfectly obvious that Moscow is manipulating and exploiting the so-called spirit of Camp David. Khrushchev has really so effectively administered tranquilizing cold war pills to major segments of our society that an increasing number of Americans aren't even aware of the great strides made by imperialist Moscow in this perilous phase of the permanent cold war. The singular victory of exacting an invitation to this country has in itself produced confusion and doubt in this country. It has entrenched the power of Khrushchev with new airs of respectability and legitimacy. It has depressed the freedom hopes of millions of patriots in Moscow's empire. It has impressed the newly independent nations with Moscow's inflated power, and it has also caused uneasiness among our most loyal allies situated about the periphery of the Communist empire.

DECEPTIVE PEACE AND FRIENDSHIP

This past summer we heard a great deal about peace and friendship. One of our officials used it at great length on a tour of the Soviet Union. However, before we uncritically accept this particular slogan we should look also at its significance, not only at this time but in the course of history. I would say: Yes, peace and friendship, but first, justice and freedom. The traditional Russian political slogan of "peace and friendship" has for centuries been used to seduce neighboring non-Russian nations into captivity. It is indicative of our lack of cold war insight and imagination that we fail to turn this slogan to our account in whatever sphere of human existence. Peace and friendship are and can only be the consequence of justice and freedom, not their cause. The harmony implied by peace and friendship is logically predicated on the dictates of justice and freedom. The Russians,

with typical deception, put the cart before the horse, and some of us are uncritically amenable to be taken for a ride in the cart. And this isn't the first time in the course of these past 40 years.

Now, it's not my purpose in this talk this morning to dwell on these transient events. Instead, what I would like to do is to develop three points. The first point is that the cold war is not new. It's not a new institution. It wasn't started in 1947, despite the fact that it first really began then to affect the United States. It wasn't even started in 1917. Historically and analytically, one could show Russia cold war techniques going as far back as the 16th century. The second point is that the development and refinement of these techniques have been linked with the expansion of an empire. These techniques have a tradition and, as I'll indicate with several cases, they have served to build an empire, with military power always kept in secondary reserve. And my third point is that unless we develop a perspective and an understanding of these techniques to see the whole background to what we now call protracted conflict or the cold war, we can only hope to make all sorts of transient shifts, makeshifts, executed in a haphazard and aimless manner, constantly reacting, if you will, to the perpetual initiative shown by the enemy. In such a case, we will find, I think, much to our surprise and also dismay, that military power will virtually be neutralized. Even superior military power, in such a case, could really prove to be of little avail. And in exposing ourselves in this way we truly risk an eventual hot war with greater probability of defeat.

FIVE U.S. ATTITUDES

In the United States at this time, there seem to be at least five dominant attitudes: (1) wishful cold war cessationism; (2) accommodation to Moscow's empire; (3) military hardware; (4) evolutionism; and (5) cold war realism.

The first, the wishful cessationists, erroneously believe that understanding and cultural exchange will secure peace. They argue as though the two did not prevail in far greater degree with regard to Nazi Germany prior to World War II. We had cultural exchange and a very close and intimate understanding with the German people prior to World War II and yet, these did not, or were not sufficient to avert the outbreak of a second world war. The plain fact is that the cold war is at Moscow's instigation and, contrary to what they now say, it certainly has never been at our instigation. Understanding and people-to-people programs are important, but if you begin to understand that the cultural exchange program in itself continues to be an instrument carefully manipulated and used by Moscow for its own benefits, then this could hardly produce that kind of understanding which presumably will pave the road to permanent peace.

The second group consists of the accommodationists. They never learn from historical experience that this form of appeasement only encourages the enemy to bolder ventures. We have many of them in this country, in official circles and outside. They'll say, "well, if we can only accommodate them. They've expanded far enough. We could make a deal with them. This is your sphere, and this is ours"—which is, curiously enough, the very thing that Khrushchev has been seeking and demanding. This certainly indicates a very deep naivete on the part of these individuals with regard to the cold war.

A third group is made up of the military hardwarists. These hardwarists obtusely ignore the forces of spirit, will, and ruse which, so often in the past, have undermined many a mighty fortress. In the armed forces there are those, of course, like Ad-

miral Burke, who recognize that actually the decision of tomorrow will not rest in the military, especially in the period of mutual deterrence, but, instead, in the area of the nonmilitary, the psychological, propaganda, or, what we properly call the cold war.

And then, fourthly, we have the evolutionists. Many, without declaring whether they are random or selective evolutionists, are equally wishfully that history will, for some inscrutable reason, be on our side. This position certainly stimulates a passivity, a wishful hoping that somehow there'll be a liberalizing process either through consumer goods, production, and the rest of it, followed eventually by an institutional blend. This, too, fails to recognize the nature of what we call the protracted conflict.

The fifth, the cold war realists, are guided by the evidence not only of today, of yesterday, or even of 40 years of Russian Communist conquests, but also of centuries of established Russian cold war techniques. The evidence precedes any act of hope.

THE COLD WAR CONCEPT

Now, in our government, and elsewhere, there is no firm general grasp of what a cold war means. Lacking a working concept, it is no wonder that there is scarcely any appreciation of its long background of methods and techniques. However, on the other hand, it is plainly comprehensible why we continue to operate in aimless, haphazard, makeshift and piecemeal fashion, incurring losses upon losses as we hobble along. The imposing irony of our current situation is that while Moscow carefully plans its cold war tactics and maneuvers in the broad context of its fixed cold war strategy and objectives—including even the lessening-of-tensions maneuver—we are engaged in no such cold war gaming and don't even possess the apparatus for it. In a hot war, we wouldn't think twice; we would instinctively create such an apparatus.

Yet, definitionally, a cold war is a twilight condition of neither peace nor hot war, where all the basic elements of a hot war—predatory design, aggressive strategy, tactics and techniques—are present, except for open military combat between states. A cold war is really the very soul and spirit of a hot war, with the massive body of military conflict in secondary reserve. A cold war entails objectives. It entails all the techniques of ruse, of subversion, infiltration, cunning, treachery, plotting, fraud, bluster, blackmail, and indirect aggression. It includes every conceivable thing as an instrument—the psychological, the economic, the ideological, demographic, the political, scientific, educational. And it also allows for action on two levels: the level of official pretext, like Khrushchev coming here as head of State, and, second, the level of subofficial cold war operation, viz Khrushchev as the head of a world conspiracy.

Many of us rightly lean on the authority of Clausewitz to gain insight into the nature of the cold war. Lenin studied him closely and quoted him often. And Khrushchev, a professed Leninist, must see himself in the mirror of Clausewitz's words: "A conqueror is always a lover of peace; he would like to make his entry into our state unopposed." But few of us realize that Clausewitz gained his cold war knowledge in Russia's military service. With Russia's military position much weaker than Prussia's at the beginning of the 19th century and, yet, the Czar extending his domination over other nations, Clausewitz asked himself, "How could this be?" He entered Russia's military service to obtain the answers, in order to save his own Prussia. When he returned in 1814, he rejoined the Prussian Army and in 1818 was already Commandant of the General War School in Berlin. Lenin studied him and many of us turn to Clausewitz to gain insights into the nature of the cold war.

TRADITIONAL RUSSIAN COLD WAR

In essence, the cold war methods employed by Khrushchev today are no different than those developed by Ivan the Terrible, Peter the Great, Catherine the Great, and other Russian tyrants. In looking at these techniques, one has to bear in mind a traditional and institutional nexus, the nexus between internal, totalitarian tyranny and external, imperialist expansionism. The two have always worked hand in hand, one feeding upon the other, in the past as well as in the present. Substantially, the techniques have not changed. In content, by virtue of technological changes over the centuries, and especially in the recent period, you've had changes, of course. But I'm speaking of methods in substance. After all, on the substantial basis of these methods a tremendous empire had been built and still continues in existence today.

The methods are in substance psychological, propagandistic, political, and of numerous other veins that I'll cite in a moment to make my point. The military, on the other hand, has always been kept in reserve, marching in, if you will, at the climax to a situation. There is a work by which many of us could profit immensely. A work written by a French cultural traveler in the czarist empire, the Marquis de Custine, "Journey for Our Time," published by Pellegrini & Cudahy, New York, 1951, provides the diary notes of de Custine in the Russian Empire of 1839. Their timeliness will amaze you. With changes for a few characters, you would believe that he is describing the present Russian situation. He says, for example, in one place: "I try to analyze the moral life of the inhabitants of Russia. The Russian thinks and lives as a soldier * * * a conquering soldier" (p. 150). In another passage, which is very appropriate to the Khrushchev exchange visits and the hospitality involved, he says, "Once again I say, everything is deception in Russia, and the gracious hospitality of the czar, gathering together in his palace his serfs and the serfs of his courtiers, is only one more mockery" (p. 149). In this work, you will find many precious observations concerning the period of that time, only to relate them to the present with little difficulty, to say the least.

The cold war methods we want to observe for every century, since the 16th—the methods of ruse, subversion, infiltration, indirect aggression, fraud, bluster, blackmail—were adroitly employed to build up an unprecedented empire. The tyrants of the past left a wealthy legacy of cold war techniques for the Russian Communists, including Nikita the Sanguine. By these methods, the contemporary tyrants of Moscow have extended the empire and are now threatening the independence of our own Nation. The spurious ideologies of the Third Rome and Pan-Slavism were used in the same deceptive way that the mythical ideology of communism is manipulated today. It would do well for our people to learn more of the growth of the Russian Empire, both past and present, than to learn the Russian language. Such learning would reveal the secrets of empire-building, which are the cold war techniques. Frontal military aggression was always secondary.

RUSSIAN COLD WAR CASES

Now, let me just quickly review this for you, taking one case in each century. In the case of Basil III and Ivan the Terrible, the groundwork for the swift expansion of Muscovy was laid in the 16th century. The starting point was 1519; the target and victim was Kazan, the citadel of the great Golden Horde. And for 33 years Moscow worked at it in peaceful coexistence, using infiltration, subversion, and intervening support, as it does now, for a contender (Shah Ali) against the possessor of the throne. Finally, in October 1552, the Mus-

covite forces simply walked in when Kazan itself was so weak that it couldn't even defend itself.

There's a definite similarity here between this technique and the one employed by Khrushchev in connection, let us say, with the Middle East. Khrushchev first builds up a man—Nasser—and hopes that through Nasser he would be able to neutralize the area and thus exclude the influences of the United States, Britain, and others. Then, later, he builds up a contender in the area in order to provide the contention and the clash that would lead to division and chaos. Ultimately, the area drops into the lap of Moscow.

In our first case, 4 years later in 1556, by the same techniques and support of the contender Derbish Ali, Moscow managed to take over Astrakhan. The entire area of Siberia and also the Middle East, at that time, was made open to further aggression.

Take a representative case in the 17th century. This case, I believe, is very appropriate. For 4 years ago—many of you might not have been aware of it—in the Soviet Union and throughout the Communist empire, a whole year of celebration was conducted in observance of the Pereyaslav Treaty of 1654. Theses were produced, and these had to be taught and learned in Communist cells throughout the Soviet Union and also in the so-called satellite states. And what were they doing? They were glorifying the alleged union of two Slav nations, namely, Russia and Ukraine. One not knowing the history of the Pereyaslav Treaty would certainly not be in a position to evaluate the reason why, in 1954, a 300th anniversary of this event was put on. Of what significance, of what value to Moscow was there in putting on such a gala event throughout the empire?

Well, the fact is that Moscow twisted the meaning of the treaty to show today an indissoluble union between these two nations, in ostensible effect the basis for the present empire. Yet, historical facts show that when the treaty was consummated in 1654, it was only a military alliance, a mutual security pact, between Muscovy and Ukraine against hostile Polish or Turkish forces. In 4 years, that pact was violated by Moscow. We speak of treaties being violated by Moscow in our day. I could even add to the recent list of Russian violations issued by our own conference, going as far back as December, 1917, particularly in Russo-Ukrainian relations. When one looks at the history of the growth of this empire, he finds the same gross violations. Let me just cite this to you. In 1559, a war took place—an inevitable war—between Ukraine and Muscovy. Hetman Vyhovsky, who was the head of the Ukrainian forces, declared: "The treacherous action of Moscow was apparent in preparing for us a slavery primarily by means of instigating a civil war in Ukraine." How many instances do we know of instigated civil wars, many that are currently going on, indirectly if you will, in Laos and numerous other places. Again, a precedent, if you will, for the present.

Let's now look into the case of Poland in the 18th century. We know of the Polish partitions. But how many of us know, for example, the operation of the Russian "Smiling Mike" of that day. The Russian Ambassador Repnin, in Warsaw, employed the religious issue of Orthodoxy to divide the Catholics against the Orthodox in Poland until, finally, he managed successfully to bring about the first partition in 1772. Immediately thereafter, his successor, Ambassador Steckelberg, operated just as Vishinsky had in 1940 when he entered Latvia and by ultimatum "legalized" the situation. Steckelberg had the Polish Sejm "legalize" the first partition. Then, in 1793, with the second partition, a new issue was infused, 50 years before Marx even made his name.

Discord was sown between the social classes of the boyars and the peasants. Old techniques are these, no matter how you attempt to grace them and really change them.

Another interesting case, for example, was that preparatory to the conquest of Georgia. From 1768 on Russia was at war with Turkey and allied itself with Georgia. In this case, Catherine the Great placed the Russian forces in agreement with the Georgians to thwart the Turks. On the eve of battle, the Russian forces withdrew, leaving the Georgians exposed. A century or more later, an agreement between the Polish underground and Moscow's forces was consummated to destroy the Nazis in Warsaw. The agreement designated a certain time of uprising, to wage together a war against the common enemy, only to be deceitfully broken by Moscow.

As one goes through these cases, one cannot help but be impressed by the techniques that have been used to build up an empire, least of all that of frontal military assault. I could give numerous other examples. I am reminded of the case in Persia toward the close of the 19th century because of the operations of Moscow surrounding Iran today. Some of you might have noticed on the economic level where Moscow is offering Iran 85 percent of the oil profits. The highest is about 60-65 percent in mutual engagement for oil exploitation in the Middle East. Moscow is even willing to build dams and numerous other things, so long as Iran refuses to set up any missile bases.

In the 1880's, the Russian Ambassador in Persia played a very instrumental role that led to the bombing of the parliament, to the abdication of the Shah, and the withdrawal of the constitution. The division of the country between the Russians and the British soon followed.

A repetition of such division occurred in Iran in the 1940's. The old borderland's policy of using non-Russian peoples within the Russian Empire against adjoining territories is a standard one for Moscow. Just as it is attempting to use the Kurds in Iraq and elsewhere, so with the Azerbaijanis to divide Iran. Again, old techniques, and even in this century, many of us don't realize what transpired immediately prior to World War I, and then in that very fateful period of 1917-20. In this post-war period, many of the so-called republics in the Soviet Union today, were independent states. Georgia entered into a mutual security pact with Soviet Russia. Ukraine was promised that its sovereignty would be respected. One by one, through infiltration, subversion, and ideological deception, they were raped and have been kept in a submerged state within the Soviet Union.

KHRUSHCHEV AND THE CAPTIVE NATIONS WEEK RESOLUTION

The passage of the Captive Nations Week resolution this past summer disclosed two indisputable facts: one, the sensitivity of Moscow about the weakest and yet most vital nerve in its empire and, two, the lack of understanding in many sections of our Nation with regard to the significance and content of this resolution. Khrushchev's rantings against the resolution last July and, again, in his Foreign Affairs article released last August, and once again, at the end of October before the Supreme Soviet, clearly demonstrated how deeply the resolution penetrated Moscow's cold war armour. Khrushchev fears this resolution more than anything else. And the reason for this is that the resolution is fraught with enormous and even decisive cold war possibilities.

For the first time, our Government has taken official cognizance of the majority of captive non-Russian nations within the Soviet Union itself. Without the captive Baltic nations, Ukraine, the Caucasian nations, Turkestan, and others mentioned in

the resolution, Russia, with its 100 million population and its own resources, could hardly be called—as the Moscow propaganda machine now does—"the greatest power in the world." It would be no more comparable in power to the United States than a reunited Germany would be. A cold war development of this crucial weakness in the synthetic state known as the Soviet Union would seriously deflate all the bluster, bluff and sham of Moscow's economic prowess, military might, scientific achievements and cultural attainments. Parasitic growth on the basis of captive resources is not exactly alluring in propaganda or otherwise. Khrushchev has the vision to see this and thus continues to bellow against this resolution. Unfortunately, the possibilities inherent in the resolution escape most of us.

The low level of our understanding about the Soviet Union and its ersatz political character was shown at the time of the resolution's passage. Many reporters and writers inquired to know where Turkestan or White Ruthenia are located. Some wrote as though the minority captive nations in Central Europe were the only nations listed in the resolution. What can one expect when on the highest levels of our Government, the U.S.S.R. is referred to as "the Soviet Nation" and the different nations within the Soviet Union are arbitrarily and somewhat insultingly called "the Soviet people" or the "Soviets." Aside from the historical and demographic untruths of these usages, the suggestion of a united, integrated and monolithic power in the U.S.S.R. is not even intelligent from a cold war point of view. Our many economic, military, scientific and other comparisons between the U.S.S.R. and the United States are drawn on false premises. The U.S.S.R., in essence an empire within an empire, is not at all qualitatively comparable to the United States which is a nation-state.

In short, if you don't know the nature of your opponent, how could you expect to convert his weaknesses into real vulnerabilities? We are like the fighter entering the ring with an obscurantist disregard of the information given him that his opponent has several loosely patched-up broken ribs. More, like him, we even refuse to test it. Khrushchev fears such a test and virtually paralyzes some of us with his coexistence or coexistence propaganda, while at the same time his cold war activities continue undiminished in every quarter of the globe. And these activities include every conceivable instrument—political, diplomatic, psychological, demographic, economic, cultural, scientific, military.

If we are not to be cornered into a hot war, we must face up to the realities of the cold war. An unparalleled empire was built up over 500 years by cold war techniques. With modern technology and communications, it could expand in short time. A sound basis for necessary cold war gaming is provided in the Captive Nations Week resolution. With an indispensable apparatus, such as a Freedom Commission, the possibilities suggested by the resolution could be developed peaceably and victoriously in the name of justice and freedom first. The captive nations throughout the Communist empire, and particularly in the Soviet Union, constitute our most powerful weapon in this period of mutual deterrence.

AMERICA'S OPPORTUNITY, 1960-76

In conclusion, I would just like to point out that we are really on the eve of an important decade and a half. Next year, 1960, we will be celebrating the 100th anniversary of the presidency of the Great Emancipator. As he stated, no nation can be half slave and half free. With the global, international significance of our daily doings today, we can paraphrase that and say the world certainly can't be half free and half

slave. But we must also look to 1976, the period of the 200th anniversary of our own Declaration of Independence. It seems to me that in these 16 years, we face a period of moral and political rededication to show the tremendous will and the stubborn patriotism of the American people, not the old age that Khrushchev ascribes to us now. It is a period for us to prepare for the many challenges that will certainly present themselves.

In terms of our own moral and political principles, as enshrined in our Declaration of Independence, the Constitution, and the Bill of Rights—not to speak of the importance of preserving our own national independence—we have a global field for the most successful endeavor, provided we are able to express these principles adroitly, skillfully, and in a peaceful manner. The entire Communist empire, including even the Russian people, is ripe for the spirited drive of independence. For the Russians, independence from centuries of tyranny, oppression, and slavery. For the non-Russian nations, both within and outside the Soviet Union, national independence and freedom. These objectives constitute a tremendous opportunity for America, and with the proper kind of rededication, we can then begin to implement the means whereby we can seize this opportunity. No team, on any football field, has ever won a game playing on its own side of the 50-yard line. We've been doing that now for over a decade. It is not a winning proposition and there are many avenues—many feasible avenues—for this kind of pressure for freedom. As it was once said, *si vis pacem para bellum*—if you wish peace, prepare for war. And the war we have to prepare for in the case of Russia, is primarily a cold war.

Special Assistance Health Programs

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

STATEMENT OF EUGENE P. CAMPBELL, M.D., DIRECTOR, OFFICE OF PUBLIC HEALTH, INTERNATIONAL COOPERATION ADMINISTRATION, ON SPECIAL ASSISTANCE HEALTH PROGRAMS, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE

I. MALARIA ERADICATION

The proposal for the fiscal year 1961 worldwide malaria eradication program is shown in detail in the "Congressional Presentation Book" (nonregional program). It is proposed that \$38 million of special assistance funds be utilized for U.S. assistance during the fourth year of the malaria eradication program. This amount of U.S. assistance is necessary if the program is to proceed without unnecessary delays.

1. By the end of 1959, 414,404,000 people were being protected against malaria in the 25 countries which the United States was assisting bilaterally in the program. Of particular interest is the success of the program in Taiwan. No new case of malaria was discovered in that country in 1959. It appears that Taiwan will be the first country in Asia to complete eradication of the disease.

2. Certain problems have been encountered which tend to delay the development of the eradication campaign in some countries. For example, in countries such as

India, Indonesia, and Brazil, the magnitude of the operation coupled with political, administrative, and financial problems make it necessary to proceed by stages, progressively covering the malarious areas.

3. At the request of ICA an expert panel of internationally known American technical experts in the field of malariology is now studying the worldwide malaria eradication program, with particular reference to participation of the United States. Their preliminary findings definitely show that, even considering all the problems, malaria can and is being eradicated. Furthermore, real progress is being made, and momentum achieved, during these initial years of concentrated worldwide effort which began in fiscal year 1958. These results have come as a direct consequence of substantial assistance and participation by the United States. By fiscal year 1963 the goal of eradication will be much closer to realization.

4. Funding of the overall program for fiscal years 1958 and 1959 and estimated funding for fiscal years 1960-62 is shown in table 4 [not printed in RECORD]. It should be noted that governments having malaria are paying approximately one-half of the total cost of eradication.

The malaria eradication program is well underway, and there is every indication that the eradication of malaria can be achieved. Success, however, will depend upon continued U.S. support of the program at the requested funding level.

II. COMMUNITY WATER-SUPPLY DEVELOPMENT PROGRAM

The community water-supply development program was authorized by the 1st session of the 86th Congress. It provides U.S. support and leadership in a coordinated effort directed toward the control of diarrheal diseases, the most destructive remaining communicable disease in most underdeveloped countries. This will be accomplished through the stimulation of nationwide water-supply programs. The United States is assisting cooperating countries to develop or strengthen business-type self-sustaining institutions which will plan and aid financing, construction, and management of water-supply systems at the community level.

This is a program which admirably meets mutual security criteria.

1. In terms of feasibility it ranks very high. Community water supplies are popular with cooperating country officials and with the people.

2. Water is not only the key factor in the control of diarrheal diseases but contributes substantially to the reduction of lice, scabies, and filth among population groups.

3. For economic progress safe, potable water is essential to the health and increased efficiency of the labor force and to the establishment and growth of industry.

4. The program is conceived on the basis of maximum utilization of community resources to supply potable water to their people, thus reducing the drain on state and national governments.

5. Perhaps most important of all, this is a positive program which is self-sustaining and self-generating. It has a cumulative and compounding effect on the health, social and economic development of the local community and the nation.

In the short time since the program was approved implementation has been going on at a rapid pace. As planned, the activity is concentrated in assisting the cooperating governments, including their local and community authorities, to develop the technical, professional and institutional means to supply potable water to their citizens on a businesslike basis. This is a coordinated program in which multilateral agencies, WHO and PAHO, and ICA are cooperating.

The development of water supply institutions in the cooperating countries will be one of the first and most important activi-

ties in the order of priorities. Well conceived and properly organized they will have a long and lasting effect. Many countries have already taken important initial steps in planning these institutions. Requests for assistance in furthering this effort have come from Ecuador, Peru, Costa Rica, Ceylon, and Korea. Several others including Yugoslavia, India, Jamaica, and Brazil have requested assistance in other closely related aspects of institution building. Modest grants of assistance have been made to Peru and Ecuador while several others are in preparation. A team of expert consultants is presently in India with others definitely planned for Ceylon and Yugoslavia.

Training and education to develop and upgrade personnel to staff the evolving institutions must progress simultaneously. During the past year both ICA and WHO/PAHO have sponsored special training courses and seminars. These will be expanded in all areas of the world. A special course in ground water development for public water supplies was given at the University of Minnesota for 45 students from 22 countries. This will be repeated again during the university summer session of 1960. Later on this year the course will be offered in Latin America and in one other area, possibly the Middle East. One special seminar for Mediterranean countries was held in Amalfi, Italy, in December under sponsorship of WHO and attended by ICA engineers. Others are planned for the Far East later this year with ICA collaboration.

A special course in waterworks management for engineers is scheduled for April 1960, and others tentatively scheduled for Central and South America and for the Far East later in the year. WHO and PAHO have played a leading role in promoting management training with close cooperation of ICA. The bilateral programs will become increasingly active as this type of training begins to be organized within countries.

The coming months and years will be marked by a growing volume of expert consultation assistance in all phases of community water supply development—planning, organization, financing, design, construction, operation, and management.

The matter of special investigation, research, and development is receiving increased attention. While a great deal of effort is placed on this phase of water supply in the United States, very little has been done on the problems in less developed countries.

Spot investigations in Puerto Rico and Costa Rica have given promise of important economic cause and effect relationships directly associated with water supplies. Negotiations are underway with Northwestern University to investigate this area more intensively.

Plans are in progress to study specific problems with cooperating countries in the field. In Brazil one of their institutions is being approached to investigate, under field conditions, various methods of assessing shallow ground water with simple, inexpensive equipment.

A survey is underway in about 55 countries to determine the amount and type of water supply equipment and materials being produced.

It is proposed that \$2.1 million be used in this program for fiscal year 1961, broken down according to the table in the presentation.

III. INTERNATIONAL MEDICAL RESEARCH

The purpose of this proposal is to assist the World Health Organization to develop a program of research in international health matters of interest to its 90 members.

The United States made a \$300,000 contribution in fiscal year 1959 to initiate a study, \$500,000 in 1960 to take the first step in this direction, and it is proposed to contribute \$500,000 in fiscal year 1961.

A partial list of elements in this program is: (1) Standardization of nomenclature, drugs, and techniques of examination; (2) epidemiologic studies of a variety of diseases of vital interest to all countries; (3) training of scientists; and (4) development of international reference centers for tumors. To date progress has been made in all four areas.

WHO has proposed a research program for 1961 which would cost \$2.7 million. Of these funds the Director General has requested the Assembly to appropriate \$750,000 from the regular budget, the remainder to be raised by voluntary contributions to the special account for research. The United States proposes that \$500,000 of mutual security funds be contributed to the special account.

The Director General of WHO proposes the following allocation of funds for research: 50 percent for communicable diseases research; 30 percent for cancer, heart disease, and nutrition research; 5 percent for human radiation studies; 8 percent for planning for additional research; 7 percent for central administration in WHO.

Soviet Rule in Rumania

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was sent to me by Mr. Mihail Farcasanu, president of the League of Free Rumanians, calling attention to the fact that this past March 6 marked the 15th anniversary of Soviet Russia's takeover of Rumania. I am sure all of us who love freedom hope and pray that the day will come when freedom will be restored to the courageous people of Rumania who have suffered such terrible oppression during the past 15 years.

The letter follows:

THE LEAGUE OF FREE RUMANIANS,

New York, N.Y., March 2, 1960.

The Honorable ALVIN M. BENTLEY,
U.S. Representative from Michigan.

DEAR MR. BENTLEY: Fifteen years will have elapsed this March 6 since the imposing, through a military terroristic diktat, of the Soviet rule in Rumania. We believe that mention should be made in Congress of these years of terrible oppression and deprivation of liberty.

We appeal to you, as the enlightened and courageous defender of the cause of enslaved Eastern Europe. Anything you can say on this sad occasion will be deeply appreciated by Rumanians everywhere. According to our information, the personal expression of interest and sympathy from Members of Congress for the plight of the enslaved, is doing much to balance the demoralizing effect in the subjugated countries of the western policy of collaboration and amity with their Communist oppressors.

The seizure of power in Rumania by the Soviets, in defiance of an armistice convention and at a moment when the Rumanian armed forces were cooperating with the Allies on the front, is undoubtedly one of the high points of Soviet double crossing. This was done in the presence of American and British control commissions. The United States and Britain were obliged in the face of this flagrant treachery, to protest, the protests were ignored and a demand of President Truman for free elec-

tions cynically rejected. Unfortunately, the objections of the western allies were merely pro forma, they recognized the Soviet stooge government in Rumania and signed with it a peace treaty.

By this treaty, in which the Rumanian people had no part, the Russians dismembered the Rumanian national territory of Bessarabia and Northern Bukovina, incorporating them, with Western approval, in the so-called U.S.S.R. Moldovan Republic. The Rumanian ethnic majority of this pseudo-Russian province has since been subjected to systematic persecutions, among which stands out deportations to Kazakhstan. Regarding the rest of Rumania this treaty was violated from its inception by the Soviet agents in charge of the stooge government in Bucharest.

The greatest forced-labor camp in occupied Europe—the Danube Black Sea Canal—together with tens of smaller ones, were organized, deportations and political liquidation were ruthlessly used as a means to break down national resistance; Rumania became, as a French reporter put it, “the most impenetrable and oppressed country behind the Iron Curtain.” But in spite of all this the people remained unalterably anti-Communist and, a worse crime, pro-American.

The country was economically bled white by the Russians, who used it also for military bases. It should be recalled in this respect that the military clauses of the peace treaty signed by the United States, were continuously violated by the Moscow stooges, who contemptuously made a mockery of the protests of the combined United States-United Nations and World Court mighty juridical forces. But strangely enough this mockery did not deter the Western tactics of appeasing communism at any price. The unrepresentative, treaty, and international law violating Soviet stooge government at Rumania was elected as a member of the United Nations in 1955.

Hardly had this government been accepted in the United Nations, when in 1956 they lied to the General Assembly by assuring it that they had given political asylum to Imre Nagy with full guarantees for his safety and well-being. This same stooge government then promptly delivered Nagy to be executed by their bosses, the Soviets.

At the present moment, besides the “cultural relations” with such a regime, the United States and her allies are engaged in discussions in Geneva (the conference will start on March 15) on disarmament, with the apparent intention of reaching bonafide agreements. It is obvious that this sequence of events has deeply demoralized friends of the United States in Rumania and elsewhere behind the Iron Curtain.

Now, if a harmonious and brotherly understanding, real cooperation between the Soviet Union and the United States could be achieved, the sacrificing of the sacred rights to life and liberty of millions of people might have some meaning, but if, in view of all past and present experiences, this is merely an utopian pipedream of incurable appeasers, then the present actual disregard for the will of the people in these sacrificed nations will constitute not only a moral disgrace but a substantial political loss for the United States.

After the West's inaction in the Hungarian uprising, a committee of Congress said that this lack of action was “the lost opportunity of our generation.” This opportunity, although lost, can be redeemed at the summit meeting with Khrushchev if the West are not frightened or ashamed to take the defense of freedom.

Please accept again our warm gratitude for your constant sympathy and support.

I remain yours respectfully,

MIHAIL FARCASANU,

President.

Ionia Campaigns for Progress

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the publication the Great Lakelands which has to do with a fine city in my congressional district. The story this article tells of this community's efforts to better itself is truly inspiring.

The article follows:

IONIA CAMPAIGNS FOR PROGRESS

(By Carl Martens)

Looking ahead to the future, Ionia, Mich., is in the throes of a program, which is, it is believed, will insure that the community will not be left in the economic backwaters of tomorrow.

With an eye to recent predictions which indicate that the next decade will bring unprecedented growth to the Great Lakes region, the people of this small community are seeking real industrial and business development.

They are doing it by saying to industry, “Tell us your problems, and let us see if we can help you.” This helpful attitude has benefited existing industry. In the same manner, Ionia folks are willing to more than go out of their way to be helpful to a new industry, realizing that prosperous industry is a real benefit to the area.

Geographically, Ionia has much to offer, for it is in the heart of a rapidly developing industrial area. The county seat of Ionia county, the city is located about midway between Grand Rapids and Lansing in the scenic Grand River Valley.

Ionia has two very active railroads, the Grand Trunk and C. & O. Two State highway trunklines, M-21 and M-66, pass through the city, providing north-south and east-west access. The new Detroit-Muskegon expressway passes through the county only 6 miles south of Ionia, putting Ionia folks only minutes away from Grand Rapids and Lansing.

Ionia's excellent educational system was one of the first public school systems in the State. The first public school was founded in 1835 by W. B. Lincoln, a distant relative of Abraham Lincoln. The year of 1871 saw the first class graduate from Ionia High School. In the 1959-60 school year, the official enrollment of the Ionia public schools was 2,356 pupils. The district provides high school service to an area some 15 miles long and 6 to 9 miles wide. The district is currently in a building program which will add a new 400-pupil elementary school to the already existing high school, gymnasium, shop building, and two elementary schools.

Despite continually improving the school buildings, and adding several, the district has been able to operate on a total tax rate (including debt service for buildings) of less than 13 mills on the State equalized valuation of over \$21 million. Academically, the public school system is rated high, having accreditation from the University of Michigan and North Central Association.

Supplementing the public schools are three excellent parochial systems. The Catholic schools consist of both grade and high school, and a new \$200,000 addition is now in progress. The Lutheran church operates a new \$150,000 elementary school, while the Adventist church has a new modern building.

Ionia is the site of the Ionia State Hospital, the Michigan Reformatory, and the Medium Security Correctional Institution. Dr. Perry C. Robertson has been Medical superintendent of Ionia State Hospital since 1915. He has pioneered many of the treatments used for the sick over the years of administration. He has done a very commendable job for the institution and is a highly respected citizen of Ionia.

Michigan Reformatory has 1,500 inmates. Present Warden George Kropp has proven himself a very efficient man. Dr. Gerritt Heyns, the former warden was distinguished in the field of penology and is at the present time in charge of all corrective institutions in Washington State.

The Medium Security Correctional Institution has schools from elementary on through high school. Citizens of Ionia sincerely believe that this will help many a boy find his way back to becoming a respectable citizen again.

The three institutions employ a total of 850 people throughout the year, which is a valuable asset to the business stability of Ionia. Ionia is accustomed to the idea of helping the less fortunate find their way back to society. As a leading citizen put it, "There is not so much difference between those boys and you and me, only we had breaks in life which many of those boys did not have."

There are 13 well-attended churches of various denominations. Recent improvements and additions to existing facilities, place Ionia's churches among the finest to be found anywhere in a community of this size. Strong emphasis has been placed by many of the churches on religious education and training.

The Ionia Free Fair, with Allan M. Williams as secretary-manager, is Michigan's greatest annual outdoor event. The 6-day event attracts an estimated 450,000 spectators to the spacious grounds. Midway shows and rides, free agricultural and industrial exhibits, and an outstanding evening grandstand program delight the crowds. It is the largest fair in the world to feature a free gate. Many attractive, well cared for buildings house its various departments, and blend well into the beautiful, park-like setting on the banks of the Grand River. During its annual run, fair spectators thrill to auto racing, harness racing, tractor, and horsepulling contests. During its more than 45 years of existence, the Ionia Free Fair has risen to rank among the top fairs in the country.

The rich farming territory surrounding Ionia is recognized as an important asset to the overall prosperity of the community, balancing the existing business and industry. Long known as one of the richest agricultural counties in Michigan, Ionia County farmers plant and till over 55,000 acres of corn, 38,000 acres of hay, 30,000 acres of wheat, and 28,000 acres of oats. The dairy industry, however, actually proves to be the largest single source of farm income in Ionia County. In addition to this, beef cattle production on Ionia County farms has taken on new importance. Fruit production in the northern part of the county has steadily increased, and has led to the creation of some of the largest and most modern fruit storage facilities to be found. Farming in Ionia County is a \$12 million a year business.

Ionia's \$500,000 water project, which was completed this last year, gives it one of the best water systems for a city of this size. At present it has a productive capacity of about 5 million gallons daily. This can be readily increased simply through the addition of larger pumping facilities. The newly-improved municipal system includes automatic pumping stations, which are connected at all times with the 1,500,000 gallon storage system, thus assuring an adequate supply for all emergencies. The city's efficient, well-

trained, full-time fire department, plus the new water system, has led to an unusual distinction for the city. It is probably the only community of its size to have a class 6 rating for fire insurance purposes.

The Ionia County Airport, located 3 miles to the south, is well rated and permits private, and some commercial air service, operations throughout the year. A new improvement to the facility was the recent hard-surfacing of the main east-west runway. It is anticipated that additional improvements will be made as the need dictates.

Ionia's largest industry is the Ionia Manufacturing Co., a division of the Mitchell-Bentley Corp. This concern is the largest independent producer of station wagon bodies in the world. They custom produce special bodies, make automotive stampings and trim, produce specific items of metal office equipment, and have excellent engineering facilities working on many and varied products. About 2,000 people are employed by the company.

The Brown Corp. of Ionia, with some 100 employees, produces metal stampings and fabrications for automotive parts.

The Peschke Packing Co. produces and distributes an outstanding line of processed meat items, while the Runciman Milling Co., is noted for the fine quality of flour and other allied items it manufactures in its modern plant.

Other important names on the industrial roll of the community include Ionia Bottling Co., Specialty Block Co., Clore & Co., Grand Valley Chair Co., Ash, Inc., Ionia Concrete Products, Trojan Athletic Wear Co., Ionia Tool & Die, and American Venetian Blind Manufacturing Co.

Ionia is blessed with four beautiful parks suitable for reunions and family recreation. Allen Williams, former highway engineer was the originator of the idea of the natural park development of Bertha Brock Park, located 3 miles west of the city. The park consists of 237 acres of hills, valleys and beautiful scenery. It has 40 scenic areas for picnic tables which will seat 8 to 135 people to a location for a total seating capacity of 1,700.

An artificial lake is being developed in the park which will provide ice skating, swimming, and help enhance the natural recreational benefits.

Adjacent to the park, supervised and maintained by The Ionia County Hunting & Fishing Club, are several added attractions. A modern lodge located on a hill overlooking the park, is capable of accommodating upward of 200 people at a time. There is a target practice range in the basement of the lodge, an archery range on the grounds, and a long toboggan run.

Ionia has an excellent radio station, WION, a very good daily and a widely circulated weekly paper—which is rather unusual for a city of its size. The development of parking sites in the downtown area through property purchases has had the active interest and support of the city officials. Many new parking lots have been opened.

South Ionia, a suburban area developed in recent years, is an attractive little village with about 15 business places and scores of new homes. "Service With Satisfaction," seems to be the motto of the neighborly community.

Ionia has set aside hundreds of acres of choice sites for new industry and is ready to assist anyone seeking a new location. Contact may be made with the Ionia Economic Development Commission or the chamber of commerce, both of which are active organizations designed to help improve the economic growth and well-being of the community.

A very cooperative relationship exists between Ionia's management and labor, which

signifies that both parties have benefited from communications, industrial relations programs and a general understanding of the benefits of teamwork.

Ionia has a new 75-bed hospital, modern in every detail, which answers well, the needs of the county. The hospital also provides employment for about 130 people.

The civic-minded people of Ionia are dedicated to the constant improvement of the city. This is evidenced by the fact that well over 80 percent of Ionia homes are owner-occupied, and by the many building improvements which make Ionia's business and residential areas among the most attractive to be found.

Ionia is a friendly city, perhaps because of its 47 civic clubs and fraternal organizations, which function for the benefit of all.

Law of the Sea

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. PELLY. Mr. Speaker, I have appeared in the well of this House on numerous occasions to point out the threat to American fishermen of a proposal to be discussed at the second United Nations-sponsored Conference on the Law of the Sea to be held March 17, 1960, in Geneva.

Here is an Associated Press dispatch from Canada which appeared recently in many newspapers in this country. It tells the story of what the Canadians have in mind.

The Pacific coast fishing industry has a right to expect that our American delegation will not support any international agreement which would deprive Americans of long-established rights.

This newspaper story appeared in the Seattle Times:

CANADA HOPES TO END U.S. FISHING RIGHTS—
SAYS CABINET MEMBER

OTTAWA, March 4.—Canada is pushing for a territorial-limit proposal which would deprive the United States of its historic fishing rights off the Canadian coasts, External Affairs Minister Howard Green said yesterday.

Green told the Commons External Affairs Committee he is hopeful the plan will be approved at the Conference on Law of the Sea, opening in Geneva about 2 weeks.

The Canadian proposal calls for a 6-mile territorial limit, plus another 6 miles for exclusive fishing rights for the coastal state.

Green said that if this proposal is adopted, historic fishing rights enjoyed by the United States and some other countries will be wiped out.

Green said the chances for success of the Canadian proposal depend on the willingness of the countries concerned to be flexible and move toward compromise.

If inflexible positions are taken, the prospects for success will be considerably reduced.

The minister added that, if agreement cannot be reached now, it probably will be a long time before another attempt can be made. This would mean chaos, he said.

Green said there has been no indication of support from Britain, which has been ignoring Iceland's unilateral claim to a 12-mile fishing limit.

Santa Fe Springs, Calif., All America City

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. HOLIFIELD. Mr. Speaker, this Saturday, March 12, 1960, the city of Santa Fe Springs, Calif., will receive the All America City Award. I am extremely proud to be able to represent in the Congress of the United States such a progressive and modern community as Santa Fe Springs.

I wish to congratulate all of the officials and citizens of this fine city. It is very seldom such a young city is chosen to receive such a significant award. I believe the citizens of Santa Fe Springs richly deserve all of the praise and recognition they are receiving. I am sure the citizens of Santa Fe Springs feel the many hours of work and the many sacrifices that went into making this project a reality have now been justified.

The All America City Award is to be presented to the city of Santa Fe Springs, Calif., by the National Municipal League and Look magazine. The awards are given each year to 11 U.S. cities selected by a jury of distinguished citizens and experts on Government impaneled by the league. Santa Fe Springs is the youngest city to receive this coveted recognition in the 11 years the awards have been made. Santa Fe Springs is just 2½ years old.

Dr. George H. Gallup, director of the American Institute of Public Opinion, who served as jury foreman of the distinguished award jury, said:

Santa Fe Springs' award was based on its efficiency in government and progressive city administration accomplished through alert continuing citizen participation.

Four students from Santa Fe Springs high schools, accompanied by a local delegation, made the presentation of the city's history to the All America City jury in Springfield, Mass., last November. Taking part in the oral presentation to the judges were Steve Dickinson, Barney Martinez, and Kathleen Burton of Santa Fe High School, and Penny Yapelli of St. Paul High School. It was the first time in the history of the National Municipal League that youth had taken part in the All America City competition.

Just under 100 cities were considered. Their entries were screened by a committee of experts in community and government affairs. The field was narrowed to 22 finalists, who then presented their cases orally to the jury of experts, headed by Dr. Gallup. Santa Fe Springs, Calif., the youngest city ever to be selected, was chosen from the finalists to receive this outstanding honor.

I include herewith articles from the Santa Fe Springs Independent and the Los Angeles Examiner. Also an expert from the Look magazine story reporting on the award to this All America City—Santa Fe Springs, Calif.:

[From the Santa Fe Springs Independent]

CIVIC PARTICIPATION SEEN KEY TO VICTORY

Santa Fe Springs is an All America City. The announcement came this week from Dr. George Gallup, who was chairman of the All America Cities Award jury. Only other California city to win the award is Vallejo.

Other western cities honored as 1 of 11 All America Cities for 1960 are Lamar, Colo., and Seattle, Wash. About 100 cities competed in this year's contest, sponsored by the National Municipal League and Look magazine.

According to Look magazine, the 11 cities were chosen on the basis of citizen action in pressing for needed improvements and backing major community programs.

FOUR STUDENTS

The winning cities will be described in the March 1 issue of Look, which will be on the newstands February 16. This 2½-year-old community is the youngest ever to be honored in the annual competition.

Four students from Santa Fe Springs high schools, accompanied by a local delegation, made the presentation of the city's history to the All America City jury in Springfield, Mass., last November.

Taking part in the 10-minute oral presentation to the judges were Steve Dickinson, Barney Martinez, and Kathleen Burton, of Santa Fe High School, and Penny Yapelli, of St. Paul High.

OTHER WINNERS

It was the first time in the history of the National Municipal League that youth had taken part in the All America City competition.

Announcement of Santa Fe Springs' achievement will also be published in the National Civic Review and Western Cities magazine. Other cities named "All America" were Alton, Ill., De Soto, Mo., East St. Louis, Ill., Fargo, N. Dak., Norfolk, Va., San Juan, Puerto Rico, and Winston-Salem, N.C.

Aside from the presentation by the youngsters, observers feel that the role played by Santa Fe Springs residents in community projects helped most to bring home the award. Highlighted in the presentation were the many citizen committees which have advised on important civic projects.

DEFRAY COSTS

The presentation, prepared by Santa Fe High journalism advisor Ted Snyder, administrative assistant Darrell Essex, and City Manager Meno Wilhelms, also pointed out the tireless efforts of citizens toward incorporation and the lessening of the tax burden by the creation of a municipal fire department.

Numerous citizens and youth groups participated in fund-raising events to help defray the costs of sending the youthful delegation to Springfield.

Special civic events to celebrate the accomplishment for Santa Fe Springs are expected to be announced later.

One of the first will be this Friday morning at 9 a.m., when the entire community is invited to attend the first official raising of the All America City flag at Santa Fe High School.

[From the Los Angeles Examiner]

SANTA FE SPRINGS "ALL-AMERICAN"

Santa Fe Springs, 15 miles southeast of Los Angeles, one of the youngest cities in the Nation, yesterday was one of the 11 cities in the United States chosen for the All America City Award.

The All America City Award, considered the highest honor that can be achieved by communities of the Nation, was established in 1949 by the National Municipal League.

The awards are conferred on the basis of outstanding civic achievements brought about by the concerted efforts of the citizens.

Yesterday, in the Detroit Room of the Statler, Santa Fe Springs Mayor William J. McCann and "Miss Santa Fe Springs," Miss Martha Phillips, 19, a city employee, proudly displayed the award pennant.

The flag will be flown at the city's community center and at the Santa Fe Springs High School, the mayor said.

"This national coveted honor is a tribute to every citizen of Santa Fe Springs, and accepting it on their behalf is the greatest honor I could ever expect," the mayor said.

Dr. George Gallup, chairman of the council of the National Municipal League and foreman of the award jury, said:

"Santa Fe Springs award was based on its efficiency in government and progressive city administration accomplished through alert continuing citizen participation."

Santa Fe Springs was incorporated in 1957, and has a population of more than 15,000.

The other 10 cities honored were Alton and East St. Louis, Ill.; De Soto, Mo.; Fargo, N. Dak.; Lamar, Colo.; Norfolk, Va.; Vallejo, Calif.; Seattle, Wash.; Winston-Salem, N.C., and San Juan, P.R.

Among the 11 cities receiving honorable mention were Baldwin Park and Burbank, Calif.

[From Look magazine]

Mayors, city managers and other local officials sometimes make the presentations, but the task is often performed by volunteers who know the story of their city. This year, a group of high school boys and girls made the presentation in behalf of Santa Fe Springs, Calif.

A variety of accomplishments accounted for this year's winning cities. Some reflected continued citizen revolt against local crime, vice, and political corruption. Contest officials note, however, that most new kinds of civic action stem from the country's explosive population growth.

The new trend in civic action appears to fall into five areas (combined in some communities into a single long-range program):

1. Modernization: The new programs involve ingenious plans for traffic, new housing, and new industrial parks. Many projects in older cities aim at revitalizing the downtown sections to protect valuable tax-producing properties threatened by population shifts to the suburbs.

2. Slum clearance: The cultural and economic boundaries of most of our sprawling cities have spread far beyond their old political boundaries. People are facing up to the fact that the slums left behind have health hazards that involve the entire region, rather than a small local area. As a result, decaying acres of blighted homes are being eliminated with the help of citizens in the suburbs, as well as with Federal support.

3. Efficiency: The redtape and needless, overlapping costs of the good old way of doing things are being seriously challenged. It is tough to change political traditions, but the case histories show citizens are learning that tax waste at city hall comes out of their own pockets.

4. Annexation: The number of cities annexing their neighboring areas indicates that residents have been sold on the idea that larger communities with better administrations can provide more public service for less money.

5. Outside guidance: Many small communities have learned they are not alone in their efforts. For most major and many minor civic improvements, they can look to outside private and Government agencies to help bring dramatic and exciting changes to their own doorsteps.

The stories of what this year's winning cities did to win their wards begin below.

SANTA FE SPRINGS, CALIF.

Salesmen told prospective home buyers that the new tracts near the oil-rich fields

15 miles east of Los Angeles were part of communities nearby. But when the new owners moved in, they learned the sickening truth. The houses were on unincorporated land, without street lights, services, schools or identity. No one could help the homeowners but themselves. First, they organized a homeowners association. Then they spread word of what had to be done—over their fences and through their own newspaper. Soon the street lights went on, the streets were swept, and schools, parks and a post office all materialized. So intense was civic interest that 1 in 10 families helped in a study leading to a recommendation for council-manager government, then campaigned vigorously to put it over at election time, by a margin of 4 to 1.

MEMBERS OF THE JURY THAT SELECTED THE ALL AMERICA CITIES

Dr. George H. Gallup, Princeton, N.J., director, American Institute of Public Opinion, foreman.

Miss Grace B. Daniels, Kingston, Pa., president, National Federation of Business and Professional Women's Clubs.

Dr. Anna L. Rose Hawkes, Washington, D.C., president, American Association of University Women.

Harry J. Krusz, Lincoln, Nebr., president, Harry Krusz & Co.

Mark S. Matthews, Greenwich, Conn., former president, U.S. Junior Chamber of Commerce.

Willard V. Merrihue, New York, manager, Community and Business Relations, General Electric Co.

Vernon C. Myers, New York, publisher, Look magazine.

James M. Osborn, New Haven, Conn., Yale University.

Mrs. Robert J. Phillips, Washington, D.C., president, League of Women Voters of the United States.

Henry Toy, Jr., New York, president, National Citizens Council for Better Schools.

Donald H. Webster, Seattle, Wash., director, Bureau of Governmental Research and Services, University of Washington.

Arnold S. Zander, Washington, D.C., president, American Federation of State, County, and Municipal Employees, AFL-CIO.

Unfair Imports Ruin Farmers

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DORN of South Carolina. Mr. Speaker, our farmers are being ruined by imports from slave labor, foreign countries. The following farm resolutions tell the tragic story:

RESOLUTION ADOPTED BY AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION, DENVER, COLO., JANUARY 27-30, 1960

RESOLUTION NO. 7—MEAT IMPORTS

Whereas we feel the unwarranted decline in the price of slaughter cattle has been caused by the increased importation of cheaply produced foreign meat, and that this low price of cattle has resulted in great numbers of breeding cows and heifers that would normally go to slaughter being held on ranches and farms, further increasing the surplus of cattle; and

Whereas owing to the increased cost of domestic processing and retailing, this price reduction has not materially reduced the price of beef to the consumer; and

Whereas beef producers have consistently opposed Government subsidies: Therefore be it

Resolved, That this association request the Congress and the administration to grant our industry relief by enacting equitable and realistic quotas on importation of all foreign livestock, meat, and meat products, and, specifically, by setting quotas that curtail the import of below-second-grade meats which at the present time are unrestricted as to volume.

RESOLUTION ADOPTED BY VEGETABLE GROWERS ASSOCIATION OF AMERICA, ATLANTIC CITY, N.J., DECEMBER 1959

FOREIGN TRADE

A healthy exchange of goods and services between nations is highly desirable and is beneficial economically and politically to the nations involved. We believe that an active foreign trade, based on the principles of free enterprise, should be encouraged, but with due regard to the protection of our own national interests. We would look with concern on any legislative or administrative action which would tend to increase import competition with domestic perishables.

We look with suspicion on any transfer of authority over import regulations and tariffs, by membership in any supranational organization such as the General Agreement on Tariff and Trade and the Organization for Trade Cooperation. We object to the constant interference of the Department of State in foreign trade matters. We believe that regulation of our foreign commerce is the constitutional obligation of the legislative branch of the Government, and we, therefore, favor exclusion of any executive department, including the President, from regulatory authority in the field of foreign trade.

Specifically, we favor return from the President to Congress of the obligation to approve or disapprove all recommendations of the Tariff Commission made under the escape clause of the Trade Agreements Act. We recommend that the Congress establish explicit guidelines to govern decisions of the Tariff Commission with respect to import quotas, and that such decisions of the Tariff Commission on import quotas shall be final and operative unless disapproved by Congress.

FROM 1960 PLATFORM OF THE NATIONAL WOOL-GROWERS ASSOCIATION AS ADOPTED BY THE 95TH ANNUAL CONVENTION JANUARY 24-27, 1960, SAN ANTONIO, TEX.

TARIFFS

The National Woolgrowers Association believes that it is time for our Government to make a searching reexamination of its tariff policy. We urge Congress to reassert its constitutional right to set and control tariff policies.

The matter of adequate tariff protection on imports of raw wool and wool manufactures and of lamb and mutton has been of vital importance to the sheep raiser since the early years of this country. It is necessary for the very existence of our industry. For this reason we vigorously oppose any efforts to reduce or disrupt our tariff system.

This is the reason that we have always opposed the Reciprocal Trade Agreements Act and still oppose it. We deplore its extension to June, 1962 and hope that it will be allowed to expire at the end of this period.

We advocate that the authority of the Tariff Commission be strengthened and that its recommendations for protection of domestic industries be transmitted directly to Congress for its consideration and action.

We urge that the escape clause procedure be clarified so that import quotas can be readily applied.

In this direction, we strongly urge continued implementation of the Geneva Reservation with greater utilization of its po-

tential to accord the protection so vitally needed by all segments of the American wool economy.

We are still opposed to U.S. membership in the Organization for Trade Cooperation and the participation of the United States in the General Agreement on Tariffs and Trade.

We commend the Nationwide Committee on Import-Export Policy and its chairman, Mr. O. R. Strackbein, and the Trade Relations Council of the United States for their vigorous opposition to the lowering of tariffs. We request their continued activity on our behalf in connection with our historic stand on tariff matters.

**Last Commanding Officer of the Scotia Naval Supply Depot, Scotia, N.Y.—
Capt. Harold E. Cole, Supply Corps,
U.S. Navy, a Great Sailor Dies in the
Service of His Country**

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. STRATTON. Mr. Speaker, tomorrow high on a hill in Arlington Cemetery there will be laid to rest the last mortal remains of one of the finest naval officers I have ever had the privilege of knowing and one of my close and warm friends, Capt. Harold E. Cole, Supply Corps, U.S. Navy.

Captain Cole passed away suddenly last Saturday while attending classes at the Albany Teachers College in Albany, N.Y. At the time of his death he was site administrator of the Navy machine tool program being conducted at the General Services Administration Depot in Scotia, N.Y. Until last December 31, Captain Cole was the commanding officer of the U.S. Naval Supply Depot at Scotia, a post in which he had served with great distinction since July of 1956. Prior to coming to Scotia, Captain Cole had graduated from the Naval Academy at Annapolis, the Naval and Finance Supply School at Philadelphia, and the Harvard Graduate School of Business Administration in Cambridge. He served with distinction with the Asiatic Fleet prior to World War II and occupied a number of major staff assignments both at sea and ashore during World War II. Immediately before coming to Scotia he was comptroller for the Military Sea Transportation Service in Washington.

To Captain Cole fell the difficult and unhappy assignment of presiding over the Navy's major installation in the Schenectady area during its disestablishment. During the time of his tenure the Navy gradually reduced its complement at Scotia, and from time to time rumors of even greater reductions circulated prominently throughout the area. During this whole trying period, Captain Cole not only represented the Navy in the Scotia-Schenectady area with great distinction and ability but was tireless in his efforts to see that those in charge of ar-

rangements in Washington were fully apprised of the situation in Schenectady before making their decisions involving base disestablishment. Like every good commander, he had the welfare of his subordinates close to his heart.

In spite of all his tireless efforts in defense of the interests of our area and of the hundreds of loyal civilian personnel who were privileged to serve under him in Scotia in one of the finest activities which it has been my privilege to see in any Government department, Captain Cole had to watch the Navy go ahead with its decision and in December of 1959 he officially brought the Scotia Navy Depot to a close.

This action was not only a tragedy for the community and a blow to Captain Cole in his professional capacity, it also represented a serious personal blow as well. His ship sunk from under him, Captain Cole was obliged to look forward at the end of the current fiscal year to retirement from active naval service at the age of 49, with two young children left to educate. However, the personal blow which Captain Cole sustained was something he never spoke about, even to his closest friends. Having fought hard and courageously in the highest traditions of the Navy to preserve the jobs of the men and women under him, he went to work quietly without complaint to prepare for the difficult adjustment to civilian life which faced him and his family. In fact, with characteristic vigor and determination, he was at school early on a Saturday working, taking a special course of training in preparation for the impending return to civilian life when he passed away. He hadn't given up the ship. He had only just begun to fight.

Mr. Speaker, I want to take this opportunity to pay my deep respects to Capt. Harold E. Cole for the outstanding job which he did for the Navy and for our community. I have never known a naval officer who did more for a community or for the men and women under his command than was done by Captain Cole.

Our Navy exists to fight, of course, and this is her first responsibility. But no military force can ever be effective in a democracy unless it has the understanding and sympathetic support of men and women in villages and cities and communities all across our land. For this reason the individual who embodies the Navy or any of our armed services in a particular community bears a very heavy responsibility. I am frank to say that I believe Captain Cole discharged this responsibility with a distinction and with a spirit of dedication that were far above and beyond the call of duty.

His sudden and untimely passing from our local scene also raises in my mind, Mr. Speaker, another matter. As a member of the Committee on Armed Services I find it increasingly difficult to understand why our military services cannot make the fullest possible use of the abilities of the able officers who have selected the Navy as their career while they are still vigorously capable of serving and still possess their full capabilities. Why should it be that our military

services can tell a man who has devoted the best years of his life to his country that his professional career is at an end and require that he should go out and start another one from scratch at an age when his family responsibilities are heaviest, as were Captain Cole's, and when men of his own age group are only just beginning to establish themselves in greater positions of leadership and responsibility in other professional fields instead of taking down their shingles. Surely this is one of the greatest challenges which our military services face today. I for one believe they must meet this challenge promptly if we are to continue to attract to the career military service, men of the ability and devotion of Harold E. Cole.

I know the people of Scotia and Schenectady and the whole 32d district will join with me in expressing to Mrs. Cole and to her two fine sons our deepest sympathy in the loss of a wonderful husband and a devoted father.

Home is the hunter
Home from the hill
And the sailor home from the sea.

New Farm Legislation Needed

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. PELLY. Mr. Speaker, a wheat farmer from Reardon, Wash., on a trip to Phoenix, Ariz., has taken the trouble to write me his views on price supports and to endorse my bill to repeal farm subsidies. I include his letter and excerpts from other communications to show the widespread opinion in favor of ending the present agricultural program:

Hon. Mr. PELLY,
House Office Building,
Washington, D.C.

DEAR SIR: I farm a section of wheatland in Spokane and Lincoln Counties, Wash. I endorse the idea of repealing the entire farm support program as the morning Phoenix paper of February 11 states would be accomplished in a bill introduced by you. On February 19 the same paper stated that Secretary Benson submitted a farm bill that would greatly reduce price supports and free wheat farmers to produce as much wheat as they want.

I feel that accepting acreage control as the price of security price supports was like trading a birthright for a mess of pottage. If a farmer was entitled to a parity income, he certainly did not receive it when he was compelled to reduce his wheat acreage 36.2 percent (the Spokane County figure for the 1959 crop) even though he had received 90 percent of parity price support— $9 \times .638 = 57.42$ percent. If the support is at 75 percent of parity the figures are $.75 \times .638 = 47.85$ percent. I believe the farmers in the areas best adapted to wheat would have had a higher income if there had never been a farm program. In the absence of a high guaranteed price, wheat acreage would have been reduced in areas where a variety of

crops can be grown. Market price is a constantly acting production regulator like the governor on an engine. A farm program should not violate the principle of competitive marketing.

Although economists characterize the demand for wheat as inelastic, hungry, and malfed people would certainly eat wheat if they could get it. I believe they would get more if the price were set in a free market. To the underprivileged the fact that automobile output is curtailed when sales fall off may be an academic question, but no one can explain to a hungry man why the United States must reduce the acreage of food crops. Even though the economic problems are large, we would be headed in the right direction again.

More and more farmers are expressing the wish that the entire farm program be done away with. They realize that at a high cost to the Government, they have received no real benefit. It would be better to seek to reduce Government subsidies to other segments of the economy than to seek subsidies for farmers under a program that does not really help them.

I am sure there is strong underlying support among farmers throughout the Nation for plans that would abolish production controls.

Yours truly,

Other comments on the farm program are:

I suggest this solution to the farm support scandal. At this session of Congress a law be passed with the following points:

1. The Federal Government get out of the farming business completely and immediately. No price supports at all, no soil banks, no acreage allotments, and no buying of surpluses.

Would suggest that if the parity program cannot be reduced then that all forms of marketing should be put on a parity program. Such as coal mining, auto manufacturing, production of television sets, fisheries, shipbuilding, etc., and so on ad nauseum. Parity programs on manufactured products would be ridiculous and probably financially impossible, but deserves exactly the same consideration as the farm parity program.

The apportionment of 20 percent of the national budget to agricultural supports is indicative of the disproportionate political influence which agriculture is able to wield. The principle of parity embodied in price-support programs was designed as a short-term answer to a long-term problem to artificially stimulate production. These two elements reflect basic reasons for opposition to any continued price-support program.

It would seem to me if we ever plan to cure some of our farm problems we must begin to let them start operating on a supply and demand basis, not a subsidy.

I want to express approval of your stand and proposed bill for repeal of farm support prices as mentioned a few days ago in the local papers. I suppose it will encounter a lot of opposition in this election year from Members who are interested in votes rather than commonsense and economy, but I'm glad you are taking the initiative in an effort to undo what seems to me at this late present date to be a wholly unjustified and indefensible subsidy of inefficiency and waste.

Personally I think the price supports should be completely abolished. Twenty years ago when price supports were put into effect I thought that it was the only good thing that the Roosevelt administration sponsored in all of the years it was in power.

Is Political Leadership Inconsistent With Good Government?

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. TOLL. Mr. Speaker, in June 1959, a Pottsville, Pa., newspaper reporter issued a report to the fund for the Republic called "The Art of Government," which purports to cover reform and organization politics in the city of Philadelphia. The basic thesis of this report is that a political organization which becomes successful because of a good government program will eventually abandon or avoid the foundation upon which it was built and move into an area where it will operate in a corrupt or improper manner.

James Reichley, the reporter, attacks the successful Philadelphia Democratic organization and its leader, Congressman WILLIAM J. GREEN, JR. He impugns the character of the Congressman and a number of leading ward leaders of the city. On Sunday, February 21, 1960, a panel discussion was held in Congressman GREEN's district in northeast Philadelphia on the topic "Will Reform Last in Philadelphia?"

The participants were James Reichley, the author, W. Thatcher Longstreth, a leading Philadelphia Republican and former candidate for mayor, and Congressman GREEN, the Philadelphia Democratic city chairman.

The author presented an argument in favor of his report. The Republican speaker supported the author's basic thesis that efficient and successful political organizations end up in politically corrupt activities and poor government. The city chairman of the Democratic Party denied that he was interviewed by the author, charged that the report had 79 misstatements and inaccuracies and that the work was mainly fictional and based upon pure fantasy.

The danger of such prejudiced attacks, which have been made and can be made again, against any Member of Congress who is a political leader, is that the publisher frequently gives permission to reprint to other publications. In Philadelphia, the Greater Philadelphia magazine announced that it would reprint the Reichley report in full and agreed to print at the same time Congressman GREEN's answer to the report, so that all people could read both accounts and form an independent judgment.

The Times newspapers cover the Greater Northeast Philadelphia. They are independent newspapers, serving the Fifth Congressional District, where Representative WILLIAM J. GREEN, JR., is campaigning for Democratic nomination for an eighth term in the House.

The following Times newspaper editorial, which should be read by all Members, raises the question whether the history of some corrupt political organiza-

tions makes it inevitable that a successful city political organization in this day and age must follow in the same footsteps. Will a successful political organization, built on good government policies, eventually abandon them?

The editorial follows:

DOES GREEN FIT THE POLITICAL BOSS SYMBOL?

Too many people use symbols to simplify their thinking on every subject from little boys to political bosses.

If a symbolizer talks with Mr. B., and Mr. B. says he has a 6-year-old son, the stock image of a 6-year-old boy pops into the symbolizer's mind. He knows 6-year-old boys are always lively, mischievous, loud, hard to manage, and untidy.

When someone mentions political boss, the symbol pops instantly to mind. A political boss is always ruthless, unethical, grasping and undemocratic.

Such is the reaction in the minds of many Philadelphians when anyone mentions BILL GREEN.

GREEN is the boss of the Democratic Party. Right? Thus he is a political boss. Right?

ANYONE KNOWS

If he is a political boss, they figure he must be ruthless, unethical, grasping and undemocratic. Anyone knows, they say, that all political bosses always have been and always will be ruthless, unethical, grasping, and undemocratic.

We have heard many such descriptions of GREEN in recent years. We can honestly say that none of these critics who talked with us substantiated their comments beyond some vague reference to deals, the inevitable mention of Tobyhanna and the final weak defense: "I don't have anything solid to go on, but I know I'm right."

One of the sharpest recent attacks on political machines in general and GREEN's machine in particular is contained in a 125-page book, "The Art of Government," by James Reichley, a Pottsville reporter. Published by the Fund for the Republic, it covers the politico-governmental picture in Philadelphia.

The other night Reichley's book was the subject of discussion by a three-man panel at the Northeast Neighborhood Center. In addition to Reichley, the panel members included Congressman GREEN and W. Thatcher Longstreth, who was the unsuccessful Republican candidate for mayor in 1957.

Reichley said a few nice things about the local "machine," but was principally concerned with condemning it. Longstreth threw a few logs on Reichley's fire. And GREEN said the book is shot through with lies, inaccuracies, distortions.

CONDENSED VERSION

We at the Times haven't had the privilege of reading the entire report. We've only been able to get hold of a condensed version.

At this point, we are of the opinion that Reichley let a number of wise-sounding Philadelphians slip him symbol interpretations of local politics instead of hard facts. And after he had collected a number of such symbol-statements he weaved them together into one big symbol statement, upon which he set the lofty title "The Art of Government."

Unless Reichley can furnish us a lot more facts, we're going to have to disagree with his crier sweeping symbols about GREEN and his party.

We'll stick with these few conclusions for the time being: The Democratic machine is efficiently run by GREEN; it is likely to take over completely from the reformers when Dilworth steps out; its approach to government at that point is not likely to be idealistic, but is likely to provide good government.

HINTED COMPARISON

We will not accept even the hinted comparison of GREEN and his machine with Boston's late Curley and his machine or Louisiana's late Huey Long and his machine.

Maybe someday GREEN will slap the Times down in typical political boss style. But until some solid anti-Green facts are forthcoming, we'll stick with our conclusion that he's an intelligent politician who is proving that a political machine can be run efficiently without losing its ideals.

Though historians might look back on GREEN as just another machine boss, we think it's more likely they will credit him with finding the formula for combining political efficiency with sound city government.

The Crisis on the Commuter Railroads— No. 7

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. IRWIN. Mr. Speaker, for the past several weeks I have inserted a series of articles and other matter in the RECORD to familiarize the Congress with the serious deterioration of our Nation's rail commuter services and to point up the need for Federal help.

After investigation into a number of accidents on the New Haven Railroad, which serves the district I represent, I learned that failure or breakage of some parts of train running gear was responsible for some accidents. But I also discovered that the running gear, which includes axles, wheels, brakes, and other such apparatus, is not included among train equipment which must be inspected and approved by the Interstate Commerce Commission.

I introduced legislation to require extension of ICC responsibility to include the running gear.

Scrutiny of financial operations of the same railroad, as outlined in annual reports to the ICC, disclosed the need for financial assistance and I have introduced legislation to provide long-term, low-cost loans for purchase and maintenance of commuter and mass transit system facilities and equipment.

Incidents of the past weekend serve to emphasize the urgent need for legislation, such as I have introduced, to cope with the crisis on the New Haven Railroad and other commuter lines.

On Saturday, a derailment occurred on the railroad because of what a railroad official described as a broken axle caused by a burned out journal. The accident left only two tracks open and a bottleneck resulted because the accident had occurred along a portion of tracks used by the New York Central system as well as the New Haven Railroad.

How the failure of equipment not covered by ICC inspection can jeopardize public safety and enormously inconvenience the public is made clear in the following article published in the Norwalk (Conn.) Hour on Monday, March 7, 1960.

which I include under permission previously granted:

NINE HOURS TO NEW YORK; OR, LIFE ABOARD
No. 399

NEW YORK.—Here's the sad saga of ol' 399—the Connecticut Cannonball that came up a dud.

Old No. 399 is a New Haven Railroad train. On a clear day it makes the 56-mile run between Bridgeport, Conn., and Grand Central Terminal in Manhattan in an hour and 10 minutes.

Then came Black Saturday—old 399 took more than 9 slow and agonizing hours to make the 56-mile trip.

"A nightmare," cried one cold and weary passenger as he staggered into Grand Central early Sunday. Railroad officials were speechless.

The 8-car train carried 300 passengers. Many missed theater and dinner appointments, concerts, or reunions.

During the trip the heat failed on three of the eight cars. A dozen men "abandoned ship" in anger at the delay. There was no food.

The slow trip was blamed on a derailment of six New Haven Railroad cars in the Bronx. Despite that, the ride was a traveling—and sometimes stationary—comic opera. If a log had been kept, it might have read like this:

4:20 p.m.: Train leaves Bridgeport. Passengers carefree.

5:30 p.m.: Passes through New Rochelle, N.Y. Passengers enjoying scenery, reading.

WORSE AND MORE OF IT

5:35 p.m.: Train stops, backs up to New Rochelle to take on more passengers.

6 p.m.: Passes Mount Vernon, N.Y.; last of chocolate bars eaten.

6:20 p.m.: Somewhere between Mount Vernon and New York train stops. "It was horrible," said Mrs. Donald Street, of New York City. "The lights went out. There was no food, no heat."

6:50 p.m.: Passengers anxiously clutching theater tickets ask conductor if he could back train up so they could disembark and transfer to other transportation. He says, "No." Some take off anyway.

8 p.m.: Passengers tear up theater tickets.

9 p.m.: A dozen men try to leave train. They are pelted by boys with snowballs.

9:30 p.m.: Hungry passengers stare fixedly at a train passing on open track. Train has diner—and people eating in same.

Midnight: Passengers give up. Huddle together to stay warm.

1:30 a.m.: Train creeps into station. "It was terrible," said an executive from Stamford.

Amerigo Vespucci (1451-1512)

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TOLL. Mr. Speaker, Italy has been the home of the arts in all ages, but in the 15th century she gave birth to two famous sons who became great explorers. One of them discovered the New World while the other, Amerigo Vespucci, baptized it with his name.

Little is known of this adventurous son of a notary public in Florence whose sole ambition seems to have been to sail away from home to places barely known, and explore new lands. In about 1500 we find him entering the services of Don Manuel, of Portugal, and organizing several expeditions. It is now known that

in about 1502, or 1503, he arrived at a Florida shore, and then sailed south to the shores of Brazil. Then the two continents of the New World were named after him, Amerigo, America. Glory to the memory of this great explorer.

Rubber Footwear Imports

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from Mr. W. E. Brimer, president of the Tyer Rubber Co., Andover, Mass., concerning the enormous increase in the importation of rubber shoes, overshoes, and rubber-soled shoes with fabric uppers, which will, of course, reduce substantially domestic production.

The letter follows:

TYER RUBBER CO.,
Andover, Mass., March 1, 1960.

The Honorable THOMAS J. LANE,
House Office Building, Washington, D.C.

DEAR MR. LANE: Since you were apparently unable to visit with us at the Hotel Mayflower in Washington on February 18, I am taking the liberty of enclosing a photostatic copy of each of three placards which we displayed to our visitors that evening.

You will note that the first one shows that the total of imported rubber shoes, overshoes, and rubber-soled shoes with fabric uppers in 1959, for the first 11 months, reached the alarming percentage of 34.18 of the total domestic market, and that this was nearly double the percentage imported in 1958 and more than five times the percentage of 1957. The second picture shows that nearly all of the imports were from Japan, and the third shows the difference between the wage costs in Japan and those in this country.

Since wage costs represent an unusually large percentage of total costs in our type of product, it seems obvious that we cannot maintain employment in our industry in competition with a country paying 20 cents per hour for workers against more than \$2 locally.

We are, as an industry, taking steps to see what can be done either through the executive department of the Government or through legislation to establish some limit on the total of imports, and hope that we can count on your support.

We were sorry to miss you at our open house and hope to see you on some other occasion within the near future.

Cordially yours,

TYER RUBBER CO.,
W. E. BRIMER, President.

Rubber footwear imports versus industry shipments since 1953—Rubber shoes, overshoes, boots, and rubber-soled shoes with fabric uppers

More About Interest Rates

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MULTER. Mr. Speaker, I think the following exchange of correspondence will prove of interest to our colleagues. Following is a letter I received from the Northeastern Retail Lumbermen's Association and my answer thereto. If I receive any answers to my letter I will be happy to share the contents thereof with our colleagues.

The letters follow:

NORTHEASTERN RETAIL
LUMBERMEN'S ASSOCIATION,

Rochester, N.Y., February 24, 1960.

Re interest rate on Treasury obligations.
Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MULTER: On behalf of more than 1,200 retail lumber and building material dealers who are in New York and New England States, we wish to call your attention to action taken by these men on the important subject of interest rates on Treasury obligations.

This action has been taken after careful study and clearly reflects the attitude of these dealers on this matter which is of vital consequence to them and the home-buying public.

We feel that this is of particular interest to you because it reflects the considered judgment of a substantial number of your constituents.

We invite your attention to the enclosed statement of position pertaining to this resolution on interest rates.

We hope that you will give this subject your personal attention and careful consideration and that you will take such action as is warranted by further developments.

We shall be glad to have your reaction to our views on this subject.

Sincerely,

HORACE G. PIERCE,
Managing Director.

A STATEMENT OF POSITION—INTEREST RATES
ADOPTED AT THE 66TH ANNUAL CONVENTION
OF THE NORTHEASTERN RETAIL LUMBERMEN'S
ASSOCIATION IN NEW YORK, JANUARY 26,
1960

Whereas Congress failed in the 1st session of the 86th Congress to remove the 4¼-per-

cent interest rate ceiling which was imposed many years ago and is long outdated because of worldwide financial trends on long-term Federal bonds. If the ceiling had been removed the Treasury's efforts to achieve non-inflationary debt management would have been strengthened; and

Whereas short-term Treasury borrowing costs have risen to the highest level in several decades, and the ability of the Treasury to manage the debt in a manner consistent with sound principles of sustaining economic growth has been seriously undermined; and

Whereas the vital interest of all Americans is at stake because excessive reliance on short-term financing probably will have grave consequences by reducing the purchasing power of the dollar; and

Whereas this trend has affected the available mortgage funds for house construction because the consequent withdrawal of funds from traditional savings institutions such as the mutual savings banks and savings and loan associations and channeled into short-term paper which has seriously threatened their liquidity, and thereby their ability to furnish the mortgage funds necessary to build the new homes America needs:

Resolved, That we the members of the Northeastern Retail Lumbermen Association commend the administration for its position in the management of the public debt; and be it further

Resolved, That we urge Congress to remove the 4½-percent interest rate ceiling to give the administration more freedom in management of the public debt; and be it further

Resolved, That a copy of this resolution be brought to the attention of the congressional Members in the northeastern area urging their favorable action on President Eisenhower's proposal.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 3, 1960.

Mr. HORACE G. PIERCE,
Managing Director, Northeastern Retail Lumbermen's Association, Rochester, N.Y.

DEAR Mr. PIERCE: Receipt is acknowledged with thanks of yours of February 24, 1960, with reference to interest rates on Treasury obligations.

I regret to advise that it is my opinion that you are merely mouthing the statements of the Secretary of the Treasury and the Chairman of the Federal Reserve Board, which statements are fallacious and have not yet been sustained by the facts. On the contrary, every fact of economic and banking life indicates that they are wrong.

It is almost silly for anyone to argue that you will lower the interest rate in the marketplace by increasing the maximum interest that may be paid. Every time that we have increased the interest rate on FHA and VA mortgages, the rate immediately went to the maximum and stayed there. Furthermore, the interest paid on Government bonds fixes the interest rate on everything.

It stands to reason that the interest charged on risk loans, whether they be mortgage loans or otherwise, should be higher and they always are higher than the interest rates paid by the U.S. Government on its riskless securities. Our Government has never defaulted on any of its obligations and never will.

The finest security is U.S. Government obligations, requiring no effort on the part of the saver or investor but to sit back and to either clip coupons or receive the interest checks.

The pretense that short-term securities are inflationary is utter nonsense. They are no more inflationary than the E and F bonds that are readily cashable at any bank by the owner thereof. The mutual savings banks and savings and loan associations of the country have upward of 25 percent of their resources invested in U.S. Government obli-

gations, most of them long-term. They are selling now way under par. If we increase the interest rate on new issues of long-term Government securities by as little as one-half percent the value of those outstanding bonds will fall another 5 points, and if we increase the interest rate on the new long-term issues by 1 percent those outstanding long-term bonds will drop 10 points. None of those institutions can stand it.

If you think that mortgage money is now tight, just try to imagine what will happen to it when the Government issues long-term bonds at 5 percent. Commercial banks are paying a maximum of 3 percent on their savings accounts, savings banks are paying 4 and 4½ percent, and some savings and loan associations are paying as high as 4½ percent.

You can be sure that the run which was experienced a short time ago when our citizens rushed to buy the last high interest rate Government bonds will look like a crawl if we give this administration its way and let them issue long-term bonds at more than 4½ percent interest.

There is no better way to dry up the mortgage market than to have the Government issue long-term bonds at an interest rate close to that being paid in the mortgage market. Why maintain and pay for the cost of real estate appraisers and employees to service mortgages when you can get better than the equivalent net return on riskless Government securities at the expense of employing a coupon clipper?

Can you think of anything more inflationary than increasing the cost of Government? The interest on Government obligations is the first charge on the cost of Government. The national debt now stands at \$290 billion. The President says he is going to reduce that by \$4 billion. I doubt whether he can but let us assume he does. That will bring the debt down to \$286 billion. An increase in the cost of carrying that debt of only 1 percent a year is \$2,860 million each and every year of the term of the debt. And you urge the Congress to let the President do that so he can issue long-term bonds that will run from 25 to 30 years? Multiply the \$2,860 million by the number of years he wants the debt to run and you will have the total increased cost of carrying that debt. What could possibly be more inflationary?

Do not overlook the fact that this is not new or additional money that the Federal Government must borrow in order to carry on. This is all refinancing or refunding of existing debt. The only new money that must be generated for this refinancing will be the increased interest, if any.

There isn't an economist or financier in the country worthy of the name who can justify advising a client to refinance with long-term obligations an outstanding debt during a high interest rate market. The only sensible, businesslike thing to do is to finance short-term in the high interest rate market and when the interest rate drops, finance long-term. That has been traditional with our Government as well as with business and no one can give any valid reason to do the contrary.

Incidentally, did you know that in the bill reported by the committee there is a provision permitting the Treasury Department to engage in what is known as "advance refunding." That means that a Government bond that has 12 years to run until maturity, bearing a 2½ percent interest rate, can be exchanged by the Treasury for a new 20-year bond with a 5 percent interest rate. Justify that if you can. I cannot.

I will appreciate your circulating a copy of this letter among your members with the suggestion that they send me their comments with reference thereto.

Sincerely yours,

ABRAHAM J. MULTER.

An American's View of Conditions in Korea

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. UDALL. Mr. Speaker, February 25, 1960, I placed a statement in the CONGRESSIONAL RECORD lamenting the tragic death of Chough Pyong-ok, the Korean Democratic Party leader who had been battling Syngman Rhee for the presidency of his nation.

The Japan Times of Tokyo was among the papers reprinting my remarks. An American businessman noticed the story there while in Asia on a commercial trip. This person, who has made annual trips to the Far East for the last decade, possesses a broad knowledge of the area. The death of Chough, and indications of American interest in Korea's plight, inspired him to write me an extremely frank letter about conditions under the Rhee regime.

Urging my colleagues to take special notice of the passages that point to widespread misuse of American aid funds, I am placing the text of this letter in the RECORD. To protect the writer's business contacts in Korea, naturally I am withholding his name. The letter follows:

MARCH 1, 1960.

The Honorable STEWART UDALL,
Congressman, State of Arizona,
Washington, D.C.

DEAR SIR: Being in the Far East on a business trip I read with great interest your statement in the Japan Times of February 28, dealing with the coming presidential election in Korea.

I spent last week in Seoul where I was a witness to the funeral of the late Chough Pyong-ok and I was amazed at the spontaneous demonstrations of the people showing support of the Democratic Party. Thousands upon thousands of people lined the streets in a silent tribute to this great Korean patriot.

I have been coming to the Far East every year for the past 10 years, and for 6 years in a row I also have visited Korea in connection with my business. I have been able to follow the developments in Korea and I am appalled by the lack of progress and the completely hopeless economic situation under the present regime.

Businessmen (I am only talking of those I consider honest without doubt) and plain people today express openly their belief that general improvement can only come with a change in the Government.

Mr. Rhee's dictatorial state, with corrupt higher and lesser officials, and with a policy of hatred toward Japan, is blocking the development of Korea as a truly democratic state. This policy of no trade with Japan costs the American taxpayer a lot more money than if we would compel Mr. Rhee to permit free trade with Japan forthwith. Japan would be the cheapest supplier and also the best customer which Korea could have.

I would like to state here that I have no interest whatsoever in any trading between Korea and Japan; however, I do have an interest in the tremendous amount of money which we Americans are pouring into Korea without any chance to discontinue doing so in the foreseeable future. All this because

of a man, no doubt a great patriot, too old today to understand the changes in the world and surrounded by corrupt officials.

During a speech in Chile on his present tour, President Eisenhower stated that America would never support a dictatorial state. May I ask what is Korea?

I know of factories in my line of business, a tannery and a shoe factory, built in Taejon about 4 years ago with ICA funds (American taxpayers' money), and to this day neither factory has been used. Why? Because of corruption, graft, and diversion of funds.

Under the present Government I fear that the people of South Korea are moving closer to communism because of the tremendous differences between the new rich and the terribly poor masses. The present police state is a hotbed for breeding hatred and mistrust. Unfortunately we Americans are partly to blame because we are supporting men like Rhee and his friends.

I do not believe that conditions should be attached to any aid program, but in a case like Korea where our officials must see every day the evidence of graft and corruption and a policy of hatred against Japan, I feel then we either clean up the situation and insist on the establishment of a true democratic nation, or we withdraw our aid despite the terrible losses in American blood a few years back.

The true friends of America in Korea are losing faith in us. We should not let that happen.

I hope that you will forgive my frankness but, having followed the conditions over a number of years, I believe that I know what I am talking about.

Very truly yours,

(Signature withheld.)

Statement of Congressman Lane on Cotton Export Program

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my statement to the U.S. Tariff Commission on March 9, 1960:

STATEMENT OF CONGRESSMAN THOMAS J. LANE, DEMOCRAT, MASSACHUSETTS, TO THE U.S. TARIFF COMMISSION IN RE SECTION 22 OF THE AGRICULTURAL ADJUSTMENT ACT OF 1933, AS AMENDED, ON THE UNDUE INTERFERENCE WITH THE COTTON EXPORT PROGRAM OF THE U.S. DEPARTMENT OF AGRICULTURE, OF IMPORTED COTTON, TEXTILES, AND TEXTILE PRODUCTS, MARCH 9, 1960

Mr. Chairman, and members of the Tariff Commission, the cotton export subsidy program of the U.S. Government for the benefit of domestic growers, is indirectly hurting the domestic manufacturers who process this raw material into cloth and clothing. This contradiction may be described as a double-standard in textile economics.

We are paying out a subsidy rate of 8 cents a pound in cotton and the cotton content of cotton products in order to reduce the surplus of this commodity in the United States. Foreign manufacturers are buying and using this cotton to make textiles that are then exported to the United States where they undersell American-made textiles.

The same Government program which is helping the American cotton grower, is dam-

aging the American cotton manufacturer. Even though we produce more cotton than we can use, American textile manufacturers have to pay \$350 million more a year for cotton than they would at the world price.

We want to dispose of our surplus cotton abroad, but we don't want to see it come back to the United States in the form of cotton cloth or clothing that undersells American cotton textiles on the raw material differential.

This is only one competitive disadvantage that our manufacturers must contend with. The wages and other labor costs of foreign manufacturers are one-tenth of one-half of American costs. The surge of Japanese imports through 1955-56 has been held to that level by a voluntary quota arrangement with the Japanese Government.

But imports continue to pour in from other countries, and especially from India, Korea, Formosa, and Pakistan. In 1959, 170 million square yards of cotton goods were imported from Hong Kong; an increase of 170 percent over 1958.

New England textile mills have suffered from the constant erosion of unfair competition and Government indifference to their problems for many, many years.

Now that the problem of the textile industry has become national, affecting all mills irrespective of the States in which they are located, it is expected that the Federal Government will not only recognize the danger, but take effective action to protect our textile industry from the double-barreled attack of foreign competition.

The President has asked the Tariff Commission to determine if the establishment of an import fee equivalent to the export subsidy on raw cotton to foreign mills, is necessary to prevent interference with the Department of Agriculture's cotton export program. This is a 'round-about' and inadequate way to help American textile manufacturers in their predicament. A countervailing duty to offset 'two-price cotton' is a beginning. To be effective, it must be implemented by overall quotas broken down by categories of goods, and comprehensive quotas.

The whole problem will not be solved unless the Government also applies a formula that will protect our manufacturers from the low-wage competitive advantage of foreign producers who are undermining our domestic market.

The Tariff Commission must face up to the fact that the American textile industry needs protection from the destructive effects of mounting imports. As it considers the convincing testimony presented by management and labor working together in their appeal for a solution to the ruinous competition of imports, I am confident that it will make the necessary recommendations to save the American textile economy.

Dr. Thomas Garrigue Mazaryk

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith a tribute to an outstanding exponent of liberty, Dr. Thomas Garrigue Mazaryk.

March 7 was the 110th anniversary of Dr. Mazaryk's birth in Moravia. He

was the first President and founder of the Republic of Czechoslovakia, one of the greatest statesmen of this century, a great leader and patriot. Dr. Mazaryk's death in 1937, 2 years prior to the liquidation of the Republic of Czechoslovakia by Hitler, prevented his witnessing that tragic event and the present Communist control of his freedom-loving countrymen.

Mr. Speaker, I deem it most fitting that I add my tribute to that of my colleagues in the Congress in honoring Thomas Masaryk's memory on the occasion of his birth, which privilege is denied his own unfortunate people living presently under the oppression of Communist bondage.

Granting Atomic Weapons Information to France and Other Allies in Best U.S. Interest

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. CELLER. Mr. Speaker, the time has come for the United States to revise its policy of withholding atomic energy information from its own allies. This was recognized by the President in a recent press conference when he said:

When the Soviets have the information and the know-how to do things, it's pretty hard for me to understand why we don't do something with our allies.

Under the Atomic Energy Act, however, the President cannot transfer restricted material and data for use in atomic weapons unless a nation "has made substantial progress in the development of atomic weapons." Only Great Britain has achieved eligibility under this standard. Even the recent explosion by France of an atomic device in the Sahara has not qualified it to receive the American know-how and materials which would facilitate its attaining an atomic capability.

I believe that in view of the fact that the Soviet Union already has atomic weapons as powerful as those of the United States, it serves no useful purpose to continue this prohibition in effect. The law under which nuclear weapons and information are kept from our allies is out of date, especially since General de Gaulle exploded the French bomb in the Sahara.

Furthermore, the effect of withholding data and material on atomic weapons from allies such as France has become self-defeating. First, it requires our allies to spend millions and millions of dollars in duplicating work which we have already done—money better spent for raising their standard of living and for defense purposes.

Second, it makes it necessary for our allies to conduct nuclear tests explosions, either to develop their own weapons independently or to achieve the

substantial progress in the development of atomic weapons which is a prerequisite to American atomic weapons aid.

Third, either we pool weapons and expertise or nations will act independently. France will go on testing until it has the hydrogen bomb or we offer nuclear cooperation. We dare not stand pat any longer. Such action can result only in a considerable number of independent capabilities—a situation in which it would be exceedingly difficult, if not impossible, to impose effective weapons control.

To remedy this situation, on February 29, 1960, I introduced a bill, H.R. 10748, eliminating as a condition for obtaining atomic weapons assistance from the United States the current requirement that a nation already have achieved substantial progress in the development of atomic weapons. The President will thus be enabled to make atomic weapons assistance available whenever he determines that this will promote the defense and security of the United States. The proposed agreement for the exchange of information or material will, of course, still be subject to the provision of the Atomic Energy Act which retains in Congress the right to make any such agreement ineffective by a simple concurrent resolution.

I have also provided in my bill that in return for receiving aid from the United States in developing its own atomic weapons, any nation receiving such assistance must guarantee to refrain from conducting nuclear tests explosions to the same extent that the United States refrains from conducting her tests.

The passage of this legislation will not only assist such staunch and proven allies as General de Gaulle in his quest to restore France to her greatness, but it will also prevent the proliferation of nuclear tests by aspiring atomic powers which now appears inevitable.

We must help France in this manner for then France helps us in the defense of Europe. Remember also, France is our time-tested ally. We have since our beginnings been forced into conflict with every major nation in Western Europe, but France has always been with us.

The text of my bill follows:

H.R. 10748

A bill to amend the Atomic Energy Act of 1954, as amended

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 91c of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"c. The President may authorize the Commission or the Department of Defense, with the assistance of the other, to cooperate with another nation and, notwithstanding the provisions of section 57, 62, or 81, to transfer by sale, lease, or loan to that nation, in accordance with terms and conditions of a program approved by the President—

"(1) nonnuclear parts of atomic weapons and nonnuclear parts of atomic weapons systems involving Restricted Data;

"(2) utilization facilities for military applications;

"(3) source, byproduct, or special nuclear material for research on, development of, production of, or use in utilization facilities for military applications; and

"(4) source, byproduct, or special nuclear material for research on, development of, or

use in atomic weapons: *Provided, however,* That the transfer of such material to that nation is necessary to improve its atomic weapon design, development, or fabrication capability, whenever the President determines that the proposed cooperation and each proposed transfer arrangement for the nonnuclear parts of atomic weapons and atomic weapon system, utilization facilities or source, byproduct, or special nuclear material will promote and will not constitute an unreasonable risk to the common defense and security, while such other nation is participating with the United States pursuant to an international arrangement by substantial and material contributions to the mutual defense and security: *Provided, however,* That the cooperation is undertaken pursuant to an agreement entered into in accordance with section 123: *And provided further,* That if an agreement for cooperation arranged pursuant to this subsection provides for transfer of utilization facilities for military applications the Commission, or the Department of Defense with respect to cooperation it has been authorized to undertake, may authorize any person to transfer such utilization facilities for military applications in accordance with the terms and conditions of this subsection and of the agreement for cooperation."

SEC. 2. Subsection 123a of the Atomic Act of 1954, as amended, is amended by adding at the end thereof the following:

"(5) A guaranty by the cooperating party that it will refrain from nuclear test explosions to the extent that the United States refrains from nuclear test explosions;"

SEC. 3. Subsection 144c of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"c. In addition to the cooperation authorized in subsections 144a and 144b, the President may authorize the Commission, with the assistance of the Department of Defense, to cooperate with another nation and—

"(1) to exchange with that nation Restricted Data concerning atomic weapons: *Provided,* That communication of such Restricted Data to that nation is necessary to improve its atomic weapon design, development, or fabrication capability; and

"(2) to communicate or exchange with that nation Restricted Data concerning research, development, or design, of military reactors, whenever the President determines that the proposed cooperation and the communication of the proposed Restricted Data will promote and will not constitute an unreasonable risk to the common defense and security, while such other nation is participating with the United States pursuant to an international arrangement by substantial and material contributions to the mutual defense and security: *Provided, however,* That the cooperation is undertaken pursuant to an agreement entered into in accordance with section 123."

Statement on Cotton Textile Industry

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

MR. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of Mr. Seabury Stanton, before the U.S. Tariff Commission regarding cotton products, section 22, on March 3, 1960:

My name is Seabury Stanton. I am chairman of the Northern Textile Association, 80 Federal Street, Boston, Mass., which represents New England textile manufacturers. I am also president of Berkshire Hathaway, Inc., which operates seven mills in Massachusetts and Rhode Island and employs 6,000 people. Our headquarters are in New Bedford, Mass. We manufacture fine combed cotton fabrics.

I serve on the New England Governors' Textile Committee, having been appointed by the Governor of Massachusetts, and I also serve on the Textile Advisory Committee, established by the Secretary of Commerce pursuant to the recommendation of the Subcommittee of the Senate Committee on Interstate and Foreign Commerce, known as the Pastore committee.

The textile industry is still an important segment of the New England economy, employing approximately 130,000 persons. It ranks third among manufacturing industries in the area. Cotton spinning, weaving, dyeing, and finishing operations employ about one-third of this number, and the balance are engaged in processing other fibers. The area also employs 90,000 in the apparel trades.

The mills and employees in New England are, of course, an integral part of the U.S. cotton textile industry and cannot prosper unless the industry does.

It is from this point of view that we view these proceedings, and from this point of view that we wish to record the Northern Textile Association in support of the petition now before you. We also wish to endorse the statements made here by Mr. Halbert Jones, representing the American Cotton Manufacturers Institute.

I shall not attempt to review the statistical material which has been so ably presented here. I wish to emphasize, however, a few points.

1. The President's letter of November 10, 1959, to the Commission, requesting this investigation, seeks to narrow the scope of recommendations to the matter of a fee equivalent to the difference in cotton prices.

The imposition of such an equalization fee is, we believe, necessary, desirable, and equitable and we urge the Commission to make such a recommendation. Such a fee will restore us to a position of equality on cotton costs, but does nothing about the differences in other costs, such as labor, which (unlike cotton) vary greatly between countries.

Therefore, we urge the Commission to construe section 22 broadly and to make recommendations designed to remedy the total situation caused by rising cotton goods imports. Whether imports are induced by cotton cost differentials or by wage and other cost differentials, we believe they are proper subjects for this investigation.

We are hopeful that the Commission's findings and recommendations on the total situation will be persuasive with the President.

2. The welfare of the raw cotton industry and the success of Government policies designed to help the cotton farmer depend upon the maintenance of a healthy and prosperous cotton textile industry in this country. This country could not afford to maintain a large raw cotton industry if its customers were largely foreign mills.

3. Imports of cotton textiles and other cotton goods are substantial, are increasing at an alarming rate, and cause and threaten injury to the domestic industry.

As has been pointed out earlier, imports of cotton in the form of textiles have risen from about 33,000 bales in 1948 to approximately 318,000 bales in 1959, an increase of over 850 percent. The greatest increase has been between 1958 and 1959. Measured in terms of cloth, it has been estimated that imports of cloth, made-up goods and apparel have risen from the equivalent of 365 million

square yards in 1958 to 578 million square yards in 1959, an increase of 58 percent.

In addition, there have been substantial increase in imports of yarn, knit goods and miscellaneous manufacturers which, when converted to a square yard basis, show additional imports of almost 68 million square yards for a total of 646 million square yards in 1959.

	1958	1959	Change, from 1958 to 1959
Countable cotton cloth.....	141,539,538	240,769,514	70
Other cloths.....	7,446,788	10,327,873	39
Made-up goods.....	54,642,163	51,626,762	-6
Apparel.....	162,118,949	275,633,063	70
Total.....	365,747,438	578,357,212	58

There is no doubt that imported cottons replace domestic cottons. In an industry which has not shared in the growth and expansion of the past decade, and which is historically plagued with overproduction, imports depress prices, earnings, and wages and inhibit needed investment and progress.

4. Beginning in 1954 and carrying through 1955 our industry was threatened by the rapid growth in imports of Japanese cotton goods. The reasons for this growth were lower production costs based on lower labor and overhead costs in Japan. This threat was not induced by differences in cotton costs. We in the industry made every effort to meet this problem and were gratified by the action of the Japanese in establishing a comprehensive system of export quotas.

At that time our problem was almost exclusively one of Japanese imports. It was pointed out by us at the time the Japanese announced the present 5-year quota that "the arrangement deals with a particular situation of cotton goods imports from Japan. Similar problems in connection with other textile products and with other countries are not covered. These must likewise be solved if the industry as a whole is to prosper."

Since that time the Japanese quotas have limited shipments to the United States but imports from other sources have begun to rise at alarming rates. In 1956 cotton textile imports from Hong Kong were negligible. In 1959 we estimate that cotton goods imports from Hong Kong will reach the equivalent of 170 million square yards. The upward trend of imports from other countries is also marked.

	India	Korea	Formosa	Pakistan
1956.....	5,702,907			45,994
1957.....	1,098,280			13,455
1958.....	1,328,999	4,792,428	127,113	27,856
1959 ¹	21,816,000	6,411,000	8,078,000	7,557,000

¹ Estimated.

These developments have brought about a situation which did not exist in 1956 but which was foreseen. This investigation offers the means for dealing with the current and developing problem before more damage is inflicted.

5. The first quota limitations were announced by the Japanese before a two-price cotton system came into existence. The reasons for urging the quota arrangement were based on differences in wage costs, and were not dependent on the existence or absence of a two-price cotton system. We believe that the principle of quotas covering all types of cotton goods, from yarn to apparel, broken down by categories, and geared to a percentage of domestic production, is sound. We welcomed the acceptance by the Japanese and American Governments of this principle.

We urge the Tariff Commission to recommend quotas. The Japanese arrangement should serve as a pattern. Within any total quota the Japanese should retain the quotas and subquotas which they established in 1957.

6. When the Japanese quotas were developed in 1956 and 1957 we were aware that the threat of imports from other sources would undoubtedly grow, and we made it clear that our efforts to protect ourselves from this threat would continue. It would be inconsistent to urge limitations on Japanese imports and fail to make every effort to limit imports from other sources. This proceeding offers the means within the framework of our laws to accomplish this.

7. Imports of Japanese cotton goods rose from 84.6 million square yards in 1953 to 237.5 million square yards in 1955, at which time the Japanese first announced a voluntary quota. This increase of 180 percent should be contrasted with the growth of imports of Hong Kong cotton goods from 20.8 million square yards in 1957 to 170 million square yards in 1959, an increase of 700 percent. Japanese quotas were justified in 1955. Quotas on imports from other countries are justified now.

8. A fee equivalent to the per pound export subsidy rate on the cotton content of imported articles is necessary. Such an equalization fee does not solve the import problem caused by lower wage and overhead costs in foreign mills. It should, however, solve that part of the problem which is caused by the differential in cotton costs and, to that extent, is a step forward and desirable.

Such an equitable arrangement does not require extensive argument. American mills are forced, as a result of programs and legislation, to pay more for cotton than foreign mills. This being the case, tariffs on cotton goods imports should be adjusted accordingly, not only for the protection of the textile manufacturers and apparel makers, but for cotton growers as well. Failure to do this means a loss of customers for cotton growers and a loss of employment and investment in the textile and apparel industries.

9. A comprehensive system of quotas on cotton goods, including yarn, fabrics, made-up goods, apparel, and other miscellaneous cotton items should be recommended. The quota should be divided by categories, to avoid concentrations, and by countries. The total should be based on a representative period such as 1955 and divided by categories on the basis of relative production of each in the United States.

U.S. Cotton goods imports, 1958 and 1959

	1958	1959	Change, from 1958 to 1959
Countable cotton cloth.....	141,539,538	240,769,514	70
Other cloths.....	7,446,788	10,327,873	39
Made-up goods.....	54,642,163	51,626,762	-6
Apparel.....	162,118,949	275,633,063	70

Can Amphibious Warfare Survive in the Nuclear Age?

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, there has just concluded here in Washington the annual Seapower Symposium sponsored by the District of Columbia Council of the Navy League of the United States, held at the Sheraton Park Hotel. This year's symposium highlighted one of the most versatile and necessary capabilities of our balanced fleets—amphibious warfare.

The program for this significant event included a most informative article by Gen. David M. Shoup, U.S. Marine Corps, Commandant of the Marine Corps, entitled "Can Amphibious Warfare Survive in the Nuclear Age?"

At a time when our attention is so easily caught by the continuing discussions over missiles, and the constant controversy which seems to surround so many aspects of our defense preparations it is well to focus our attention upon a proven U.S. capability—amphibious warfare—in which we excel.

Again and again in the years of the cold war the free world's ability to respond to the recurrent crises which mark the East-West struggle has rested squarely upon the versatility, mobility, and instant readiness of American seapower, and in particular—the highly trained amphibious forces of the balanced fleet.

General Shoup's comments serve to remind us that what has been true in the past will remain true in the future. Whatever else we in the Congress may provide for in meeting the security requirements of the Nation, we must not neglect the very forces which time and again by their instant, impressive response have enabled the free world to stand fast in the face of Communist aggression.

Under unanimous consent, Mr. Speaker, I include the views of General Shoup, as they appeared in the program for the Amphibious Warfare Seapower Symposium 1960, in the RECORD:

CAN AMPHIBIOUS WARFARE SURVIVE IN THE NUCLEAR AGE?

(By Gen. David M. Shoup, Commandant, U.S. Marine Corps)

Amphibious warfare is a highly specialized art which has evolved over the centuries. Like more conventional forms of warfare, it has been employed at times by men of genius who fully understood it and at other times by men who lacked the vision and experience to employ the art successfully. In ancient times Phoenicians, Greeks, and Romans launched successful ship-to-shore operations. Their success stemmed from recognizing the complicated and specialized nature of their task.

During the 13th century, Asia and parts of Eastern Europe fell prey to the swift cavalry of Mongol hordes from the roof of the world. Empires ceased to exist in face of their inexorable advance. They were

everywhere victorious. Yet even in their golden age and at the zenith of their success, the Mongols were unable to project themselves beyond the confines of the Eurasian landmass. Kublai Khan's attempted amphibious invasion of Japan failed partly because he lacked an understanding of seapower and amphibious warfare.

In the 18th century it was mastery of seapower and a sound national maritime philosophy which enabled England to reign supreme as mistress of the sea. But during that same century her record of success in almost a score of amphibious ventures was less than 50 percent. In the decade and a half preceding the Congress of Vienna, her landing forces were successful in only one-third of approximately a dozen operations. It was ironic that the world's greatest seapower failed to develop the techniques for projecting seapower ashore.

A century later England was responsible for one of the most disastrous of modern seaborne ventures. The abortive Anglo-French ship-to-shore assault to seize the Gallipoli Peninsula from the Turks early in World War I appeared to sound the death knell for amphibious operations. Although the ill-fated operation to seize the Golden Horn was in itself a failure, it was in many respects the guinea pig which made possible present day amphibious doctrine.

In the aftermath of World War I, U.S. marine officers, who predicted the nature of the coming amphibious war with Japan, set about to develop the techniques which would be needed to win such a war. Their work was conducted in the face of dissenting world military opinion.

When the United States was drawn into World War II we were the only Allied nation which was prepared to conduct amphibious operations on a major scale. The landing force techniques pioneered by the Marine Corps coupled with the amphibious techniques developed by the Navy enabled our country and our allies to conduct the greatest amphibious war the world has ever known. Never before in the history of the world has a coalition of allies marched or sailed farther or launched a greater number of successful amphibious operations of a major scale than the United States and her Allies in World War II.

WITH THE "MOSTEST"

Amphibious assaults in World War II were characterized by huge concentrations of men, ships, and aircraft which were launched against the enemy to exert the greatest shock possible. The attacker's combat power at the juncture of sea and land was brought from zero to the maximum attainable as rapidly as possible. Frequently the outcome was decided in favor of that belligerent who could achieve optimum mass soonest. Heavily populated battle areas were the order of the day.

World War II ended as the nuclear age was ushered in. Thus far the atomic weapons used at Nagasaki and Hiroshima constitute the only combat use of nuclear warfare, but their portent was unmistakable even in 1945. It would be sheer folly to expose great concentration of men, ships, or aircraft to possible nuclear attack by an enemy possessing the secret of the atom. A reappraisal of our methods was required.

I think it is significant to note, however, that nuclear weapons affected tacticians in all military walks of life. Accepted principles and techniques for air, naval and land warfare were subjected to just as close a scrutiny as the speciality of amphibious warfare which embraces all of the other forms of combat.

Two questions arose with respect to our speciality. Can amphibious warfare survive in the nuclear age; and, if so, does it deserve to survive?

Massing forces at the point of a main effort has been a standard combat tactic for centuries. The advent of nuclear weapons placed commanders on the horns of a dilemma. Massing forces, whether they be aircraft, ships, or men, creates a lucrative target for nuclear attack by an enemy. Conversely, if a commander disperses his forces over too great an area he subjects them to defeat in detail by an alert and mobile enemy. The secret of success in this age lies in the ability to remain dispersed except for brief periods when forces must be massed to accomplish a given mission, immediately after which they must again be dispersed before being subjected to nuclear attack.

USED IN INDOCHINA

Obviously if we are to fight a nuclear war of any proportion or even to fight a conventional war against an enemy who can, if he chooses, use nuclear weapons we must possess the means for accomplishing rapid massing and equally rapid dispersing of major forces. We found the answer in the helicopter. This highly versatile vehicle provides the means for keeping attack force ships dispersed at sea while retaining the capability to overfly enemy beach defenses and, by swift concentration of helicopter-borne troops, strike an inland objective in sufficient mass to force a decision. In place of the two-dimensional warfare of recent years—striking frontally or on a flank—we have introduced a third dimension, the vertical assault. What was merely a concept 15 years ago is now a tried and tested doctrine.

When vertical assault was first considered as a possible answer to the problem caused by the threat of a nuclear conflict, however limited, extremists were found on both sides of the scale. On one side could be found those who decried helicopters and claimed they were too vulnerable to serve a useful purpose in combat. On the other side were those who prophesied that soon all phases of an amphibious assault operation would be accomplished using helicopters. I subscribe to the middle of the road, not from any desire to compromise but because of the hard facts of reality. Helicopters were used successfully in combat in Korea by our marines and in Indochina by the French. As a means for lifting assault troops and for keeping them supplied they serve our purpose admirably.

BUDGET REALITIES

On the other side of the coin there are still some items of hardware in our inventory which do not lend themselves to being helicopter transported. Conventional means of landing must be employed if we desire these items brought ashore. In addition, the realities of the budget and competition with other programs of equal and greater importance leave no doubt that we may never have available to us all the helicopter amphibious assault ships (LPH's) we would like to have.

Amphibious assault operations for the foreseeable future will be a mixture of the old and the new. Assault elements will be lifted by helicopter; perhaps additional assault units will be lifted in amphibious vehicles, and necessary quantities of supplies, equipment, service and support troops and replacements will be landed over the beaches which must be secured by the assault troops. The mix of helicopters and surface craft contributes to dispersion, and in my view both have a proper role in modern warfare.

IN NUCLEAR ENVIRONMENT

There is no doubt in my mind that amphibious warfare is as valid in a nuclear environment as any other form of warfare. This brings me to the second part of the question I raised. Does amphibious warfare deserve to survive?

The continued existence of amphibious warfare as a practicing art can be justified

only if it meets the requirements of national strategy. It becomes necessary, therefore, to examine the objectives of our defense program. Simply stated, these objectives are: first, to deter general war; and second, to deter limited war or to win or contain limited wars without delay if they should once start.

It must be recognized that all of the armed services of the United States contribute to the overall defensive posture and therefore to the general deterrent capability of our Nation and of the free world. In the event a general war should occur the role of our retaliatory striking forces is clearly evident. The exact role of forces not having an instant retaliatory mission will depend to a great extent on the survivability inherent in the various elements which make up the opposing power blocs and the moral fiber of their people.

Our role in limited wars can be predicted accurately. There is a general consensus, with which I heartily agree, that limited wars are the most probable type of action we may have to fight. Although of less threat to national survival than general war, limited engagements merit our close attention. They must be met with the forces in being. Speed of response is a matter of primary importance.

REMINDER TO COMMUNISM

The Navy-Marine Corps response to limited war threats has been and will be the balanced fleets. Deployed in each of the great ocean areas, the fleets are maintained in a state of readiness for immediate combat employment. Our highly trained Fleet Marine Force units in close proximity to amphibious shipping stand as a constant reminder to the Communist world that we are ready and able to counter aggression in any quarter of the globe.

The deterrent potential inherent in an amphibious task force extends to all areas which can be reached or influenced from the broad expanse of the seas. Our existing capability in this regard is unique. It is unmatched anywhere else in the world and furnishes our country with a handsome return on its investment.

An amphibious task force enjoys a high degree of strategic mobility, and it can deliver its Fleet Marine Force units to a troubled area without delay. Arrival at a potential trouble spot does not signify an irrevocable commitment of a landing force, however, because the endurance of a fleet enables it to lie just over the horizon for days or weeks. It can land its landing force of marines in part or in whole should the situation deteriorate and their presence be required ashore.

The Navy-Marine Corps team stands ready at this very minute to conduct amphibious operations using the doctrine of vertical assault. However, the fire support that is available from seaward is diminishing.

DON'T BURN BRIDGES

The crashing broadsides and thunder of scores of fire support ships to which we became accustomed in the last war are now thinning out in favor of all-weather aircraft and missile support. I sound a caution here because the time has not yet arrived when we can turn our backs completely on conventional warfare techniques.

Amphibious assault transports or LPH's which were designed from the keel up for helicopter operations will be entering the fleet soon. And the CVS support carriers which have been converted for our use are doing a splendid job. Only two CVS are presently in use along with one old converted CVE escort carrier. Obviously our capability for launching an amphibious vertical assault must be increased. As I have previously indicated, marines will make their entry into enemy territory both by

helicopters and by surface craft for a long time to come.

Our organizational structure, our weapons and equipment, and our state of mind are geared for any kind of war in any environment. The necessity for amphibious readiness is still with us in full measure.

Our China Policy Must Change

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. PORTER. Mr. Speaker, our China policy must change if we are to avoid war and attain peace. I wrote an article favoring recognition of Red China, after preliminary negotiations and exploration, in the March issue of the American Legion magazine. Most of the resultant mail has been very favorable to my stand. Under unanimous consent I am including a letter I received from State Representative Robert H. Barnes, Democrat, of Montville, Conn. Last year the Oregon Senate passed a resolution favoring trade with Red China in nonstrategic materials on the same basis which we use in trading with the Soviet Union.

Following is Mr. Barnes' letter, resolution, and statement to all members of the 1959 Connecticut General Assembly:

DEAR CONGRESSMAN PORTER: I liked your pro stand in the March issue of the American Legion. How much longer are we to keep our head in the sand? As a veteran of five wars, including World Wars I and II, I say that it is about time we became realistic in our policy toward the China mainland. The following is what I have done about it.

HOUSE JOINT RESOLUTION 8

Resolution proposing a compromise with Red China Government

Whereas the situation in the Far East, notably in the Yellow Sea-Formosa Straits area, has kept the people of the United States in a state of apprehension, tension, and confusion, for a considerable length of time, which is exceedingly detrimental to the well-being of the world in general and the United States in particular, many believing that eventually the end result might well be world war III; and

Whereas since the Korean war, Korea has been divided into two hostile camps, the Communists of North Korea, with telling assistance by Red China, exerting constant political and military pressure on the Free Republic of South Korea; and

Whereas so long as the de facto government of Red China is not recognized by the United States as a de jure, sovereign nation, so long as the United States resists the efforts of Red China to join as a member of the United Nations, and so long as the controversy over the Quemoy-Matsu Islands remains unresolved, strained relations between the two countries, Red China and the United States, will continue unabated; and

Whereas the Government of the United States, well knowing the aims and desires of Red China, as heretofore indicated, should take full advantage of this favorable and promising opportunity, before it is too late, to resolve the differences between the two countries, by offering to compromise the aims and desires of both countries, Red China and the United States: Be it therefore

Resolved, That it is the consensus of the General Assembly of the State of Connecticut that for the general welfare and tranquillity of the people of Connecticut and of the United States, the following proposal be made by the United States to Red China, viz, that:

(1) The Government of the United States will recognize Red China as a going, established, and sovereign nation, with the institution of diplomatic relations between the two countries, Red China and the United States;

(2) The United States will not oppose the entrance of Red China into membership of the United Nations; and

(3) The United States will endeavor to induce the Government of Formosa to give up the Quemoy and Matsu Islands to Red China, these three concessions in exchange for:

(a) Red China to withdraw its forces and influence from North Korea, aiding in the reunion of North Korea with the free Republic of South Korea;

(b) Red China to withdraw its forces and influence from the kingdom of Tibet and such other countries and territories not a part of China proper;

(c) Red China to recognize Formosa as a free, separate, and sovereign nation, and agreeing further not to covet, molest, or attack this island empire; and

(d) Red China will return to the United States all military and civilian prisoners now held by Red China, upon the confirmation of these bilateral concessions, by both Red China and the United States; and be it further

Resolved, That the clerks of the house and senate shall cause copies of this resolution to be sent to the President of the United States and to the 86th Congress.

To All Members of the 1959 General Assembly:

I have submitted for approval and passage by this assembly a resolution dealing with the unconscionable and deplorable situation now prevailing in the Far East between the Governments of the United States and Red China which if passed by this assembly will be forwarded to the President and the 86th Congress of the United States.

The benefits derived from this resolution to the State of Connecticut, if the suggestions set forth in the resolution are carried out to a successful conclusion, are many, but most importantly (not mentioned in the resolution for obvious reasons) would be the boost to the economy; Connecticut, a manufacturing State, selling its goods once again to China, directly or indirectly.

The writer of this explanation of the subject resolution once lived in China, during which time, learned a great deal about the Chinese people, their customs, habits, and thinking. I also learned of a considerable degree of friendship for Americans, better than that for the peoples of other occidental countries, stemming from the time Yankee Clippers went around the Horn and commenced trading with Chinese merchants, and the action of the American Government at the turn of the century (1900) when the United States declared for an open door policy in dealing with the Chinese, opposing the greediness of the other major powers who desired to divide a then very weak China into spheres of influence. However, today, that reservoir of friendship is rapidly being dissipated, as a result of a stubborn U.S. policy that has long since become bankrupt.

Not only are we losing this friendship but let's not forget that we have already lost almost all of our once substantial commerce with China, there remaining but a trickle through such places of entry like that at the port of Hong Kong. I have lived and visited in the seaports along the coast of China—Canton, Hong Kong, Swatow, Amoy, Shanghai, Weihaiwei, Chefoo, Tientsin, and Chin-

wangtao—and have seen our huge ocean liners, tankers, and freighters at the docks, but today that good, inspiring sight has ceased to exist. I have been inland and have seen American goods in abundance but that also has disappeared from view. We are currently not selling to China by reason of our nonrecognition, while all other principal powers have access to this market, resulting from their acceptance of Red China as an organized, going nation.

As a result of our nonrecognition, the Communists of Red China are taking advantage of the situation—to our disadvantage. They are not telling the people that our opposition is due to our disapproval and distrust of their communistic government, but rather that we dislike them, the Chinese personally, the color of their skin, their inferiority, their low position in the scheme of things. They are conducting a hate campaign that will continue until the entire population of 650 million will look upon the United States as their mortal enemy. The only solution is to get back into China as quickly as possible to let them know us once again.

Let us not forget that our posture of opposition and the hatred being generated is aiding the Reds where they need aid the most. It is helping them to solidify their position and firm up their control over the Chinese people, selling communism to them, and getting their complete, all-out cooperation for the aims and goals of the Communist movement.

The provisions of my resolution, if carried out, would not only benefit both sides, the United States and China, but would be face-saving for both countries. Let's not forget that face saving is more important to the Chinese than life itself.

A final point. What happens if we become involved in a war with Soviet Russia? As matters now stand, Red China would be on Russia's side. But if we were on friendly terms with Red China, it is quite possible that Red China would come in on our side, because the Chinese have never forgotten or forgiven the Russians for invading and possessing, at one time or another, large chunks of China, like Manchuria, Inner and Outer Mongolia. China would like nothing better than to revenge herself on the Russians. Why don't we take advantage of this situation as a part of our national defense, strategical and tactical planning?

For a better feeling of security and economic well-being for the people of Connecticut, I earnestly and respectfully solicit the support of every member of the Senate and House in this 1959 general assembly. Thank you.

ROBERT H. BARNES,
Representative From Montville.

Amerigo Vespucci (1451-1512)

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BOLAND. Mr. Speaker, Americans owe many things to many peoples, for we are indebted to innumerable countries and peoples for what they have contributed to our civilization. We are especially indebted to Italy for giving birth to two great Italians whose deeds and names are indissolubly connected with America. Christopher Columbus, one of the great explorers in his days,

discovered the New World, and his contemporary, Amerigo Vespucci, gave his name to the New World.

This enterprising son of a notary public in Florence was born on March 9, 1451. From his early youth he was an adventurer, anxious to go far and away from home. His parents placed him in the great commercial and banking house of the Medici, and that connection offered him opportunities to travel and sail to all parts of the then known world. In about 1500 he entered the service of Don Manuel, of Portugal, and made several expeditions to the New World. It is believed that some time in 1504 he came here and gave his name America to our continent. Today, on the 509th anniversary of his birthday, let us remember this great explorer, this great son of Florence.

The Vision of Thomas Masaryk

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. BOWLES. Mr. Speaker, we commemorate this week the 110th anniversary of the birth of one of Europe's greatest statesmen of our modern era.

Thomas Garrigue Masaryk, the George Washington of Czechoslovakia, was a man of vision, of action, and of profound humanity. As one scholar has written, "Masaryk's life and work remain an inspiration for all free peoples, and his name stands out in the company of the immortal creators of our civilization."

When the infant Czech Republic emerged from the chaos of World War I, Thomas Masaryk became that Nation's first President. For 17 years he guided the destinies of a remarkable experiment in applied democracy. Under his leadership, Czechoslovakia became a model of political liberty and economic progress for all of Europe.

In no area was Masaryk's achievement more brilliant than in the area of land reform. Land tenure was one of the greatest problems facing his Nation. A state largely agricultural, Czechoslovakia had to break with its feudal legacy if it was to survive as a stable, well-ordered democracy.

To a great extent, Czechoslovakia had been a land of the dispossessed. The peasant toiled on land that was not his own and accrued little from the fruits of his labor that went to the landlord.

Under Masaryk's guidance a remarkably just 1919 Land Reform Act was put into operation. By the end of 1937, over 4½ million acres of land had been distributed to about 650,000 applicants. The total distribution would have increased to 5 million acres and 700,000 applicants by 1940 had not the Nazi invasion of Czechoslovakia intervened.

The significance of this extensive land reform program cannot be overestimated. Here was an agrarian revolution on a grand scale, a demonstration of a

democratic revolution in depth carried on peacefully, efficiently, and with justice. The old social and economic order had been transformed, and a genuine democratic system was erected on a new base.

Masaryk's land reform assured the success of the Czechoslovak democratic Republic because it consolidated the support of the people, Czech and Slovak alike, for the Republic. Vital to this success was the President's intense faith in his own people.

But Masaryk's Czech patriotism was grounded in a wider vision as well: a vision of the interdependence of all nations. He became a tireless and eloquent spokesman for the idea of self-determination within federation—the federation of the nations of Eastern Europe from the Baltic to the Aegean, and ultimately the federation of all free nations everywhere.

Fortunately, Thomas Masaryk did not live to see the betrayal of his nation at Munich and the later tragedies which wrote a temporary end to Czech democracy. Nor did he live to see the postwar world fall sadly short of the aspirations he cherished for all mankind.

In the winter of 1948, I had dinner in Prague with his son, Jan Masaryk, then serving as Czechoslovakia's Foreign Minister. It was the eve of the Communist coup d'etat and Jan Masaryk was caught in the struggle against Soviet encroachment which had already engulfed most of Eastern Europe.

In the noble tradition of his father, Jan Masaryk told me of his fervent hope somehow to build a bridge between the Soviet world and the Western democracies.

Yet the construction of such a bridge was clearly no longer possible. When Czechoslovakia attempted to join the Marshall plan some months later, the Soviet Union forced the Government to reverse its decision. The Czechs fell under the dark shadow of Communist tyranny, and with their fall the subjugation of Eastern Europe was complete.

This week we can recall both the life and the vision of the elder Masaryk with a purpose. For, more than any other man, he embodied the ideals and aspirations of all the nationalities of Eastern Europe. And until the battle which he waged so long is at last won—until the peoples of Eastern Europe can practice the self-determination he preached—we can never accept as final the political arrangements of Eastern Europe that have been imposed by armed might.

A Different Look at Democracy

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. PATMAN. Mr. Speaker, the Citizens Journal, Atlanta, Tex., in its issue

of March 3, 1960, contained an article on "A Different Look at Democracy." This article, which won first place in the Americanism contest, sponsored by the Athenaeum Club, of Atlanta, Tex., was written by John Hudspeth, a senior in Atlanta:

A DIFFERENT LOOK AT DEMOCRACY

(By John Hudspeth)

The world we live in today is very small and complex. America seems to be the pacesetter and each year it paces its people and the rest of the world even more rapidly. Here in America, we have adopted the scheduled life, with as much as possible crowded into it. So much goes on at such a terrific pace in this life that we are often apt to be confused and a little bit frightened. Hardly a day passes now that we don't hear of a new scandal being discovered, especially in big business. The American is not sure he can trust even his neighborhood butcher anymore. Recently he has found that he has been defrauded in his own living room by none other than his television set. He is also shocked by the price he has been paying for commodities, such as drugs; and how his fellow American is making such a tremendous profit at his expense.

Besides these things, we daily hear of steel strikes, space programs, presidential candidates, foreign aid, national surplus, balancing the budget, and new communist activities. Is it not only natural for the American to be a little confused and frightened?

But just a moment, is this our idea of an American? One too busy and confused to enjoy and appreciate life? Is this the impression we are giving other people? Or is it just the opposite, the "Hollywood view"—a carefree life with nothing to do but drive sport cars, eat caviar, to night clubs, drink champagne, and ignore all morals. Perhaps this is the American's idea of success.

The question is, "Has America lost sight of what it was established for?" We say we have political freedom, but how many turn out for the polls? We declare we have religious freedom, but why is it that the church pews are never full? We talk about our freedom of speech, but how many use it to speak out against an injustice? I believe in the Optimist's Creed, but how long can we just sit back and let things work themselves out?

As citizens of tomorrow, we must face up to these questions. To do this, we must prepare ourselves. I believe everyone realizes that education will be a big factor in the world of tomorrow. But we too often forget that before we can apply our education to help solve the problems of our world, we must be at peace with God and with ourselves. We must recognize the real values in life; its meaning and how to live it; love and how to apply it; forgiveness and how to practice it. A well loved American novelist has expressed what I am trying to say very well.

He says, "Oh Lord, thank You for the privilege and gift of living in the world filled with beauty and excitement and variety."

"Thank You for the gift of loving and being loved, for friendliness and understanding, for the beauty of the animals on the farm and in the forest and marshes, for the green of the trees, the sound of a waterfall, the darting beauty of the trout in the brook."

"Thank You for the delights of music and children, of other men's thoughts and conversation and their books to read by the fire-side or in bed with the rain falling on the roof or the snow blowing past outside the window."

"Thank You for the beauties of the four seasons and for the churches and the houses built by fellow men that stand throughout the centuries as monuments to man's aspirations and sense of beauty."

"I thank You for all of these things and many more, and above all I thank You for people with all their goodness and understanding which so far outweigh their vices, their envy, their deceptions."

"Thank You, God, for life itself, without which the universe would have no meaning."

At this time you may be asking yourself, "What does this have to do with democracy?" If so, answer this, Could people in a Communist-controlled country be thankful for these many things? From my conception of Communist rule, they could not.

Only in a free, democratic nation can such attributes such as ours prevail.

When my generation has lived its short time upon this earth, I pray that our descendants will be able to give thanks for what this novelist has. If they can, I believe our efforts will not have been in vain.

Therefore, the youth of tomorrow must be a well-educated citizen with a strong moral character. He must have faith, not only in God, but in himself. If our generation produces this person, then I feel confident that America will continue to be the Nation that it has in the past, and that no power on earth will be able to crush it out.

Report of the President

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DAVIS of Georgia. Mr. Speaker, the Society of American Registered Architects held their first national convention last September in Kansas City, and elected Mr. Wilfred J. Gregson of Atlanta, Ga., as their national president. This expression of trust and confidence in Mr. Gregson on the part of the membership of this society was in recognition of the fact that he was the moving force and the guiding light behind the creation of this organization.

The Society of American Registered Architects is a professional organization whose objectives are "the unification of all architects into a harmonious, democratic society and the improvement of architecture and architects by a recognition of the responsibility each architect has for each other." In the words of this society's recently elected national president, "The Society of American Registered Architects is a society designed to represent all registered architects. Its one intention is to operate under the Golden Rule and have all architects relate themselves to each other the same way, advancing in general the practice of architecture for all architects."

At the September meeting, Mr. Gregson made the president's report to the convention. The January 1960 brochure of the society carries the following article regarding this report:

REPORT OF THE PRESIDENT

"You are my report. You are the ones who have made the first great step toward a unified profession of architecture. You are a living report that will go to every part of these 50 United States."

So said President Wilfred Gregson in his

report to ARA members at the opening sessions of the national meeting.

"You will take back the olive branch as a token that the waters of selfishness are receding" said the founder of ARA. Describing the founding of ARA through his own efforts and with the aid of many others, Gregson stated that ARA is now a powerful society throughout the United States.

"We have succeeded in proving that there is a great need for the Society of American Registered Architects; that there are unlimited ways such a society can be of value to each architect, his client, his town, State, and Nation. * * * We can't cure all the ills at once, but we have started and can see possibilities of great expanses."

The president of ARA predicted that the unselfish work of ARA members will end in finer architecture and more unified distribution of the proceeds.

He stated that the task of ARA members is to enlist every registered architect in the United States.

"Architects must be represented before Congress," the president declared. He asked that some ancient taboos on advertising be recognized as now out of date.

The theory "it's better to do nothing than to be called unethical" has played into the hands of a few moguls and helped a few gigantic firms to flourish, Gregson stated.

The ARA program is simple. It is all architects for all architects. ARA policy is to build up architects, not fence them in, the president explained.

"We must alert architects to the greatness which is ours. We must teach our own people that there is a god of plenty in the heavens and that the doctrine of insufficiency is evil."

"The control of ARA is by officers who are elected each year at the annual meeting. The nominations committee is also elected at each annual meeting. There can be no stacked vote or perpetuation of officers. This includes your president who automatically becomes past president at the meeting of 1960, when a newly elected president will take the gavel."

As a final charge he told members that ARA must not become overcomplicated, or its objectives forgotten.

WILFRED J. GREGSON,
National President.

Amerigo Vespucci, the Italian Explorer Yesterday, and Amerigo Vespucci, the Italian Training Ship Today

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MULTER. Mr. Speaker, an interesting story in the American student's history of colonial America is that of Amerigo Vespucci, Italian navigator, from whom the American Continents received their name. Vespucci left accounts of his voyages the first of which, in June of 1497, seemed to have reached the South American Continent before Columbus or Cabot. A German mapmaker, Martin Waldseemüller, who translated the narratives of Vespucci, suggested in 1507 that because he was the first to make known his explorations in the New World that it might be proper

to name the new continent America. At first the name was applied to only the southern continent but gradually it came to include the northern also.

Another story relating to Vespucci is of current interest. This is the account of the naval training ship, the *Amerigo Vespucci*, named in honor of the Italian explorer. This ship is now in use in the Italian Navy to train sailors participating in NATO for the common defense of the West.

Both the stories, although over four and one-half centuries apart, are illustrative of the Italian's relationship toward America. The first shows how a skilled and courageous Italian seafarer was one of the first to explore our shores. The second is symbolic of the Italian peoples determination to align their efforts with America and other NATO nations for the defense of the free world.

Americans, also, have always felt a close relationship to the Italian people. For generations they have admired sunny Italy with her priceless monuments of the past. Moreover, they have always been grateful for the Italian immigrants' contributions to the political, economic, social, and cultural growth of America.

At times, however, Americans have been concerned about the fate of Italy. Her predicament under fascism troubled us profoundly. But since the war, this fear has been dissipated because Italy has shown decisively that she is glad to have reacquired her freedom and has shown this by her desire to be aligned with the West. This has been the will of the great majority of the Italian people. Italy has once more resumed her place of responsibility and cooperation in the family of free nations.

Ever since the inception of NATO, Italy has given her unstinted support to this Organization. Despite the numerous political, economic, and social problems that faced Italy at home after the war, she still has managed to do her share in this alliance of the nations of the free world. In the joint military exercises by NATO during the past few years, Italy has shown that she is an important and integral part of the Western defense system.

The progress of Italy since the war has been made possible by the generous and laborious character of her people as well as by the assistance granted by her allies, especially the United States. Nevertheless, Italy is the first to be aware that economic and political problems still have to be faced. Consequently, she is ever vigilant in the fight against poverty, fear, and aggression.

It is well that on this March 9, the birthday of Vespucci, we stress the close relationship that exists between the United States and Italy which goes beyond the military pacts and agreements that they have signed. Friendship between these two nations stems from an identity of democratic ideals and ties of affection and blood which existed long before these diplomatic pacts and which have tended to keep the two nations close in spite of the geographic distance that separates them.

Report by the Sigma Delta Chi Freedom of Information Committee

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MACDONALD. Mr. Speaker, it is clear that most American citizens believe that during peacetime, at least, the people of this country are entitled to know what its Government is doing. Yet we know that certain officials in the executive branch of our Federal Government have taken upon themselves to deny information requested by the Congress.

Every Member of Congress knows that an informed public is an intelligent public. While we are aware of some fine work on the part of TV and radio in disseminating information, I feel that our American newspapers are doing a fine and intelligent job of informing the public.

With this in mind, I wish to bring to the attention of every Member of Congress portions of the 1959 report by the Sigma Delta Chi Freedom of Information Committee. This report recounts not only significant efforts of this professional group of 16,000 journalists on behalf of the public's right to know, but also continuing situations where that right has been denied.

I want to emphasize that Sigma Delta Chi has been a leader nationally in the fight to diminish unwarranted secrecy in government at every level and to open the conduct of public business to the people, through the press. Sigma Delta Chi is therefore to be commended on the great fight they have made and are making to remove excessive restrictions on Government information. The Congress must not let them down for the future freedom of the American press is tied up with the future freedom of the American people.

The report follows:

PROGRESS IN FREEDOM OF INFORMATION

Piecemeal progress was made in 1959 against unjustified secrecy imposed by Federal officials on information involving the operations of Government. At the same time, however, the imposition of secrecy on the broad and undefined ground of executive privilege reached a new peak, posing the most serious threat to the theory of open government so far in U.S. history.

The major victory in the fight against Government secrecy was the opening of Senate office payrolls for publication. Newspaper pressure forced the U.S. Senate to open for publication the payrolls of individual Senators. Vance H. Trimble, of the Scripps-Howard Washington bureau, led the way to elimination of this payroll secrecy with his series of articles on congressional payroll scandals. Senator THOMAS C. HENNING, of Missouri, initiated the action in the Senate which resulted in the opening of the payrolls.

It is important to note that the pressure of public opinion resulted in opening the Senate payrolls after a Federal court had rejected Trimble's lawsuit in which he had contended the Senate had no legal right to

hide the payroll records. The court ruled that the Congress had a right to make its own rules relative to administration of its own affairs.

The case demonstrated how an overwhelming public opinion and a solid front of newspaper editorial support can force the opening of Government records, even when an agency of Government might have some legal right to withhold the records.

Late in 1959, Representative JOHN E. MOSS' House Subcommittee on Government Information issued a 454-page report on the year's running fight against secrecy in Federal Government, and it drew the following conclusions:

"1. Continued withholding of information and officials' reports from the public and the Congress solely because knowledge might create controversy or affect the sensibilities of Federal employees will inevitably destroy the very keystone of American Government—the principle that the operations of Government must endure the crucible of public debate.

"2. Neither the Constitution nor the laws enacted by Congress, nor the decisions of the courts, provide any basis for the claim of 'executive privilege' now imposed upon the public and the Congress. The 'privilege' of secrecy, claimed by officials far down the administrative line from the President, is nothing more than an insidious resurgence of the divine right of an all-powerful Executive—a doctrine laid to rest more than a century and a half ago by the American Revolution and the Constitution of the United States.

"3. To an alarming degree, the Pentagon's information organization has assumed characteristics of a propaganda ministry, and confusion has replaced candor in areas of vital importance to the survival of a democratic society.

"4. The bureaucratic attitude which holds that the people must justify their right of access to Government information requires a continuing congressional pressure to remind Federal agencies that 'public business is the public's business.'"

On October 17, in a speech to the College of Journalism at the University of Colorado, Samuel J. Archibald, staff administrator of the House Subcommittee on Government Information, said:

"The problem of secrecy in Federal Government probably will get a lot worse before it gets better, and it will not get better until the majority of the Nation's newspapers realize that the fight for freedom of information is a lot more than an attempt to get more handouts from more Government agencies so newspapers can fill their news columns using fewer reporters."

Your committee subscribes wholeheartedly to these statements from a congressional committee which has spent 4 years investigating secrecy in Federal Government.

GAINS AND LOSSES IN 1959

During the year, Representative MOSS' House Subcommittee on Government Information continued its watchdog surveillance over the Federal bureaucracy, taking up many complaints from the press and the public. In its final report for the year, the subcommittee listed 35 areas of inquiry, citing some gains and some losses. Here is its record:

"1. Every department which had cited the 'housekeeping' statute (5 U.S.C. 22) as authority to restrict information reported that the 1958 freedom of information amendment to the statute did not limit executive power to restrict information.

"2. The Defense Department established an elaborate 'hold for release' system to control nonsecurity information about missile and satellite projects and create a favorable public reaction.

"3. The Defense Department shrouded the Atlas-Score talking satellite project in deep secrecy and, when the event was publicized, created the false impression that the satellite was more than twice as big as the largest comparable Russian satellite.

"4. The Defense Department repeatedly used the claim of military security to refuse information about the use of monkeys in scientific efforts.

"5. The Defense Department refused to release pictures of the outside of the Titan missile even though the outside configuration had been declassified and the missile stood in full public view, but pictures were released of the President viewing the completed missile just before the November 1958 elections.

"6. The Defense Department reorganized information activities to give the Department's public relations office greater control over the release of information by the military experts.

"7. Executive agencies used the excuse of security censorship to delete nonsecurity information from congressional testimony.

"8. The Army supported the Board of Engineers for Rivers and Harbors' policy of doing business in secret, admitting there is no statutory authority for the Board's secret meetings but contending secrecy permitted free discussion of controversial items in the billions of dollars worth of public works projects handled by Board.

"9. The Federal Aviation Agency refused to make public reports on malfunctions of new-type altimeters installed in commercial jet airplanes after restricting use of the altimeters, claiming the public might 'misinterpret' the facts.

"10. The Federal Power Commission refused to make public a Commission staff report on a proposed power exchange contract, claiming the staff would not comment freely on controversial matters if the information were available to the public.

"11. The Labor Department claimed Federal-State cooperation would be weakened by public access to Bureau of Employment Security analyses of administration of State unemployment insurance laws.

"12. The Bureau of Prisons denied public access to studies of conditions in local jails for fear of 'controversy,' claiming an 'executive privilege' for the restriction.

"13. The Housing and Home Finance Agency refused to make public audit reports of local housing authorities financed with Federal funds, claiming employees would not comment freely if the information were made public and asserting an 'executive privilege' to restrict the reports.

"14. The Air Coordinating Committee cited an executive privilege as authority for refusing a State official access to minutes of its meetings.

"15. The Civil Service Commission claimed an executive privilege to hide the result of an investigation of irregularities in a Virginia rural mail carrier examination.

"16. The Army refused to make public the records of military trials which had been held in public even though records of comparable civil trials are available, claiming as authority for the restriction the 'inherent authority of the executive branch to safeguard records in the public interest.'

"17. The Navy backed up a subordinate official's refusal of a congressional request for an unclassified report on the Naval Gun Factory, claiming that the report would cause controversy and asserting an executive privilege for the refusal.

"18. The White House refused a congressional request for information on Operations Coordinating Board guidelines directing the Defense Department information policies, claiming an executive privilege to withhold the information.

"18. The House and Home Finance Agency claimed an executive privilege to refuse information on an investigation of the Los Angeles City Housing Authority to the California State Legislature, the attorney general of California, and to the Congress.

"20. The General Accounting Office reported the citation of executive privilege for numerous refusals by executive agencies to make available information which the agencies are required by law to provide the GAO.

"21. The Civil Service Commission reversed its earlier policy of making public the names of retiring Federal employees, contending that the information should be restricted because there was no law authorizing the release even though no law prohibited it.

"22. The Electronic Production Resources Agency in the Defense Department reversed the policy of making available to the public nonsecurity statistics after the Department of Commerce protested release of the information.

"23. The Department of Justice continued restrictions on access to information about Federal prisoners.

"24. The Navy provided reports of tests of an arctic cargo sled to the designer of the sled who had been trying to get the information for 10 years.

"25. The Army disclosed information on medical payments after a private citizen had tried for 8 years to obtain the information.

"26. The Comptroller of the Currency initially refused to make public the blank forms filled out by persons applying for national bank charters, contending that only legitimate requests for the blank forms should be honored, but later made the blank forms available when asked to cite statutory authority for the refusal.

"27. The Budget Bureau clarified restrictions on testimony by Defense Department witnesses before congressional Appropriations Committees, contending that military experts are not completely free to express personal views at variance with budget requests.

"28. The Bureau of Public Roads removed restrictions on the availability of nationwide highway statistics, making the information available to local government officials who needed it for tax planning purposes.

"29. The Defense Department issued a directive declassifying most military documents originated before 1946 and continued its study of methods to declassify current documents and prevent overclassification.

"30. The Defense Department stated that an attempt by a Navy public information officer to screen questions which reporters ask of high-ranking officials was a mistake contrary to Department policy.

"31. The Federal Aviation Agency made available a previously restricted engineering report on the materials to be used in paving the new Washington International Airport.

"32. The Agriculture Department clarified regulations which had been misused to restrict public access to crop allotment records, particularly in California.

"33. The Interior Department made available previously restricted information on leases of public lands and took steps to revise information practices in Bureau of Land Management offices.

"34. The Treasury Department, under requirements of a new law, provided for public access to applications filed by nonprofit organizations for tax exempt status.

"35. The Internal Revenue Service made more information publicly available about tax court cases and established an information seminar for executives."

San Francisco, City by the Golden Gate, Lauded by Premier Khrushchev in Moscow

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the New York Times of Wednesday, March 9, quoting the Chairman of the Central Committee of the Soviet Union, Premier Khrushchev, as saying that San Francisco, my home city and my district, has done more to establish good relations between the United States and the Soviet Union than any other city. He also described San Francisco as the best city in the whole United States of America. Mr. Speaker, as a native of San Francisco, I am proud of the remarks of the Premier and I am certain his feeling is reciprocated by millions of Americans. His remarks were made to our mayor, Hon. George Christopher, who is now touring the Soviet Union as an official guest of the Government.

The article follows:

A U.S. MAYOR IS WARMLY RECEIVED BY
KHRUSHCHEV

(By Osgood Caruthers)

Moscow, March 8—Premier Khrushchev was reported today to have declared that the Soviet Union was ready to enter a worldwide pact to destroy all nuclear weapons "under proper surveillance." This was reported by San Francisco's Mayor, George Christopher, shortly after he and his party had had an hour-long talk with Mr. Khrushchev and other Soviet leaders. The meeting was followed by a luncheon in the great Kremlin Palace. Mr. Christopher and his wife have been touring the Soviet Union as guests of Mr. Khrushchev since February 25. The interview in the Premier's office with Mr. Khrushchev and First Deputy Premiers Anastas I. Mikoyan and Frol R. Kozlov was the climax of the journey.

Mr. Christopher said that there had been some heated debate on the general subject of rival ideologies but that with the exception of Mr. Khrushchev's brief remark concerning the banning of nuclear weapons specific world issues had not been discussed.

Mr. Khrushchev asked the mayor to tell the American people that the Soviet Union would never provoke or level an attack against the United States, Mr. Christopher said.

The general atmosphere of the meeting was warm hospitality, Mr. Christopher reported. The Premier recalled how his reception in San Francisco during his visit to the United States last fall was in warm contrast to the uncomfortable time he had in Los Angeles.

MAYOR MAKES PROPOSALS

"He told me that San Francisco had done more to establish good relations between the United States and the Soviet Union than any other city," Mr. Christopher said. "He said San Francisco had 'broken the ice' and he thought it was 'the best city in the whole United States of America.'"

The Soviet leader was said to have assured Mr. Christopher that when President Eisenhower visits the Soviet Union next June his reception here would be "even warmer than mine was in San Francisco."

Mayor Christopher has been peppering Soviet authorities with proposals for various types of exchanges between Moscow and San Francisco, including a possible return visit by Mr. Khrushchev.

He suggested that a future summit meeting be held in San Francisco, that the Kremlin hasten to agree to a direct route that would permit Pan American World Airways to fly from San Francisco over the polar route to Moscow, that the Soviet Union participate in a "world technical information and exchange center" he hopes to set up in his city and that the two cities expand cultural and student exchanges.

He also proposed that the Soviet Union permit Conrad Hilton to build a hotel in Moscow, that the Soviet Union buy California wines and that the Soviet Union agree to let Frank (Lefty) O'Doul bring all needed equipment here to teach the Russians baseball with an eye to future contests between the two cities. Mr. O'Doul, a former National League batting and outfield star, managed the San Francisco Seals of the Pacific Coast League.

The Soviet reaction to the baseball idea was somewhat less than enthusiastic, Mr. Christopher indicated.

The only proposal from the Golden Gate that was successful was for an exchange of animals between the zoos of the two cities. San Francisco soon is to receive a pair of Tibetan snow leopards and six saiga antelopes, the mayor reported. In exchange San Francisco is to send six California sea lions by air across the pole and is considering the Moscow Zoo's request for mountain lions, Canada geese pronghorn antelopes and other North American animals.

The highlight of Mr. Christopher's visit to the Kremlin, he reported, came when Premier Khrushchev walked with him, arm around his shoulders, across the Kremlin courtyard through throngs of Soviet sightseers and introduced him to them amid cheers and applause.

"I cannot imagine President Eisenhower doing that sort of thing in Washington," Mayor Christopher, a Republican, commented.

On the Square

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. LEVERING. Mr. Speaker, I have always said that as the leader of the free world, our country cannot escape its responsibility in helping to maintain the moral, social, and economic stability of other freedom-loving nations in the world in our common battle for survival against atheistic communism. And, Mr. Speaker, the record clearly shows that our people in the past have not shrunk from this responsibility—they have borne the crushing burden of extra taxes, they have permitted the future of our children to be mortgaged by the multi-billion-dollar foreign aid programs, but Mr.

Speaker, I wonder how long our President can expect the support of the people's representatives in Congress in his request for more and more foreign aid, when his administration becomes more and more critical of our requests for flood-control projects as insurance against disaster for our own people. As a matter of fact, I wonder how the administration expects us to be able to meet our commitments all over the world if we are not permitted to safeguard our natural resources from which our wealth flows.

I would remind my colleagues that while I have never asked for funds except for projects approved by the U.S. Corps of Engineers and the Committee on Public Works, none of the long list of flood-control projects set up in the foreign aid program have any such approval. I am confident that the Members of the House will not follow this narrow view and will this year, as they have in the past, support my requests for flood-control money to provide manageable streams as an investment in our future.

Under leave to extend my remarks in the RECORD, I include a fine column, entitled "On the Square," by P. Wendell, from the March 7 edition of the Newark Advocate, Newark, Ohio, Mr. Speaker, as further evidence of the growing resentment among the good people in my congressional district against those policies which suggest that we have plenty of everything for the people in foreign lands but not enough for our own folks at home:

ON THE SQUARE
(By P. Wendell)

A flood-scarred citizenry is taking a dim view of the sudden switch to pinch-penny frugality within the Bureau of the Budget. If this strange impulse had been directed toward the billions being squandered in foreign aid, Newark would have joined in the applause.

But the refusal to grant \$32,000 for a flood-control survey of the Licking watershed is a pinch in the wrong place.

Such an appropriation, strongly urged by Congressman ROBERT W. LEVERING, would have activated the first step toward vital measures of local survival.

It would seem a trivial contribution on the part of a free-spending Government—with the welfare of a populous community in jeopardy.

Instead, the Eisenhower regime is pressing Congress to appropriate new billions to succor the afflicted in foreign lands whose plight touches the President's heart.

Newark and environs still show the scars of the greatest flood disaster in history—and a similar preliminary setting is now in evidence.

It was no comfort to hear Herbert Eagon, director of the State department of natural resources, sound a warning against a sudden thaw.

If the spring rains should arrive while Ohio is still blanketed by a heavy snow, another flood catastrophe could logically ravage the State.

The conditions were similar—lingering snow, frozen soil, and a heavy rain—when the rising waters engulfed a helpless community a year ago.

And Newark is no better prepared today, even after 14 months' warning, to meet such an emergency.

The protective dike on the South Side, bogged down in pointless controversy, is just as inadequate as it was in 1959.

The waterworks dam, washed out in the flood to give the city the bitter taste of a water crisis, is still a grim joke.

And a new administration, redolent with promise, is diligently dickering over a sensible substitute that won't be delivered until in the spring.

Newark's smoldering wrath over the Federal budget rebuff will not be cooled when Congress votes still more funds to complete the Dillon Dam.

In the light of the millions poured into this project, worthless as a safeguard for Newark, the \$32,000 asked for at tributary survey is a mere pittance.

Yet, all of a sudden, the Bureau of the Budget decides to tighten the pursestrings until Ike taps the Treasury to sterilize foreign soil against the seeds of communism.

It would seem that the American people, who have rebuffed strange doctrines, should be rewarded, at least to the extent of receiving back a few of their own tax dollar for their own protection.

Perhaps we should begin sweeping off our front doorstep before running around with an eager broom to dust off the grimy premises of our distant neighbors.

What's Wrong With the Way We Pick a President?

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MACK of Illinois. Mr. Speaker, Adlai E. Stevenson has examined our method of nominating and electing a President and has found many shortcomings that prevent the quadrennial contest from becoming the forum it should be for serious discussion of the policies that would best serve our national purpose.

In two thought-provoking articles for This Week magazine, Governor Stevenson analyzed the problem and posed a possible solution: A televised great debate series on the pattern of the Lincoln-Douglas debates. It is a happy coincidence that Governor Stevenson is a great grandson of Jesse Fell, the Illinois editor who proposed the Lincoln-Douglas debates on the slavery issue.

Under leave to extend my remarks, I include here the first of the two articles and will submit the second for publication in the next issue of the RECORD.

[From This Week, Feb. 28, 1960]

CHOICE BY HULLABALOO—I

(By Adlai E. Stevenson)

Shortly before last Thanksgiving, two candidates for Presidential nomination, one a Democrat and one a Republican, visited Wisconsin to win friends and influence people. The cranberry uproar was at its height: The Secretary of Health, Education, and Welfare had announced that cranberries might be contaminated by a chemical insecticide, and, with Thanksgiving at hand, "busier than a cranberry merchant" had become for the Nation's cranberry merchant a cruel mockery.

THE CANDIDATES ATE CRANBERRIES

Wisconsin raises cranberries, and Wisconsin growers maintained their berries were healthy. To prove it they entreated the Democratic candidate to drink a big glass of Wisconsin cranberry juice for all to be-

hold. He did. Then the Republican also came to Wisconsin, and of course he promptly ate four helpings of cranberries—for the benefit of the photographers.

But I submit that, however important the cranberry is to the cranberry merchant, whether a candidate indorses it has very little to do with his qualifications to be the President of the United States.

I do not mean to criticize these candidates for succumbing to the inevitable. I have been in similar predicaments. I've worn silly hats and eaten indigestible food; I've bitterly denounced the Japanese beetle and fearlessly attacked the Mediterranean fruit fly. This last, if you didn't know, attacks citrus fruits, a matter of no small importance to Florida citrus growers—and to politicians campaigning in the Florida primary.

No one would pretend that cranberry chemicals and citrus diseases do not deserve attention; of course they do. But so much attention from candidates for the highest temporal office on earth? Isn't it time we grew up?

It seems to me that we ought to revise the hit-or-miss system by which every 4 years we select a man to lead us. With the primary season of 1960 beginning, and the New Hampshire election almost at hand, maybe this is a good time to review the process.

First, the primary system. In 1956 I began campaigning in the primaries in January, continued without letup until June, turned immediately to the nominating convention, and then plunged at once into the general election campaign—a total campaign of about 10 months.

In all I made more than 300 speeches and traveled close to 75,000 miles and spent more money than I care to think about. (In 1932 Franklin D. Roosevelt made only about 107 speeches and traveled less than 15,000 miles.) I am told I set a record both for words uttered and mileage traversed—and I am not at all proud of it and I wish no presidential candidate ever had to do it again.

I talked about everything from nuclear bomb testing to the tariff on tunafish. A great deal of the speaking was repetitious, much of it reached only a handful of people, and little of it served greatly to clarify our national purpose—which is what presidential campaigns are supposed to do.

I can say all this without apology. I did what had to be done under the rules of the game.

Obviously a year of perambulating incessant exposure and talk is exhausting. You grow weary, frustrated and bored. Any man who has listened to himself several times daily since February is not likely to inspire his countrymen in October. The primary system weakens a candidate's ability to present his case.

WHAT DOES A PRIMARY ACCOMPLISH?

Moreover, the primary system operates under a hodgepodge of State laws. Some primaries are binding on convention delegates, some are partly so, and some not at all. Some, though binding, are shunned by candidates because of unfavorable special circumstances. Others, not binding at all and technically meaningless, are eagerly sought because of favorable circumstances. Some assume undue importance simply because they are held early.

I yield to no man in my affection for the lovely State of New Hampshire; but does it make sense that, solely because New Hampshire votes early, the opinion of a few thousand of its inhabitants should wield great influence in deciding who shall preside over 180 million of us? And in a State primary seldom more than 25 percent of the eligible voters participate anyway.

A primary campaign is a State campaign, in many respects not unlike a campaign for State office—Governor, attorney general, auditor. A candidate makes his speeches to meetings of party workers or to groups of

citizens gathered in halls, hotels, and picnic grounds. Such groups often don't want to hear much about complex national issues; they are more concerned with local party affairs and with meeting the candidate.

Moreover, as I said when I was Governor of Illinois in 1952, I don't see how any officeholder can participate in a nationwide primary campaign without neglecting the job the people elected him to do. In the case of a Governor, the chief executive of a huge business, neglect is serious. And if he doesn't neglect his job he won't do himself justice in the primary.

Actually primaries are more likely to destroy good candidates than to make them. The plain truth is that a primary campaign is not a suitable testing ground for presidential candidates.

Now as to the general election campaign, it presents one overwhelming problem: how to communicate ideas on complex issues to an audience of 180 million. In a simpler society, a political candidate could stand in the forum in Athens and carry his message to the voters by merely speaking in a loud voice. But not in America.

Traditionally we have attempted to reach American voters through a hodgepodge of rallies of party workers, huge public meetings, radio talks, and whistle stops, all reported nationally in the press.

The whistlestop is a venerable political institution and I daresay that in the days when the railroad tracks ran right down Main Street it was an eminently useful one. But at that time we were only a few million, not 180. Today it is utterly impossible for a candidate to reach more than a handful of the populace in this manner.

Moreover, whistle stopping has an inherent weakness. Woodrow Wilson put his finger on it when, at Michigan City in the 1912 campaign, he told a crowd of 600 what he did not like about speaking from a rear platform: "I have tried discussing the big questions of this campaign from the rear end of a train. It can't be done. They are too big, that is the long and short of the matter. By the time you get started and begin to explain yourself the train moves off. I would a great deal rather make your acquaintance than leave a compound fracture of an idea behind me."

In recent years candidates have attempted a variation on the whistlestop, the prop stop—a brief airborne stopover during which the candidate speaks from a platform beside his airplane while an uneasy audience stands blinking in the sun or shivering in the wind.

My own experience at prop stopping has been almost wholly unhappy. The sounds the candidate makes compete with the sounds of aircraft (which may be merciful to all). And an airport is remote from the city's center; to go out to it to hear, or try to hear, a political speech is almost unthinkable to anybody but a loyal party worker, who is already convinced.

A CITY MAY BE INSULTED

Finally, a city may be insulted by a candidate who deigns only to descend briefly on its airport. Airports and planes for some reason have not managed to arouse people's affection as did the iron horse. I have a feeling that the whistlestop is dead and the prop stop will never get off the ground.

Rallies of party workers are useful. The candidate may inspire his workers. He gives them arguments they can use in discussing issues with voters. He binds them tighter to their party. But I sometimes think candidates spend too much time addressing their workers and not enough trying to reach the public at large.

And I have never been convinced that such party rallies should be televised. A successful rally must be a noisy emotional experience of the convinced, and an independent

voter sitting in his living room, not converted to the candidate's faith but willing to listen to his arguments, must be repelled or at best only amused by the spectacle of eager partisans laughing uproariously at the candidate's every feeble witticism and roaring with glee at each intemperate assault on the opposition—and the more extravagant his language the better. A good political rally is no place for a sober, sensible discussion of intricate problems, and policies.

As for large public meetings, they, too, are useful and a candidate, by incessant effort, can reach a good many thousands this way—provided the people come.

Whether they come depends on the strength of his local political organization and to a far greater extent on whether the local press and radio arouse interest in advance to get out a crowd.

Those, then, are the traditional methods of reaching the voters face to face. And by using them, even if campaigns lasted much longer than 2 months, a candidate could reach but a tiny fraction of the 180 million Americans.

Now, of course, all these meetings are reported nationally in the press. But that way the candidate's views reach the voters second-hand, and I am talking about reaching them directly.

Moreover, to depend upon the press to report the speeches of the rival candidates with equal fullness and fairness, one must assume that newspapers are generally neutral and have plenty of space for politics. The press in the United States has always had the right to free expression of opinion.

HOW TO REACH THE PUBLIC

But a newspaper's editorial slant often affects the way it displays and balances the news. It is my experience that the press as a whole reflects a greater warmth for a Republican candidate than for a Democratic one—with, of course, notable exceptions.

It has been proposed that to reach more voters directly the candidate, instead of trying to leap rapidly from one city to another, visit regional centers around the country for a series of speeches and meetings with people who come in from the surrounding territory.

We attempted something on this order—a quick trip around the country—as a preliminary to the 1956 campaign. As a preliminary it was fine—it enabled us to address most of the party leaders in a series of strategic areas and to meet a good many of them. But I doubt if it would work well during the campaign itself.

A hundred years ago people would travel long distances to hear a candidate for President, but nowadays who would journey to any distant city to hear a candidate except a party worker? Regional meetings would ease the strain of travel on the candidates but I doubt if they would solve the problem of how he is to communicate directly with the people.

STEVENSON TRIED A NEW APPROACH

I tried another device in 1956: That of issuing a series of printed program papers setting forth in detail my views on various issues and proposals for dealing with them. They were detailed documents and they set forth programs for legislative and executive action in specific terms, not in the platitudes and generalities that make up most campaign oratory; and had I been elected I would have put them into effect.

I thought these documents useful and I wish all candidates would issue similar ones—no one would ever again need vote for a man without knowing exactly what to expect of him. But I am realist enough to know that the number of Americans who would read these documents was small. As a method of reaching the vast American public, they were a predestined failure. And as a stimulant for meaningful, thoughtful discussion they were a failure too, for

the Republican candidates ignored them and so did most of the press.

What then do we do? If candidates can't communicate by party rallies, large public meetings, whistle stops, regional meetings and program papers, where shall they turn? They have already turned—to television.

National political television came of age during the nominating conventions of 1952. It played an important role that year during the campaign and an even more important one in 1956. Soon it may be decisive. For by no other means can a candidate hope to communicate with so many voters directly.

So I suggest we give some thought to the way political television has been used in the past and to whether in the future it is likely to do what it ought to do in a democratic system: enlighten the electorate on the issues and on the candidates' views of those issues.

And about this I have many misgivings. Television is fantastically expensive. In a dark hour of the 1956 campaign, my manager Jim Finnegan muttered with fine irony: "If somebody doesn't come up with \$70,000 in the next hour and a half, 'that eloquent voice of the Western World' ain't gonna be on TV tonight."

Each half hour my voice burdened the networks cost my party \$70,000—which may explain why my speeches so often ran overtime. I was trying to crowd as many ideas as possible into the half hour.

SHOULD MONEY DECIDE A CAMPAIGN?

In 1956 the Republicans spent \$4,036,935 on radio and TV and the Democrats \$2,971,143, a total of \$7,008,078. No doubt they will spend more this coming year.

But this raises a serious problem, for it gives the best financed party a tremendous advantage. Should money decide who can carry his case to the people?

Again, 50 years ago audiences listened for hours while Bryan or La Follette held forth on such abstruse questions as monopoly and the tariff; but radio shortened the time of a political speech to half an hour. And in 1956 I was told that no television speech should be longer than 15 minutes, that 5 minutes was better and that a 1-minute "ID"—a spot commercial—was best of all.

So here is another serious question: How can a candidate possibly deal honestly in 1, or 5, or 15 minutes with any complex question—with inflation or disarmament, for example? Plainly, he cannot. He is reduced to sloganeering, to huckstering, to oversimplifying.

If he has ideas on a complex subject, he is not permitted to set them forth. Instead he must reduce them to a slogan. Slogans may be all very well to sell soap. But in politics they are dangerous. To reduce a foreign policy decision to a phrase is to give no hint of the perils, alternatives, and secondary issues that lie behind it. The slogan "Liberation" for the satellites may have been a good vote catcher for the Republican candidates, but the tragic fate of the Hungarian rebellion demonstrated its fraudulence as a policy.

DANCING GIRLS OR IDEAS?

Again, from the earliest times politicians have sought to please, to entertain; but television encourages this weakness. We are already familiar with rigged campaign performances on TV, with candidates that don't simply appear on TV but are "produced." Television watchers expect to be entertained. Dare politicians disappoint them? Will showmanship be substituted more and more for discussion, dancing girls for ideas?

And may not all this lead to even greater apathy on the part of the voters? Everyone decries apathy and agrees it can, if extended indefinitely, lead only to the death of democracy. I should think that the television of the future, if it follows the pattern of the

past, can only increase voter apathy. People will "consume" political broadcasts as they "consume" TV comedies, Westerns and spectaculars. They will sit back in their chairs and enjoy themselves—or they will switch to something else. Their attitude will be, let the performers perform.

This is apathy. TV requires no effort on the part of the viewer. Fifty years ago, men were not apathetic toward politics, for citizenship was highly prized and made demands on them. They had to travel long distances by wagon and stand in the hot sun for hours to hear or see Bryan, La Follette, McKinley, or Theodore Roosevelt.

POLITICS SHOULD BE SERIOUS

* Not today; a man need not even leave his living room to be entertained by Mr. X — candidate for President of the United States, the most powerful office on earth. Politics may have been "entertainment" in the old days, too, for there weren't very many other distractions. But in those days people took their politics seriously and were willing to work for their entertainment.

Today we have to find some means of making politics "serious" again—of making the business of presenting issues to the voters so interesting and so compelling that the voters will want to listen.

That's our problem.

Winning Essays by Fifth and Sixth Grade Students in Schools of Lynwood, 23d District, California, on Theme "Our Heritage of Freedom"

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent so to do, I am privileged to present the text of the winning essays written by the students of the fifth and sixth grade pupils of the public and parochial schools in the city of Lynwood, Los Angeles County, Calif. These students and the schools they attend are all within the great 23d District which I represent this my 14th year in this great legislative body.

With these essays I also include the text of the letter, dated March 4, from the Americanism chairman of the Disabled American Veterans Auxiliary No. 86 of Lynwood, Calif. This letter being explanatory of the essay contest.

I am sure that all who read these essays will join with me in congratulating the sponsoring Disabled American Veterans Auxiliary No. 86, and the school authorities for joining in carrying this important essay contest to its fruition.

With Soviet Russia doing as she is with her children from very early ages, I think it behooves us to encourage and implement all we can, within our American freedoms for the individual, to early begin to inform young American citizens as to the functioning of our constitutional form of government. Therefore, I believe it is proper and constructive that these youngsters in the great 23d District who have participated as winners in this appropriate essay contest

entitled "Our Heritage of Freedom" be further encouraged along this very line. Certainly it is true that the future of America—our future—depends upon the children and youth of the present generation.

DISABLED AMERICAN VETERANS

AUXILIARY No. 86,

Lynwood, Calif., March 4, 1960.

Congressman CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: Received your letter of February 26 regarding our recent Americanism essay contest held throughout the fifth and sixth grades of public and parochial schools in the city of Lynwood.

We are honored by your interest and privileged to have the opportunity to submit the two top essays for the Members of the House of Representatives to consider placing on record in the CONGRESSIONAL RECORD.

This is an annual program, starting each year on the first day of February and terminating the 23d of February. We have just concluded our ninth year and feel justly proud that we have had an opportunity to open an avenue to the youth of this community that they might travel and thereby gain a deeper appreciation for this great Nation and to realize that they must assume responsibilities, if our great democracy is to remain secure and a beacon of hope to the world.

Essays on Americanism are not unusual but we feel this program is because we have reached a rather young group of students. These students range from 9 to 12 years of age. Formative years in the lives of our children, where not only love of family, home, and religion must be developed but love for our Nation as well.

It has been my privilege to organize and chair this program and watch its growth for the 9 years and I am indeed grateful for this honor and for the splendid cooperation received from the superintendent of Schools, the principals, teachers, the press, and all concerned.

May I close with humble pride for your concern and thank you for your interest.

Sincerely,

LUCILLE KANKA,
Americanism Chairman.

ESSAY WINNERS ON THE THEME "OUR HERITAGE OF FREEDOM"

FIRST PLACE

(By Ronald Nakamoto, Lindbergh School, fifth grade)

I am an American citizen. Although my hair, my skin, and my eyes are of a different color I am still an American. That's what's so wonderful about this Nation, is that even if I am different than some people in some ways I can take my place among other people as an American because I was born here.

We Americans have a country that is the dream of many people who live overseas or beyond our borders. They do not know the privilege and the liberty of being able to speak freely, worship as they please, and choose the profession they wish.

Sometimes we don't realize how lucky we are, nor how many hardships our ancestors endured to make us a strong nation and help us have a heritage of freedom.

I think we could say George Washington and John Paul Jones helped to start us on our road to freedom. Our world wars have helped us preserve this freedom.

But our freedom was not all won by wars. Alexander Graham Bell, Thomas Edison, Dr. Salk, and other great men have made contributions to mankind and the freedom of our Nation.

Yes, I could go on and on but this is the real idea of our American heritage, and I

am a part of it. I may not go down in history, but if I do my best to live up to school, city, county, State, and National laws, I will help to write a chapter called peace in our heritage of freedom.

SECOND PLACE

(By Pamela Boyle, Will Rogers School, fifth grade)

Our American heritage means this to me: It has made our country brave and free. We've fought many wars and shed many tears, And helped many countries abolish their fears.

We believe in truth and freedom for all. Our rights are protected no matter how small.

It matters not, what color or creed, The size of the man or the size of the deed.

We worship and play and work as we please. We've never been forced to get down on our knees.

We've fought and we've won our liberty. Freedom, our American heritage, means this to me.

THIRD PLACE

(By Karen Gilbreath, Lindbergh School, fifth grade)

Our heritage of freedom are the rights we have inherited from our ancestors who fought for us in the wars against England and other countries.

Did you ever think about what our heritage of freedom gives us? Well for one thing it gives us the right to vote, to attend our own church and also lets us govern ourselves. It gives us the right to speak freely. It gives us the right to have a fair trial when we're accused of doing something wrong.

Our heritage of freedom is a great thing. But do you know who makes it so great? Us, the people of the United States of America.

Our forefathers made America great. To keep it great we must obey laws and pay our taxes. Yes; we have a great responsibility, the responsibility of keeping our United States great by being good American citizens ourselves.

FOURTH PLACE

(By Debbie Markovic, Will Rogers School, fifth grade)

"Rich man, poor man, farmer, and tradesman fought to make our American heritage possible. From our Eastern Atlantic shores to the far Western Pacific, our American heritage is always in evidence.

"The sight of many people going to the many different churches on Sunday shows us one freedom, freedom of religion. Our many newspapers with people writing and even criticizing our Government shows freedom of speech.

"When we see a policeman, we are thankful for his protection and in our courts we are innocent until proven guilty. These assure us freedom from fear.

"These things help always to keep in my mind how much Americanism and my American heritage means to me and how I must always do my best to help preserve these freedoms. The one almost sure way that I can help to insure these freedoms is to always vote when I am old enough."

FIFTH PLACE

(By James Miller, Seventh-day Adventist Academy)

I am glad for freedom. Freedom means a lot to me—for instance, my home, my parents, my religion, and other things. I am glad that I can go to the school I want to. I am glad that I can pick the friends I want. I am glad that when I get older I will be able to vote for the person I think will make a good leader for our United States. Without freedom this world wouldn't be worth living in.

SIXTH PLACE

(By Leslie Laver, Mark Twain School, sixth grade)

Our American heritage is a great and wonderful story in itself. It's the story of a great country that was created out of a vast wilderness in an unbelievably short time. It is the story of a nation founded on the principle of all men's rights of life, liberty, and the pursuit of happiness.

Five hundred years ago there were only a few scattered settlements along the Atlantic coast. Even as little as 200 years ago, there was no United States of America. Today the United States stands first among the countries of the world in freedom and in opportunity. I myself believe that it is a great privilege to have a heritage such as the one that our forefathers gave for such a country as the United States of America.

SEVENTH PLACE

(By Bill Ball, Will Rogers School, sixth grade)

Our heritage of freedom
So dear to you and me
Is the challenge of tomorrow;
Today's opportunity.

Secured by our forefathers
This heritage sublime,
By faith and prayer, sweat and toil,
Lives sacrificed, and time.

The symbol of our freedom
Is our flag; our people, too,
Who pledge their lives allegiance
To our own red, white, and blue.

Our heritage of freedom
I shall guard, and all shall see
That America my homeland,
Is the land of liberty.

Our heritage of freedom
The whole wide world may share,
When men shall live as brothers
As freemen everywhere

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the Record shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

California Gov. Edmund G. Brown Urges National Attention to County Prob- lems

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. ENGLE. Mr. President, the Governor of the State of California, the Honorable Edmund G. Brown, addressed the County Finance Congress of the National Association of County Officials in San Diego, Calif., on February 15, 1960. In that address, he pointed out how the major county problems had come to be in the urban counties, and that, because of lack of sufficient local revenues, the Federal Government should help meet the challenge. He cited as the most difficult problems the control of water pollution, the elimination of blighted areas through urban renewal, the development of adequate civil defense programs, the support of programs for developing and improving airports, and the provision of satisfactory educational facilities and well-trained teachers with the help of Federal aid to education. The Governor praised county officials for facing up to their obligations, but bemoaned the fact that the administration in Washington has been strangely insensitive to the problems.

Recognizing the need for Federal financial assistance, Governor Brown emphasized at the same time that we must be vigilant in preserving home rule and local initiative. He told the county officials who must provide this initiative that "I have every confidence that you have such leadership, and that county government will succeed in the new role to which history has assigned it." I also share this confidence since I have developed a deep respect for local government through long association with local problems.

After I was elected district attorney of Tehama County, Calif., in 1934, I was legal adviser to the Tehama County Board of Supervisors for 8 years and became intimately acquainted with the valuable services local government performs. This experience also led me to believe that government programs, whether Federal or State, should be administered at the local level, whenever possible, with sufficient flexibility to permit local governments to adjust the administration of these programs to local conditions and requirements.

I believe Governor Brown's speech makes clear the important role county officials must play in cooperation with Federal and State officials if we are to

solve the basic governmental problems of the space age. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GOV. EDMUND G. BROWN, COUNTY FINANCE CONGRESS OF THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS, SAN DIEGO, FEBRUARY 15, 1960

I am deeply honored by your request for an encore. At your meeting in Washington last year, I occupied you largely with a discussion of our problems in California, and I feared you might condemn me as incorrigibly western. Instead, I see that my references to California brought all of you here. Well, you couldn't have come to a nicer place, and I am happy to welcome you.

In coming here, you will not only have an opportunity to enjoy San Diego's famed winter climate and her other attractions. You will also find here, and in many other California counties a preview of what is in store for you back home. Because, in truth, the problems we face in California are the same as many of you in other States face, except that our more rapid population growth brings them on more rapidly.

The central fact in the experience of all of you is the transformation of the traditional role of county government. Less than a generation ago county government was essentially rural government. Today, in a great number of instances, county government is increasingly urban, with all the new responsibilities which that implies.

Indeed, even among those counties which remain preponderantly rural, technological developments have wrought changes in the responsibilities of county government. Far fewer people, for example, are raising our crops. And those who are producing them are, in the original sense of the word, urban, by which I mean conditioned to a great extent by values that prevail in cities. They demand the same kind of services as city folk; and in an increasing number of instances, they are getting such services from their county governments.

Let me return, however, to the area where the major problems lie—the urban counties. The population of the United States—about 170 million today—will be between 220 and 244 million by 1975. Shortly after the turn of the century, it will be somewhere between 300 and 400 million, and at least 85 percent of it will be concentrated in vast metropolitan areas. Thus, under the impact of profound social and scientific changes, county government is today shaping the environment for millions of tomorrow's urban inhabitants.

Quite literally, the challenge is to keep people from choking themselves in great metropolitan concentrations. In essence, you are challenged to fashion a new and more humane environment, not for a population but for people.

The way in which you fashion that environment is fundamentally a problem in the use of land. Although in many areas the hour is late, you still have an historic opportunity to avoid tragic errors which have marred urban development across the country for more than a century. I cannot exaggerate the magnitude of this problem, nor the opportunity we have.

In California, metropolitan growth is enveloping our most fertile land; particularly in the San Joaquin Valley, the Los Angeles Basin, and the Santa Clara Valley. At a daily population increase of 1,500 people, California is consuming 375 acres of land every 24 hours. This amounts to 140,000 acres annually; and at present densities, we can expect 3 million additional acres to be consumed by 1980—more than the entire area of San Diego County.

Now much of this urban spread is inevitable. But much of it is wantonly wasteful of our best soil. It is characterized by scattered development; and that not only takes land out of farm use, but also unnecessarily or prematurely commits additional land to urban development.

Santa Clara County, with large areas of our best soil, is an excellent example. If all the land withdrawn for urban use in the Santa Clara Valley since 1947 were consolidated, it would approximate 26 square miles. Instead, an area of about 200 square miles has been committed to urban development.

In the face of consequences such as this, it becomes imperative that county government encourage what is best in private development and provide a complement of well-conceived public policies. At its best, private enterprise has responded to the challenge of population expansion by developing impressive industrial parks, imaginative retail shopping centers, and vastly improved residential neighborhoods. But, as we all know, there are also ugly and wasteful abuses of our countryside.

To assure good land use, there must be close cooperation of public and private efforts in this field. That means sensible relating of home and shop and industry. It means a more efficient transportation system embracing more than automobiles and highways; it means foresight in the location of churches and schools; it means close-at-hand recreational areas, the proximity of woodland, the sight of pleasing landscapes and open sky. Much of this can be accomplished by looking ahead and without great outlays of public funds.

But having said that, I must add in all candor the sheer impact of growth requires tireless public effort if we are even to hold our own.

A spectacular example of the cost of mounting urban congestion is in air and water pollution. Fortunately, on both of those, we have made legislative headway in California during the past year.

Still another spectacular example is traffic congestion. Some weeks ago a dog ran across our heavily traveled Santa Ana Freeway during the rush hour. In an instant, 40 cars were wrecked. To me, that dog became a symbol of how fantastically complex urban life has become.

I am talking now about the need for new public services that will enrich life. I am talking about essential action just to keep life from becoming impoverished by the increasing strains and stresses of metropolitan living.

The great limitation even to doing that, of course, is lack of sufficient revenues. With the general public, two of the least known facts about contemporary American government are simply these; first, how sorely pressed State and local governments are for adequate revenues, particularly compared to the fiscal means of the Federal Government;

and second, the fact that the main burden of our population growth—the necessary costs and investments—fall not on Federal authorities but State and local agencies. School construction, street and highway needs, sewers and water pollution problems, and air contamination are just several such examples.

I most surely advocate keeping the responsibilities for functions like those with local officials. I believe in keeping the necessary offices of government as close to people as possible. But the simple fact is that we must go where we can get the money and, given our tax structure, that means to the Federal Government.

This represents no partisan insight. Let me quote the Rockefeller report on education.

It notes that the inability of local jurisdictions to meet the needs of an expanding society is "due partly to the excessive dependence of State and local revenues—particularly the latter—upon the real property tax, which is notably lagging in its response to rising income." "And it is due partly" the report goes on, "to the fact that State or local governments are reluctant to extend or expand their taxing systems for fear of placing their communities or States at a competitive disadvantage relative to other areas." In my judgment this is a real and quite understandable fear and it often stops the most forwardminded counties and States from moving ahead.

I frankly think State and local officials across the country are facing up to their obligations. Unhappily, the administration in Washington has been strangely insensitive to the problem. I say this with no partisan purpose. It is an unfortunate fact. Let me give you some examples of vital concern to every one of you.

Example No. 1 is water pollution. Water pollution abatement is one of the nation's most vital conservation programs and yet the President recommended that the popular and effective sewage-treatment grants program be cut from the \$45 million appropriated by Congress each year since 1956, to \$20 million. Both Houses voted overwhelmingly to pass a bill doubling the program—the House by nearly two-thirds, the Senate by more than a two-thirds majority. Yet that decisive mandate has been ignored.

Example No. 2 concerns urban renewal. In that program, the counties are already silent partners by virtue of their participation in the tax forgiveness clause of the Urban Renewal Act. Urban blight breeds crime and delinquency; it rots our cities at the core; and like all decay, it ultimately corrupts everything that surrounds it. County jurisdictions are therefore intimately concerned with correcting urban blight.

But here again, the Federal Government has consented to only a token program. Its authorizations are inadequate to the task of keeping up with the spread of blight, not to mention correcting the decay we already have.

Example No. 3 is civil defense, which I know will interest you because your association has an active and efficient civil defense committee. In California, local jurisdictions will spend about \$3 million this year on a civil defense program. Now Congress has accepted the principle of partial Federal responsibility for adequate civil defense by providing for half the cost of the administration of State and local programs. But the administration has failed to make budgetary provision for this minimal insurance against a military disaster.

Example No. 4 is the program for developing and improving airports. This program is of special interest to you because the funds are needed most at the county or local level for feeder-type airports which lack the financial support available to large metropolitan airports.

At the administration's initiative the matching funds provided by the Federal Government were cut from \$100 million annually to \$53 million. In an age when rapidly increasing air travel makes it imperative that we keep our airports up to standard, the administration slashed support by almost one-half.

Example No. 5 concerns Federal aid to education. The Nation is confronted by a massive shortage of 195,000 teachers and 140,000 classrooms. The country is confronting a near crisis in meeting its education needs.

Government at the State and local levels already is sorely strained financially to support education. And that includes the State of California. Here 42 cents out of every State tax dollar is going for public education. Yet with our "youngling" population—we have 500,000 more schoolchildren than New York, despite its larger total population—we simply are not doing all that is needed and certainly not all that I would like. Property owners at the level of local government are already heavily put upon in most areas to meet school costs. In the face of that, I believe it is only reasonable and proper that the resources of the Federal Government be brought to bear.

The alternatives, unfortunately, are an increasingly overcrowded school system losing ground in the face of the Soviet and scientific challenge; or mounting local school tax burdens, and those primarily and unfairly on property owners; or intelligent, carefully considered Federal contributions. Our choices are just that plain.

Believe me when I add that, in weighing Federal support, we must be vigilant in preserving home rule and local initiative. We must guard against rigid uniformity and insist on flexibility in Federal programs. Above all, we must never abdicate our own responsibilities.

Those responsible for county government have been thrust into a position calling for a high order of leadership. I have every confidence that you have such leadership, and that county government will succeed in the new role to which history has assigned it.

Meanwhile the problems ahead call for the cooperation of government at all levels: city, county, State and Federal; and for the vision of men who see beyond their own jurisdictions.

America's future deserves no less. I believe that we shall have such cooperation and enlist such vision. That is why, as the Governor of a great State, I face the future full of confidence and of hope.

Use of Carriers Is Our Defense Program

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following statement and newspaper article concerning the effectiveness of aircraft carriers in our military defense program.

The controversy raging over the capability of carriers is somewhat clarified by an article by John J. Schieffelin which appeared in the New York Times of February 11.

The range of the carrier is almost incredible as it is possible, with its air complement, to reach out over thousands

of miles and cover tremendous segments of the sea. Mr. Schieffelin points out the difficulties involved in locating and destroying a carrier in the wide open regions of the oceans. A huge armada of submarines, plus swarms of aircraft and surface craft, would find themselves spread very thin on the surface of the sea in attempting to locate a carrier which has both speed and defensive capabilities, as well as terrifying destructive force.

The article follows:

USE OF CARRIERS FAVORED—FAST FLEET BELIEVED BEST DETERRENT TO WAR IN NEARBY WATERS

TO THE EDITOR OF THE NEW YORK TIMES:

In connection with the current debate on defense I should like to call attention to the article by Hanson Baldwin on January 26 headed "Rough Seas for Carriers" touching upon an important feature of our defense.

He mentions a secret fleet-air defense exercise of the Navy and Air Force held off the Atlantic coast late in 1959. The conditions were controlled to the extent that the position of the fleet was known to the attacking land-based air forces of the Tactical Air Command. Apparently, the Navy ships, having picked up the attacking aircraft at a distance of over 200 miles, intercepted and, theoretically, splashed the vast majority of them before they got within 70 to 100 miles of the carriers. The fact of the matter seems to be that not a single attack plane got anywhere near the carriers.

While such a test is seldom considered conclusive, the exercise sheds light on a truth that is not understood by a good many sincere Americans. This truth is that carriers, protected by modern defense networks, are far less vulnerable than is supposed—that in fact they pose a very difficult problem to a would-be opponent.

First, they have well over 130 million square miles of ocean in which to operate, so that a strong initial advantage was given the attackers in this exercise. Second, even if their position is known it is hard, if not impossible for approaching aircraft to penetrate their defensive screen, with its modern electronic equipment.

RANGE OF AIRCRAFT

Moreover, the fact that a carrier's aircraft can reach out over distances now counted in thousands of miles, and deposit nuclear weapons on chosen targets, makes it essential for any group aiming to conquer the United States to make arrangements to put all of our carriers out of business before concentrating an all-out attack on our homeland.

The effect of this is that the major forces of a would-be attacker must be directed against any and all carrier task forces that may be at sea at any given moment. The problem of locating and destroying such task forces in the wide open reaches is so vast that even the most numerous submarine armada ever created, plus swarms of air and surface craft, would find themselves spread very thin, with no assurance of success.

In the two world wars the fighting and destruction have been far away from our country. The best insurance for keeping another war far away lies in a fleet of modern, fast carriers. As a deterrent to starting such a war, the presence of carriers cruising steadily beyond the horizon is tops.

SECOND BEST TYPE

And this brings up the final point mentioned by Mr. Baldwin—namely, that the Navy, in accordance with the recommendation of the administration budget, is building a conventionally powered carrier costing about \$290 million. A nuclear powered carrier would be better because, among other

advantages, she can sustain high speed over longer periods without refueling. However, a nuclear powered carrier costs \$130 million more, or a total of \$420 million.

With the safety of our people at stake this seems a poor time to be building the second best of a type of ship we well know how to build. Nuclear powered carriers, roaming the seas in cooperation with our nuclear powered submarines, would be a deterrent that would virtually eliminate the probability of another Pearl Harbor, and if a major war were to start would keep the fighting far from our land.

JOHN JAY SCHIEFFELIN.

NEW YORK, February 9, 1960.

West Virginia—Land of Scenic, Recreational, and Historical Values and Natural Beauty in Close Proximity to Population Centers—Foundation for a Potentially Thriving Tourist Trade

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. RANDOLPH. Mr. President, an article I wrote at the invitation of the editor of the Charleston (W. Va.) Gazette on the attractiveness of West Virginia was published in yesterday's issue of that newspaper.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA'S NATURAL BEAUTY LURES TOURISTS

(By JENNINGS RANDOLPH, U.S. Senator from West Virginia)

There has been much comment on the human resources of West Virginia and the past and present achievements of some prominent West Virginians.

This discussion relates to the resources of our land and the scenic, recreational, and historical values which are the foundation for a potentially thriving tourist trade.

Our State parks and State forest facilities, given major impetus during the administration of Gov. H. G. Kump, and aided invaluably by programs of the Federal Government during that era, offer unique outdoor recreation for millions of urban dwellers in the metropolitan centers of the eastern seaboard, the Middle Atlantic, and the Midwestern States.

By the same token, the recreational areas within the Monongahela National Forest and that portion of the George Washington National Forest within West Virginia, afford other pleasant recreational opportunities for our own people and visitors from other States.

CLOSE PROXIMITY TO POPULATION CENTERS

There is probably not another State in the Union which is as singularly favored as West Virginia in being able to offer so much of natural beauty in such close proximity to the population centers of the eastern half of the United States, with 55 percent of the people of the Nation living within a 500 mile radius of our State. It is apparent, therefore, that, despite the significant increase in tourism West Virginia has experi-

enced in recent years, we have barely begun to benefit from its full possibilities.

The attractions of West Virginia's State park and forest facilities, and those of the National Forests within our State—ranging from the quiet grandeur of the scenery at Cacapon in the eastern panhandle to the spectacular New River gorge near Babcock State Park in the southern part of the State—provided unparalleled opportunities for the tired city dweller seeking the restorative values of outdoor life.

Fourteen of the State parks and forests offer cabin or lodging facilities or both, a majority affording a choice between rustic accommodations and modern deluxe facilities set in unspoiled natural surroundings. With reference to the developed recreational areas within the National Forests, the less than 10 percent of the George Washington National Forest situated in West Virginia has been too much overlooked in this respect, but the Monongahela National Forest, situated totally within our State, has extensive recreational facilities—without cabins, however.

NEARLY MILLION VISIT NATIONAL FOREST

It is probably a little known fact that the Monongahela National Forest, in 1959, received a total of 987,900 visits to its 50 special recreational facilities, broken down into categories of visits as follows:

Camping at 22 sites, 19,300; picnicking at 17 sites, 173,900; swimming in 5 pools and lakes, 72,300; hunting, 179,700; fishing in forest streams and 3 lakes, 344,600; hiking and riding, 1,800; organizational camping at one Forest Service-owned facility and three non-Forest Service-owned organizational camping sites, 7,200; sightseeing, 179,900; forest product gathering for pleasure, 21,200; visits for scientific studies and hobbies, 2,200; and other miscellaneous types of visits, 25,800.

Yet, despite the work of our State industrial and publicity commission, a study of our tourist trade would indicate that we have not adequately told the "West Virginia story." During the past 5 years tourist expenditures have increased dramatically from \$174,562,214 in 1955 to \$270,569,447 in 1959. What is probably more significant, however, is that the number of annual visitors has actually decreased during that period from an estimated high of 8,115,429 in 1955 to a low of 7,389,218 in 1958, with a slight rise to an estimated 7,450,625 in 1959.

Inasmuch as the average tourist stay has been relatively constant (between 4 and 5 days), the increase in gross receipts has been due to a step-up in per capita expenditures, rather than to a growth in the volume of visitors. In fact, the average expenditure has almost doubled during that period, from \$5.50 per person per day to \$8.07, thus proving the point of the Mississippi Governor who said that a tourist is "as valuable as a bale of cotton and twice as easy to pick." Nor should it be overlooked that tourism is the only kind of trade in which we do not export some portion of our natural resources for the dollars received.

Further observation seems pertinent with respect to the untapped tourist potential:

Last year, 59 percent of West Virginia's visitors came from the neighboring States of Ohio, Pennsylvania, Maryland, and Virginia, while the even more heavily populated States of New York, New Jersey, Michigan, and Illinois—all within a radius of 500 miles or less of our State—supplied only 14.9 percent of the total.

Thus, it is apparent that we must do a major selling job making the charm and beauty of West Virginia more widely known in the population centers of the Middle Atlantic and Midwestern States.

PROMOTION IS COOPERATIVE ENTERPRISE

Nor should this be a task conducted solely by the State Industrial and Publicity Com-

mission and the U.S. Forest Service, insofar as the latter has to do with publicizing the facilities of the national forests within our borders. Despite the appropriateness of the efforts these agencies expend for tourism promotion, it needs supplementation. The privately operated hotels, motels, and restaurants obviously reap large shares of the profits from tourists drawn to our State primarily by its scenery and the publicly owned park and forest facilities. They, too, have obligations to assist with the State's tourism promotion.

According to the annual analysis of our tourist trade published by the West Virginia Industrial and Publicity Commission, last year 59.3 percent of our visitors were in the State on vacation. Of the number represented by that percentage, 72.7 percent were attracted by the scenery, the parks, and the forests; yet, during the same year, 71.4 percent of them stayed at motels and hotels, while only 15.4 percent lodged or camped at parks and forests.

In view of these statistics, it would seem only appropriate, therefore, that the trade associations and individual operators of hotels and motels should take an active and leading role in publicizing not only their own facilities, but the natural and scenic values of the State as a whole.

To come to something very close to my heart, I would mention, as an added tourist attraction, the rich historical lore associated with West Virginia. American history was formed in large measure by the Allegheny Mountains as the route of southward migration of the Scotch-Irish and German settlers, and the Ohio River as the gateway to the West. At a time when Americans might well be reexamining their cultural roots in an effort to arrive at a more meaningful conception of our national purpose, history as it was lived in West Virginia has much to contribute.

MORE THAN HALF MILLION VISIT HARPERS FERRY

Not the least important of our historical attractions is the Harpers Ferry National Monument under control of the National Park Service and situated in both Jefferson County, W. Va., and Washington County, Md. When a Member of the U.S. House of Representatives for 14 years, I was privileged to author the bill which established this site as a Federal park. Since that time the State of West Virginia has appropriated in full its share of land acquisition costs. Maryland is appropriating for this purpose on an annual basis. With the continued restoration work on the original arsenal and other buildings, there has been a constant increase in the number of visitors. Over the past 4 years the number of guests who have registered their presence has increased by more than 400 percent, from 115,667 in 1956 to more than 595,610 in 1959.

It is pleasing to report there is every likelihood that there will be added Federal facilities at Harpers Ferry which will doubtless multiply the number of visitors and the utilization very extensively. The Department of the Interior and its National Park Service have certified their approval to the Senate Committee on Interior and Insular Affairs of a bill introduced by me in the present 86th Congress to authorize acquisition of additional land, including inactive Storer College, to be used for monument area enlargement and new facilities for National Park Service personnel training. This measure has been approved by the Senate Subcommittee on Public Lands and is optimistically looked upon as one which probably will become law this spring.

Then, too, it is to be hoped that in the near future we shall be successful in establishing another national monument facility in West Virginia—the Washington Western Lands embracing significant parts of the area within the triangle formed by Parkers-

burg, Point Pleasant, and Charleston. Senator ROBERT C. BYRD is a cosponsor of a bill I introduced in the Senate, with a companion measure in the House by Representative KEN HECHLER, to authorize such a facility within the national parks system. A national monument of this nature would be an appropriate testimonial to the continued significance of the Ohio and Kanawha River Valleys since the days of the Revolution.

Harpers Ferry and the Washington Western Lands area are but two of the many points of historical interest in West Virginia which serve to keep alive the meaning of our national heritage for citizens of all the States.

Nature and history have combined to produce immense and varied resources in our State. It is now up to us to develop them wisely for our own benefit and that of future generations.

International Effects of U.S. Foreign Policy

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial from the New York Times of February 21, 1960:

ARE WE UN-COMPETITIVE?

Is the United States falling behind in terms of its competitive position in world trade? And, narrowing the question somewhat further, is it true that we are "pricing ourselves out of the international markets"?

Those who have undertaken to approach these questions open-mindedly are usually the first to point out that even after one has eliminated as many of the independent variables as possible he can offer the resultant figures only for what they are worth. Nevertheless, for what they are worth the figures produced by such studies seem invariably to add up at the minimum to the conclusion, "case not proved."

Typical of these is the staff report on "The International Effects of U.S. Foreign Policy" for the Congressional Economic Committee's inquiry on employment, growth, and price levels. Over the period 1950-58, declares this study prepared under the direction of Dr. Padraic P. Frucht, the United States share of world trade has shown no marked deviation from that of the longer-term past.

There were extreme discriminations against American exports in a number of markets—restrictions that could not have been surmounted regardless of American prices. This is particularly true in the case of the industrialized nations. To remove this disturbing factor the study concentrates on the nonindustrialized nations, where we compete directly with the other industrialized countries. Since these market shares vary considerably from year to year, the study assumes that a general decline of 5 percent would be required to support the thesis that we had lost our ability to compete. Actually, as compared with the base years 1954-56 to 1958, our total exports fell only from 34 percent to 33.3 percent of the total exports by the industrial countries to the non-industrial.

As to the alleged fact that we have been priced out of the world markets by rising

wage costs, the authors present a table on such costs for this country and its chief competitors. The ratio of 1958 wage costs to those of 1954-56 was 103 in the United States, a figure lower than that of 4 out of 5 of its chief competitors. And that competitor was Italy, a country that carries an oppressive burden of unemployment.

Waste of Taxpayers' Money

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. LAUSCHE. Mr. President, the average American taxpayer is a thrifty and prudent individual, willing to bear his or her share of the huge cost of the operation of our Federal Government, in confidence that that Government will in turn be thrifty and prudent in the spending of tax dollars.

It is when instances of outright waste and lavish spending of tax money are observed that taxpayers speak out in protest, as has Mr. George N. Bosnak, of Lorain, Ohio, in a recent letter addressed to me.

Mr. President, I ask unanimous consent that Mr. Bosnak's letter on the subject of wasteful and unnecessary spending be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LORAIN, OHIO.

Senator FRANK J. LAUSCHE,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR: I have just returned from my annual Florida vacation and am more than a little burned up about the waste of the taxpayers' money as evidenced by the Government offices and activities set up in the plush hotels of Miami Beach.

It is a little difficult for me to appreciate why offices for the Departments of Agriculture, Ordnance, Employment, and Fish and Wildlife should be housed in the Americana Hotel. It would be hard for me to visualize a rustic farmer or a frost-bitten citrus fruit grower making inquiries at the luxurious Americana as to when his next support check might be paid.

Similarly, the gathering of our postmasters and their wives to hear Postmaster General Summerfield expounding the dire need for higher postage rates while surrounded by the plush appointments and services of the Deauville Hotel really floored me.

May I respectfully solicit the influence of your good office to have these bureaus and activities removed to some clean air-conditioned locations in some downtown office building or, at least, to a location closer to the areas of their responsibilities at an appreciable savings.

This letter is in no way intended as criticism of yourself as I deeply appreciate your personal efforts to effect economies. However, I just felt that I had to call your attention to something that was indicative to me that our tax money was being needlessly squandered by some divisions of our National Government.

Sincerely yours,

GEORGE N. BOSNAK.

Dr. John W. Carr Dies at the Age of 100

EXTENSION OF REMARKS OF

HON. FRANK A. STUBBLEFIELD

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. STUBBLEFIELD. Mr. Speaker, recently one of the outstanding educators of Kentucky died in New York City just 2 months after he had celebrated his 100th birthday. The first president of Murray State College, Murray, Ky., and later dean and acting president, he served the college actively for 26 years until his retirement in 1940. After that as president emeritus and college historian he went to his office daily until he was 93. He lived for more than 30 years in my home town of Murray. Through his labors and those of his predecessors, Murray College—founded in 1923—has grown to one of the fine State colleges in the United States. Dr. Carr deserves great credit for his work in bringing about this development.

Dr. Carr was a native of Indiana and spent nearly a quarter century in its schools. Later he was a school administrator in Ohio and New Jersey before coming to Kentucky near the close of World War I. In honor of his unusual career, I should like to reprint some of the details of his life.

On the occasion of his 100th birthday, December 13, 1959, Dr. L. J. Hortin, formerly professor of journalism at Murray College and now head of the journalism department at the University of Ohio, wrote the following account which appeared in the Paducah Sun-Democrat and, in part, in the New York Times and many other papers of the country. His article follows:

The dean of the American schoolroom, Dr. John Wesley Carr, will be 100 years old December 13.

After being in a schoolroom for 87 years—from 1866 to 1953—Dr. Carr is now living with his grandson, Frank Carr, in New York City. His only living son, Harry, also of New York, says his father is looking forward to his birthday, but he says, "He ain't hurrying it any."

The task which Dr. Carr faced when he arrived in Murray in 1923 at the age of 63 might have dismayed most men. He had \$116,000 for a site and building—most of this given locally—and \$30,000 for operations. He began in September of that year with a few rooms in the local high school, three full-time and two part-time teachers, a library which contained a dictionary and a Bible, and 87 college students. By 1926, shortly after he left the presidency for the deanship, the college had a \$650,000 plant, a faculty of 30, and a 4-year college course. He acted as both dean and president in the period of 1933-36, seeing the college through some of the more trying days of the depression. When he retired from the deanship in 1940, the college had 11 buildings and an enrollment of 1,111. He lived to see a college whose buildings, faculty, and student body more than

doubled in size. His name will be remembered in the John W. Carr Health Building which was built in 1937. On the occasion of its dedication, Senator Alben W. Barkley declared:

No man in any State has contributed more to the permanent values of life than has this man.

The following statement, written by Dr. Carr in 1933 to the freshman class of that year, reveals his ability to write moving prose and something of his philosophy:

To the incoming students, one and all, I greet you and welcome you to Murray State Teachers College.

I welcome you to the halls of learning where it will be your high privilege to be associated with the great and good of all the past.

I welcome you to this campus which you will learn to love and which, to me, is as fair as the garden of the gods.

I welcome you to our laboratories where the secrets and wonders of nature will be revealed.

I welcome you to the library where you will find the treasures of the past.

I welcome you to the departments of art, music, and literature where beauty is enthroned and where the mind is lifted up until it soars on the wings of the imagination.

I welcome you to the study of history and geography, economics and the science of government and the science of society, itself, where you will have an opportunity to learn about human relations, and where, I trust, you will learn how to cooperate with others in the creation of a better society than this world has ever known.

I welcome you to the study of psychology and education, where you will study the human soul, where you will not only learn its laws, but where you will learn how it is nurtured—where you will be trained in heart and hand in the art of arts, the teaching of little children, and where perchance you may even catch a glimpse of the Master.

I not only greet you and welcome you to this college, but I commission its worthy faculty as your companions and guides through the Elysian fields of learning, which a great and generous people have provided for you to the end that you may become worthy teachers of the children of the commonwealth.

The Late Dr. John W. Carr

EXTENSION OF REMARKS OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. EVERETT. Mr. Speaker, as a former student of Murray State College during the period that Dr. John W. Carr, who recently died at the age of 100, was its president, I wish to add my words of praise to those given by my colleague, Congressman FRANK STUBBLEFIELD, of Kentucky, in whose home town Dr. Carr lived and worked for more than 30 years.

Hundreds of us who secured a college education during the depths of the depression of the thirties would not have been able to had it not been for Dr. Carr, then 76 years of age. He sought financial support from the legislature for the college he loved and labored to keep the

educational program going. I recall in particular his splendid efforts to arrange for jobs and financial aid for students so they might be able to stay in school. As a graduate of that institution I know that I speak the sentiments of all the graduates and students when I say that we are so happy and proud and grateful that Dr. Carr did what he did in our behalf.

He was a great force in education in the United States and especially in our part of Tennessee and Kentucky. He was an inspiration to all who knew him—a champion of education and a fine Christian gentleman.

I should like to concur in the statements made above by my distinguished colleague, Congressman FRANK ALBERT STUBBLEFIELD, in behalf of Dr. Carr. An excellent editorial appeared in the Nashville Tennessean of February 20, which was written by an outstanding editorial writer of this newspaper, Gene Graham, also a graduate of this college. This editorial follows:

[From the Nashville Tennessean of Feb. 20, 1960]

DR. JOHN W. CARR: LONG, FRUITFUL LIFE

Dr. John W. Carr, who died Thursday in New York at the age of 100, was a man of remarkable stature in his chosen profession, education.

His active life was spent in Indiana and in Kentucky, but his influence was widely felt throughout the Nation and he was well known to many Tennesseans.

Dr. Carr, having served in the office of the superintendent of public instruction of the State of Kentucky, moved to the small hamlet of Murray in weststate at an age when most men are looking toward retirement—age 65. There he helped to found what is today Murray State College, and he served it as dean, as president, and as president emeritus, a position he held at death.

Dr. Carr was an inspiration to all who knew him. Few have demonstrated so capably the continued usefulness of a life in its golden years.

Increase of Minimum Wage

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. KENNEDY. Mr. President, the Senate will shortly be considering a bill to increase the minimum wage and extend coverage of the Federal law to some 8 million workers who do not now enjoy protection of the Wage and Hour Act. I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received recently from the commissioner of labor of the State of Wyoming, Mr. Burton L. Clark, who makes, I believe, a very cogent argument for passage of legislation increasing the minimum wage and broadening the coverage.

I also ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted recently by the City Council of Lawrence, Mass., pertaining to the same legislation.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

STATE OF WYOMING,
COMMISSIONER OF LABOR AND STATISTICS,
February 19, 1960.

HON. JOHN F. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: I would like to add my voice to a great number of Wyoming people who think the enactment of improvements to the Fair Labor Standards Act at this session is a must.

1. The minimum wage should be raised to \$1.25 per hour in industries covered by the Fair Labor Standards Act.

2. The coverage should be extended to a great many more workers in our country. We think the coverage should be extended to at least 7 or 8 million more workers in retail, service, hotel, and other low wage industries.

In our State these requests not only come from labor leaders, welfare workers, etc., but from employers in our State who have a policy of paying a living wage. They point out they are faced with competition from employers who pay substandard wages to their workers. This, of course, is competition that can only be taken care of by legislation to protect both the worker and the employer.

Opposition to this legislation will say it is inflationary. We do not think it inflationary for a worker to make \$50 a week gross pay.

Certain groups will ask to be exempted from this act. It has been our experience in enforcement of labor laws, those asking for exemptions usually are the ones employing workers needing protection the most.

If we exempt certain businesses from this act according to the number of employees they have it would, in some cases, encourage them to hire fewer workers in order that they would not be covered by the act.

I further ask that this communication be read into the minutes of your committee hearings on this subject.

Very truly yours,

BURTON L. CLARK,
Labor Commissioner, State of
Wyoming.

RESOLUTION IN FAVOR OF RAISING THE FEDERAL MINIMUM WAGE

Whereas there is now pending legislation before Congress to increase the Federal minimum wage to \$1.25 per hour; and

Whereas the Fair Labor Standards Act calls for only \$1 an hour; and

Whereas there are nearly 20 million wage earners who are completely without any protection with reference to minimum wage earnings; and

Whereas in view of the steady rise in the cost of living and increased productivity, the city council hereby adopt this resolution calling upon the Senators of Massachusetts and Representative Thomas J. Lane, Majority Leader Congressman John W. McCormack and Secretary of Labor James Mitchell to lend their support to increase the Federal minimum wage and to support legislation to abolish this obsolete minimum Federal law and to broaden the coverage of the Fair Labor Standards Act; and be it further

Resolved, That a copy of this resolution be sent to the above named.

U.S. Companies Abroad

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. BETTS. Mr. Speaker, at last count more than 1,000 American com-

panies were engaged in industrial and commercial activities abroad. Hundreds of American firms have established manufacturing facilities overseas. In many cases there foreign-made products are shipped back to the United States as components to be assembled in finished products.

Certainly no one can blame the managements of these corporations for seeking component parts at the lowest possible cost. You might say that by taking advantage of low foreign wages these companies are helping to hold down prices here at home and are thereby contributing to economic stability.

On the other hand, you might also contend that these manufacturing operations abroad really represent a serious drain on our economy through loss of jobs and job opportunities. Billions of American dollars have been invested in these foreign facilities—dollars that might have been used to create jobs for our own expanding population.

At any rate, the Journal of Commerce has published a timely and thought-provoking article on this important industrial trend, to which I respectfully call the attention of my colleagues:

[From the Journal of Commerce, Feb. 24, 1960]

USE OF FOREIGN PARTS GROWING AS COMPONENTS IN U.S. PRODUCTS
(By Jerome Oelbaum)

Take a close look at the coaster brake on your boy's American-made bicycle. There's a good chance it's manufactured abroad. Or the bread-slicing machine in your neighborhood bakery. Or, ironically, the little name plate that identifies a truly U.S.-manufactured camera as "Made in U.S.A."

U.S. manufacturers are now importing a large number of parts and components from foreign companies to incorporate in finished products for the American market. Some are bought from independent foreign manufacturers. Some come from plants affiliated with American companies.

MORE IMPORT PARTS

According to reports presented at a meeting being conducted by the American Management Association the probability is that the practice will increase rather than contract. There are companies that have been fighting the trend, sticking to a "Buy American" policy. But many are apparently giving way under pressure of competition.

S. H. Mesha, purchasing agent for Arnold Schwinn & Co., Chicago bicycle manufacturer, indicated that foreign bicycle parts makers are supplying U.S. companies with many important components. He warned that some American parts producers have had to curtail or suspend their output and this narrows the sources of local supply for bike manufacturers.

USES FOREIGN PARTS

"But we have to take the risk in order to compete," Mr. Mesha said.

Schwinn and other U.S. bicycle manufacturers several years ago convinced the administration to raise tariffs to check sales by foreign bicycle companies to this market.

Mr. Mesha reported that now foreign companies furnish about 16 percent of an average Schwinn bike.

Frank X. White, vice president of American Machine & Foundry Co., said overseas affiliates of American companies are going to be used increasingly to make goods that the U.S. parent corporations sell back home.

"We may deplore that . . . we should do nothing to accelerate it," he said, adding, however: "But you've got to take this action if you want to stay in business."

He advised industrialists not to always look to the Government for protection against foreign competitors. The solutions lie to a large extent in American manufacturers' ability to cut costs, redesign products, develop new products and automate their production.

AIDED BY NEW PRODUCTS

American Machine & Foundry, he said, had been priced out of world markets in some products such as truck wheel rims and electric motors. But the company has come out with new products, notably an automatic pin machine for bowling alleys, that have pushed up total exports. Under development is new equipment for desalting of sea water.

Mr. White indicated that his company, nevertheless, is continuing to increase manufacture abroad.

The pin-setting machines are now being made overseas as well as here; bicycle manufacturing may have to be shifted to Mexico; older style bread-slicing machines and their parts are being made abroad, leaving the U.S. plants to make small high-speed slicers; and the company's De Walt saw will be made in Italy for exports to areas outside the United States.

WORLDWIDE BUYING

John Ricca, purchasing agent for Arabian American Oil Co. (Aramco), said this oil company, which operates solely in Saudi Arabia, is buying hundreds of products—both industrial equipment and consumer goods for workers—on a worldwide scale.

This practice began after the war as the company attempted to use blocked funds in foreign nations. But it has continued, he said, because costs of some goods are lower outside the United States and the company, in any case, would like to buy where it sells its oil if prices and quality are adequate.

"We save from 19 percent to 25 percent on the average foreign purchase over United States, and on some items we find the combined material and freight cost as low as one-quarter to one-half of the U.S. cost."

PIPE PURCHASES CUT

A few years ago, the executive said, Aramco bought 90 percent of its oil pipe in the United States. This year only about 2 percent will be bought here.

In the equipment field, foreign companies' servicing facilities are generally as good as those of U.S. firms, he said.

Quite a lot of American companies with which Aramco deals are eager to get production facilities in Europe in order to capture Middle East oil business.

The American Management Association's meeting is designed to acquaint U.S. businessmen with problems and profit opportunities in organizing purchasing activities on a global scale. The concluding session of the 3-day conference will be held today.

**Senator Kenneth B. Keating, Republican,
New York, "Speaker of the Year"**

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. BEALL. Mr. President, the University of Maryland sponsored the Capitol Hill debate tournament, which attracted wide attention. At the final ceremonies, held in the Senate caucus room on Saturday afternoon, February 27, 1960, one of our colleagues, the distin-

guished Senator from New York [Mr. KEATING] was awarded the "Speaker of the Year" plaque, an honor fully deserved.

Upon receipt of the award, the distinguished Senator made a brief and outstanding statement on the subject, "Congress and the Supreme Court."

In the debate tournament finals, a University of Maryland contestant, Mrs. Jackie Crews, received the third place silver key award. The subject of her speech was "Mediocrity in American Life."

To take part in this debate tournament, students came from colleges as far away as the Air Force Academy in Colorado, the University of Miami, and Bates College in Maine.

In my opinion such a debate tournament is a most praiseworthy activity, and its sponsors should be commended. Also, I would like to commend those of the University of Maryland who managed the tournament in such an excellent manner.

I ask unanimous consent to have printed in the Appendix of the RECORD a news article which appeared in the March 1, 1960, issue of the Diamondback, under the heading, "Maryland Speaker Places Third in Capitol Hill Tournament"; also a news article in the same publication headed, "New York Senator KEATING Honored at Debate Finals," and also the text of the address made by the New York Senator.

There being no objection, the articles and address were ordered to be printed in the RECORD, as follows:

MARYLAND SPEAKER PLACES THIRD IN CAPITOL HILL TOURNAMENT

(By Terri Goldberg)

A University of Maryland contestant, Mrs. Jackie Crews, received the third place silver key in the persuasive speaking contest of the Capitol Hill debate tournament held Saturday in the Senate caucus room on Capitol Hill in Washington.

Mrs. Crews spoke on "Mediocrity in American Life." First place went to Findlay College Representative Allen Jones.

The Capitol Hill debate tournament is sponsored by the University of Maryland under the direction of Mr. Malthon Anapol of the speech department. Thirty-two colleges and universities sent two teams, one affirmative and one negative to participate in the tournament.

Mr. Anapol remarked, "The interest of other colleges in the tournament is so great that several applications must be rejected due to limited time and accommodations. The tournament is growing every year."

One topic for debate is chosen the year. The topic for debate for each year to be used throughout debate for the year 1959-60 was "Resolved that Congress Should Have the Power to Reverse Decisions of the Supreme Court." The topic chosen is always one of national political importance.

B. Bruce Wagener of the University of Maryland Speech Department explained, "The tournament is unique in two respects: First, the finals are held on Capitol Hill, the seat of our National Government, and second, the debating is carried on before people who are likely to be influenced by what they hear. The issues debated are those on which Congress could act."

"In the past 3 years since the tournament began, it has rapidly become one of the big tournaments of the country, as indicated by the representation of the 32 of our top colleges and universities."

Students came from colleges as far as the Air Force Academy in Colorado, the University of Miami, and Bates College in Maine.

Both the affirmative team and the negative team of the University of Maryland won two debates against other colleges. Each representative team participated in six debates on the Maryland campus, held Friday and Saturday morning. The affirmative team winning the most debates in the preliminaries, and accumulating the greatest number of points, debated the top negative team in the finals held on Saturday in the Senate caucus room.

The final speeches of the Persuasive Speaking Contest followed a formal greeting by the Honorable Thomas Clark, Supreme Court Justice.

NEW YORK SENATOR KEATING HONORED AT DEBATE FINALS

Senator KENNETH B. KEATING, of New York was honored at the finals of the Capitol Hill Debate Tournament, sponsored by the University of Maryland Saturday, where he was awarded the "Speaker of the Year" plaque for his outstanding speeches on the subject of "Congress and the Supreme Court."

In his address to the 175 students and guests gathered in the Senate caucus room, Senator KEATING said that he felt there has been a failure on the part of the public to distinguish between criticism of the Court and criticism of the decisions of the Court.

The Senator explained, "The controversy between Congress and the Court in recent years is an inevitable and perhaps even an intended result of the division of governmental responsibility decreed by the Constitution. It is an example of our system of checks and balances in operation."

Those who are stanchly in favor of congressional power over the Court "have proposed remedies for some decisions that would endanger the Court's very existence as an independent, coordinate hand of our Government." On the other hand, "the Court's unqualified defenders are ready to burn at the stake anyone who suggests congressional perusal of the decisions of the Court."

Senator KEATING said that the Court should not be any more immune to criticism than the other branches of our Government. "The Court has served its country well in its 171 years of existence, but not all its precedents have withstood the test of time."

In favor of the Court, he said, "Congress also has the duty to prevent the undermining of our judicial system and to protect and preserve the role of law. The difference between a society governed by principles of justice and a society governed by arbitrary fiat is the difference between government and tyranny."

Then, in favor of Congress, Senator KEATING said, "Congress and not the Court is the supreme lawmaker under our system. Its attempts to deal with problems disclosed by judicial opinions should not be interpreted as attacks upon the Court."

Senator KEATING summarized his opinions on the subject by saying, "I believe Congress has been wise in rejecting all proposals to interfere with the jurisdiction or status of the Court. I also believe that Congress has been amiss in failing to moderate the impact of some of the Court's decisions on our defenses against crime and subversion, entirely regardless of whether the Court was legally correct or incorrect in the conclusions it reached."

Senator KEATING anxiously awaits the day when the measures he has introduced, that are important in our battle against communism or criminality, will be considered on their merits instead of as a part of a debate over the relations between Congress and the Court.

CONGRESS AND THE SUPREME COURT

(Text of address by Senator KENNETH B. KEATING, Republican, of New York, on occasion of the awarding to him of a plaque as speaker of the year at the final ceremonies of the Capitol Hill debate tournament)

This is your day to debate and speak and so I will not detain you long.

I would, however, like a few minutes of your time to discuss my position on your debate subject and to try to put this issue in proper perspective, as I see it.

First, in my opinion, the controversy between Congress and the Court in recent years is an inevitable and perhaps even an intended result of the division of governmental responsibility decreed by the Constitution. It is an example of our system of checks and balances in operation. It is as natural as differences between the President and the Court or the President and Congress, and no more harmful to the public interest, if kept within proper bounds.

Second, the most unfortunate aspect of this controversy is the tendency, in some quarters, to classify all those interested in this subject either as defenders or detractors of the Court itself. There has been an abysmal failure to distinguish in public discussion between criticism of the Court and criticism of the decisions of the Court.

Third, this misunderstanding has been engendered in part by the pronouncements of the extremists on both sides of this issue. The Court's unqualified defenders are ready to burn at the stake anyone who suggests congressional perusal of the decisions of the Court. The Court's irrespressible detractors, on the other hand, have proposed remedies for some decisions which would endanger the Court's very existence as an independent, coordinate hand of our Government.

Fourth, the Court should not be any more immune from criticism than the other branches of our Government. To maintain that the Court is infallible is to deny history. The Court has served our country well in its 171 years of existence, but not all its precedents have withstood the test of time. The Justices of the Court deserve our continuing respect, but not our unqualified homage.

Fifth, I believe that lawyers have a particular duty to protect the Court against unwarranted attacks. The basis for this duty is explained very well in the first canon of professional ethics this way: "Judges not being wholly free to defend themselves are peculiarly entitled to receive the support of the bar against unjust criticism and clamor." But even this injunction should not be read to stultify constructive criticism of decisions of the Court by members of the bar.

Sixth, Congress has a like duty to prevent the undermining of our judicial system and to protect and preserve the role of law. This is a sacred mission. The difference between a society governed by principles of justice and a society governed by arbitrary fiat is the difference between democracy and tyranny. Congress must always treat the Court with the veneration due one of the pillars of our institutional structure.

Seventh, it should always be recognized, however, that Congress and not the Court is the supreme lawmaker under our system. Its attempts to deal with problems disclosed by judicial opinions, should not be interpreted as attacks upon the Court. And the proposals for corrective action should be considered on their merits and not as part of a battle over whether this is a good or a bad Court.

Finally, let me say that although I believe Congress has been wise in rejecting all

proposals to interfere with the jurisdiction or status of the Court, I also believe that Congress has been remiss in failing to moderate the impact of some of the Court's decision on our defenses against crime and subversion. And that is so, entirely regardless of whether the Court was legally correct or incorrect in the conclusion it reached. I have introduced a number of measures in the past few years which I believe are vitally important in our battle against communism and criminality. I anxiously await the day when these measures will be considered on their merits instead of as a part of a debate over the relations between Congress and the Court.

In closing, I should like to pay a richly deserved tribute to Mr. Anapol, director of debate of the University of Maryland, and committee chairman of the Capitol Hill tournament, and to the members of his committee for their initiative in organizing this fine tournament, for their vision in giving it the scope of such wide and choice representation, and for their sheer courage in attacking such a massive assignment and bringing it to fruition so successfully.

To win or to lose in this competition is important—but it is not all important. Each team—each individual contestant—in this tournament will leave with a more durable treasure than a cup or a medal. You have enriched yourselves personally through this experience. You have tested your mettle, and the mettle of others. You have had the benefit of a dress rehearsal for the drama of life that unfolds before you. May I wish each and every one of you—with all my heart—every success and every happiness in the years ahead. And whether in marriage or in single blessedness, may you never lack for issues that light the spark of constructive dissent.

University of Chicago Professors Compare Soviet-United States Strengths After Tour of Russia

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the following article from the March 1960 issue of the University of Chicago magazine:

SOVIET, U.S. STRENGTHS COMPARED—ARE RUSS SUCCEEDING IN "BURYING" US? DO WE TRAIL RUSS IN ARMS RACE? CAN RUSS TOP UNITED STATES IN EDUCATION?

(In a series of three features, the Chicago Daily News presented highlights of a tape-recorded interview its staff members had had with six University of Chicago faculty members this January. The faculty are: Dr. Paul C. Hodges, professor emeritus of radiology, recently returned from an extensive tour of Russia; Chauncey Harris, dean of social sciences and professor of geography, an expert on the growth and function of Russian cities, industrial resources and agricultural programs; D. Gale Johnson, professor of agricultural economics, one of 12 Americans who toured Russia under U.S. Government sponsorship; Everett C. Olson, chairman of zoology, expert on evolution; and Robert Osgood, associate professor of political sciences and research associate at Center for Study of American, Foreign, and

Military Policy. The following is excerpted from the News:

Question. "Dr. Hodges, can you tell us something about medical research and health programs in Russia?"

Mr. HODGES. I saw research going on in the First Medical Institute in Leningrad under Prof. Ugloff. Student surgeons were doing the sort of dog surgery, heart, and lung surgery that you would see at any good department of surgery in the United States.

Older men were doing similar operations on patients. I found them all extremely modest, well informed about what is going on elsewhere in the world and not at all boastful.

I saw research going on in a rather unique eye institute in Odessa. I doubt whether anywhere in the world one could see as many patients who have successful corneal transplants as we saw in a few hours there.

Any ophthalmic surgeon there who needs a cornea simply goes to the nearest undertaker and gets any eye that happens to be there at the time without the consent or even the knowledge of relatives.

Question. "How would you compare the health of the Russian and the American people?"

Mr. HODGES. Russians freely admit that at a given age they are considerably older biologically than we apparently are. They age earlier. They marvel when they see American men and women in their seventies and eighties touring in Russia.

I have assumed that this was simply due to the fact that in Russian life has been hard for a long time and that hard work wears people out. In that one respect, they are not as well off as we are.

In the matter of medical care, I think experience shows that when the average Russian needs medical assistance, he has only to ask for it and it is available to him.

They make a great deal of the fact that they never have to wonder how they are going to afford medical care.

Question. "Would you evaluate the medical care they receive?"

Mr. HODGES. Wherever I saw it, it was good. The Russian doctors are critical of it only to the extent that in the less populated areas they are distressed with the distance the patients may have to be taken for major surgery.

By our standards, the wards are crowded, the food is coarse, but I doubt that the crowding or the food in the hospitals is any worse than it is in the homes.

It's silly for us to judge these by our standards. Above everything else, there is a spirit of friendliness in the Russian hospitals.

Question. "Does a man have to be a Communist party member to direct research activity there?"

Mr. HODGES. We didn't feel like embarrassing our hosts by asking them. I am told that the students who come to us in this country are members of the party and that intourist guides are members of the party.

Mr. HARRIS. May I contradict this? Some of the students are members and some are not, and the same goes for guides. It requires enormous effort to become a member of the party. Many are not prepared to devote that much time to political affairs.

There is a considerable difference by fields. For example, in the faculties of the social sciences, nine-tenths of the staffs of universities are members of the party, whereas in the physical sciences it's only one-fourth.

Question. "Do you think, Dean Harris, that because a scientist is a member of the party it makes him more competitive with the United States—more desirous of 'burying' us in his particular field?"

Mr. HARRIS. Oh, probably in that he would try to follow the party line.

Question. "Would it make him a better scientist?"

Mr. HARRIS. It might make him a poorer scientist. However, any intense motivation, be it nationalistic, idealistic, religious, or personal, may drive a man to greater achievements.

Question. "Does this require comparing of morale among American and Soviet scientists?"

Mr. HARRIS. In the Soviet Union, there is an attempt to improve morale and to motivate people by a sense of urgency and national pride.

The desire to achieve, the sense that they must achieve for the honor of their people, is quite an important factor.

Mr. ANDERSON. There are big incentives. The richest guys in the Soviet Union are the physicists. The scientist is in the highest echelon of respect and well-being in terms of the goods of life.

Question. "What motivates an American scientist?"

Mr. ANDERSON. I think he is motivated mainly by the intellectual challenge he is offered, the chance to make a discovery or do something new.

Question. "Isn't that a better kind of motivation for productivity?"

Mr. ANDERSON. I wouldn't be a bit surprised. I am dubious that in the long run their system will pay off as well as ours.

Question. "Returning to the question of research, how well does the Soviet Government finance it?"

Mr. HARRIS. In order to improve production, the Soviet Government as a matter of policy invests very large sums in education and research. Research is not a sheer intellectual delight. Research is a productive investment. I have observed, the budgets are very generous.

The Institute of Geography at the Academy of Science has 300 full-time senior research workers. There is not a comparable research institute in this field anywhere else in the world.

Question. "Is there anything that gives them flexibility in key areas of research?"

Mr. HARRIS. They have both greater and less flexibility than the United States. They have greater in the sense that if an area like rocketry demands sudden great investments of manpower and capital by a central planned decision they can divert these on the highest priority quickly and flexibly.

On the other hand, they have less flexibility in that their scientific programs tend to be planned a year or two in advance and the scientist is supposed to achieve a certain end that is stated in the plan.

In America, if we see a promising new lead, we shift very quickly to wherever our curiosity leads us. In the Soviet Union, one may be inclined to say: "Well, we must finish this plan, then we must think about that a little later."

Question. "How did the Russians come to build the world's biggest atom smasher?"

Mr. ANDERSON. They had clearly resolved to get the biggest machine at the earliest possible time. The quickest way to do this was to take an American version known to be operating and to copy it, but make it bigger.

We wouldn't build a machine that way because we haven't the money.

Question. "Are there other signs of their copying us?"

Mr. ANDERSON. We found the same thing in labs. Often the designs were the same as ours. Wherever they wanted something in a hurry, they copied.

Mr. OLSON. They were smart enough to take what was available and use it well. This is one reason they've been able to progress so rapidly.

Question. "Yet they are doing basic research at the same time?"

Mr. OLSON. Yes, but they're using copies of existing instruments. In mineralogical laboratories I saw this continually.

Question. "How are they able to come up with more money than we to achieve certain ends?"

Mr. ANDERSON. Just a matter of allocating the funds. You start out with people who aren't used to having much.

You only have to contrast the Gum department store in Moscow and Marshall Field & Co. to see where the money is going. It's going into research and technological development.

Question. "As you run a box score and take the various subjects, say physics and geology and go right down the line, wouldn't we come out with a pretty good batting average?"

Mr. ANDERSON. I don't think anybody has any doubt including the Russians themselves, that our present position in science in general is superior to theirs. They're trying to reach us still.

Every Russian physicist worth his salt speaks English, a tacit admission that if they want to be up to date, they must read the American Physical Review.

Question. "Why our concern, if we have this solid foundation?"

Mr. ANDERSON. Their gain is faster than ours.

Mr. OSCOOD. I'm not sure I agree that every advance of the Soviet Union is to our disadvantage.

Mr. ANDERSON. I didn't make that statement. Science is competitive. It doesn't mean that a scientific advance in the Soviet Union acts to our disadvantage, it might even add to our advantage.

Question. "Turning to the much-discussed subject of education, is there anything about the Russian system that we might envy or borrow?"

Mr. HARRIS. I would say the state's taking broad financial responsibility for the support of education as a major governmental activity.

Mr. JOHNSON. The main place in which Soviet education has paid off, and where the emphasis has been important, has been at the elementary and secondary level. They have, I think, practically wiped out illiteracy for everyone under 40, by strengthening the elementary and secondary schools.

This has been a major factor in the great rise in production. They turned a peasant population into a population qualified for industrial work.

Question. "Does the average Russian child get more schooling than the average American child?"

Mr. JOHNSON. No; I don't think so.

Question. "More intensive schooling?"

Mr. HARRIS. Yes; he devotes less attention to extracurricular activities and to what we sometimes call fringe activities in school.

Question. "Then how do you get this creativity that they seem to be achieving?"

Mr. HARRIS. This probably is in a relatively small proportion of the population. Only 3 percent of the university undergraduates go to graduate work. In graduate work, they begin to select for creativity and originality.

Mr. JOHNSON. The areas in which they have shown the greatest creativity are those in which any conflict with the Communist interpretation of life is the smallest.

Question. "Assuming that their figures are correct, and that their rate of growth continues, where eventually will this place us in relation to them?"

Mr. HARRIS. If the Soviet Union were to continue to put a large proportion of its effort into coal and steel, and if we were to continue to put our efforts into a variety of activities, they would eventually surpass us in both coal and steel production and, because of the long American steel strike, they may have begun to challenge us in steel production.

Question. "Don't you think that our system fosters more creativity?"

Mr. HARRIS. We like to hope that it fosters it.

Question. "Could Khrushchev's intimidation that we shall 'bury' you come true in education?"

Mr. HARRIS. If we are complacent, if we think what was adequate for our grandparents is adequate for today, the Soviets would "bury" us. Or if we think that what is adequate for today will be adequate for 30 years from now, they would likely catch up to and surpass us.

Question. "Can we take up the question of production? We are told the Soviet economy is increasing at the rate of 9 percent a year while ours is increasing at the rate of about 3 percent. If that pace continues, sometime in the 1970's or probably later, they will have reached our level."

Mr. JOHNSON. If you accept these two assumptions, there will come a time when their output will exceed ours. There is a question whether they can maintain as high a rate of industrial growth as they have in recent years.

And their large rate of growth is due to the fact that they are willing to do something which I think we are basically unwilling to do and I would doubt whether, given our values, we should do.

They are willing to take a large proportion of this year's output and invest it in increased output in years ahead.

But there are many other factors in the economic picture.

Question. "If things continue as at present, what will happen?"

Mr. ANDERSON. What usually happens. There is much more drive and determination when you are trying to catch up than when you're already on top.

Question. "Should we adopt the policy to raise our steel production from 147 million tons just to stay ahead of the Russians?"

Mr. JOHNSON. No, it's not necessary that we stay ahead in steel production. Steel production, after all, as a percentage of the national output is relatively small.

It is really the question of how much we want to invest out of current earnings for the future.

Question. "What about Soviet plans to use increased production?"

Mr. JOHNSON. I think they are likely to go in several directions. One, I think there will be an honest effort to increase consumption at home.

Question. "But nothing will be done at the expense of the military, they will take that right off the top?"

Mr. JOHNSON. There is some real possibility that the relative share of the military might decline, even though the absolute amount might increase over time.

Question. "The Russians say that the American economy is bound to have depressions and of course that will play an important role in this competition. What is the thinking on that?"

Mr. JOHNSON. It's likely that we will continue to have dips, so to speak, in our economic activity, such as we had in 1948-49, or 1953-54, or 1957-58.

The likelihood of anything like the thirties again is very, very small.

Question. "Well, is the fact that Russia is catching up to what we consider a normal standard something to be feared or welcomed?"

Mr. HARRIS. Improvement of a standard of living in any part of the world should be welcomed by any person who has human welfare at heart.

Question. "We can't consider that then, in the context of one nation 'burying' another. But could someone bring this matter of production rivalry into focus?"

Mr. HARRIS. If the American economy stagnated, the Soviet Union would ultimately "bury" us. One of the real problems is the relative appeal of our system and their system for popular support. In their internal

propaganda, they emphasize how insecure life is in the capitalist world.

When I was in Moscow, they said it must be terrible to be unemployed. "We don't have unemployment. We don't have to worry." It's a sense of having security and care which by internal propaganda, by education, they tend to build into the system as important values in which they feel they exceed us.

Question. "Could you evaluate our strengths?"

Mr. HARRIS. We emphasize the value of freedom. We don't like to be assigned to our jobs. We don't like to have a paternalistic, even if a wise, government tell us what we should do.

The Soviets have built up one set of values and we've built up a different set.

For their set of values, the system gives certain satisfactions which our system wouldn't. For our set of values, our system gives satisfactions which the Soviet wouldn't.

Each society has built up internal support for the values which it emphasizes.

Question. "What are the areas in which Russia's advances become an important element in the cold war?"

Mr. OSGOOD. It's not clear that our own scientific advances should be determined directly as a reflex of Soviet advances, but rather according to our own purposes.

But in the area of military technology we are in the most direct competition and that, I think, has the greater urgency in the short run.

Mr. ANDERSON. Don't you agree that, besides the military, there are other fields which in some ways have comparable importance?

If the Soviet economic improvement becomes important enough, they could take away our markets. They could compete with us in every area.

Unless American national policy rises to the challenge in each of these fields of human endeavor, they'll do it.

Mr. OSGOOD. Regardless of their motivation, it will pay off if they can allocate and centralize sufficient resources to the areas of national power that are decisive.

It may be that they lag in basic research and motivation, but that won't make any difference if they continue at the present rate of advance in military technology.

Question. "What do you see happening?"

Mr. OSGOOD. We won't have a chance to see the results of long-term competition if we don't preserve a certain relative disposition of military power to defend our vital interests.

And I think it is extremely dubious that we will succeed, at the present moment.

Mr. ANDERSON. I attack this point of view. I don't think that the military position is all-important. It's very important to match and, if possible, keep ahead of the Soviet position in the military.

But that in itself is not sufficient. It has to be done all across the board.

Mr. OSGOOD. The short term may be decisive, is my point.

Mr. ANDERSON. This country has, on several occasions, been faced with the danger that over-exuberant enthusiasm for military preparedness has brought the country to the brink of economic disaster, or could.

Military preparation is so wasteful of economic and natural resources, the people, goods and productivity, that you have to be exceedingly careful. The defense effort absorbs a not negligible part of the national productivity.

Mr. OSGOOD. Defense is financially extravagant and impinges, in some respects adversely, upon every other aspect of national life. But it's indispensable. It's the precondition for anything else that we protect our vital interests.

Mr. ANDERSON. We have to maintain our military position, but I do want to point out the dangers of overdoing it.

Mr. OSGOOD. You evidently disagree with my assumption that we are not maintaining our military position.

Mr. ANDERSON. I don't consider that the American military position is inferior to the Russian.

Mr. OSGOOD. I'm quite sure of it. I don't think it's a question of literally matching Soviet military power in every realm, or keeping ahead of them in the sense that if they create so many ICBM's you have to create so many.

The purposes that our military power serves are not identical to the purposes that Soviet military power serves.

What constitutes deterrence for us is based upon a complex of factors that are not the same as what constitutes the Soviet ability to support its quite different political objectives with military power.

I think we are falling behind rapidly and dangerously in the sense that we are losing our ability to deter aggression and to meet it without blowing up the world if we fail to deter it.

Question. "In the competition between the two worlds, are we equipped to win or to maintain our way of life? Will they bury us?"

Mr. HARRIS. In certain types of competition, they may turn out to be a much more efficient producer in ratio to effort. What is unclear is whether under individualism we tap certain reservoirs of human creativity which are untapped in the Soviet system. This may provide a margin for superiority.

I think the answer to that question cannot be definite. We don't know. Only time can tell. There are some evidences on each side of it.

Question. "You have stipulated certain areas that possibly are aiming to threaten us and you have stipulated others in which it is unlikely they are going to catch up in a long, long time."

Mr. JOHNSON. If you want to take the area of consumer goods, they're catching up with us on a per capita level, but it's so far in the future it's not too important at the moment.

But if you're speaking primarily of heavy industry, this is not so far in the future that we should be unconcerned.

Mr. ANDERSON. I think the Russians will make a great try to reach and surpass us in research. But I believe in the fundamental good sense of the American people that we scientists will be supported and supplied with the means and stimulation to help us maintain our position on top.

Mr. OLSON. In education, it is often overlooked that Russia is only now starting to attain a situation we have had for many years, complete literacy. They are quite a way behind us except in the very high centers.

However, I believe that in sheer factual education, before too long, they will equal and in some cases will be superior to us.

Young Republicans in the West

EXTENSION OF REMARKS OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two excellent columns dealing with the work of the Young Republicans in the West, written by one of the West's outstanding columnists, Mr. George Todt, and pub-

lished in the San Fernando Valley Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Fernando Valley Times, Feb. 19, 1960]

YOUNG GOP'ERS WORK SERIOUSLY

(By George Todt)

"As I approve of a youth that has something of the old man in him, so I am no less pleased with an old man that has something of the youth. He that follows this rule may be old in body, but can never be so in mind."—Cicero.

What are California Young Republicans really like?

One hears many stories. Some seem fanciful, based on rumors. Others appear to be on the beam.

One of the best ways to learn the facts is to go to the scene of action and observe. Stop, look, and listen. I hid me over to the Young Republicans annual State convention recently in the Statler-Hilton.

What I found out at firsthand was heartening indeed. These kids are for real. In many ways they put their elders to shame when it comes to dedication to fundamental party principles, moral high mindedness, and ability to put out the work. They are business-like, attentive to duty, plain spoken and intelligent.

In the course of my rounds, I talked with many outstanding Young Republicans. Included among them were Virginia "Ginger" Savell, Sherman Wagenseller, Sandy Quinn, Pete Ashen, Betty Blake, Clifford Anderson, Jimmy Weir, Charles Wilding, Al Livingston, Steve Fryer, Nancy Root, Dick White, John Etherton and Alan Nichols—just to recall a few.

I asked many questions and found that they knew the answers I sought. They were not afraid to speak out on the important issues of the day, either. The rather typical timidity of the modern businessman to sound off on vital political issues was not to be found in this particular gathering.

Some of the issues on which the Young Republicans took a strong, determined position included national defense, narcotics, welfare abuses, and increased spending by Gov. Edmund G. Brown. They also expressed themselves as strictly against the action of a local union's leaders in dropping two men from the union for supporting a legitimate political issue which was before the California voters in the last general election.

Of Betty Blake, treasurer and past social chairman of the Wilshire Club, I asked how much of the Young Republicans' activity was social and how much the down-to-earth business of politics.

"We do have a certain amount of social activity to bring us together each month," she told me. "But it is really secondary to our interest in good government. That is the actual motivating force behind our organization. We are in this work to do something worthwhile for our country through the right kind of political action. There's very little nonsense in this group. Look around you and see."

This was true. As I looked about the various groups in their caucusing and meetings I was impressed by their moderation, good manners, and taste. There was no rowdiness, boisterousness, or sophomoric behavior going on anywhere that I saw. Good humor and pleasant fun, of course—but everybody seemed to stick to business.

One of my biggest thrills came when, attending the College Federation caucus, we heard Pete Ashen, who later was elected Young Republican national committeeman, answer a hot question put to him (at my instigation) by a likeable young Sigma Chi from USC named Steve Fryer. It was on

the loyalty oath contained in the National Education Act for university students.

"As one boy who has had the privilege of serving our country twice in war," Pete said, in simple, forthright honesty, "I can only say that I consider it an honor for me to sign any statement of loyalty to the American Republic. What's there to be ashamed of in doing so?"

[From the San Fernando Valley Times, Feb. 20, 1960]

YOUNG GOP'ERS PLATFORM STRONG

(By George Todt)

"Cherchez la femme." (Find the woman.)—Dumas, Les Mohicans de Paris.

In the person of Mrs. Fred H. Savell, Jr., La Canada, the California Republicans, found the right woman for the right job—so they gave her a rousing expression of confidence when she was elected president of the organization. Her election took place at the young GOP'ers recent annual convention.

Virginia, an attractive young lady whose Titian-colored tresses earn her the sobriquet of "Ginger," has mettle and spirit to correspond to the nickname. She is expected to spark Young Republicans' activities in this important election year.

Asked about her plans, she said:

"My first objective is to bolster our membership, which dropped considerably after the 1956 presidential election campaign. Our numbers are in the vicinity of 7,500 today, and we aim at a minimum of 10,000 by the end of 1960.

"Next priority will be closest possible liaison with the GOP Legislative Campaign Committee in special target areas, such as assembly districts where there is a real chance to pick up seats. A survey too is underway.

"It is my desire to tie the Young Republicans in closer with the senior members of the party. I hope the elder leaders will see fit to bring the younger people into positions of leadership and responsibility at a faster rate.

"We cannot compete with powerful organizations such as COPE (AFL-CIO Committee on Political Education), and the ADA (Americans for Democratic Action) unless we have an enthusiastic mass movement of young people.

"It seems to me that the party can afford to place more confidence in its young people—those with good judgment that know how to work under pressure. Our YR's consider Vice President RICHARD NIXON an ideal example of what is meant here. Too many older men fold up in times of stress.

"I'm very proud of our YR's for another important reason: Their moral standards are high and they conduct themselves accordingly. They believe in the right kind of conservatism. They want the Government to keep hands off free enterprise as much as possible. And they have taken a tremendously strong stand against the evils of the foul narcotics business. Eventually I believe they will cause effective action to be taken by the present Governor in this respect. Incidentally, we see eye-to-eye with Assemblyman Lou Cusanovich, of the San Fernando Valley's 64th assembly district on this vital issue to our young people. We demand stiffer penalties for 'pushers.' We think the Governor should call a special session of the legislature to deal with the problem.

"I wish to emphasize that our most important job is to get down into the assembly districts to wage a successful campaign this time. We all ought to realize that a vote for the assemblyman amounts to a vote for the top of the ticket also.

"In the past 'A vote for Ike' didn't necessarily mean a similar ballot for the rest of the team."

Washington and the Guard

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues an editorial which appeared in the Tampa (Fla.) Tribune on February 22.

Believing that a maximum strength should be retained in the National Guard, I was sufficiently impressed with this editorial that I am including it in the CONGRESSIONAL RECORD, in that I believe it should be called to the attention of all Members of the House. Support of this type from the press certainly gives strong encouragement to the officers and enlisted men of the guard, who, in many instances, make substantial sacrifices of time and work in order to remain members.

The editorial follows:

WASHINGTON AND THE GUARD

Two forces which helped form and sustain the United States merge today in a single observance. This is the anniversary of the birth of George Washington. It also is National Guard Muster Day. The two events have a definite relationship.

As a citizen-soldier Washington led units of the Nation's first National Guard in the battle for independence. He certainly would approve of the spirit of the modern National Guard, an ever-ready force to be used in local or national emergencies.

Today's guard has its roots deep in Washington's era. The oldest guard unit in the continental United States is the 182d Infantry of Massachusetts, originally organized as the Middlesex County militia regiment in 1636. Known as the Old North regiment, it responded to the call at Lexington and Concord where the American tradition of citizen-soldier "Minutemen" was born.

But today's guard can trace its heritage back even further than Washington and the Revolutionary War. The 295th Infantry of Puerto Rico dates back to the militia organized there in 1510 under the command of Juan Ponce de Leon.

General Washington depended heavily upon his colonial citizen-soldiers to carry on the battle against the Crown. Militias raised by the colonies for local and self-protection were formally organized into the overall defense force of the country in 1775 by the committee of safety of the Second Continental Congress. They provided approximately 165,000 of the 396,000 troops organized under General Washington's command.

There is little physical resemblance between the guard organization of Washington's day and the modern, well-equipped fighting force which exists today under this designation. But one essential similarity remains: both groups represent volunteer citizen-soldiers and demonstrate that our strength stems basically from nonprofessionals who prepare themselves to take up arms to defend the principles of democratic freedom.

Washington, himself, was an excellent example of a citizen-soldier. He had no formal military training except for limited service with the forces of General Braddock in the French and Indian War. He is not remembered so much for his ability in the field, but

for his determination, courage, character, resourcefulness and energy. As a tactician, he did not rank high. Thomas Jefferson records that Washington made many mistakes. But transcending these errors was an awareness of purpose and native wisdom which won a final and permanent victory for the colonies.

It is fitting, then, that today we honor both the memory of George Washington and the spirit of the National Guard. Together they represent extremely important factors in our way of life and as long as they endure no man or nation can charge the United States with an aggressive military spirit toward other lands.

The citizen-soldier concept is one of defense as illustrated in that old colonial banner which featured the coiled rattlesnake and the legend, "Don't tread on me." It is demonstrated by the fact that our civilian Government is by law superior to our military organizations and that only rarely in our history have we elected military men to the White House.

Washington lives today at a significant symbol and the National Guard reflects a citizen's love of freedom and determination to preserve it.

Prize-Winning Editorial

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. KEFAUVER. Mr. President, one of the most inspiring editorials I have had the privilege of reading was published in the Johnson City Press-Chronicle last July 5 and recently was awarded the George Washington Honor Medal Award. The award was sponsored by the Freedoms Foundation of Valley Forge, Pa.

This outstanding editorial was written by Mr. George W. Kelly, editor of the Johnson City (Tenn.) Press-Chronicle editorial page.

The State of Tennessee is justly famous for its excellent newspapers, both daily and weekly, and its editors for generations have enhanced the newspaper profession with their dynamic editorial opinions.

In winning this national award, Mr. Kelly and Publisher Carl A. Jones, Jr., of the Johnson City (Tenn.) Press-Chronicle once again have brought well-deserved honors to all newspapers in the State and indeed to the press of the entire free world.

Other honors were won by Tennesseans in the contest. Martha Ann Shoun of Johnson City won a George Washington Honor Medal Award for a public address entitled "I Speak for Democracy." The Patton-Crosswhite VFW Post 6975 of Bristol and the Andrew Johnson VFW Post 1990 of Greeneville won medals in the community programs category.

Tennessee is justly proud of their achievements.

I ask unanimous consent that Mr. Kelly's prize-winning editorial entitled, "The Pursuit of Liberty—In So Many Ways, Man Is Still a Slave," be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PURSUIT OF LIBERTY—IN SO MANY WAYS MAN IS STILL A SLAVE

What is independence?

We say it is freedom—the birthright of every American by virtue of the Declaration of 1776.

But what is freedom?

Is it something that can be "declared" into being?

A man can declare, as one did, "I am the master of my fate. I am the captain of my soul."

But is he? Can a person ever be that free?

The Declaration of 1776 proclaimed our independence of Great Britain. Then we fought a war to make it so.

Thomas Jefferson wrote into the Declaration that every man is entitled to life, liberty, and the pursuit of happiness. We wish he had used pursuit as a prefix for liberty too—the pursuit of liberty.

For liberty, freedom, independence—call it what you will—is something we must constantly pursue. If we do not, it will go far from us and we may lose it entirely.

We think we have broadened the concept of freedom much since 1776, and we have. But in many ways we are still slaves. True, no tyrant looms over us threatening to encase our ankles in chains. Due process of law protects us from that. But no law has been written, nor can there be, to protect us from the tyranny of our own mental processes or the despotism of our own souls. Many of us lie shackled in prisons of our own making, too weak and too afraid to declare our freedom.

Let us in this independence season of 1959 make a new declaration. Let us resolve to pursue:

Freedom from selfishness. Let us try to avoid the soul corrosion that comes from serving self alone. Let us not become a slave of our own greed.

Freedom from envy. Let us not despise our neighbor for his success. Let us not become a prisoner of little thoughts and mean deeds.

Freedom from prejudice. Let us accord every man his due. Let us judge him for himself alone, not by his color or class or station in life. Let us never yield to the tyranny of intolerance.

Freedom from cynicism. Let us not sit in the scorners' seat. Let us try to develop a belief in something. If we lack faith in ourselves, may we not try to inflict our misery upon others.

Freedom from ingratitude. Let us never be guilty of failing to say thank you for any service, any favor a fellow being may render. Most of all, let us never be guilty of failing to say thank you to the Giver of all Gifts. The most miserable prison of all is that which houses the ingrate.

The pursuit of liberty.

The pursuit of independence.

The pursuit of freedom.

It is a race that must be run. Both as a Nation, and as individuals, we must run it if we are even to approach the full meaning of the words.

The Women of the White House

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. RANDOLPH. Mr. President, yesterday there was a presidential primary contest in New Hampshire. Others soon will follow, and we are already deeply involved in the Nation's quad-

rennial game of speculating on the next occupant of the White House. There is, naturally, an attendant interest in the person who will be the next First Lady of the land.

An appropriate and timely address on the subject of the wives of past Presidents was delivered yesterday to the young women of Greenbrier College for Women in Lewisburg, W. Va., by the noted Southern writer and lecturer, Frederick Taylor Wilson, Mr. Wilson, author of "Pen Pictures of Presidents" and "Our Constitution and Its Makers," among other works, is a highly informed and well qualified speaker on the subject of the lives of our Presidents and their helpful wives. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from his most recent excellent address.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE WOMEN OF THE WHITE HOUSE

Although the female population of the Nation is greater than that of the male, there have been 71 sons born to Presidents and only 47 daughters. Several of the daughters died early in life; among them were two of Jefferson's five daughters and both of McKinley's.

There have been 34 wives of our 33 Presidents. These 34 were born in 16 different States. Virginia, Ohio, and New York each was the birthplace of six future wives of Presidents. Nine States have had one daughter to become the wife of a President. One President's wife (Mrs. John Quincy Adams) was born in London.

Jefferson, Jackson, and Van Buren were widowers when President and none of them were remarried. One President, Buchanan, of Pennsylvania, never married. Two Presidents, Tyler, of Virginia, and Wilson, of New Jersey, lost their wives by death and remarried while in the White House. The second wife of Tyler, Miss Julia Gardner, of New York, was 30 years his junior. Like Tyler's first wife, she bore him seven children, the younger of these was Mrs. William Ellis, of Shawsville, Va., who died in 1947. The second wife of Wilson, a Washington widow (Mrs. Galt), still lives (87). The best known of the early wives of the Presidents was Dolly Madison, a native of North Carolina, who served 8 years as hostess for Jefferson, a widower under whom her diminutive husband served as Secretary of State, and for 8 years as the wife of President Madison.

Abigail Adams was the wise influence behind her husband, John Adams, and also her brilliant son, John Quincy Adams, the only woman who was the wife of one President and the mother of another one. She died, however, before her son became President, the only son of a President yet to be President. It is tragically true that the wife of William Henry Harrison never saw her husband alive or dead as President. He died 30 days after his inauguration. She had remained in Ohio. She lived 23 years longer, dying at the age of 89, the oldest at death of any ex-President's wife thus far. Her grandson, Benjamin Harrison, became President (1889) 25 years after her death (1864). Mrs. Polk, who survived her husband longer (42 years) than the wife of any other President, died at 88 years of age. She served as secretary to her husband.

The wife of Pierce was perhaps the unhappiest wife of a President. She had lost all her children before he became President, and was an invalid.

The wife of Hayes (1877-81), like her husband, was a first honor college graduate. She was the first President's wife who was a college-bred woman. Grover Cleveland, a bachelor (48) married Frances Folsom (22)

who had once been his ward in Buffalo. After his death she remarried, the only President's widow so to do.

The wives of John Adams and Taft were the only wives of Presidents to have sons become U.S. Senators. The wives of John Adams, John Quincy Adams, W. H. Harrison, Tyler, and F. D. Roosevelt all had sons who served in Congress.

The two daughters of Jefferson who grew to maturity were the wives of two Virginia Congressmen when their father was President. The daughter of Theodore Roosevelt (Alice) was the wife of Longworth, an Ohio Congressman and onetime Speaker of the House, when he was President. One daughter of Wilson (Eleanor) married a member of his Cabinet, William G. McAdoo.

No President's son has been a minister, although the son of Wilson's daughter Jessie is now a prominent Episcopal clergyman (F. B. Sayers, Jr.).

The only two wives of Presidents who had university degrees were the wives of Coolidge (University of Vermont) and Hoover (Leland Stanford University).

Garfield, Hoover, and Truman were all in school with their future wife.

Fillmore and Johnson, accidental Presidents, both of whom once worked as tailors, were taught by their future wives.

Mrs. Franklin D. Roosevelt has been the most active publicly of any President's wife.

The only daughter of Taft, Mrs. Helen Manning, is the most scholarly of all the daughters of a President. She has served as dean and as acting president of Bryn Mawr College. Thus far no President's daughter has held high political position.

At this time there are only three living wives of former Presidents—Mrs. Wilson, Mrs. Franklin Roosevelt, and Mrs. Truman.

Two of Cleveland's and Theodore Roosevelt's daughters and one each of Taft, Wilson, and Truman are the only daughters of former Presidents now living.

It is difficult to imagine that a daughter of Tyler (1841-45) died 102 years after her father left the White House.

Loyalty Oaths

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 8, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of editorials which comment on the effort to eliminate the disclaimer affidavit from the National Defense Education Act of 1958. These editorials reflect but a part of the widespread support which S. 2929, the Kennedy-Clark-Javits bill, has received in the Nation's press.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston Herald, Oct. 4, 1959]

LOYALTY OATHS

We are glad Harvard has now joined the long list of American colleges that balk at making their students take a special loyalty oath to qualify for Government loans.

Under the National Defense Education Act, as it now stands, applicants for student loans must not only take a special oath of allegiance to the Government but also disclaim by affidavit belief in or support for groups advocating overthrow of the Government.

Most U.S. students are both loyal to their own Government and totally uninterested in conspiracies to overthrow it. Why should they be subjected to the humiliation of swearing to an allegiance which in other citizens is taken for granted? Why should students, of all people, be bound by these extra ties of thought control?

So many colleges and college organizations have protested against this discrimination, that Senator KENNEDY of Massachusetts introduced a bill to eliminate the offending requirements. Senator GOLDWATER offered a substitute which would simply make it unlawful to accept a Federal scholarship if one were involved with Communist organizations. But the Senate, in its peculiar wisdom, turned both proposals down.

We do not understand it.

Senator KENNEDY's statement of the case is still unchallengeable:

"I believe there is no reason why college and university students should be required to take this oath when the beneficiaries of other forms of assistance on the part of the Federal Government are not subject to such a requirement. Certainly the Smith Act applies to all Americans. Why should we not make a similar requirement of the farmers, the newspaper publishers, and those who receive mortgage assistance in connection with their homes?"

There was no answer to this challenge. Nor could there be. But since Congress has elected to be stubborn, the colleges should show themselves stubborn, too. They should withdraw from the aid program and wait for wiser counsels to prevail in Washington.

[From the Boston Herald, Oct. 7, 1959]

OATHS AND OATHS

Since our editorial on loyalty oaths appeared Sunday we have received several letters like the one in today's mailbag. Apparently we did not make our position clear. We'll try again.

"Why should not students of our colleges adhere to loyalty to our Government?" our correspondent asks.

Obviously they should. All citizens should be loyal to their Government. All citizens should be willing to swear to that allegiance under appropriate circumstances.

The bad thing about the oath requirements in the National Defense Education Act is that they single out one group of citizens for special treatment. They require students who receive Federal aid to swear to their allegiance, although farmers, and businessmen, and home purchasers, who are also assisted by Federal funds, are placed under no such obligations. They imply that students are less trustworthy and less loyal than other citizens, which is quite unfair.

"Would you entertain in your home anyone whom you knew would destroy your home?" the letter continues.

Again, the question answers itself. But, if we invited into our home a person whom we had no reason to suspect of destructive tendencies, we certainly would not insult him by asking him to swear not to blow us up. Nor would we expect such an oath, if it were taken, to add to our security.

The letterwriter is opposed to giving Federal scholarships to Communist infiltrators. We heartily agree. It is important to keep secret Communists out of education and all other fields of endeavor. But we don't think loyalty oaths are an effective way to do it. Communists are not afraid of false oaths.

The best that can be hoped from the oaths required by the Education Act is that they will screen out certain confused but conscientious young people who have played about the fringes of the leftist ideologies and are unwilling to lie about it. And it is far from clear that this will be a gain.

One of the prime purposes of democratic education is to clarify political thinking and show the waverers that communism and other totalitarian ideologies are wrong. Can this purpose be achieved by confining educational opportunities to those who have already seen the light?

More than enough has already been said on this subject. American education will not collapse if the oath requirements remain in force. But we agree with Senator KENNEDY that Congress acted in haste when it established them, and that it should be seeking now for more effective ways to promote loyalty in our colleges.

[From the Pittsfield (Mass.) Berkshire Eagle, Oct. 8, 1959]

HARVARD IS RED—WITH INDIGNATION

Diehard McCarthyites who like to picture Harvard as a hotbed of dangerous doctrines no doubt now feel that their worst suspicions have been confirmed. Because it objects to the loyalty oath requirement of the National Defense Education Act, the university has decided to forego some \$385,000 in student loans allocated to Harvard by the Federal Government.

The fact is, however, that Harvard is in excellent company on this issue. More than a dozen major liberal arts colleges—including Amherst, Bennington, Princeton, and Swarthmore—have already refused to participate in the Federal program on the same grounds. At Williams College, the faculty has gone solidly on record for repeal of the student loyalty oath provision. And lest this be deemed a symptom of radicalism, it might be added that this provision has also been vigorously opposed at congressional hearings by the Reverend Michael P. Walsh, president of Boston College.

The principal reason for this opposition is that demanding loyalty affidavits from college loan recipients is blatantly discriminatory when similar demands are not made of farmers, businessmen, homebuyers and others who receive Federal funds. To establish students as a special category by requiring them to swear to an allegiance that others take for granted is an indignity that smacks altogether too much of the sort of anti-intellectualism of the police state.

As a practical matter, moreover, exacting a loyalty oath in exchange for scholarship aid accomplishes nothing whatsoever, because the sort of persons this is designed to exclude from the program are precisely the sort who have no compunctions about taking a false oath. The net effect is not to bar Communists, but rather to bar liberals who are conscientious enough to object to such requirements in principle.

At the last session of Congress, a bill to strike the loyalty oath from the National Defense Education Act was sponsored by Senator JOHN KENNEDY, whose credentials as an anti-Communist would seem to be more than adequate, but after lengthy debate the Senate "chickened out" by sending the bill back to committee. Although a majority of the Senators doubtless shared Mr. KENNEDY's conviction that the oath is both unwise and pointless, they were afraid to go on record against anything with an anti-Communist label.

This illustrates once again the extreme difficulty of repealing hasty and foolish legislation in the internal security field once it has been enacted. The fact that the high purposes of the Defense Education Act are being largely impaired by the controversy over its loyalty provisions may help to teach Congress the high price of yielding to demagogic temptation.

[From the Worcester (Mass.) Republican, Nov. 19, 1959]

WHY THEY OPPOSE STUDENT OATHS

Objections to the loyalty affidavit feature of the Federal Government's student loan

program have reached the point where Harvard and Yale no longer will participate.

The affidavit requires that before a student obtains a loan he must swear that he does not believe in, or belong to any organization that advocates the overthrow of the U.S. Government by force or violence or any illegal or unconstitutional means.

The educators are rightly disturbed about this provision, not because they believe in communism or anarchy, but because they see in the requirement a threat to long-established principles.

The idea that any citizen should be forced to subscribe to loyalty tests, as defined and administered by the Government, is repugnant to our democratic traditions and contrary to the basic principles of academic freedom.

It makes no difference whether the loyalty test happens to embody an idea which good Americans would freely endorse. The unobjectionable test today could lead tomorrow to demands for oaths of a far more restrictive and oppressive nature.

Colleges and universities, in company with private citizens, have a duty to resist any trend whereby the Government assumes to set itself up as the arbiter of individual beliefs.

Although to many persons it may appear that Harvard and Yale are making mountains out of molehills in the current case, the principle behind their stand is an important one and well worth defending.

[From the Woburn (Mass.) Independent, Nov. 19, 1959]

CLASSIC DISTINCTION

Harvard University's President Nathan M. Pusey has put an end—for the present—to participation by Harvard undergraduates in the benefits of National Defense Educational Act of 1958.

By that act, the colleges and universities of the country could distribute Federal moneys to needy or worthy students so that they could pay their tuition and continue their education.

In the act is the requirement that the loan recipient, in order to get the money, must disclaim belief and membership in and support for any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods.

Pusey and a long list of leaders of the Nation's great universities and schools have opposed the affidavit of disbelief as an affront to freedom of belief and conscience.

These educators do not propose to subsidize the education of subversives.

When the student gets the loan he makes the normal student oath of allegiance to the United States and to uphold the Constitution.

The university men are against this misguided addition that touches a man's conscience and belief.

Senator JOHN KENNEDY tried to get the offensive section deleted from the act.

President Pusey is all for the oath of allegiance.

But he will have no part with a Government's attempt to make a man's personal belief the grounds upon which he will get an education or be deprived of one.

This may seem like a lot of teapot tempest, but if we do not keep a sharp eye on Federal do-gooders, we may establish precedents that seem to have the aroma of patriotism but may wind up, in the passage of years, to have the nauseous odor of discrimination, prejudice, and despotism.

We will defend our country and that for which it stands.

But we will never allow laws to tell us how we must think, or penalize us for our beliefs.

What Is a Liberal?—An Independent Weekly Editor in East Texas States His Views

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. YARBOROUGH. Mr. President, one of the favorite political and journalistic pastimes these days seems to be to try to define just what is a liberal. In recent weeks I have read articles and columns not only trying to ascertain just what is a liberal and who is a liberal, but also discussing various types of liberals.

For example, one writer had the opinion that there are basically two kinds of liberals—the winged liberal and the horned liberal. After all these articles, there still seems to be considerable question of exactly how one defines a liberal.

An interesting philosophic discussion of this question was written by Latane Temple in an independent "deep" east Texas weekly newspaper, the Angelina County Free Press, published at Diboll, Tex. I ask unanimous consent to have printed in the Appendix of the RECORD the front page editorial from the Angelina County Free Press of February 3, 1960, headed: "What Is a Liberal?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS A LIBERAL?

(By Latane Temple)

The current vogue among many big metropolitan newspapers is to scorn the liberal. Whenever you read the term, it is with some scathing inference.

This tendency frankly disturbs us. We grew up thinking that liberalism was in the highest American tradition. We always thought that the signers of the Declaration of Independence were liberals as opposed to the Tories who adhered to George III. We thought that Thomas Jefferson, in outlining the freedom and equality of mankind, was a liberal. We have believed that Andrew Jackson was a liberal when he fought the New York banking interests who sought to run the U.S. Treasury for their personal profit.

It was the liberals, we thought, who saved our banks and farms and homes (and perhaps a few big newspapers) back during the great depression.

Frankly, we have always felt that we were a liberal, although admitting such in the face of such formidable stigma may be tantamount to social suicide among some of our best friends.

Can it be that these great papers are speaking actually of reactionaries who call themselves liberals? Reactionaries who want to revert from our traditional balance of democratic forces to a more totalitarian form? Reactionary forces which choose to rule by appeal to extremists views, reactionaries who seek power by appealing to blocks rather than to the people?

Since we are people ourselves and want the privileges and protection of the law for ourselves which has always been guaranteed in our form of government for people, we will throw our lot with the candidates and

parties who most clearly exhibit an understanding of and sympathy for these privileges and rights. We take this to be the liberal point of view.

If this term now carries stigma with it because it has been adopted by some extremists, we urge the great purveyors of the written word to retire the term of decent respect for great leaders who have borne it in honor. Otherwise, the confusion is such as to drive many unwillingly into the extremists' camp for want of a more congenial home.

Eulogy of Hon. Herbert R. O'Connor

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. BEALL. Mr. President, one of our Nation's truly great patriots, Herbert R. O'Connor, was buried on Tuesday. Mr. O'Connor was twice Governor of Maryland, as well as my predecessor in this body and it was my privilege to have him as a close, personal friend. At his funeral men and women from all stations of life joined in an inspiring testimony to his many achievements in behalf of his country and his church. The requiem mass for Senator O'Connor was celebrated in the Cathedral of Mary Our Queen, in Baltimore, and a beautiful eulogy was delivered by the Very Rev. Vincent F. Beatty, S.J. Father Beatty, who has been president of Loyola College, Baltimore, since 1955, is a man noted for his spiritual, scientific, civic, and humanitarian interests. I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

WORDS OF EULOGY DELIVERED BY FATHER BEATTY AT THE REQUIEM MASS OF THE HONORABLE HERBERT R. O'CONNOR

May it please your grace, Archbishop Keough; your excellency, Governor Tawes; honorable Members of the U.S. Senate and the House of Representatives; right reverend and very reverend monsignori; your honor, Mayor Grady; distinguished members of the bench; very reverend and reverend fathers; esteemed Knights of St. Gregory; officials of the Federal, State, and local governments; dear religious; beloved friends of Herbert O'Connor, in the ordinary events of everyday life words so often prove inadequate to convey the depth of human feeling. How utterly fragile they are today to bear the weight of love, of admiration, of genuine sorrow that floods our hearts in the presence of the death of a loved one. Realizing the weakness of speech at a time like this, Holy Mother Church wisely offers as her final eulogy to a beloved son the most holy sacrifice of the mass. It is through the mass, offered this morning by his grace, the archbishop, that Holy Mother Church bids an earthly farewell to Herbert O'Connor, in the presence of his family, his brothers, and sisters, and his many friends, as he leaves the ranks of the church militant to join the numbers of the church triumphant.

Here he lies in the splendid new Catholic cathedral dedicated to Mary our queen whose Son he had followed so well as a

devout, intelligent, and active Roman Catholic. Here he lies in this city of Baltimore that he loved and served so faithfully, in the State of Maryland that he rose to govern and to represent in the U.S. Senate. Here he lies surrounded by the members of his family to whom he was so dedicated, in the presence of a legion of friends from all walks of life whom he remembered and cherished even in the midst of public acclaim.

Herbert O'Connor was a man of God with a faith inherited from saintly parents. He was endowed by nature with a quick and keen intellect, and he lived his faith and exercised his intellect, united with God his Creator. God to him was supremely real, ever close at hand. He was a man who walked with all faith and simplicity in the presence of God amid the demanding duties of public office.

On Ash Wednesday he was at the altar rail. He received ashes on his brow and heard from the priest's lips and the ecclesiastical and familiar words: "Remember, man, that thou art dust, and unto dust thou shalt return." Ash Wednesday was not the first time that he had heard this reminder of mortality, but it was to be the last, and I know that he lived ever in the memory that earthly life is an exile, that our true home is heaven, and that we must be prepared to leave exile for home and the joys of earth for the peace of heaven. For many years in many churches on the first Friday of each month, the Senator, with Mrs. O'Connor, received his Lord in Holy Communion, but on the first Friday of March 1960, his Lord received him into an eternal companionship so beautiful, "that the eye has not seen nor the ear heard nor hath it entered into the mind of man to imagine."

To Herbert O'Connor, his wife and family were inseparably joined in a bond of love. In the spirit of St. Joseph, the model of all husbands and fathers, he lived for his family. They were his joy and his crown. The hours he enjoyed most were not those when he was viewed by a nationwide audience on a television screen, but those when he could be with Mrs. O'Connor and the children stimulating attractive conversation around his own dinner table. One by one he gave up his children in marriage—first Herb, then Gene, Jimmy, and Pat—and in giving he received. How he cherished the tender love of his grandchildren and the joy of seeing his own ideals and hopes in the families of his children. And one of his last family duties was to stand as the best man in the marriage ceremony of his youngest son, Bob, just 11 days ago. Truly, no man loved his family more than Herbert O'Connor.

But he was not satisfied to be a man of God and nothing more. He was not content to return home after a day of trials and hearings, appointments and disappointments. His vision was broader, his love deeper, his dedication more perfect. He saw that other families than his own needed help, that governments can be no better than governors, and he gave himself to public life to serve the human family by taking an active, laborious, often heartbreaking and wearying part in public service. For him the people never receded into vague shadows—they were always real, they had names, they had faces. He was sensitive to the turmoils of the human heart and delicate and just in his opinions and decisions in matters of great moment and in those of lesser consequence. He loved the human family, and because he loved them, he served them; and because he loved them deeply, he served them well.

If we turn our thoughts from Senator O'Connor back to ourselves, the question that arises in our minds quite naturally is: Why must a man like this die? What is the meaning of death? For the Christian, death is something we owe to God. It is a debt that man must pay for the earthly life, and

it is part of the cost of eternal life. Without the grief of death, there can be no perfect union with God—the only complete fulfillment of the incessant demands of restless human nature. Death, then, is meaningful, even though sorrowful and intrusive. It brings forth tears to our eyes for the same reason that it brought forth tears to the eyes of Christ Himself at the death of Lazarus—because loved ones are separated. Although we weep at death, "We do not weep," in the words of St. Paul, "as those who have no hope." We hope for and believe in the resurrection of the dead and the communion of saints. We believe that if we die in Christ we shall arise in Christ. Our thoughts, then, cannot be of death alone but they must be of life, too—of eternal life.

Because of the love with which the O'Connor family have received me into their home over the years and because they have shared with me the joys of so many of their family celebrations, I feel that I am not usurping a sacred prerogative when I express their gratitude to you for your presence at these ceremonies this morning. I know how thoughtfully kind so many of you have been during these hours of tribulation and how appreciative are the relatives of Herbert O'Connor for these kindnesses. In their name, too, I publicly voice their gratitude to His Grace Archbishop Keough for celebrating the Mass of Requiem and for officiating at the last rites this morning for Herbert R. O'Connor.

May eternal light shine upon him, and may he enjoy the blessed companionship of God forever.

Father James J. O'Brien, Educational Leader, Pastor, Chaplain, and Servant of Mankind, Dies at Austin

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. YARBOROUGH. Mr. President, an educator and pastor known and loved by thousands of Texans—Rev. Father James J. O'Brien—died recently in Austin at the age of 79. He had served on the faculty of St. Edward's University for 30 years and was vice president of the institution from 1934 to 1937. While I served as district judge at Austin, he was a pastor and teacher. Father O'Brien was my friend.

In addition to his service as a pastor, a university administrator, and a teacher, he also was chaplain of the Austin Chapter of the Reserve Officers Association. It was my privilege to serve with him in the Austin Reserve officers unit.

Mr. President, the Austin Chapter, Reserve Officers Association, passed a resolution in February honoring Father O'Brien. I ask unanimous consent to have it printed in the Appendix of the Record.

I further ask unanimous consent to have printed in the Appendix of the Record an article from the Austin Statesman of January 25, 1960, entitled "Reverend O'Brien Dead at 79," and an article from the Austin (Tex.) American entitled "Reverend O'Brien Rites Slated."

There being no objection, the resolution and articles were ordered to be printed in the Record, as follows:

RESOLUTION HONORING FATHER JAMES O'BRIEN

"Whereas the late Rev. James J. O'Brien, CSC, whose death occurred this past month, was a long and dedicated member of the Reserve component of our Nation's Armed Forces, and while serving as pastor of St. Mary's parish in Austin and during his tenure as president of St. Edward's University in Austin and later as chaplain at that school, served as chaplain of the Austin chapter of the Reserve Officers Association and participated in both local and State activities of the Reserve Officers Association, all as a result of his interest in his Nation's welfare: Be it

"Resolved, That the Sunday during National Defense Week of 1960 be dedicated by the Austin chapter in honor of the late Reverend Father O'Brien; and be it further

"Resolved, That Senator RALPH YARBOROUGH of the State of Texas, also a member of this chapter, be requested to make an appropriate entry in the CONGRESSIONAL RECORD noting Father O'Brien's death and his past service not only to his church but to his Nation as a member of its Reserve Forces. Few clergymen have been known and loved as was this outstanding Reserve officer, not only in the State of Texas, but throughout the Nation."

Unanimously adopted this 8th day of February 1960, A.D., by the Austin chapter, Reserve Officers Association of the United States.

RUSSELL E. FORESTER,
Commander U.S. Naval Reserve, President, Austin Chapter.

[From the Austin Statesman, Jan. 25, 1960]
REVEREND O'BRIEN DEAD AT 79

Father James J. O'Brien, C.S.C., longtime member of the St. Edward's University faculty, died Monday, January 25, 1960, at 1:30 a.m. at Seton Hospital.

A wake for Father O'Brien will begin at 9 a.m., Tuesday, in the Main Building Parlor at St. Edward's and will be continued through Tuesday night.

Most Rev. Louis J. Reicher, bishop of Austin, will celebrate pontifical requiem mass Wednesday at 10 a.m. at St. Mary's Cathedral. Pallbearers will be priests from Austin parishes.

Burial will be at Notre Dame, Ind., in the Holy Cross Community Cemetery.

The arrangements are under direction of Wilke-Clay Funeral Home.

Father O'Brien was vice president of St. Edward's from 1934 to 1937 and prior to that he had served as professor of history. In recent years, he was chaplain of the university. He once held the pastorate of St. Mary's Church in Austin and has also been president of the Deans of Men of Texas Colleges and Universities.

Always a man of great energy and strong personality, Father O'Brien had a host of friends both in and out of the Catholic Church. Having served at St. Edward's for a total of 30 years, 15 in one period from 1922 to 1937, and since 1946, he counted among his friends thousands of former students of the university.

Surviving relatives are nephews and nieces in Detroit and St. Louis, Mo.

Another activity that brought him many friends and acquaintances was long service as a chaplain in the Officers Reserve Corps, in which he held the rank of major for many years, after having served as a first lieutenant and captain during World War I. His last appointment was as a lieutenant colonel in November, 1952. He had been national vice president of the Military Chaplains Association of the United States and chaplain of the Reserve Officers Association.

Father O'Brien was born March 17, 1881, in Creve, Ireland. He received the habit of the Congregation of Holy Cross on July 3, 1909, and made his perpetual vows on July 4, 1911. He was ordained to the priesthood on June 26, 1914.

While Father O'Brien was serving as pastor of St. Mary's Church, Austin, in 1939, he observed the silver anniversary of his ordination. He received messages of congratulation from Pope Pius XII, Archbishop Arthur J. Drossaerts of San Antonio, and from the following Texas bishops: Christopher E. Byrne of Galveston; Joseph P. Lynch, Dallas; E. B. Ledvina, Corpus Christi; and Robert E. Lucey, now archbishop of San Antonio but then bishop of Amarillo.

While he was pastor of St. Mary's, Father O'Brien was active in a campaign to clean up the newstands of the city.

During his pastorate at St. Mary's he was also chaplain of Capital City Council, 1017, Knights of Columbus.

Father O'Brien was educated at the University of Notre Dame, Catholic University of America, and Columbia University. He held the degrees of Litt. B.S.T.B., and LL. D. The last named was conferred on him by St. Edward's University at the close of his term as vice president of the school.

[From the Austin American, Jan. 25, 1960]

REVEREND O'BRIEN RITES SLATED

Austin friends will pay final respects to one of the Southwest's best known and most popular clergymen in funeral services to be held Wednesday for the Reverend James J. O'Brien, C.S.C., 79, former vice president of St. Edward's University, who died early Monday morning in Seton Hospital.

In historic St. Mary's Cathedral, where he once served as pastor, a pontifical requiem mass will be sung Wednesday at 10:30 a.m. by the Most Reverend Louis J. Reicher, bishop of Austin. The eulogy will be given by the Reverend Joseph McAllister, C.S.C., former rector of the cathedral. Music will be sung by the Vincent Hall Choir of St. Edward's University under the direction of Brother Romard Barthel, C.S.C.

Austin priests will serve as pallbearers. They are the Reverend Donald Draine, C.S.C.; the Reverend Joseph McMahon, C.S.P.; the Reverend Herbert Hooks, O.M.I.; the Reverend Joseph Kmiecik, C.S.C.; and the Reverend Joseph Houser, C.S.C. Brother Raymond Fleck, C.S.C., president of St. Edward's University, also will serve as a pallbearer.

A wake, open to the public, will be held in the parlor of the main building of St. Edward's University, beginning Tuesday at 9 a.m. and continuing for 24 hours. The body will be sent by the Cook Funeral Home to Notre Dame, Ind., for burial in the Holy Cross Community Cemetery. Father O'Brien served one term as a pastor of St. Patrick's Church in South Bend, Ind.

Rosary services for Father O'Brien will be recited at 8 p.m., Tuesday, in the parlor of the Main Building at St. Edward's. The Knights of Columbus will be in charge.

At his death Father O'Brien was chaplain of St. Edward's University, where he was long associated. He had been in failing health for 6 months but had been confined to the hospital only 1 month. He also was a lieutenant colonel in the Retired Chaplain's Reserve, U.S. Army.

Father O'Brien was associated with St. Edward's University for a total of 30 years in two periods—from 1922 to 1937 and from 1946 to 1960. He served as vice president of that university from 1934 to 1937, and prior to that was professor of history. He served as pastor of St. Mary's Church here from 1937 to 1943.

Surviving relatives are nephews and nieces in Detroit and St. Louis, Mo.

Another activity which brought him many friends and acquaintances was his long service as a chaplain in the Officers Reserve

Corps, in which he held the rank of major. He had previously served as a first lieutenant and captain during World War I.

Father O'Brien was born March 17, 1881, in Creve, Ireland. He received the habit of the Congregation of Holy Cross on July 3, 1909, and made his perpetual vows on July 4, 1911. He was ordained to the priesthood on June 26, 1914.

Bernard Hillenbrand Timely Call for United Efforts of County Officials and Wildlife and Conservation Leaders To Save Natural Beauty of America

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. YARBOROUGH. Mr. President, the National Association of County Officials has long been recognized as one which reflects the forward-looking and aggressive thinking of local governmental leadership in America. The county officials throughout the Nation are close to the problems confronting our units of local government dealing directly with the people, and they therefore are keenly aware of the needs and interests of the American public.

On March 8, 1960, Mr. Bernard F. Hillenbrand, the executive director of the National Association of County Officials, presented a forceful and thought-provoking message to the 25th North American Wildlife and Natural Resources Conference meeting at Dallas, Tex. In his message Mr. Hillenbrand stressed the need for prompt and intelligent action in conserving the rapidly vanishing natural beauty of America. I urge every Senator to read his message.

At this time I wish to commend Mr. Hillenbrand and the National Association of County Officials for their support of conservation programs. This is a timely message. The need for action is urgent. The bills to create Padre Island, Cape Cod, and the Oregon Dunes National Seashore Areas are in keeping with Mr. Hillenbrand's aims.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the Dallas speech of Mr. Bernard F. Hillenbrand entitled "America the Ugly."

AMERICA THE UGLY

(By Bernard F. Hillenbrand)

It is a sad commentary on America that the very things that have made the country great are now making it the ugliest looking nation in the world. The energy, imagination and drive of Americans that have created the greatest material benefits ever enjoyed by civilized man, have also created the neon sign, the treeless suburb and the stench of the polluted stream.

The aim of these remarks today is to enlist the support of conservationists everywhere in the cause of preserving a tiny part of the innate natural beauty of America for those poor souls who are doomed to live out their lives in the urban areas of the Nation. We are talking about 70 percent of

our population today; 85 percent of our population in the year 2000. We hope that we can get conservationists interested in supporting a specific proposal that we will make in a moment.

Problem: The problem is clear. Until now we have determined as a matter of national policy that nothing must stand in the way of building industrial might, a high standard of living and great material well being. We have been tremendously successful. Our philosophy has been something like this. We have to have jobs for our people and we must have industrial development even if the factories pour poison into the drinking water and pollute the air we breathe. People must have houses and the builders have raced into the suburbs and piled one subdivision upon another with no plan whatsoever to preserve any open space. Our civilization rests upon mass consumption and we must have billboards jammed on every highway urging that we eat more crunchies or buy more electric blankets. Trees do not pay taxes and they must be chopped down to make way for a pizza parlor.

The solution is also clear. We must now develop a new national policy that will both increase our material benefits and more important, create surroundings that are pleasant enough to allow us to enjoy these material things. Our premise is that a factory can be pleasant and inoffensive to humans; a highway that is beautiful can also be as useful as one that is not; and, suburbs can be constructed to preserve natural beauty and still make a profit for the builder.

Leadership: What is needed is immediate awareness that a plea to preserve natural beauty is not a move to stop progress. We are not against progress. We are for conservation of natural beauty.

It is possible to have natural beauty and still accomplish our other national aims. It does take action. Immediate action. We must get key areas under public control. Open spaces must be preserved now.

At the outset we would like to make it clear that while this is an urban problem it is not a municipal problem in the sense that it is going to be solved by cities. The key unit of government here is the county—or rather a partnership between city, county, and State, with the county being responsible for action.

County problem: Cities for the most part are almost completely developed and there are few open spaces to preserve. Most of the areas that we are talking about are outside the city—physically and jurisdictionally. In the typical urban area, the city is also handicapped in this problem because it does not have the broad tax base that is necessary for the initial expenditures to secure these spaces. Then, too, in the typical urban area there is not a single city but rather a welter of smaller municipalities—and it is always more difficult to get things done when you have too many cooks.

Counties, by contrast, are in a position to act. They have a long tradition of service having been formed at the earliest dates in our history. They predate most other units of government. They have political leadership and area accountability—two very important attributes in solving any governmental problem. Most of the land we are talking about—the picturesque farm, the patch of woods, the stream valley, the areas that must be preserved from ruin—are out in our county. Equally important, the county is a unit of government that serves both the city people and those in the rural or semirural areas outside the city. With few exceptions all are represented on the county governing body. Counties have an areawide tax base to draw upon for finances and have strong ties with the State legislatures.

Blueprint for action: If we have identified the key unit of government we also have a plan of action suggested by William H. Whyte, Jr., author and assistant managing editor of *Fortune*. Some day when we do have an adequate program of preserving open spaces we are going to get behind a movement to have them renamed. "Whyte Spaces" in honor of Holly Whyte. Most of you, I am sure, have read the August 17, 1959, issue of *Life* magazine in which he sets forth his plan to preserve the vanishing U.S. countryside. This is a review of that plan with some suggestions that we in county government might add.

The basic tenet of the plan is to buy conservation easements to preserve certain farm and undeveloped lands from being swallowed up by the developers' bulldozers. A county can purchase the development rights for a fair price and insure that a farmer or landowner will not be forced by economic pressure to sell to the developer. The easement is one of the oldest legal devices we have and has been used successfully to preserve undeveloped areas around airports and scenic places along highways.

It is basically fair. It compensates an owner now for the money that he might have made by selling his property to speculators. It enables the farmer to continue farming. It preserves the beauty of the area, and thus enhances the value of surrounding development. It is much less expensive than outright purchase of land and in most cases can accomplish the same purpose. It opens the way for subsequent purchase of areas for park or recreation purposes. Conservation easements do present many problems but it does appear that these can be worked out. Santa Clara County, Calif., is a pioneer in this area. Thanks to the planning director, Karl J. Belser, Santa Clara County has found the key to true urban-rural living; town and country coexisting without one destroying the other.

Purchase land: Of course, the obvious way to acquire streams, valleys, forests, and other open spaces is to purchase them. In many cases this will be the most practical solution. It must be done, however, before the price becomes too high. Imagine, for example, what it would cost today to purchase Central Park if it were not publicly owned. Much desirable land will also be donated for public purposes and provide the land for future park and recreational areas.

Note the emphasis upon either purchasing land or easements immediately. This is a far better approach than spending precious time and money on areawide studies although it is apparent that these will be needed, too. The trouble is that too often a prolonged study on open spaces results in loss of the very spaces that the study will eventually conclude should have been purchased in the first place. It is certainly better to have too much open space than too little.

Emphasis upon action to acquire open spaces is not to be interpreted as downgrading the value of preparation of a sound areawide land-use plan. Our problem is that we have reached a crisis. We must act now and take a chance that there may be error. Obviously every community should have a well thought out areawide plan for community development. Federal matching grants to smaller counties and cities are available for this purpose. In the case of areas that can qualify as metropolitan or regional in character, assistance is available to even the largest of communities.

Once a plan is developed it must be protected by adequate zoning regulations. It must be admitted that much of the open area that has to be preserved is located in county areas where no area plan has been developed and where no zoning protection exists. It must also be admitted that per-

haps in the case of preservation of open spaces, the use of zoning is inherently unfair to private landowners who must suffer the financial loss incident to not being able to develop their land and thus the public benefits at the expense of the few.

National committee: We at the county level, acting through the National Association of County Officials, are well aware of our responsibilities and are solidly behind the plan to preserve the innate beauty of America. We think that one of the most important elements that is lacking, however, is national leadership and direction. Ideally we probably need another Teddy Roosevelt to give expression to the sentiments that lie deeply inside most Americans. Plainly this is a national problem if ever there was one and it will require national direction to coordinate the work of nearly every citizen who must eventually become involved.

We would therefore propose to you now that we get behind the idea of creating in this session of Congress a national committee to develop a national plan to preserve the spaces of America. You will recall that a few years back the President of the United States appointed a similar committee to examine our national highway needs. The committee was headed by an outstanding American, Gen. Lucius Clay. The Clay Committee inventoried our national road needs and came up with a plan which, with important modifications, eventually became the basis for our present gigantic highway building effort.

A committee of this type, with adequate representation by conservationists, public officials, businessmen, labor leaders, newspaper representatives, and other outstanding citizens, could perform a tremendous national service if it accomplished nothing more than to identify the problem more clearly in the public mind.

It appears now that we have a spark plug here, a tire there, and a motor there, but we need to put it together and make a national vehicle. A committee could report in a year—to coincide with a new administration in Washington—with recommendations that could provide national direction.

Aroused public: We need an aroused public that understands that the natural beauty of America is as precious a natural resource as iron or oil and that, like the latter, its preservation and sensible use can bring important economic advantages to all citizens.

The National Association of County Officials invites you conservationists to join us in this effort because we have conclusively proven that a partnership between the two groups can be profitable to America. You will all recall that in 1956 conservationists and local public officials joined together to support national action to clean up the Nation's streams. You also know that in spite of setbacks here and there we have been able, through this partnership, to develop an important first step—the 1956 Water Pollution Control Act. At last we are beginning to get public awareness of the soundness of our recommendations and it won't be long before we get conclusive results.

It would be a particular pleasure to continue this partnership with "Pinky" Gutermuth and the other outstanding conservation leaders in this most challenging new area.

Perhaps the way to conclude this is to repeat the oath every Athenian took upon reaching manhood. It expresses in a few words the attitude that Americans must adopt if we are to continue to be great.

"We will never bring disgrace to this our city by any act of dishonesty or cowardice; we will fight for our ideals and sacred things of the city, both alone and with many; we will reverence and obey the city's laws and do our best to incite a like respect and reverence in those around us; we will strive unceas-

ingly to quicken the public sense of civic duty; and thus in all ways we will strive to transmit this city not only not less but greater, better, and more beautiful than it was transmitted to us."

Additional Support for Proposal To Establish a Department of Urbiculture

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. KEATING. Mr. President, problems resulting from the explosive development of our urban centers become more acute daily. Our metropolitan areas are hard pressed to find answers to such complex challenges as transportation, traffic control, water resources, land use, planning, zoning, housing, libraries, schools, health and recreation facilities, and a host of other community services.

The problems encountered by city dwellers are compounded because although the growing cities are not limited by city, county, or even State boundaries, the governmental solutions to these problems usually are so limited. As a result, Federal assistance is vitally needed to help resolve some of these issues. This is not to say that local officials do not have grave and often paramount responsibilities in these areas. But we must not overlook the need for greater coordination and direction of the Federal effort to help our cities.

There is a growing realization throughout the Nation of the need for more efficient and cohesive Federal assistance to our urban centers. I have received widespread support for the idea to establish a Federal Department of Urbiculture, which I feel is the best means to achieve this goal. Recently, two distinguished constituents of mine, Harold Riegelman, counsel to the Citizens Budget Commission in New York City, and Roger Starr, executive director of the Citizens Housing and Planning Council of New York, wrote me about their views on this proposal. I ask unanimous consent that excerpts from their letters be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

CITIZENS BUDGET COMMISSION, INC.,

New York, N.Y., January 13, 1960.

HON. KENNETH B. KEATING,
Capitol, Washington, D.C.

DEAR KEN: This is to congratulate you upon your efforts to secure legislation to create a Cabinet-level Department of Urbiculture in the U.S. Government. We heartily endorse such a proposal and would like to help advance it.

We agree with you that the problem of metropolitan development is national in scope and requires the broad national view if the country's key areas are to develop in an orderly and efficient manner. The stake is not merely financial, but human, because

it is in these vast metropolitan areas that so large a proportion of America's population lives and works.

We suggest that you consider marshalling all voluntary civic and trade organizations throughout the United States in support of your effort. We shall happily join such a national movement.

Very truly,

HAROLD RIEGELMAN,
Counsel.

CITIZENS' HOUSING AND PLANNING
COUNCIL OF NEW YORK, INC.,
New York, N.Y., February 25, 1960.

Senator KENNETH B. KEATING,
The U.S. Senate,
Capitol, Washington, D.C.

DEAR SENATOR KEATING: I have read with great interest your bill providing for the establishment of a Federal Department of Urbanization.

I am of the opinion that the establishment of such a department would be of great help in providing effective leadership for the solution of many problems common to all the cities of this country. It would place responsibility for the solution of problems on one executive head. At the present time we have a number of agencies whose heads are charged with the administration of laws. It is my experience in local government that there is a measurable difference in achievement when the one type of mandate is substituted for the other. It seems to me that such a department would not merely eliminate duplication and fill gaps between the areas of responsibility of separate authorities, but would give positive direction where the urban resident, worker, and investor, need it most.

Sincerely yours,

ROGER STARR,
Executive Director.

Advances in Defense Business Management

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by F. Trowbridge vom Baur, General Counsel for the Department of the Navy, entitled "Advances in Defense Business Management." This speech was delivered before the Kiwanis Club of Birmingham, Ala., on Tuesday, December 8, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADVANCES IN DEFENSE BUSINESS MANAGEMENT
(By F. Trowbridge vom Baur)

I want to talk to you today about a subject which seldom seems to get into the newspapers, yet which is vital to the protection and pocketbooks of the people of the United States and which certainly should have the understanding of the American public.

This subject is the advances which have been made in recent years in the business management of the Department of Defense. What I am going to endeavor to show you is that, during the last few years in particular, great strides have been taken

in the direction of efficient management, elimination of waste, and duplication of effort, the providing for a better defense, and last but not least, economizing with the taxpayers' dollar.

THE EXTRAORDINARY SCALE OF DEFENSE OPERATIONS

Few people who have not worked in the Department of Defense have any real conception of the size of its operations or the magnitude of its problems in the field of business management, as well as in others. This Department is bigger than a number of the biggest corporations in America all rolled into one. As a result, it has problems in communication, organization, administration, and in sheer mass effort and activity, which are not approached by any business enterprise in the world. In addition, because of its relationship to the necessarily shifting tides of national policy, it has additional problems, peculiar to it alone, and highly intangible in nature, which are superimposed upon those problems which are common to both industry and defense. In appraising the subject of business management in this great Department, therefore, I think one must always bear in mind the size of the organization, the scale of its operations, and the magnitude and complexity of the problems with which it deals.

Let me illustrate this by mentioning just one problem alone—the inventory problem. A large mail-order house will carry approximately a hundred thousand different items in its catalog. And it is no secret that business people think that that is a lot of items. But in its supply systems, the Defense Department actually carries some 3,400,000 different items, not including the principal or end items such as aircraft, ships, tanks, etc. Also, the total value of all industrial inventories in the country is approximately \$85 billion. Yet, the Department of Defense owns inventories in its supply systems, again exclusive of these principal or end items, valued at \$46,400 million. Just imagine a business where the job of management is to manage inventories valued at more than one-half of those privately owned in the United States.

In addition, the Defense Department has management and distribution problems of this inventory which no private concern has. It must distribute this inventory on a worldwide basis with a positive assurance that the right material, in the right quantity, will be in the right place at the right time, and it must do this also in accordance with the shifting tides of international relations and domestic policy.

Motivation, too, is entirely different. In industry, the main objective is to get a fast turnover; to buy, to manufacture, and to sell quickly. If industry buys too little, some sales are lost and that is unfortunate, but not usually disastrous. If industry buys too much, specialized marketing techniques are employed to reduce inventories to normal size. But in the Defense Department, the motivation stems from different objectives. It must buy what it needs to fight a war which we all fervently hope and pray will never occur, yet at the same time, the only normal use of this great inventory is in peacetime training. As a result, this leaves the Defense Department with buying problems which industry has never even had to consider. For instance, if it buys too little, more than sales may be lost; indeed, the results can be catastrophic and could mean the destruction of the Nation. And if it buys too much, a completely different set of problems arise because of the fact that the Department of Defense can only dispose of surpluses in a very restricted market and under strict legal rules.

OBsolescence AND SURPLUS PROPERTY

And this brings me to the problem of obsolescence and of defense hardware becom-

ing surplus. Industry, of course, is free to make mistakes, and, as everyone knows, it does make them. However, industry has the great advantage of being able to make them, and to solve them with little or no publicity. Now, the Department of Defense makes mistakes too, because it is also run by human beings. Yet, because of the very magnitude of its operations and the additional problems with which it is confronted, its mistakes loom larger and seem to receive the very maximum publicity.

In any event, in disposing of surplus property, the operations of the Department of Defense are completely circumscribed by law. As you know, ours is a government of laws and not of men. The Federal Government is one of delegated powers only; and under article IV of the Constitution, only Congress can dispose of or authorize the disposition of Government property. This means that administrators in the Department of Defense cannot dispose of surplus property in any way which seems to them to be good at the time. On the contrary, there are definite legal rules which must be followed.

In addition, in the Department of Defense we are bound to have surpluses, because of scientific development, design changes, and planned events, such as the move from manned aircraft to missiles. There is nothing anyone can do about this, except to plan and adapt to the changes of science as best we can. The Department of Defense must not only plan to be prepared in the years to come, it must manage to be prepared at the present time, and indeed from week to week, day to day, and even from moment to moment.

Now, when property becomes surplus, unfortunately the Department of Defense cannot create an internal market by cutting prices and running special ads and special sales. Its operations are controlled by law, as I have indicated, and it must look outside the Department for sources of disposal. Moreover, even in this outside market, the Defense Department is still not free to compete with private industry. Prior to disposal in any significant volume, surveys are conducted in conjunction with the Department of Commerce to determine whether the market impact will be such as to harm industry. And in overseas areas, surplus disposal is even more complex because of the problems of security and the effect upon the internal economy of foreign nations. So perhaps you may agree with me, that in this area of surplus property disposal alone, there are enough problems to stir the imagination and stimulate the energy of any corporate executive.

Now, with this brief outline of some of the business management problems of defense and some of the basic differences with industry in objective and motivation, and the legal restrictions which circumscribe our actions, I would like to tell you about some of our more recent programs for the improvement of business management in the Department of Defense, and the great strides which have been taken. Specifically, I want to talk to you about cataloging, standardization, single managers, the Armed Forces Supply Support Center, and the efficiency which has resulted and the savings which have been and are being made for you, the taxpayer.

CATALOGING

The Department of Defense has recently completed the tremendous job of identifying and centrally cataloging every single item in the entire military supply system. And we have also completed the equally tremendous job of the necessarily resulting changeover in stock bins, production records, etc., worldwide. As a result today, from the procurement of an item to its final disposition, a single catalog number identifies each and every item of supply through-

out all stages of the supply management process. Thus we now have a common language of supply which means the same thing to all echelons, units, and people in the worldwide organization of the Defense Department and the military services.

This Federal catalog supply system was set up under Public Law 436, enacted in 1952. At that time there were about 5 million items—think of it—5 million items of military hardware. Now I am happy to be able to say that at the present time we have reduced this to about 3,400,000. That means that we have actually reduced the number of items by some 32 percent, and this total is presently being further reduced by the other programs which I will describe to you in a few minutes.

In addition, it should be recognized also that the maintenance of a catalog is a never-ending job. New items are being introduced into the system at a rate of about 250,000 a year as a result of the rapid developments in science and in the production of new hardware. Yet I am glad to say also that we are constantly removing old items through our standardization program. Last year, about 150,000 old items were removed from the catalog. In addition, as new and more experimental hardware tends to stabilize, the rate of standardization with respect to them may be accelerated.

STANDARDIZATION

Going hand and hand with cataloging is the standardization program. First, let me point out that there was an important prerequisite to the standardization program, and that was the Federal Catalog System which I just described to you. In other words, the uniform identification of each item was necessary prior to being able to standardize on any one of them.

Let me give you several examples. First, the standardization of loudspeakers (FSC class 5965) in the Signal Corps Supply System has resulted in 102 items being declared as obsolete for immediate elimination: 520 items have been declared nonstandard but to be issued until exhausted; and only 110 items have been established as standard for future procurement. Now this is a total reduction of 622 out of 732 items, or a reduction of about 85 percent in the number of items. In practical terms, this means that in the future, instead of having to buy 732 different items, only 110 items will actually have to be procured. It should be obvious to you, I think, that in the long run this means better prices and substantial savings to the taxpayer, as well as greater efficiency in supply management of the Department of Defense. Substantial savings in cost of administration, as well as directly in procurement, and in warehousing and distribution, are involved.

Let me give you another illustration. Under the program for the standardization of accessories for industrial engines, approximately 20 out of a total of 35 projects have now been completed. These projects covered such items as the engines themselves and their accessories such as battery charging indicators, air cleaners, oil filters, radiator caps, and V-belts, etc. As a result of the work done to date, 259 standard items have now been established to replace 3,955 items prior to standardization—or a reduction of about 93 percent. Again, this will mean better prices, greater ease of maintaining inventory and of distribution, efficiency in operation, a more adequate and effective defense, and finally, savings for the taxpayer.

In still another instance we have standardized on one type of 18-ampere automotive generators, which can now be used in place of 98 models previously used. In this case, other indirect benefits can come about since now we need to stock only 16 repair parts for this one generator, while in the past it had been necessary to stock 880 repair parts

to cover the 98 nonstandard generators. Again, this means greater efficiency, a more adequate defense, and savings for the taxpayer.

Also, in processing four simplification projects covering resistors (FSC class 5905), the Electronics Supply Office of the Navy has reviewed 19,824 items and has declared 7,929 nonstandard, again with improved results for both defense and the taxpayer.

SINGLE MANAGERS

Now let me mention the single managers. The development of the Federal catalog system with its common identification language, has enabled the Defense Department to take another very important step toward the integration of supply management of items which are common throughout the military services. This is the development of the single manager system. Under this single manager system, one service, that is one of the military departments, is assigned the task of buying and managing a whole group of commodities for the entire Defense Department. Thus, the single manager service buys, stores, and distributes the commodities for which it is responsible, and all the military services use this common wholesale system as their sole source of supply. Thus, instead of four different supply systems at the wholesale level in the Defense Department competing with each other with respect to a single set of subject matter, the single manager system provides a single point of contact with industry and an integrated material management process.

At the present time there are four commodity single manager assignments in operation. These are the Medical Supply Agency and the Petroleum Supply Agency, managed by the Navy; and the Subsistence Supply Agency and the Clothing and Textile Supply Agency, managed by the Army. Two additional assignments have recently been made. Administrative and Housekeeping Supplies and Hand and Craftsmen Measuring Tools have been allocated to the Army; and Hardware, Abrasives, Metals, and Paints to the Navy. In all of these systems, except the one for petroleum, the single manager owns or will own and distribute all wholesale stocks of the designated commodity.

Now, in addition to these commodity assignments, there are single managers handling services—notably transportation. Accordingly, ocean transportation has been assigned to the Military Sea Transport Service—commonly called MST—of the Navy. Air transportation has been assigned to the Military Air Transport Service of the Air Force, commonly called MATS. And land transportation has been assigned to the Military Traffic Management Agency in the Army.

Also, there are intangible as well as direct improvements in efficiency and savings in dollars which will result from the single management system. Among the economies which have been made possible by the single manager system are the following. First, total personnel engaged in supply systems operations for single manager commodities has been reduced by 752 people, with a resulting payroll savings of over \$4 million a year. This is a reduction of about 12 percent at the inventory control point level alone.

Second, inspection and test facilities have been consolidated, with resulting annual savings of \$2,280,000. The consolidation of wholesale stocks under single manager ownership has permitted an inventory drawdown with a one-time savings of \$235 million, based on the excess of sales over procurement.

Third, the consolidation and realignment of motor pool distribution system has resulted in the elimination of 66 storage locations and in the reduction of 4,758,000 square feet of occupied storage area.

Finally, the administrative lead time for the procurement of commodities has been reduced by 31 days in one single manager operation alone—that of clothing.

As these single managers progress, even greater savings will be made. Again, the implementation of the single manager concept has eliminated duplicatory effort, waste, and competition between the services, has promoted business efficiency in the Department of Defense, and is saving your money. Again, this is in the interest of the American public and the taxpayer.

A further expansion of the single commodity manager concept is contemplated. Studies looking to this end are now underway in the area of additional "general supplies," automotive, construction, and electrical-electronic items. They will undoubtedly extend to cover any other integrated items of subject matter common to the three services. And these actions are indicative of the rapid acceptance and progress of the single manager plan, of its effectiveness as well as its economy.

SINGLE DEPARTMENT PROCUREMENT

We have developed another device known as single department procurement. In this type of assignment, one department acts as the buying agent, in broad areas, for the other departments. For example, the Ordnance Corps of the Army, through its headquarters at OTAC in Detroit, is the sole buyer for all combat and general automotive equipment, such as tanks, trucks, station wagons, and other vehicles.

The Navy and Air Force in their turn buy certain types of items for themselves and their sister services. For example, the Navy buys material handling equipment, while the Air Force is the sole buyer of photographic equipment, airport lighting fixtures, electron tubes, etc.

This system of single department procurement has many benefits. First, it has benefits to industry; for to industry it means the procurement procedures become standardized and the job of doing business with the Defense Department is that much simpler and easier. For instance, there is now only one point of contact by industry for bid information, with resulting savings in getting educated, in time and travel costs. And to both industry and Defense there are the benefits of integrated, scheduled procurement, with an orderly impact on the total production capacity of the country. The military services do not bid against each other to force prices up, but rather gear their purchases to the economy as a whole.

We are still exploring further the use of single purchase assignments.

THE HIGH DEGREE OF COOPERATION AMONG THE SERVICES

I think there is one very significant feature of these different programs which I have been describing to you, and that is that they are essentially cooperative programs. They could not exist and work, they could not improve our defense and save the taxpayer's dollar, if they were not run cooperatively by the three military departments. Necessarily, each department has different functions, and the people in each have had different training. But it should also be understood that there is a highly developed system of co-operation among the three military departments, and highly organized teamwork. Basically, it is this powerful element of co-operation among the services on this broad scale, under the leadership of the Department of Defense, which has made these advances in business management possible.

THE ARMED FORCES SUPPLY SUPPORT CENTER

Another advance in business management in the Department of Defense was the establishment in July 1958, of the Armed Forces Supply Support Center. This, again, is a joint agency of the military services. It reports to a Council composed of senior lo-

istics officers of the services, with the Deputy Assistant Secretary of Defense for Supply and Logistics as Chairman. The Council, in turn, is responsible directly to the Secretary of Defense. Among other things, the cataloging program and the standardization program, which I have described to you today, are monitored by the Armed Forces Supply Support Center. This assures that they will be managed together and that the two programs will be properly integrated and geared together as they go along.

Another important function which has been assigned to the Armed Forces Supply Support Center is the material utilization program of the Defense Department. This program is another one of vital importance to all of us. Its important objective is to make sure that no unit in the Defense Department buys something when the required material is available elsewhere in the Department. In addition, in cooperation with the General Services Administration, this program has now been extended to all other agencies of the Federal Government, and through the Department of Health, Education, and Welfare, to the States and organizations of national interest. This program, in its turn, has been highly successful. Indeed, under it, over \$700 million worth of material is now made available annually, in lieu or instead of new procurement. This has meant a better utilization of our available resources; and, again, this program has meant better business efficiency in the Department and economy in dollars for the American taxpayer.

THE INCREASING IMPORTANCE OF DEFENSE BUSINESS MANAGEMENT

We are living today in times where balancing the budget is difficult. The American taxpayer is carrying a heavy load. And even though the appropriations for the Department of Defense have not been increasing, the cost of defense has been steadily rising. For instance, today's nuclear submarines cost almost ten times as much as the World War II type. In addition, in the past 5 years, the number of aircraft in the Defense Department has remained about the same, but the value of these aircraft has increased about 80 percent. That 80 percent increase amounts to about \$12 billion in value.

However, we must keep the ships operating, the planes in the air, and the missiles ready. And all of these operating items cost money. As a result, it is simply imperative, in the interest of national economy as well as in the interest of national defense, that we strive constantly for the very best business management in this great Department. I hope these few illustrations will make clear to you in some degree that great strides have been made in the last few years in the business management of this enormous military operation. To be sure, it is not perfect, and there are many advances still to be made. But with these significant developments which have taken place recently, with the completion of the cataloging program, with the standardization program, with the setting up of single managers and the making of single purchase assignments, and the establishment of the Armed Forces Supply Support Center, substantial savings in dollars have been made for the American taxpayer, as well as in improving the efficiency of the business side of the Department of Defense.

Finally, while there is still a great distance to go, it is only fair that the American public and the American taxpayer, as well as American contractors, should know about these developments. The reason is that business management in the Department of Defense must have the confidence of the American public if it is to succeed. And they must know about these things which I have endeavored to describe to you today, and about comparable developments, if they are to have that confidence.

Lord Ashley Cooper's Dictionary of Charlestonese

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. GOLDWATER. Mr. President, on Tuesday of this week I asked unanimous consent to have printed in the body of the RECORD a short dictionary of southern words. I did not know at the time the author of this amusing little collection of words was from the South. I have since discovered that its author is Mr. Ashley Cooper, a columnist for the Charleston (S.C.) News and Courier. I am further told that this collection is published in the form of a small booklet; in fact, I have one in my hand. It is entitled "Lord Ashley Cooper's Dictionary of Charlestonese," and is compiled for the Charleston News-Courier.

The short insertion which I made in the RECORD the other day has caused quite a bit of comment among my southern friends, and among persons whom I have never had the pleasure of meeting.

I think that people, generally, across the country might become better acquainted with this very amusing work of Mr. Cooper. Therefore, Mr. President, I ask unanimous consent that the booklet to which I have referred may be printed in its entirety in the Appendix of the RECORD.

I may say that, while we are not supposed to advertise on the floor of the Senate, the booklet is sold for 25 cents a copy, and the proceeds are devoted to charitable purposes. The profits go to the newspaper's Good Cheer Fund for Christmas presents to the needy.

There being no objection, the booklet was ordered to be printed in the RECORD, as follows:

LORD ASHLEY COOPER'S DICTIONARY OF CHARLESTONENSE AS COMPILED FOR THE NEWS AND COURIER

FOREWORD

Although, as everyone knows, Charlestonians speak perfect English, residents of many other sections of the United States unfortunately do not. Ironically, these sloppy talkers from elsewhere complain sometimes, while visiting the Holy City, that they cannot understand the pure and clear accents of Charlestonians.

To remedy this deplorable situation, Ashley Cooper, columnist for the News and Courier, started publishing certain Charlestonese words in his column. A number of readers sent Charlestonese contributions, which also were published.

Now, for the first time (fust toyme), Charlestonese words have been compiled into a dictionary.

Published by the News and Courier, the "Dictionary of Charlestonese" sells for 25 cents a copy. Additional copies may be obtained by writing the newspaper, 134 Columbus St., Charleston, S.C. Profits go to the newspaper's Good Cheer Fund, for Christmas presents to the needy.

A

Abode: Wooden plank.
A boot: Approximately.
Ain't: Sister of one of your parents.

Air: What you hear with, i.e., "Friends, Romans, countrymen, lend me your airs."

Argon: A Pacific Coast State just north of California.

Arm: I am.

Armageddon: I'm gonna get.

B

Balks: A container, such as a match balks.

Ball: To heat a liquid until it bubbles.

Bare: A beverage made from malt and hops.

Barter: Something to spread on bread.

Beckon: Meat from a pig, often eaten with a-ligs for brake-fuss.

Bone: Blessed event, i.e., "I was bone a Charlestonian." (A very blessed event, in the minds of all Charlestonians.)

Bottle: A military engagement.

Bow-at: Something you sail in, off the Botry.

Boy: To purchase.

Braid: What you make toe-est from, to go along with beckon and a-ligs for brake-fuss.

Bucks: Something the library is full of.

Bull: Nickname for William. (Another nickname: Woolly.)

Bum: An instrument of destruction, as the H-bum.

Bun: Consume by heat, i.e., "When you make toe-est, don't bun the braid."

Bus: Upper part of the human body.

C

Caller: Part of a shirt that goes around the neck.

Canada: Politician running for public office.

Cane chew: Aren't you able to, i.e., "Cane chew talk like a good Charlestonian?"

Caught: A little bed.

Chair: A shout of approval, i.e., "Let me hair you chair and hawler for The Citadel."

Chalk-let: A flavor.

Chess: A strong balks (box).

Cholmondely: Pronounced Chumley, it's the brick thing on a roof that lets out smoke.

Coal: Allment that causes sniffles.

Coarse: Certainly.

Coat: Where they got that jedge an' all, i.e., "Stannup for hizzoner, coat's in session."

Coined: Humane, i.e., "He was always coined to animals."

Conduit: Impossible of accomplishment.

Cup: A place called home by hens, i.e., "Where's Woolly? Woolly's payntin' the hen cup."

D

Dearth: The world we live in.

Des Moines: They belong to me.

Dollar: Less sharp, i.e., "My knife was dollar than his-own."

Drug: Hauled.

F

Faltns: A barricade of works or brick.

Famine: Tilling the soil, i.e., "I've been famine all my life."

Fan Ella: The flavor of white ice cream.

Fare: To be a-scairt, i.e., "I fare it may rene, snow, and heel."

Feel: An open space.

Flow: What you stand on in a house.

Forks: Bushy-tailed animal hunted by riders in red coats.

Frustrate: Tops; initial ranking.

G

Garner: A man who tends to flowerbeds.

Gate: To obtain.

Gay-yet: Opening in a fence.

Go it: A smelly animal which eats tin cans.

Granite: Conceded, or given, i.e., "He was granite a pardon by the guv-ner."

Groan: Increasing in size.

H

Hall: The abode of integrationists, some damyankees and other evil spirits.

Hair: At this place.

Halo: A greeting similar to "how do you do," (see Higher) i.e., "Halo, Woolly, what are you doing hanging around hair?"

"Higher, Bubber, I'm just hanging around for the hall of it."

Harmony: Cooked grits.
 Hawzers: Hay-eating quadrupeds.
 Hell: An elevation lower than a mountain.
 Hem: Meat from a pig. Not to be confused, though, with poke or beckon.
 Hepcat: Act of giving assistance to a feline.
 Herring: The auditory function, i.e., "Pappa's hard of herring."
 Higher: See Halo.
 Hominy: What number?
 Hone: Something on an auto that you blow.
 Hot: An internal organ which, in every red-blooded Charlestonian, beats quicker when the band strikes up "Dixie."

Ice cool: The institution of learning which stands midway between grammar school and college.

Jell: Place of confinement for criminals.
 Durance viol.

Kin: Something usually made of tin that food is packed in.

Lack: Enjoy, i.e., "I lack fried chicken."
 Lane: Lying down.
 Lawn: Not short.
 Layman: A fruit from which layman-ade is made, i.e., "Is that your layman-ade?"
 "No, that's Pappa's-zone." "Well, poet back in the pitcher, 'cause Pappa's now drinking bare."
 Lean: A little road, i.e., "Lovers' Lean."
 Lease: The smallest.
 Loin: Storying. Not telling the truth.
 Lore: To let down.
 Loss: To mislay, i.e., "He loss his match balks."
 Lucid: Leggo it.
 Luck: To direct one's gaze, i.e., "Luck year, Pappa, what Bubber did to your match balks."

Mare: Hizzoner, the city's chief executive.
 Mean: A gathering of people, as a committee mean.
 Mine eyes: Salad dressing.
 Minuet: You and I have dined.
 Mow: An additional quantity.
 Muttered: A yellow condiment that goes well with hot dogs.

New sand Korea: Ashley Cooper's newspaper. (See Pay-upper.)
 Noise: Pleasant, i.e., "Noise weather we're having."

Oil and: A body of land surrounded by water.

Packing: Maneuvering an auto to the curb.
 Pain: A writing instrument mightier than the sword.
 Passe: Father has spoken.
 Pastor: Field where cows graze.
 Pat: Portion, but not all.
 Paunch: Blow struck with the fist.
 Pay-upper: What sells for a nee-y-cal and prints news and Lord Ashley's column.
 Pie sun: What you put out to kill roaches that they usually thrive on.
 Play it: Something you eat grits off of.
 Poach: A Verandah.
 Poet: To transfer a liquid; that is, "Poet from the pitcher to the glass."
 Poke: Hog meat.

Police: Term of polite request. A person desiring to maneuver a car to the curb might ask a pool-lease-man, "Cain I police pack hair?" To which the pool-lease-man would doubtless respond, "No, you cain not."
 Pool-lease-man: See above.
 Pre-shade: Grateful for; that is, "I pre-shade the compliment."

Rah chair: Where you are at.
 Rum: An enclosed space within a building.

Sane: Speaking; that is, "I can hardly hair what he's sane."
 Send wishes: Items of food made with bread, handy for a picnic.
 Sex: One less than seven, two less than eh-et, three less than noine, foe less than tin.
 Shasta: She inquired of her.
 Shot: Not long.
 Shout: What a baseball pitcher accomplishes when he prevents the opponents from scoring.
 Snow: To breathe loudly and heavily while sleeping.
 Syndicate: Located within a gate; that is, "Where's the sword at Henry Gaud's house?"
 "Syndicate."

Tarred: Weary.
 Tin sin stow: The foive and doyme.
 Toe: Preposition meaning toward; that is, "I went toe the Oil of Pams."
 Toll: Thin slabs of baked clay.
 Toll: Past tense of tell.
 Ton: To swerve. To ton around.
 Tone: Ripped.
 Toy: Cravat.
 Toyed: Something that ebbs and flows off the Bottry.
 Traffic: Something stupendous, like a movie that is beyond colossal or epic.
 True: Hurled; that is, "He true the ball."
 Tuck: Removed; that is, "He tuck pappa's nick-toy."

U.G.: A family name, also spelled Huger.

Version: The kind of queen that Queen Elizabeth I was.
 Vertigo: What happened to him?
 Voice: A squeezing tool, attached to a workbench.

Wheel: The sort of a mammal that Moby Dick was.
 Wretched: The long name for the nick-name "Dick."

Yawl: Mode of address used by N'Yawkers when visiting in the South.

Year: To listen.
 Yuk come: Someone approaches; that is, "Yuk come Romeo."

Zone: Belonging to someone; that is, "That nick-toy is pappa's-zone."

Memorial to Capt. Robert F. Scott at South Pole

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. BYRD of West Virginia. Mr. President, on a cross erected in the South Polar regions to commemorate the sacrifice of Capt. Robert F. Scott and his party who perished in 1912 on their way back from the pole, are the following words: "To strive, to seek, to find, and not to yield." These words are taken from Alfred Lord Tennyson's "Ulysses."

I ask unanimous consent to place in the Appendix of the RECORD some of the delightful lines from that great work.

There being no objection, the lines were ordered to be printed in the Appendix of the RECORD, as follows:

FROM ULYSSES

There lies the port; the vessel puffs her sail;
 There gloom the dark, broad seas. My mariners,

Souls that have toil'd, and wrought, and thought with me,—

That ever with a frolic welcome took
 The thunder and the sunshine, and opposed
 Free hearts, free foreheads,—you and I are old;

Old age hath yet his honor and his toil:
 Death closes all; but something ere the end,
 Some work of noble note, may yet be done,
 Not unbecoming men that strove with Gods.
 The lights begin to twinkle from the rocks;
 The long day wanes; the slow moon climbs;
 the deep

Moans round with many voices. Come, my friends,

'Tis not too late to seek a newer world.
 Push off, and sitting well in order smite
 The sounding furrows; for my purpose holds
 To sail beyond the sunset, and the baths
 Of all the western stars, until I die.

It may be that the gulfs will wash us down;
 It may be we shall touch the Happy Isles,
 And see the great Achilles, whom we knew.
 Tho' much is taken, much abides; and tho'
 We are not now that strength which in old days

Moved earth and heaven, that which we are,
 we are,—

One equal temper of heroic hearts,
 Made weak by time and fate, but strong in will

To strive, to seek, to find, and not to yield.

—Alfred Tennyson, 1809-92.

Judge Irwin D. Davidson of New York

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ANFUSO. Mr. Speaker, our former colleague, Judge Irwin D. Davidson of New York, made headlines in the Nation's press this week with his statement that he would no longer approve wiretapping applications and that judges should not be parties to authorize wiretapping because it is an illegal act. Judge Davidson stated:

There are those who say wiretapping is a very effective tool for the investigation and discovery of criminal acts. I agree, but it is nonetheless an illegal tool at the present time and no more legal at this date than is a gun or a blackjack, both of which are also quite effective.

Many of my colleagues here will surely remember Judge Davidson, who served in this House in 1955 and 1956 during the 84th Congress. He was on the Banking and Currency Committee and the Merchant Marine and Fisheries Committee. He served with great distinction in the House and was highly regarded by all his colleagues.

Judge Davidson is now on the Court of General Sessions in New York, where he is also serving with great distinction.

He is not only a great and respected jurist, but has become known as a jurist with a heart, a judge who metes out justice with mercy.

In connection with his statement on wiretapping, the New York Times had an article in its issue of March 8, 1960, about Judge Davidson under the title "Justice With Mercy." Under leave to extend my remarks, I wish to insert this article into the RECORD and call it to the attention of all my colleagues:

JUSTICE WITH MERCY: IRWIN DELMORE DAVIDSON

In the words of Judge Irwin Delmore Davidson of general sessions, "God has not been too good to many people."

The 54-year-old judge, who dismayed the District Attorney's office yesterday by saying he would no longer approve wiretapping applications, is not about to be second-guessing Divinity. But in his judgments from the bench he sees it also as his duty to weigh the bad breaks that life has brought to those before him and to insist on the full—and understanding—protection of the law for all.

Twenty-two months ago Judge Davidson sentenced four teen-aged gang members to prison terms ranging from 5 years to life for the killing of Michael Farmer, 15-year-old polio victim. But he announced from the bench that he was doing so "with a sense of frustration and a heavy heart" because society itself shared the guilt.

"I think of what might have been had society been willing to concern itself and act regarding the broken home, the truant, the street gang and youthful defiance—things no one can now deny unmistakable notice," he said.

AID TO MAIMED

In another case, Judge Davidson deferred sentence against a 16-year-old who had been convicted of stealing an automobile. The judge learned that the boy had been burned on the hand by his mother as a punishment when he was 8; the boy now had a crippled hand. Judge Davidson said the youth deserved one break in life and helped him get it by appealing for free surgery. Two months later the boy and the judge watched, both in delight, as the boy unclenched his fingers for the first time in 8 years.

It was a short-lived satisfaction, however. A few months later the boy stood in Federal Court and pleaded guilty to forging an \$85 social security check. He was confined to a correctional institution for an indeterminate period.

Judge Davidson, who served as a Democratic Assemblyman in Albany for 12 years and was elected to the House of Representatives in 1954 for the seat vacated by Franklin D. Roosevelt, Jr., was known as "The Kid" in political circles because of his youthful looks. He still looks young; his black hair still shows no streaks of gray.

The judge likes jokes, his own and others, and is a popular after-dinner speaker, but he prefers to keep jollity at a distance when he is on the bench.

"We see a lot of very unhappy people," he says. "And sending people to jail day after day doesn't make for much exuberance."

ONCE A SCRIPT WRITER

Judge Davidson, who was born in the city and received a law degree from New York University Law School, supplemented his income as a young lawyer by writing scripts for Fred Allen, the comedian. When he was still a student, the dean selected him and two others to go to a Metro-Goldwyn-Mayer school to study dramatics. But his father wanted him to be a lawyer; so he gave up scripts for legal briefs. The two other students, who made the transfer, were Guthrie

McClintic and Rouben Mamoulian, both successful drama directors today.

Judge Davidson spent 6 years as a judge in the court of special sessions prior to his election to Congress. He was elected to his present \$34,500-a-year court post in 1957.

The judge usually gets to work in his seventeenth-floor chambers at 100 Centre Street about 9:30 in the morning, lights a Corona Queens cigar and checks over the day's work with Peter Stowe, his law secretary, and the probation officer.

RELAXES WITH CIGARS

A little after 10 a.m. he dons his robes and mounts the bench. He avoids restaurants, confines his lunches invariably—in chambers—to black coffee and fat-free buttermilk. He looks forward to the recesses, when he can light up another cigar.

His wife Bernice, an inveterate reader, recommends the books that he should read, and he says her selection is always "exactly right."

They have two sons, James, 19, and Mark, 15. Another son, Jon, died 5 years ago from football injuries.

The Need for a Department of Science

**EXTENSION OF REMARKS
OF**

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 10, 1960

Mr. HUMPHREY. Mr. President, Congress has a tremendous responsibility in 1960 to advance and to coordinate Federal scientific activities which are now dispersed among about 50 different agencies. I urge early action by this body on S. 1851 to establish a commission to study the need for a Department of Science along the lines of a proposal I made in the 85th Congress and again last year.

Mr. President, I ask unanimous consent that an article I wrote entitled "The Need for a Department of Science" which appeared in the January issue of the *Annals of the American Academy of Political and Social Science* be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

**THE NEED FOR A DEPARTMENT OF SCIENCE
(By HUBERT H. HUMPHREY)**

(Abstract: The Senate Committee on Government Operations, in which Senator HUMPHREY has taken an active role, has concerned itself with the need for a science department in the Government. A Department of Science and Technology they have found would be a very necessary and essential adjunct to our governmental system. Its main purpose would be the coordination and centralization of the now dispersed Federal scientific activities. The new Department would promote the clear-cut responsibility and authority in Government science needed for the enhancement of our national security. Yet the reorganization of the existing science units contained in various departments and agencies of the Government, has met strenuous opposition from sources in the administration. In addition to the proposed bill providing for the creation of the Department of Science and Technology, the Senate committee has initiated

another bill now before Congress which provides for a commission to study the various problems connected with the creation of such a science department.—Editor.)

The first finding of the original Hoover Commission on Organization of the Executive Branch of the Government, submitted to the Congress in February 1949, and upon which the reports of the Commission were based, was that "the executive branch is not organized into a workable number of major departments and agencies which the President can effectively direct, but is cut up into a large number of agencies which divide responsibility and which are too great in number for effective direction from the top."¹

The proposal to create a Department of Science and Technology within the executive branch of the Federal Government, which I first proposed more than 2 years ago, was based upon that sound principle of government. This was 3 months before Sputnik brought the Congress and the American people to the realization that extensive reorganization of Federal science programs was necessary if we, in cooperation with other free nations of the world, were to reassert our leadership in the field of science.

During the last decade the United States and the entire world have been caught up and swept along by fantastic advancements in the scientific world. The executive branch of the Federal Government and the Congress have, fortunately, taken the initiative, through more or less haphazard and unrelated actions, to provide a spearhead for progress to meet the challenge of greater technological advancements. It is imperative, however, that this country continue to be the motivating factor and maintain its lead in scientific development, and be prepared to carry on a comprehensive and constructive program to meet the challenge of world communism. To continue this leadership, a complete reevaluation must be made of present Federal operations in science, research, and technological fields, and effective steps taken with the least possible delay to coordinate and improve the existing organizational structure of our Government which carries on these functions.

DEVELOPMENT OF SCIENTIFIC AGENCIES

To meet the many problems as they arose, new agencies were created and efforts made to bring about improvements in the Federal science programs. The Congress has provided necessary funds as required in support of such programs, and I am confident it will continue to do so. Among the most progressive steps taken to meet the objectives in the civilian science field were the appointment of a Special Assistant to the President for Science and Technology; the creation of the President's Advisory Committees on Science and Technology and on Government Organization; the establishment of the Interdepartmental Committee on Scientific Research and Development, later superseded by the Federal Council for Science and Technology; the extension of the authority of the National Advisory Committee for Aeronautics through the creation of the National Aeronautics and Space Administration; and the establishment of committees on science in the House and Senate.

While these steps have been helpful and undoubtedly are necessary actions in pursuit of the overall objective of efficient Government operations in the field of science, further consideration must be given to still existing inadequacies not only in these agencies but in other areas which must be co-

¹ Commission on Organization of the Executive Branch of the Government, First Finding, a report to the Congress, February 1949 (Washington: Government Printing Office, 1949), p. 3.

ordinated with operations of a similar or related character and reorganized under more cohesive administrative controls.

The basic approach to reorganization recommended by the Hoover Commission was prophetic in regard to the present status of science operations of the Federal Government. There are approximately 50 agencies which perform some science and research activities having direct application to the overall science program of the Government. In addition to the four Presidential advisory groups dealing with science, there are three major independent science agencies or commissions and more than 40 components of other departments and agencies which operate science and engineering programs supposedly related to the major departmental mission for which the departments were established, or for which special agencies were created.

Some of these internal agencies, such as the National Bureau of Standards and the Office of Technical Services in the Department of Commerce, are performing services not directly associated with the primary mission or even related functions of the departments in which they are now located. Consequently, they do not receive the technical administrative direction necessary to insure operations at their highest potential. On the other hand, some of these internal agencies, which include the National Institutes of Health, the Agricultural Research Service, the Advanced Research Projects Agency, and the Science Advisor to the Secretary of State, perform services which most authorities on science programs of the Government feel do have direct application to the program areas of the respective departments in which they are located and should retain their present status.

COORDINATION OF FEDERAL ACTIVITIES

From the beginning, the Senate Committee on Government Operations, on which I serve, in its studies of the problems, studiously avoided involving the civilian science activities with the applied science and research programs of the military departments which pertain to national defense and come within the jurisdiction of other committees, or with advisory or coordinating agencies or officials within the Executive Office of the President performing high administrative and policy functions under the direction of the President.

The major objective of the Science and Technology Act of 1958, which I introduced as chairman of the Subcommittee on Reorganization and International Organizations, was to bring about, under a Secretary at the Cabinet level, coordination and centralization of those Federal activities now scattered among existing departments, as well as those which had grown haphazardly following World War II in the field of civilian science.

It was proposed, as an approach to these problems of reorganization and improvement of science programs and for the purpose of eliminating duplications and waste of scientific, technological, and engineering manpower, to (1) promote closer cooperation between Federal agencies which carry on science activities; (2) improve, coordinate, and expand the Federal science information and documentation programs; (3) afford adequate Federal support for education in physical sciences and engineering; (4) encourage the establishment of institutions in areas of broad basic scientific activity, such as oceanography, meteorology, etc.; (5) to establish and maintain science programs abroad through the use of foreign currency credits; and (6) to improve and elevate the status of science within the legislative branch by creating standing committees in the House and Senate which would have direct jurisdiction over civilian science programs of the Federal Government. Thus full

congressional evaluation of all such activities and the relationship of these widely scattered agencies to similar programs and operations would be assured. All of these committee recommendations, except the proposal to create a Department of Science and Technology, have been activated in varying degrees, although continued reevaluation and further appropriate actions to fully implement these programs are necessary to achieve fully the objectives sought.

A new department

The Committee on Government Operations was confronted from the beginning with four primary problems: (1) Would a Department of Science and Technology afford the necessary administrative controls and science leadership required to correct existing deficiencies in Federal operations in science and research? (2) Would such centralization of functions and supervisory control afford an answer to the multitudinous duplications and waste that presently exist in our Federal science programs? (3) Would it in any way impair any of the independent activities and basic objectives of certain of the specialized agencies which had been established by the Congress and the President, or cause any disruptions in existing science and research programs? (4) If a Department of Science were to be created, which independent agencies, or components of existing Federal departments, should be incorporated within such a Department?

Provisions of the bill

In an effort to avoid disruptions of existing programs and to ensure that full appraisal of these problems could be made before any permanent reorganization was proposed the bill introduced in the 85th Congress, and again in the 86th Congress, to create such a Department of Science and Technology merely provided for grouping of Federal science agencies. The proposed Secretary of Science would have administrative control over certain of the independent agencies: the Atomic Energy Commission, the National Science Foundation, and the National Advisory Committee for Aeronautics, now the National Aeronautics and Space Administration; and certain components of existing departments: the National Bureau of Standards and the Office of Technical Services of the Department of Commerce, and the science functions of the Smithsonian Institution. The bill provided for no change in the basic statutes governing the operations of any of these agencies. Rather it was designed to promote more administrative efficiency in the government's scientific activities and to provide a framework for better coordination of all scientific functions. The committee proceeded under the assumption that, if a department was established, internal reorganization could be effected as experience and operation needs required.

There have been other suggestions relative to the creation of a Department of Science, which involve entirely different approaches. The proposal outlined by Dr. L. V. Berkner, President of Associated Universities which operate the Brookhaven National Laboratory for the Atomic Energy Commission, has received a considerable amount of support from scientists and administrators of science programs. Under Dr. Berkner's plan, the National Science Foundation, the National Aeronautics, and Space Administration, and the Atomic Energy Commission would retain their independent status as specialized agencies, while the proposed Department of Science would set up centralized components in various areas of physical sciences, such as oceanography, meteorology, climatology, and standards.

OPPOSITION TO REORGANIZATION

In recognition of the varying points of view held by those who were active in the Federal science program, the staff of the

Senate Committee on Government Operations, in carrying out the committee's directive to draft suggested legislative proposals to meet the needs of the Government, made numerous contacts with officials carrying on various science programs. Except in one or two instances, there was strenuous opposition to any change in the present organizational structure.

The Hoover Commission in its concluding report also warned of this type of resistance to any proposed reorganization efforts, as follows:

"It is natural to expect vigorous opposition to reforms from agencies and groups, each of which approves heartily of reorganizations that do not affect its own immediate interests. The Congress must be prepared to accept this fact and give careful attention to the validity of arguments of those who would seek to escape reorganization, as many have so successfully done in the past.

"While honest differences of opinion certainly may exist as to the best method of accomplishing any particular reform, such differences should not be accepted as valid arguments against the desired objective. Once the practice of exempting certain agencies and excepting particular functions has begun, the chances of achieving substantial improvements in the efficiency of the Government will speedily diminish."

At the hearings which followed the introduction of the bill proposing the creation of a Department of Science and Technology in the present Congress, all officials of the Federal Government who testified were vigorous in their opposition to any legislation to bring about better coordination of science activities, and insisted on maintenance of the status quo.

Political interference with science

Objections were also expressed on the premise that it would inject politics into science activities; that the establishment of a Department of Science and Technology would bring scientists under bureaucratic control, which would be detrimental to the performance of the functions presently vested in various Federal agencies.

This fear apparently exists only with reference to the brand of political overlordship emanating from an executive department; the brand of political control which could issue from the Executive Office of the President, and it seems to me most inconsequently, is apparently regarded as a benevolent variety of political control. This attitude ignores the fact that the President enjoys complete authority over the administrative functions of the executive departments, all independent agencies, and over the policies he establishes within his own office. In all instances, the appointees are named by the President. Those whom the President sees fit to vest with wide authority in the Executive Office of the President are his own selections, while those who are at the head of the departments and agencies must undergo close scrutiny as to their qualifications in their respective fields of operation before they receive Senate confirmation.

With particular reference to political interference, it is important to remember similar alleged forebodings in relation to the establishment of the present Department of Health, Education, and Welfare, under which socialized medicine and Federal control of education in the United States was said to be inevitable. Nothing could have been further from the truth. It is a matter of common knowledge that, in the world-renowned laboratories and clinics of the National In-

* Commission on Organization of the Executive Branch of the Government, Concluding Report, a report to the Congress, May 1949 (Washington: Government Printing Office, 1949), pp. 47-48.

stitutes of Health of the Public Health Service, an arm of the Department of Health, Education, and Welfare, the freedom of the research scientist to pursue his investigations, wherever they may lead, is a zealously guarded personal prerogative. Of course there is political control, but a control executed by a government of laws; a control which has enabled this country to take a pre-eminent position in today's world.

It is necessary to remember, too, that a Department of Science and Technology would be new in name only; its constituent agencies would be taken from those which now administer the relationship between science and the Government. The need for the new department exists because these relationships are being administered without the coordination so urgently demanded by the exigencies of the time. This objective is in accord with another recommendation of the Hoover Commission, that "The numerous agencies of the executive branch must be grouped into departments as nearly as possible by major purposes in order to give a coherent mission to each department."

Progress in other areas

It is fortunate that real progress is being made in some scientific areas, as originally proposed in the Science and Technology Act of 1958, despite the present continuing disorganization. An illustration of this is afforded by title IX of the National Defense Education Act of 1958 of which I was also a sponsor. This legislation requires the National Science Foundation to form a Science Information Service and an advisory Science Information Council to provide for the accumulation, translation, indexing, retrieval, and other services necessary to promote more effective availability and dissemination of the scientific literature of the world. Pursuant to this enactment, the Science Information Service was established and the Science Information Council was appointed.

Further, the National Science Foundation announced formation of the Federal Advisory Committee on Scientific Information, composed of representatives of 17 Federal agencies engaged in scientific information activities, the purpose of which, according to the Foundation, is to provide "an integrated approach to the Government phase of the intensified national science information effort." Also, the National Science Foundation supported the establishment, within the National Bureau of Standards, of the Research Information Center and Advisory Service on Information Processing, primarily to encourage automation in the processing of scientific information. However, the progress thus far made, through the information program and other programs now actually underway, toward effective coordination of all the Government's scientific interests is grievously outweighed by that which still remains to be done.

Operations differ

One of the most persistent arguments constantly advanced against the creation of a Department of Science and Technology is that the programs, responsibilities, objectives, and operations of each of the Federal agencies engaged in science activities are different in character and have special fields of responsibility, which must be rigorously preserved. Those who make this contention insist at the same time that there must be a uniform science policy. Thus, while contending that a Department of Science would drain off manpower and scientists now engaged in the various programs operating

within their own areas of activity, the fact that a centralized agency would bring all related science activities into closer contact and tend to eliminate the existing competition for and wastage of scientific and technological manpower, is completely ignored. The heart of this argument, as I understand it, is that the only way to insure coordination is to continue the multitude of independent agencies operating in specialized fields and to have superadvisory or coordinating scientific groups within the Executive Office of the President act as their guardians.

Clear-cut responsibility

Those who place their reliance on coordinating devices such as interagency committees for improving communications and for providing stimulus to Government science activities fail to recognize the built-in limitations of these approaches. By their very nature interagency committees cannot be creative except at a very low level of operation. They are inevitably restricted by the views of the most pedestrian and unimaginative members. Their product will almost certainly be a kind of lowest common denominator of their combined ideas. What is needed is dynamic, forceful, and continuing leadership which could best come from a cabinet department with clear-cut responsibility and authority in the field of science and technology. For it seems to me that the present structure of the Federal Government in other areas, with the programs devised and implemented by the concerted action of the Chief Executive and the Congress, is the obvious answer.

STUDY COMMISSION

At the hearings held before my subcommittee in April of this year, a number of witnesses suggested that, in order to solve some of the above outlined problems, a Commission patterned along the lines of the Hoover Commission should be established to make a study as to whether or not a Department of Science and Technology should be created. If such a department were found to be desirable, the Commission should then recommend to the President and the Congress which functions now being performed by other departments and agencies of the Government should be transferred to such a department. It was suggested that the Commission should be composed of eminent authorities in the field of science, representatives of the Federal Government agencies which were engaged in basic civilian science activities, and members of the legislative branch of the Government.

At the conclusion of these hearings, the staff of the Committee on Government Operations drafted a bill providing for the establishment of such a Commission. The bill was introduced as Senate bill 1851 on May 5, 1959. It was the view of the Committee that its provisions were broad enough to authorize the Commission to study: the need for strengthening American science and technology, one of our essential resources for national security and welfare; the reorganization of the existing departments and agencies to promote better centralization and coordination of Federal science programs and operations; and the formulation of effective policies for training, recruiting, and utilizing scientists and engineers.

Witnesses testify

At the concluding hearing of the Committee, which was held on May 28, 1959, witnesses were invited to direct their testimony not only to the bill proposing the creation of a Department of Science and Technology, but also to the proposed establishment of a Commission on a Department of Science and Technology. Some of the spokesmen for the administration who testified at these hearings contended that there was no need for legislative action and

opposed both proposals. Their opposition to the creation of a study commission to determine what might be done to improve and coordinate Federal civilian science programs was based on the contention that the President's Science Advisory Committee and the Federal Council for Science and Technology, both of which were then headed by Dr. James R. Killian, Jr., would provide all the necessary information upon which the President could take appropriate action to bring about governmental reorganizations to correct deficiencies in present operations.

Government witnesses who opposed the creation of a commission to study these problems repeatedly placed heavy emphasis upon the personal ability and qualifications of Dr. Killian and the confidence placed upon him by the President and the scientific community. Yet, at that very moment, Dr. Killian's resignation had already been submitted to the President. Without reflecting in any manner upon the qualifications or potential leadership of any of the science advisers to the President, I think Dr. Killian's resignation makes it more imperative than ever that Congress reassert its legislative prerogatives in the field of science. An accountable officer, whether a member of the Cabinet or otherwise, should be made responsive to the needs of congressional committees which are attempting to eliminate the existing deficiencies in the science program of the Federal Government.

A real need exists

An analysis of the testimony of spokesmen who were representing the President at the hearing, will force the inevitable conclusion that it is the desire of the present administration to center within the Executive Office of the President all control over civilian science operations. If these recommendations are accepted, they would deny to the Congress access to information which is essential to the legislative branch if it is to perform its normal constitutional functions. It tends to preempt the scientists who are thoroughly informed and conversant about governmental science operation for the benefit of the President alone, and effectively prevents the Congress from obtaining information from qualified experts in the fields of science.

It was the conclusion of the Committee that a real need exists for a bipartisan Commission to study the problems related to the proposed creation of a Department of Science and Technology. Such a bipartisan Commission could find an equitable solution to the present chaotic conditions of Federal science. The bill to establish such a Commission is now awaiting approval by the Senate and the House of Representatives next session.

It has been stated by many who oppose a Department of Science that scientists must be free to learn through observations and contacts with other scientists in order to cope with the problems of science in their own fields. It would be hard to imagine a better means of effective observation than to have the basic science programs coordinated under central administrative control, where daily observations and contacts could be made as required, without having to make separate approaches to a number of individual officials and agencies carrying on related science programs with no central coordination of policy or operations.

Decision with respect to a creation of a Department of Science and Technology, or of another kind of authority of no less eminence, is, in my judgment, the overriding issue and the obvious need. Fettered leadership, which experience has so often demonstrated, is all that can be expected from makeshift, compromise arrangements devoid of statutory authority and totally dependent upon voluntary cooperation for its achievements.

Achievements of the Rural Electrification Administration—Excerpts From Address by Clyde T. Ellis

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 7, 1960

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an address by Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association. The address is entitled "Prologue to a Golden Jubilee," and was delivered on February 22, 1960, at the 18th annual meeting of the National Rural Electric Cooperative Association.

Mr. Ellis is one of the most loyal leaders in the movement to preserve the rural electric cooperatives of America, and through the years he has certainly proved himself to be a fearless and most capable leader. As a former Governor of South Carolina, I was instrumental in the organization of the first rural electric cooperative in America. So it has been with deep interest that through the years I have followed the growth of the electric cooperatives.

In my opinion, Mr. Ellis' address was the highlight of the meeting which commemorated the 25th anniversary of the founding of the Rural Electric Cooperative Association. From the viewpoint of millions of farmers, the address or report is a historic documentation of their success. For that reason, I ask unanimous consent that excerpts from Mr. Ellis' address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

On Constitution Avenue in Washington, D.C., about halfway between the Capitol and the White House, there stands a magnificent building that houses some of our country's most precious documents. The Declaration of Independence is there and the Constitution.

It is the National Archives, a building and an institution dedicated to preserving the record of America's past.

In the stone near the entrance is engraved a famous line from Shakespeare which might well be an admonition to us here as we pause briefly at the silver anniversary milestone of our great rural electrification program.

"What is past is prologue," the quotation says.

"Prologue," according to Webster, means "introduction" or "preface." Therefore, what is past in the rural electrification program is but an introduction to what is yet to come.

Our past is precious. Our own archives are filled with the joys and sorrows, the triumphs and defeats, the accomplishments and failures which are interwoven in the story of these 25 years.

All of it, I think, can be reduced to the six words selected by your program committee to be the theme of this meeting: "Rural Electrification—Good for All Americans."

REWRITING HISTORY

I have an interesting publication just put out by the power companies' Edison Electric

Institute. It's called Rural Electrification in the United States and it tells all about how the profit power companies have electrified rural America. Among other things, it says—stretching the truth a little—that they supply wholesale power to two-thirds of the rural electric cooperatives.

It doesn't say that we paid them over \$72 million for supplying us this power in 1958, and even more in 1959, but we did. And even in a cost-plus business it's nice to pick up an extra \$72 million a year.

This little book, by the way, gives a very interesting history of rural electrification.

For example, on page 39 it says, "Bringing electricity to the farm has taken long, steady years of research, development, and sales effort on the part of the Nation's investor-owned electric utility companies."

How do you like that way of rewriting history? And you can bet this book will be purchased by the hundreds of thousands of copies by the power companies and spread through the communities you serve.

BENEFITS OF ORGANIZATION

In many States you have efficient and strong statewides, with excellent consumer publications. We feel the growing influence of these organizations and their papers in our legislative battles. Time after time your State managers and editors have provided the margin of strength that has carried the day.

More and more of you are pooling your business services through your statewides to achieve the greater economies of scale. This is the type of activity I feel we must do more of in the years ahead. Individually, we are small; united, we have tremendous power and strength.

We must find ways and means of working together—through the statewides, through regional power associations, and through NRECA.

We do not need to look far into the past to recognize the tremendous benefits of working together in the field of legislation. This was never demonstrated more clearly than last year.

Just look at a few of the issues you were up against. And look what you did to them.

1. You were up against a tremendous administration-sponsored power-company-supported drive to hike your interest costs and cut the big bankers in on your loan program.

2. You had just seen the Comptroller General concoct a ruling on REA that would have prevented you from serving anybody a power company wanted to serve and would have required you to repay immediately to REA millions of dollars you had borrowed and used in good faith.

3. You had seen your able REA Administrator stripped of his authority to approve major loans without first getting the Secretary of Agriculture's blessing on each loan.

Contemplate for a moment what might have happened had you not been organized to place your views before Members of Congress on these issues.

Do you suppose the Comptroller General's highly injurious ruling would have been overturned by the Senate in passing the Aiken resolution if you had been unable to speak with a powerful voice?

Do you think all damaging legislation would have been bottled up if you had not had national action? Don't forget there are gigantic forces, led by the President himself—you heard him last year—striving to get some of this legislation through Congress and into law.

You have told us of your national staff what to do, and we have done it. As a result, your system, no matter where it is, has realized enormous dollar savings, many times your dues in the national, annually.

Through NRECA, you have successfully fought for the Federal dams and transmission lines that have meant the difference be-

tween success and failure for many systems, and have helped lower the overall cost of power for all systems.

At your direction, we have gone all out in our opposition to REA interest rate increases and Wall Street financing schemes. Without a strong national voice speaking in your behalf, I am convinced you would be paying from 4 to 6 percent for your loan funds right now.

It is certain that ahead of us lie problems and challenges unmatched by anything we have seen in the past; new kinds of problems, more complex, potentially more deadly, than any we have known before; problems that arise from the changing shape and mood of the American Nation, problems that arise from our own growth and expanding responsibilities.

Just consider the somber implications of some of the major challenges that you have to grope with in the days, months, and years leading toward the golden anniversary year.

THE TIGHT-MONEY ISSUE

Consider the tight-money issue. This is upon us. It is an issue that no single co-op or power district could deal with individually. It is an issue that will require all the unity and cooperation we can muster among ourselves as well as among our neighbors, our friends in other areas of endeavor—consumers wherever they are. We are all affected tremendously.

We believe you want this whole tight-money high-interest policy reversed. Delegates to the last three regional meetings last fall passed resolutions to this effect. Our correspondence and conversations with you indicate that many of you feel the long-range solution to our own interest rate problem must be found along these lines.

People have finally begun to realize that the tight-money policy is a rigged affair. It is rigged for the purpose of redistributing the income and wealth of the land. It is a policy that transfers income and wealth from the lower and middle income groups, such as farmers and wage and salary earners, to those already rich.

You have a big stake in this issue, both official and personal. It hits you as one responsible for the management of your rural electric system. It also hits at you as a consumer and taxpayer.

Since 1952, we have had nothing but tight money, and we have already had two economic setbacks and a continuing farm depression, despite defense spending at almost wartime proportions.

In our current monetary struggles, one group after another has been battered down by the captains of tight money.

The veterans lost their battle against high interest. Farmers lost their fight to hold down Farmers' Home rates. Farm Credit rates are up. PCA rates are up. Housing rates are up. And so on, and on. Only the rural electricians have survived it.

The same philosophy surrounds the tight-money drive on REA. They want you to be gouged along with everyone else.

THE ANTI-REA CAMPAIGN

You remember last year at our annual meeting in Washington President Eisenhower himself came to sell his policy. For 2 years now his budget message has urged Congress to impose the high interest, tight-money policy upon your program.

Thus the leader leads and now the lieutenants follow. The Director of the Budget has been giving speeches before big-business groups in many parts of the country in an effort to get them behind the drive to raise your rates. The Secretary of Agriculture and many of his assistants have gone about trying to arouse people against the loan terms of your program. And the Secretary of Agriculture has ordered the REA Administrator to campaign and lobby for

changes in the REA law to inject the Wall Street, tight-money practice in our program.

Here is the language of the Benson orders to the Administrator:

"It is my thought that it will be necessary for you to do a great deal of ground-work between now and the next session of Congress on setting the stage for the new REA legislation. As you have indicated many times, it would never be possible to get new legislation in this field until there is a fair amount of support for it at the grassroots or local cooperative level.

"It would seem that there would be much that you could do between now and the time the new Congress convenes to develop support for this new legislation. One suggestion might be that you would concentrate your efforts as much as possible on just a few key States. I would like to discuss this further with you at a convenient time."

I have read you the entire memorandum which is signed by E. T. Benson and which is addressed to David A. Hamil, Administrator, REA, and is dated August 26, 1958. The memorandum is part of the official record of the Department of Agriculture and was printed in the transcript of a hearing before a Subcommittee of the House Committee on Agriculture on February 18, 1959. The committee requested this and other memos after they were exposed in our Minuteman newsletter.

Just a few days ago, the REA Administrator was again obliged to issue a statement in support of the President's plan: "The recommendation of the President regarding REA interest rates," the REA Administrator announced on January 19, "is both realistic and necessary."

Realistic and necessary. For whom—you or the moneychangers?

What can we do about this threat to our program?

Two years ago at Dallas, we rallied behind the cry of "stand your ground." Today, just standing our ground will be inadequate. We have no choice but to march forward and do battle, to reverse this policy which threatens our very existence.

I am convinced that the kind of golden anniversary you will celebrate in 1985 will depend in part on how you deal with this great issue at this meeting.

DYNAMIC MANAGEMENT

Consider next the challenge of providing the dynamic management your system and the program as a whole must have to meet the problems of the future.

You are at the helm of a business that has become large in scope and in problems. The average rural electric system has \$3 million in assets. Only 7 percent of the corporations in America have assets of \$1 million or more.

Therefore, you, whether you are a director or a manager, have to know and practice the very best of modern management techniques.

Most of you, of course, have recognized this need. That's why you took group action through your national association in order to provide yourselves with comprehensive management services. You developed through your national association a program of management training which affects practically every aspect of your operations. You developed, again through NRECA, a consulting service in order that new ideas, new techniques, new experience, and new patterns might be exchanged for more effective benefit to each one of us.

This is how we have been meeting the challenge of management needs up to this point. We know from what we can see of the future that we have just begun to scratch the surface. We know that nobody is going to solve our management problems

for us; we are going to have to do it ourselves, working together.

PROVIDING THE CONSUMER'S NEEDS

Consider next the challenge presented to us by the consumer-member. He is—as he has always been—the heart of the program. This has been basic philosophy with us the last quarter century, and it must continue to be.

The whole world is now becoming aware of the problem of an exploding population. In the United States, cities are bulging out into territory served by the rural electric systems themselves, this is both good and bad. But it is a fact we have to deal with.

It is not possible at this point to forecast with too much confidence the extent of growth in the rural electric systems' areas. However, by studying census estimates, by studying actual growth as reflected by actual count of the increasing numbers of people we have served over the last several years, and by making certain assumptions and judgments, we can forecast some few years ahead and perhaps make some educated guesses as far into the future as 25 years from now.

It seems reasonable to predict that if the rural electric systems continue to serve the same territory as now, they will more than double the number of meters now served by 1985.

Are we preparing to meet this great challenge, with all its implications?

POWER USE

Take the matter of power use. This is something which concerns both you and the consumers.

A sound power use program can greatly strengthen the rural electric systems themselves. It can accelerate the expansion of average sales which produce bigger margins at lower rates. Thus, what is good for the member-consumer is good for the cooperative or power district.

All rural electric benefit directly from the sales campaigns of electric appliance and equipment manufacturers and distributors. They are now working hard in the rural market—they are spending huge sums of money to acquaint your consumers with electrical appliances that you want your members to buy.

This didn't just happen overnight or by chance. It's taken years of hard work—years of explaining the rural electrification program to the right people. It has taken a lot of coordination with your statewide organizations to give manufacturers a true picture of the market and a plan for selling to that market. But as a result you, through your NRECA, have become the organized leader in this area.

BILLION DOLLAR MARKET

We've had to prove to industry that rural electric members provide a tremendous market for their products. Last fall our power use section, with your help, conducted the first reliable national survey of the rural market. It showed that rural electric members would buy over \$1 billion worth of electrical appliances in 1960.

POWER CONSUMPTION

What can we expect to happen if we are able to meet this challenge involving power use and the consumer?

We can expect a phenomenal growth in the use of electricity and in the performance of your system.

By the end of our next quarter century, I am sure you will find that modern farms will be averaging 40,000 to 50,000 kilowatt-hours of electricity per year. The average now is 4,200 per year, but many farms are already using in excess of 50,000 kilowatt-hours per year.

This could well mean that the total power requirements of rural electric systems will rise—again, if you meet the challenge—from about 29 billion kilowatt-hours input, which was last year's figure, to an estimated 250 billion kilowatt-hours in 1985.

This means that rural electric systems have the potential of providing more electricity to their rural members than was used by the entire country for all purposes as late as 1942.

POWER SUPPLY PLANNING

If rural electric is to meet the challenge, if they are to play their part in the country's all-electric future, there must be more than resolutions imploring the national administration or Congress to answer our prayer.

We must act, and act fast. We must undertake immediately, region by region, practical, long-range, joint power supply planning. We must employ the necessary engineering, legal assistance and other assistance to make our long-range planning concrete.

In this regard, our on-the-spot inspection of Russian power development last fall was a revelation. I saw that country in the process of building five giant regional power grids with more modern high-voltage long-distance transmission than anything in the United States. Ultimately, these systems will be tied together into one trans-Soviet grid, all fed by great hydro and thermal generating stations, the latter located near fuel reserves.

The free countries of Western Europe are doing the same thing. A study team of rural electric leaders found last fall that all these countries, from the Baltic to the Mediterranean and from the Iron Curtain to the English Channel, are tied together with extra high voltage transmission. And they also found that these countries had evolved a formula under which all systems—government, cooperative, and power companies—work together to meet the common need for ample supplies of low-cost power for everyone.

A SIMPLE FORMULA

It's a simple formula, although varying in different countries. Basically a nonprofit stock company is formed, with the National Government being a major stockholder, but with all other producers and users of wholesale electricity owning part of the stock and helping to run the giant generating stations and transmission grids. This would be a way for us to get abundant wholesale electricity for all in America without the Government having to do it.

Former Federal Power Commissioner Leland Olds has given much study to this overall subject and has proposed two bold experiments.

The first would establish giant regional generation and transmission cooperatives—far larger than anything we have today—to meet the future power needs of all the Nation's electric systems at the lowest possible cost. The second would establish a Federal Public and Cooperative Finance Corporation to handle the financing of the public and cooperative sector of the Nation's economy, including the great regional G & T's.

Whether the ultimate answers will be found along these lines, or some modification of them, can only be determined after our practical long-range power planning activities begin to produce results. But at this point, they seem to hold real promise.

SUMMARY AND CONCLUSION

We've seen that the challenges of the future grow from the seeds of the past. The past is prolog.

Somehow in the future we must be better than we have been in the past. If we aren't better, we can expect to see our magnificent accomplishments of the first 25 years whittled

tled away and dissipated. We cannot stand pat and live on the glory of an era that is now the dead past.

The human memory is short. Already a generation has grown up that knows the old days only as legend—a new generation of our own members, a new generation of city people, a new generation of Congressmen. They have no firsthand knowledge of the miracles you have worked.

Yet, if we act wisely now, the future holds great promise for the fulfillment of our dream of abundant power at low cost for all rural America—an objective that will truly be good for all Americans.

It Is Already Here

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. COLMER. Mr. Speaker, today we begin debate in the House on the so-called civil rights legislation. Ever since the many bills on this subject were introduced last year in the first session of this Congress, a number of us have given unlimitedly of our time, efforts, and whatever talents we possessed to prevent these proposals in any form from reaching this point of consideration on the floor. We were motivated, first, by a recognition that these proposals were primarily, if not solely, a political maneuver by self-styled liberals to gain the approval of minority groups and, second, by a fundamental opposition to this legislation as being unconstitutional. We were convinced that these proposals were a further studied effort to destroy the original concept upon which this Republic was founded as a government of united but sovereign States, rather than one of centralized power vested in a Federal bureaucracy.

On the eve of this debate we southern Representatives in the House caucused and perfected a broad organization to combat this movement to the best of our ability and with the limited opportunity offered under the parliamentary rules of this body.

Mr. Speaker, at this meeting a resolution expressing the sense of its members was adopted. It was proposed by the able and distinguished Member of the House and former Governor of the great Commonwealth of Virginia, Congressman WILLIAM TUCK. The resolution follows:

Resolved, That it is the fixed determination of this group to oppose by every method and argument the passage of a civil rights bill, and particularly the registrar amendment which will be offered. We are utterly weary of the constant efforts of the proponents of this legislation to adopt punitive measures aimed at the Southern States, which have been the bulwark of democracy from the founding of the Democratic Party by Thomas Jefferson.

The proposed legislation is an obvious and studied return to the force bills enacted by Congress in the Reconstruction days following the Civil War. The proposal applies to local, State, and Federal elections. Aside

from being unconstitutional invasion of the rights of States to determine the qualifications of voters, it is an invitation to rioting and bloodshed, which have already been induced by the agitation for the passage of this bill.

We expect to oppose it with the parliamentary procedure at our command to the utmost, and we commend the valiant and unflinching efforts of those Senators who are making full and effective use of the parliamentary procedure at their command, and for the brilliant debate which they have conducted in opposition to the bill on its merits.

Tight Money

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CURTIS of Missouri. Mr. Speaker, Business Week has made a nationwide survey of corporate executives regarding money conditions and in its February 27, 1960, issue printed an article on the results thereof, as follows:

WHERE THE CREDIT PINCH HURTS

(Small companies, and those in a few hard-hit industries, are the chief sufferers. Survey shows that most companies aren't—or say they aren't—much affected. Nobody seems afraid of an actual scarcity of credit, and most are prepared to pay even higher rates. Only a big upsurge in demand on top of further tightening by the Federal Reserve could bring about a new round in interest boosts. This is unlikely this year.)

Since 1951, when the Federal Reserve won the right to pursue an independent monetary policy, the cost and availability of money have been a constant problem for corporate management. At times, as in the tight money squeeze of 1957, it has been a major worry.

Company treasurers resented the high rates that banks charged on loans; they resented even more banks' insistence that they maintain compensating balances, depriving them of the full use of their borrowed money. And because they feared that rates would go even higher and that credit might not be available at all, they stepped up their demands—which had the effect of further tightening an already tight situation.

Today, borrowing is more expensive than it was at the height of the 1957 squeeze (the prime rate is now 5 percent, compared with 4 percent in 1957). Banks have many more loans on the books—and appear much more reluctant to increase their lending. Nevertheless, corporations are much less worried today about credit conditions than in 1957. They have no fears of an actual scarcity of credit. And they are prepared to pay even higher interest costs than we have right now.

CALM VIEW

This relatively calm appraisal of the credit outlook emerges from a nationwide survey of corporate executives made this week by Business Week. While most corporations are paying the highest interest costs in a generation, few executives say they consider this a matter of prime concern. However, despite their protestations, many admit taking steps they wouldn't have taken but for tight money.

Here is what corporations are saying about money conditions:

More than 90 percent report that tightness of money will not change overall corporate

strategy; the remainder, mostly smaller companies, admit that any further tightening would pinch very hard.

More than 80 percent report that their liquid holdings—cash and short-term investments—are satisfactory. However, many predict a decline in liquidity as they pay for inventories and pay their taxes.

More than 75 percent plan to increase their inventories in 1960. A majority in this group report that they will be making only "normal" and moderate—10 percent to 15 percent—increases. And about half say they will not have to borrow to do so.

About 60 percent plan to step up their expenditure for plant and equipment by a modest amount. But less than half of these say they will do any outside financing.

While almost every company says it is now paying higher rates on borrowings than ever before, there is no sign that corporations are planning to borrow in anticipation of even higher rates. Nor do they talk of borrowing for speculative purposes.

REASSURING

These responses indicate that corporate credit demand will not get out of hand and precipitate a drastic credit squeeze this year. Fear of this was widespread earlier in the year, but the survey makes clear that there is no mad rush to rebuild inventories that would require heavy borrowings.

This does not mean that borrowing rates are likely to go down. Credit demand this year should be about as strong as it was in 1959, when the banks were hard pressed to meet corporations' calls for loans. If the Fed sticks to its present course of keeping credit tight but not increasing its restrictiveness, the normal seasonal rise in demand at tax time may bring some stiffening of rates—but not any jump to new heights.

But it would take a combination of increasing Fed pressure and a big upsurge in demand to bring about a new round of interest rate hikes. This does not now appear likely, although a good many corporations say that if sales are better than they expect, they will increase their spending—and their borrowing—no matter what the cost in interest.

The financial vice president of a national food company in the Midwest says: "If you need money, you need it. And you go out to get it. The interest rate is unimportant when you need money."

LIVING WITH IT

This reaction appears to be typical of most corporate executives. They have no liking for tight money, but they have learned to live with it.

They have increased and expanded their credit lines. They are keeping closer tabs on their cash positions. They have learned to invest surplus cash in high-yielding short-term paper, mainly 91-day Treasury bills. As a result, they are much more assured than they were during earlier bouts with tight money.

SYMPTOMS OF PAIN

Some companies, though, are hurting—mostly because they are small or because they are in one of a few hard-hit industries—construction, lumber, retailing.

One big Eastern contractor says that the high cost of money is postponing a number of building projects, which is crippling some smaller construction outfits. Retail stores in a number of cities complain that high interest costs are narrowing their profit margins to the vanishing point. And a sprinkling of companies in various industries admit that they are depending on factors, whose charges are about double those of the banks.

Many big corporations confirm that smaller companies are having a rough time. A big Chicago manufacturer of machinery says that some of his smaller customers are very

slow in making payments; a New York appliance maker makes the same observation. In general, smaller companies are getting the funds they need, but they are paying higher rates than large and medium-sized companies, and they are required to provide greater justification for their borrowings.

While smaller companies are pinched the hardest, bigger corporations aren't altogether immune from the money squeeze. True, they have had little trouble in borrowing, but they are paying rates that are cutting into profits. Thus, the notion that tight money has no effect on company policy must be taken with a grain of salt.

INVENTORY PLANS

Certainly, the very cost of money explains some of the evident caution of inventory policy. When interest rates were much lower, many companies would take a gamble on inventories or even on a downright speculative venture—such as real estate. Now, the high cost of money makes such gambles too risky, even if the banks were willing to lend all the money the companies wanted.

The survey shows that less than 10 percent of the corporations interviewed plan big inventory increases—on the order of 30 percent to 50 percent, the sort of increase that would require heavy borrowing. Only one, a manufacturer of signs and displays, seems to be gambling at all; he plans a 50 percent increase in inventories because he expects a business boom. All the others who are budgeting for a big rise in inventory spending cite special circumstances.

For example, a big Eastern manufacturer wholly devoted to defense work plans a 50 percent hike in inventories because of new Government orders. A southern drug manufacturer is spending over 20 percent more for inventories, but only because it has made several acquisitions. A New York garment maker is also planning larger inventories as a result of taking over another firm. He explains: "Ordinarily, we would increase our stocks by 20 percent, but this year it will be larger because of our new acquisition."

Plans of a majority of companies to increase inventories only moderately seem to have been influenced by interest rates. In many cases, their budgeting for inventory appears to be determined by their ability to finance themselves. Many of them plan to build up their inventories without resort to bank credit, and a somewhat smaller group hopes to borrow less than usual.

WAITING FOR SALES

A few companies say they are already overloaded with inventories. For example, a Cleveland metal outfit, which started building up its inventory before the steel strike, says it has too much on hand. A California electronics maker is in the same fix, and companies in many cities report that in their rush to buy goods after the steel strike they have already amassed all the inventories they need.

Some companies are proceeding cautiously, waiting to see what sales will do. A Texas manufacturer of oil industry equipment says he will borrow to increase inventories if sales rise; at the moment, though, the ratio of inventories to sales is much lower than in past years. And a St. Louis electrical equipment maker says that better handling of materials deliveries makes it possible to get along on smaller inventories.

CAPITAL SPENDING

A similar pattern seems to prevail on capital spending. At one extreme are a small number of companies that plan big increases, mainly because of better business prospects or expansion plans; at the other are a small number that plan to cut back their spending. The majority say they will spend at a level somewhat higher than they reached in 1959. Most companies in this group add

that they expect to get by without relying on external financing.

INTERNAL FUNDS

This do-it-yourself financing indicates that corporations are generating more and more funds internally, but it is also a sign that business is reluctant to pay the high cost of external financing, whether in the banks or in the capital market.

Thus, money rates may not be crimping business, but they are high enough to make businessmen cautious, unwilling to increase borrowing unless they can see definite profits from it.

They can take this position because they have a fair degree of liquidity. Of course, company treasurers rarely admit to being satisfied with their liquid assets, but, by and large, corporate cash positions are good right now. They are a little below last year's level, but well above the troughs of 1957-58.

These liquid assets will melt a good deal in the next few months as corporations use them for inventories and taxes. Last year, corporations loaded up on short-term government securities, particularly when inventory buying declined during the steel strike. Now they will be selling these investments; the fact that they have such paper to sell is one reason that they feel so secure about the credit outlook.

IF SALES TAKE OFF

This cool and cautious attitude may change if sales begin to spurt. Corporations will not hesitate to spend more and borrow more if it appears profitable to do so. Thus, there may be a rush on the banks if sales take off—or if prices start rising.

Then it becomes a question of what the banks will do. The banks today are squeezed much harder than corporations. This contrasts with the 1957 squeeze, when corporations were hit hard. Today, the banks say that, while they have funds available for "legitimate and credit-worthy customers," they look closely at every loan proposal.

Some banks say that they are cutting down on practically all loan demands; others turn down everything but virtually risk-free short-term loans. As one St. Louis banker admits, "We have no room for anything but the best types of borrowers."

Bankers feel that the Fed will provide the reserves to take care of seasonal loan demands. But if demand exceeds seasonal surges, rates will have to go up. According to one New York banker, "It looks as if we will be able to get through the year without another hike in rates. But we can be surprised—we have been before."

Resolution by Lithuanian Americans of Omaha

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, the Lithuanian Americans of Omaha, Neb., at a meeting on February 14, commemorated the 42d anniversary of the declaration of independence of Lithuania.

Those in attendance at this meeting adopted a resolution about the current negotiations in the international field,

and I deem it a pleasure to include it as part of my remarks, as follows:

Whereas the people of Lithuania, one of the first victims of Communist Russia, have been forcibly deprived of the exercise of their sovereignty and of the basic rights of individual, religious, political, social, cultural, and economic liberty, and are now subjected to the inhuman policy of oppression, terror, murder, and mass deportations to Siberia and other parts of the vast Soviet territory;

Whereas no nation, great or small, can today feel protected from the claim of international communism supported, as it is, by all the destructive weapons that modern civilization has devised for mankind;

Whereas the "peaceful coexistence" line of Moscow is designed to lull the free world into a sense of false security in order to gain time and to consolidate the Communist forces for further aggressions; Therefore be it

Resolved, That this meeting appeal to the President, Secretary of State, and the Members of the U.S. Congress with the request to do everything possible (1) that the liberation of Lithuania and other Russian enslaved countries be included in the program of the American foreign policy and in the negotiations at the summit conference; (2) that the Government of the United States enter into no agreement which would in any way acknowledge the fruits of any past, present, or future Soviet aggressions;

Resolved, That we urge the Government of the United States never to compromise for the sake of illusory coexistence between the West and East those eternal ideals of natural freedom and human rights defended throughout American history, but to do all in its power to liberate Lithuania and other occupied countries from Soviet tyranny;

Resolved, That we shall continue to support the Government of the United States wholeheartedly in its efforts to effect a just and durable peace in the world.

JOHN SARKA,

Chairman.

VITALIS A. GADELIS,

Secretary.

Mr. Eisenhower's Pollution Control Veto

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CANFIELD. Mr. Speaker, under unanimous consent I present an editorial which appeared in the February 29, 1960, issue of the Passaic-Clifton Herald-News concerning President Eisenhower's veto of the Water Pollution Control Act and my vote to override, and a statement bearing on the editorial:

MR. EISENHOWER'S POLLUTION BILL VETO

The criticism of President Eisenhower's veto of the bill to increase Federal spending for water pollution abatement is another manifestation of the "let's get the money from Washington" spirit.

In the veto message, Mr. Eisenhower emphasized his belief that pollution of streams, which he called "a priceless national asset," must be stopped. He contended, however, that it would be wrong for the Federal Government to "hold forth the promise of a large-scale program of Federal support," as the bill did, because it would "tempt municipalities to delay essential water pollution abatement efforts while they waited for Federal funds." He also said that pollution

abatement is a responsibility of municipalities, States and industries.

Mr. Eisenhower used strong language in presenting his views on water pollution:

"It is unconscionable for one town or city deliberately to dump untreated or inadequately treated sewage into a stream or river without regard . . . for downstream neighbors. Local taxpayers should be willing to assume the burdens necessary to bring such practices to a halt. Businessmen and industrialists must face up to the expenditures they must make if industrial pollutants are to be removed from the Nation's waters."

The President's stand should be applauded by residents of the Passaic Valley area. Fifty years ago, the municipalities bordering on the Passaic River banded together and, at a cost to themselves of millions of dollars, constructed a trunk sewer in order to clean up the lower Passaic River, which had become a malodorous open sewer. This is the kind of local initiative that Mr. Eisenhower believes the answer to the pollution problem. In view of the local effort to cleanse the Passaic River, the vote of Representative GORDON CANFIELD, of Paterson, to override the President's veto was a vote against the interests of Mr. CANFIELD's district.

The Passaic Valley communities continue to spend large sums annually to operate the trunk sewer system. It does not make any sense that their residents should be taxed by the Federal Government to pay for pollution abatement projects in areas whose residents want Washington handouts so they can escape paying their own bills.

STATEMENT BY REPRESENTATIVE CANFIELD

The Federal water pollution control program is expressly intended to encourage and stimulate local action in this field. The vetoed bill which I supported, H.R. 3610, had specific safeguards to assure that local responsibility would be maintained. For example, it provided that no grant could exceed 30 percent of the cost of a project or \$450,000, whichever was the smaller. Under existing law, which the vetoed bill sought to amend, grants are limited to 30 percent or \$250,000, whichever is the smaller.

Obviously, the major financial burden would have remained with local communities. Proof of this is the fact that since 1956 some 2,000 projects have received grants totaling \$163 million. The total cost of these projects is \$938 million. Thus, for every Federal-grant dollar, local communities have spent \$4.70. There is no other Federal-grant program which can match this performance of local participation.

The vetoed bill, which would have increased Federal participation from \$50 million to \$90 million a year, would not have altered the 70-30 ratio. It merely would have made it possible for additional communities to participate in the program.

President Eisenhower's argument that the additional Federal funds would "tempt municipalities to delay essential water-pollution abatement efforts while they waited for Federal funds" requires close analysis. According to the U.S. Public Health Service, sewage treatment plant construction has increased 75 percent since Federal funds have become available for this purpose. More than 14,000 miles of rivers and streams have been wholly or partially cleaned up as a result.

According to the conservative Washington Star in its February 24 editorial, "This record weakens the President's argument. Local efforts to eliminate or reduce residential and industrial pollution have been greatly stimulated by Federal aid already granted."

But probably the strongest answer to the President's argument comes from his own Water Pollution Control Advisory Board, established by law to advise him on matters relating to water pollution. About a month

before the President's veto that Board unanimously adopted the following resolution:

"The Water Pollution Control Advisory Board, after careful analysis of the construction-grant program for municipal waste-treatment works to control water pollution as authorized by section 6 of the Federal Water Pollution Control Act, believes that these grants have significantly stimulated and increased construction of needed facilities. At the same time there has been no slowdown in the rate of construction of such treatment works financed entirely by non-Federal funds."

"The board further believes, to safeguard public health and other legitimate water uses, that additional incentives are needed to meet the backlog of municipal waste-treatment facility construction."

The President's Board then unanimously endorsed the bill which was vetoed.

With regard to our own area in the Passaic River Basin, it is certainly true that a sustained local effort has been made and that the citizens on their own have done much more than people elsewhere in controlling pollution. Still, the problem of pollution persists in the Passaic Valley, and this is evidenced by the fact that five of our communities have already received nearly \$471,000 in Federal grants. The five are Caldwell, Berkeley Heights, Paramus, Passaic Township, and West Paterson.

The very fact that the State Health Department recognized the need of these five communities for Federal funds is testimony that pollution was there.

In discussing this question we ought to remember that rivers and streams recognize no manmade boundaries, that they flow from the mountains of one State to the plains of another and the coastal basin of still another. Long ago the Supreme Court of the United States decided that waterways by their nature had to fall under Federal law.

I pose this question to you: Would I have been a good Representative if I had voted against pollution control just because my district has the problem licked? Am I supposed to close my eyes to the needs of the rest of the Nation simply because my district is indirectly involved? I think not. For in the long run, if the Eighth Congressional District is to prosper and grow, if it is to become and remain decontaminated from pollution, then it will do so only if the rest of this great Nation prospers and grows, if all of the rivers and streams are cleaned up. How many of you work in other river basins, or vacation there, or have friends or relatives there? In short, we are one Nation now. We cannot arbitrarily separate one little section from another, but we must recognize and solve common problems, we must understand how closely Paterson is related to New York, or Trenton, or Washington, or the fertile States where our food comes from, or the steel centers, or Cape Canaveral.

Finally, I want to mention pollution and foreign aid. Under the bill vetoed by the President, New Jersey would have received \$2 million in Federal grants. In his budget for fiscal 1961 he recommended a 60-percent cutback in the present program, which would result in an allocation of \$446,000 for our State. Compare this with the 3,795,000 American dollars spent in Pakistan on the Greater Kurachi water and sewage disposal project under the President's foreign-aid program. Compare this with the 2 million American dollars spent in Panama under the foreign-aid program for the extension of water pollution control and sewer development. And compare this with the 1,336,000 American dollars spent in Cambodia for health and sanitation projects. Each of these expenditures was specifically requested by the President. In voting the interest of my

district, I could not justify denying to it what the President asks we give to similar projects in far-off lands.

Power Companies Reap Huge New Tax Subsidy

EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. EVINS. Mr. Speaker, recently I made some remarks about the \$1½ billion subsidy the private power companies are enjoying as a result of the accelerated amortization benefits they received before the accelerated amortization program was repealed by the Congress. The same private power companies are now cashing in also on a new form of subsidy which is provided by the liberalized depreciation provision of section 167 of the Internal Revenue Code of 1954.

It is estimated that in the next 20 years the tax reductions that the power companies will receive under this provision will exceed \$10 billion.

The way that this present provision of the Internal Revenue Code is operating to give the private power companies this gigantic subsidy is most cogently described in an article by Mr. J. D. Brown in Public Power Magazine for February 1960.

Under unanimous consent I include this article in the Appendix of the RECORD.

The article follows:

POWER COMPANIES REAP HUGE NEW TAX SUBSIDY—LIBERALIZED DEPRECIATION BENEFITS DWARF MULTIBILLION-DOLLAR FAST WRITE-OFF BONANZA

(By J. D. Brown)

The private power companies "from time to time get their hands in the honey pot, and, having closed their fists, they won't be able to get them out of the jar," said Representative (now Senator) CLAIR ENGLE, Democrat, of California, in a speech at the 1957 American Public Power Association convention in New York City.

It was Senator ENGLE's picturesque way of saying that the power companies were getting tremendous Federal subsidies through fast tax writeoffs. The power companies are still enjoying benefits from the use of these interest-free loans that may well run into billions of dollars. But Senator HARRY F. BYRD, Democrat, of Virginia, who called the tax writeoffs "bluntly, a subsidy" and other Members of Congress were successful in stopping further Federal subsidies to the power companies through fast tax writeoffs.

Today, there's another "honey pot"—potentially more lucrative than even fast tax writeoffs—that the power companies have "their hands in." This is the much-discussed "liberalized depreciation" provision, section 167 of the Internal Revenue Code of 1954.

Liberalized depreciation is a hot topic. A New York investment firm, Goodbody & Co., in a research study on the subject last year, said it "has created a greater controversy . . . than any controversy over accounting methods that we have seen." One case has already been before the U.S. Supreme Court.

And the issue involves big stakes. Over the next 20 years liberalized depreciation could hand the power companies a whopping \$13 billion in tax savings, with ultimate possible benefits to the power companies of as much as \$47 billion. By comparison, maximum possible benefits to private power companies from fast tax writeoffs are estimated at a mere \$5 billion. In other words, liberalized depreciation is a "honey pot" well worth digging into.

Yet the Goodbody & Co. study said "numerous utility executives would be glad to see" Congress "stop any further use of liberalized depreciation by utility companies." These private utility executives, the statement continued, "argue that the piling up of billions of dollars of deferred taxes creates a growing political risk as far as the utility industry is concerned."

And it must be embarrassing for the power companies—who spend millions yearly on misleading ads about public power and taxes—embarrassing because Federal Power Commission statistics show that in 1958 private power companies kept an average of 20 percent of every dollar they collected from their customers allegedly to cover the companies' Federal income taxes. Some companies, in fact, actually pocketed more than they paid to the Federal Government.

This was interest-free capital contributed by the companies' ratepayers * * * an interest-free "loan" made possible by the liberalized depreciation provision of the Internal Revenue Code of 1954.

As an example of the manner in which these benefits may build up, in 1958 Ohio Power Co. collected from its customers about \$15.6 million to pay the company's Federal income taxes. However, the company only paid about \$6.6 million to the Federal Government, and put \$9 million (about 57 percent of the total collected from customers for this purpose) into a "deferred taxes" account. That is, the company actually collected more from its customers as an interest-free loan than it paid in Federal income taxes.

How does liberalized depreciation work? For tax purposes, the company is permitted to write off more of its plant investment in the early years of service life, thus reducing its net income—and its Federal income taxes. But the company keeps another set of books for ratemaking purposes, and on these books it uses straight-line depreciation—that is, the same amount of depreciation each year over the property's service life. Thus the company's rates are high enough to cover Federal income taxes on the higher net income resulting from straight-line depreciation. But the company—since it keeps another set of books for tax purposes—actually pays lower Federal income taxes on the basis of speeded-up or "liberalized" depreciation.

If the company collects more from its customers for Federal income taxes than it actually pays to the Federal Government, what happens to the rest of the money? And who benefits? The big benefit, of course, comes from the interest-free use of the tax savings. If you received an interest-free loan, to be repaid in 33 years, and if you could invest this money at 6 percent (normal rate of return for power companies), you could pay off the loan and end up with a profit of more than three times the amount of the original loan.

Under liberalized depreciation, the tax savings, or interest-free Federal loan, is \$128,740 for every \$1 million of new plant investment. If a power company reinvests this tax savings, at 6 percent compounded over a 33-year period, the net benefits (or subsidy) will be \$473,740. Thus the power

company can net almost half as much as the plant originally cost—by the use of interest-free money.

At the end of 1958, FPC says 156 electric utility companies had accumulated nearly \$900 million from liberalized depreciation and fast tax writeoffs. At the end of 1959, this amount had grown to \$1.2 billion, according to Electrical World—and unless regulatory commissions and/or Congress put a stop to these huge tax subsidies, the amount will grow to even more staggering proportions in the years to come.

TAX-FREE DIVIDENDS

The power companies have insisted that these subsidies should be for the benefit of stockholders, not for ratepayers. This \$1.2 billion in interest-free capital, interestingly enough, is about three times the amount of electric rate increases (\$405 million) which private power companies obtained in the 9-year period from 1951 through 1959.

The most flagrant example of favoring stockholders is that last year at least 23, and probably as many as 29, private power companies distributed their tax savings to stockholders as tax-free dividends. In some cases, 100 percent of a power company's dividends were tax free, since the tax savings from liberalized depreciation and fast tax writeoffs were "flowed through" to stockholders as a "return of capital." (Of course this "capital" came from the ratepayers, not the stockholders.)

FPC Chairman J. K. Kuykendall, in a letter of January 14, 1960, to Representative AL ULLMAN (Democrat, Oregon), listed these 29 companies "whose 1959 common dividends may be fully or partially exempt from Federal income taxes," and indicated that fast tax writeoffs and/or liberalized depreciation were responsible, although other factors could have an effect.

However, FPC's Opinion 264, which permitted utilities to keep the tax savings resulting from fast tax writeoffs said: "Congress did not intend to provide a temporary fund to these companies which could be diverted to payment of dividends to their stockholders. * * * Consequently, we will take all steps necessary to insure that * * * the temporary savings produced by the deferral of taxes are not used, directly or indirectly, for the payment of dividends." This language seems clear enough, but to date the Commission has taken no steps to stop these tax-free dividends, even though 26 of the 29 companies passing out tax-free dividends are under FPC jurisdiction. As much as \$100 million in tax-free dividends were distributed by the companies last year.

The crux of the liberalized depreciation issue seems to be that this provision of the Internal Revenue Code should not apply to regulated utilities.

Logic supporting this point of view comes, oddly enough, from a private power company executive, John B. Madigan of Hartford Electric Light Co., speaking last year at the National Conference of Electric and Gas Utility Accountants, said the intent of Congress in passing section 167 was to encourage industry to modernize machinery and equipment.

"In our industry, however, to be realistic, accelerated depreciation does not stimulate to any great extent the replacement of obsolete equipment," Mr. Madigan declared. "Does anyone seriously contend that our plant would not have been expanded as fully or as rapidly, or that our maintenance program involving replacements of units of property would have been curtailed if it were not for accelerated depreciation? Perhaps it achieved all these things for other taxpayers, but certainly not for us. What was achieved was, in effect, nothing more than a reduc-

tion in taxes equivalent to the lowering of the present corporate rate of 52 percent; and if income taxes had actually been reduced in such manner, would anyone argue that we ought to be allowed to retain the savings over and above the fair and normal rate of return?"

At the same meeting, Arthur H. Kuhn, of Pioneer Service & Engineering Co., summed it up this way: "The concept of liberalized depreciation was sold in the first place by the capital goods industries, which are not regulated. * * * They were designed to meet many problems that are not related to the utilities. Once it was passed, it became available to all companies."

Even the FPC, in its 4 to 1 decision in 1956 in the Amere Gas case when it ruled that utilities should receive the benefits of these huge tax savings, said: "The extraordinary ability and willingness * * * to attract capital and construct new facilities causes us to question whether the incentive provided by section 167 of the Internal Revenue Code is necessary or desirable for this industry or will, in the long run, be as beneficial to the public interest."

FPC Commissioner William R. Connole, in a historic dissent in the Amere Gas case, said utilities "not only have the privilege and the incentive to expand, but indeed have a clear-cut, universally recognized and inescapable obligation to do so. * * * And it would be a vain act indeed were the Congress to enact a statute which would purport to cure a nonexistent problem or to provide encouragement where none is needed, indeed where none can be inferred without impugning the willingness of utilities themselves to conform to their existing obligations and the ability of the regulatory community to meet its statutory and constitutional mandate."

Allen S. King, president of Edison Electric Institute and president of Northern States Power Co., told the New York Society of Security Analysts on January 6 that private power companies invested a record \$3.8 billion in new plant and equipment in 1958—"one-eighth of the investment made by all American industry during that year." The electric power industry, Mr. King proudly declared, is a basic "growth" industry, which by 1964 will be investing \$4.5 billion a year in new facilities. The observer must wonder, then, why this basic "growth" industry needs the vast subsidies available through section 167, designed to encourage private firms to expand.

Power companies claim there is only a tax deferral, not a tax reduction, through liberalized depreciation. They'll eventually pay the same amount of taxes over the service life of the properties; it's just a shift in the timing of these tax payments, they say. But FPC, even though its rulings give these tax subsidies to the power companies, admits that the result of liberalized depreciation is "properly characterized a 'tax saving,'" rather than simply a tax deferral. In a growing industry like the electric power industry, the new investment becomes larger, the tax deductions due to liberalized depreciation grow correspondingly, and the total sum of "taxes deferred" becomes evermore huge. No power company will ever pay up or even decrease the amount of its "deferred" taxes unless the utility operation is liquidated or sharply reduced.

Also, there is another loss to the Federal Government, since lower tax payments by power companies mean the Government must borrow to make up for the loss in revenue. Fast tax writeoffs cost the Government several billions of dollars; but liberalized depreciation can eventually be much more costly to the Government.

Perhaps the most amazing event in the recent history of liberalized depreciation was a suit filed last year by a power company

combine against the American Institute of Certified Public Accountants. The power companies—Appalachian, Ohio and Indiana & Michigan—actually tried to stop the Institute from sending to institute members a letter saying that deferred taxes should not be shown in any account "included in the stockholders' equity section of the balance sheet." Said these power companies: we have \$65 million in "earned surplus restricted for future Federal income taxes account," and the removal of this so-called earned surplus from common stock equity would damage the companies' financing program. This case went to the U.S. Supreme Court, with the power companies losing. The American Institute of Certified Public Accountants sent the letter. The incident makes clear the stakes in this issue.

UNJUSTIFIED SUBSIDIES GROWING

So one ends up with this picture: Congress in 1954 passed section 167 of the tax law providing Federal subsidies to encourage private competitive business to expand. Most private power companies—regulated, required by law to expand; given incentives through a guaranteed rate of return (after taxes) to expand—climbed on the free-enterprise bandwagon and took advantage of these subsidies. This was particularly significant because the power companies are a high investment industry—representing one-eighth of all investment by American industry in 1958—so they would benefit more than other industries since the subsidies related to investment.

The result: tremendous Federal subsidies to the power companies, subsidies which even some power company executives apparently are concerned about, subsidies which obviously are not needed by, nor justified for, the power companies.

If you are aware of these huge Federal subsidies to the private power companies, some of the national ads run by the power companies are laughable. For example, read this copy from a recent electric companies advertising program ad: Public power is "all so unnecessary. America's many independent electric companies are able—and ready—to supply all the electricity the Nation needs—without your tax money."

ECAP ads never mention the "hands in the honeypot"—hands of many "Independent" power companies accumulating vast amounts of interest-free capital. This year, a move is underway to further "liberalize" the depreciation provisions of the Internal Revenue Code, so as to provide even greater "incentives" (subsidies) to the private power companies. The result would be to make further use of the Nation's tax laws to provide Federal subsidies to an industry which speaks loudly about its growth without the use of Federal funds.

INTEREST-FREE CAPITAL FOR POWER COMPANIES

Private power companies, on nationwide basis, pocket 20 percent of every dollar collected from customers to cover companies' Federal income taxes; some companies pocket over 50 percent.

The money they retain—because of a "fast depreciation" provision in Federal tax laws—is interest-free capital. Over next 20 years, total of this interest-free capital could reach \$13 billion. Reinvested at power companies' normal 6-percent return, this sum could build up to subsidy of \$47 billion over 33-year life of properties.

Total tax savings accumulated, at end of 1959, was already \$1.2 billion.

In addition, many power companies distribute their tax savings to stockholders, as tax-free dividends. Nearly \$100 million in 1959.

Loss to Federal Government from fast tax writeoffs and liberalized depreciation will run into billions of dollars.

Buffalo: City of Good Neighbors

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. MILLER of New York. Mr. Speaker, the city of Buffalo, N.Y., a part of which I have the privilege to represent, is truly a city of good neighbors. I would like to call to the attention of the House of Representatives an excellent article by Walter G. Young as it appeared in the March issue of Catholic Digest.

The article follows:

BUFFALO: CITY OF GOOD NEIGHBORS—WHERE MILLIONAIRES AND PAUPERS ARE SCARCE, BUT CHARITABLE HEARTS ARE AS ABUNDANT AS THE ELM TREES

(By Walter G. Young)

Late in 1959 Bishop Joseph A. Burke of Buffalo, N.Y., asked the Catholics of his diocese for \$2.5 million for a seminary. That's a lot of groceries, children's shoes, and gas bills when it comes out of workingmen's pockets. So he set aside one week for the campaign: a most conservative schedule, as it turned out.

It took all of 7 hours for the goal to be topped. By the end of the week it was on the way to being doubled, with \$4.4 million subscribed.

The Catholics of Buffalo were proud of the response, but not at all surprised. In this city such feats are taken as a matter of course, though visitors are often dumfounded.

Buffalo is one of a handful of the Nation's large cities where Catholics outnumber the rest of the population. A diocesan census in 1958 showed the population to be 63 per-

cent Catholic in the city, 53 percent in the suburbs.

About a third of Buffalo's 600,000 people are of Polish descent. Italian, German, and Irish groups are also numerically important. This distribution, of course, accounts for the Catholic preponderance. And it gives Old World charm to the city. On Holy Saturday Polish families carrying their baskets filled with Easter's breakfast throng to church for the ancient food-blessing ceremony, Swieconka; Italian neighborhood feasts mark St. Joseph's Day; and on March 17 the whole city puts on a green tie and claims to hail from County Cork.

The original village was planned shortly after 1800, with Washington, D.C., as its model. Today's city retains the original pattern of diagonal streets and spacious squares. Having been burned to the ground during the War of 1812, it started rebuilding on the hot ashes. In 1832 it incorporated as a city with 10,000 people. It grew steadily during the 19th century, and passed the half-million mark around the period of the First World War. Then it slowed down, girdled with annexation-resisting suburbs.

Since the Second World War the suburbs have had to absorb the growing population, and now find themselves saddled with the very thing they sought by independence to avoid—alarming tax bills.

Buffalo's location had much to do with its early prosperity. At the eastern end of Lake Erie, halfway between New York and Chicago, it quickly became an important distribution center for goods and a stopover for westbound settlers. Besides location, there was an abundance of water—there was the Erie Canal—and in time there was electric power from Niagara Falls.

Manufacturing plants began to dot the area; grain elevators appeared; lake shipping flourished. Railroads followed, until the city was the second largest rail center in the Nation. In Lackawanna, an independent adjoining city of (today) 30,000 people, the country's third largest steel mill was built.

Strong, farsighted men guided the city's early history. One of the first was Judge Samuel Wilkeson, who brought the Erie canal to Buffalo. Its terminus was already in the bag for Black Rock, a neighboring village down the Niagara River, when Sam roused the citizens, lobbied Albany, and dug out a harbor. He got his terminus; and although later the victory came to have small significance (Buffalo annexed Black Rock in 1853) it was important at the time. It marked the beginning of Buffalo's ascendancy.

If Wilkeson was the father of the city, Benjamin Rathbun was its first entrepreneur. In the 1830's he was Mr. Buffalo: the biggest merchant west of the Atlantic seaboard, a stage-route operator, a contractor who was completing two buildings a week, and the owner of the palatial American hotel.

But with so many interests, Rathbun eventually found the water too deep. Financial maneuvering proved his downfall; and if he gained any satisfaction from the experience, it would have to be that he was able to serve his 5-year sentence in his own Rathbun-built jail.

Then there was a dapper millionaire, Colonel Palmer, whose unorthodox business methods were typified by a deal he made one day at lunch. With no apparent forethought, he offered his companion \$150,000 for everything he owned except his "wife, babies, and household effects." The offer was accepted and ratified with a drink. And there was Joseph Dart, who pushed the city into its milling preeminence by building mechanical grain elevators over the objections of scoffers who insisted that the

only efficient grain elevators were Irishmen's backs.

Mark Twain lived in Buffalo for a spell; and in nearby East Aurora, Elbert Hubbard pasted together his "Scrapbook."

Today the colorful pioneers have gone; and Buffalo, the Nation's 15th city in size, is a conservative place short on splendor and long on the old look. No dominant industry signs most of the paychecks, for Buffalo's eggs are in many baskets: steel, automobiles, flour and feed, chemicals, paint, furniture—you name it.

The factories, largely absentee-owned, are as numerous as the downtown pigeons and as varied as the suburban tax rates. This diversity, coupled with conservatism in thought and action, stabilizes the city's economy. Even during the terrible thirties, Buffalo suffered no major bank failure. Breadlines and shanty towns were comparatively minor blights. Millionaires are scarce here, but so are paupers.

Notable public buildings include the 384-foot city hall, dedicated in 1932; Civic Stadium (1938), a fine football bowl, unimaginatively located; and Memorial Auditorium (1940). Kleinhans Music Hall, dedicated in 1940, is one of the country's finest, providing beauty, comfort, and almost perfect acoustics for 3,000 people.

But the real objects of pride are the trees, all 400,000 of them. The elms arch across the wide avenues like motorists' honor guards. Citizens write indignant letters to the editor whenever progress claims a few. Everybody worried about Dutch elm disease, now reasonably controlled. With replanting to cover its ravages already begun, a priceless asset appears secure.

Buffalo weather is noteworthy for its practically permanent breeze, which in winter finds its muscles. That's when Buffalonians are ready to challenge Chicago's Windy City title. Although the chamber of commerce says wind velocity averages less than 15 miles an hour, you'd have a hard time driving that point home to January's pedestrians trying to cross Niagara Square while hanging on to the winter rope railings. The ropes, after all, are placed there for only one reason; to keep struggling pedestrians from being blown out into the traffic.

The Lake Erie breezes do more good than harm. They carry away the smoke from factory chimneys, and they air-condition the summers. Buffalonians suffer no smog choke, few wet-dishrag days, and fewer sleepless nights.

The U.S. Government once seated itself at Buffalo—for only a few hours, to be sure, and under tragic circumstances. It was September, 1901. President McKinley had just died in a Delaware Avenue home, victim of an assassin's bullet. The Cabinet hurried to the city. It met in the Buffalo club, which became the Capitol pro tem, and decided, among other things, how the Vice President should be sworn in. On September 14, in another Delaware Avenue home, Theodore Roosevelt became our 26th President.

Buffalo politics was a springboard for two Presidents: Millard Fillmore and Grover Cleveland. Both were local lawyers. Fillmore was the first chancellor of the University of Buffalo, and Cleveland served a term as mayor.

Father John Neumann came to Buffalo in 1836, fresh from ordination. His labors in the mission parishes outside the city were rigorous. He often walked 20 or 30 miles a day. Before he left the city in 1840 he had established a network of parochial schools, which in those days were by no means common even in large cities.

Later, as bishop of Philadelphia, he organized the first diocesan school board. Today he is venerable John Neumann, and his works around Buffalo may some day help him to sainthood.

Father Neumann had hardly left for the redeemer Pittsburgh house when Nelson Baker was born in Buffalo. He was to be the city's best loved clergyman. He was ordained in 1876, and in due course received the title of monsignor; but always he was known simply as Father Baker—or, sometimes, as the padre of the poor.

In 1882 he was sent to neighboring Lackawanna as director of Our Lady of Victory Homes of Charity. Under his care the homes gained national prominence. In 1920, when he was almost 80, he started to build a great church. Although Our Lady of Victory Basilica took 6 years to build he lived to see it, and he offered Mass there for 10 years before he died in 1936.

Hardly anyone thinks of it as Our Lady of Victory Basilica. To everyone, including pilgrims from all over the country, it is just plain Father Baker's. It is one of the most elaborate churches in America, and is internationally recognized for its works of art.

Each year on July 29, the anniversary of the padre's death, hard-boiled Lackawanna declares a civic holiday. Everybody from the mayor on down attends mass and gravesite ceremonies.

Educational institutions in Buffalo are headed by the privately supported, 12,000-student University of Buffalo. Catholic colleges include the Jesuits' Canisius, with an enrollment of more than 2,000; and D'Youville and Rosary Hill for women. Buffalo is a leader in the field of diocesan high schools, having at present nine in the city alone. The system was instituted by Bishop John O'Hara, C.S.C., now cardinal archbishop of Philadelphia, and is being expanded by Bishop Burke.

St. Rita's home for retarded children, the Plarist Fathers' Calasancius school for the exceptionally bright, and St. Mary's School for the Deaf are special establishments under Catholic auspices.

Roswell Park Memorial Institute is one of the world's two or three largest centers for cancer research and treatment. The institute was established 60 years ago. It operates today with a staff of 1,400.

Club owners in sports are often fans, but in Buffalo the fans are the club owners. In 1955, when the AAA baseball club seemed doomed, 3,000-odd fans put up close to \$200,000 to buy it. With such a wide base of ownership, the city has since led all the minor leagues in attendance. In 1950, fans had put up a like amount in a fruitless attempt to save the city's profootball. Diehards the Buffalonians are, indeed; and it looks as if they are soon to get the big-league status they crave.

If major league teams do come to Buffalo, they will be international favorites. Canada is only a few hundred feet away. A couple of million Canadians live within 100 miles. They pour into the city, on Canadian holiday weekends. Ontario license plates sometimes outnumber local ones on downtown streets.

The city's most public display of Catholicism happens every spring. Early in Lent, lampposts and buses blossom out with posters; newspapers, radio, and TV furnish unstinting publicity; and on Passion Sunday the Catholic Charities Appeal starts its week-long campaign. The drive has never failed to go over the top since its inception in 1924.

The few cities that boast similar appeals haven't approached this one's success, though most of them are patterned after it. The people give over \$2 million every year.

Msgr. Eugene A. Loftus, director of the drive since 1939, says, "The appeal has fostered harmony among our different national factions." In other words, the Catholic Charities Appeal is one of the forces that continue to make Buffalo the city of good neighbors.

Farm Legislation

EXTENSION OF REMARKS OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, the farmers in my district are greatly concerned about the serious condition of agriculture in our country today, and I share their concern. These farmers do not embrace the philosophy that the Federal Government owes them a living, and they realize that a solution to the farm problem will not come about by sitting back and complaining about their troubles and hardships. Rather, they know that constructive thinking by the farmer himself—the man who is closest to the problem—is necessary.

Recently a group of farmers who reside in Otoe County, Nebr., expressed to me their views and suggestions relative to our national farm program. These constituents of mine are hard-working, serious-minded men and they are genuinely interested in assisting in working out a sensible solution to the problems which exist in the field of agriculture. Their observations are the result of earnest study and deliberation, and I think they present some interesting ideas.

Mr. Speaker, I take this opportunity to bring the proposals of these farmers to the attention of my colleagues for their study in connection with farm legislation which will be considered by the Congress.

NOTES ON PROPOSED FARM PROGRAM

(By Paul Antes, Syracuse, Nebr.; John Pickerrill, Unadilla, Nebr.; Bill Davis, Syracuse, Nebr.)

During the past 50 years there has been tremendous technological progress in agriculture. This progress has resulted in widespread benefits to the Nation as a whole.

While productivity in agriculture has increased in a rapid rate, the income received by farmers has decreased. Agriculture as an industry is not receiving a fair share of the rewards of a highly productive economy. Programs need to be devised which make it possible (a) for farmers as a group to obtain a fair share of the national income, and (b) for these returns to be distributed in such a way that the "family farm" will continue to be the predominant type of land tenure in the United States.

Agricultural programs need to be reexamined from time to time and modified in order to more adequately fulfill these objectives. It is with this in mind that we submit the following proposals for your consideration:

A. Price support programs should be designed to strengthen the competitive position of the family-type farm and at the same time allow some large-scale operations without Government supports. This can be accomplished by providing a system of graduated price support levels for nonperishables based upon amounts produced.

One hundred percent of parity on first 2,000 bushels of wheat, corn, and milo.

Ninety-five percent of parity on next 1,000 bushels of wheat, corn, and milo.

Ninety percent of parity on next 1,000 bushels of wheat, corn, and milo.

Eighty-five percent of parity on next 1,000 bushels of wheat, corn, and milo.

Total, 5,000 bushels.

This (5,000 bushels) should be the maximum for Government support payments to any one individual. Each individual tenant should be limited to his share of the above supports. Landlords owning more than one unit would be entitled to their share of the above supports with a maximum in supports of \$25,000.

If supplies of wheat or other basic non-perishables reaches a 1½-year supply the Secretary of Agriculture would have the authority to implement production controls; also, he would be required to sell from Government stocks, each year, amounts equaling any surplus occurred in excess of 1½ year supply under price support programs.

Production could be limited in the following manner:

A. A basic family farm should be designed as a production unit with a minimum production base of 3,000 bushels of wheat, corn, oats, or milo with controls operating on a graduated percentage basis, the larger units bearing the greater percentage.

B. The operator of a family farm unit would be entitled to the above supports on basic nonperishables and production payments on perishables of a quality consistent with consumer demand, with a limit of \$2,000. No one farm unit would be entitled to combined price supports and production payments in excess of \$10,000.

C. Credit programs: Agricultural credit should be provided at a low rate of interest with a long repayment period. Agricultural credit should be provided with a 10- to 20-percent downpayment to help expand small units to reasonable sized units. In areas where climate is highly variable, the repayment plan should be devised to fit these conditions.

D. Rural housing: Most farm homes are old. There is a need to encourage the building of modern farm homes through housing loans similar to those used in urban areas.

E. Recreation: Positive programs should be developed to take submarginal agricultural land out of production. Wherever possible those lands should be used for planned recreational development.

F. Research: Research is needed to (1) develop new uses for agricultural products and (2) expand overseas markets.

G. Price supports on nonperishables and production payments on perishables should not exceed \$10,000 per unit or \$25,000 to any individual.

In the last 2 years imports of meats have increased to the amount of 8.4 percent of the total meat production of the United States. We believe that regulations should be implemented to control imports to the 1957 levels.

Thomas Masaryk: A National Hero of Seldom Paralleled Stature

SPEECH
OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. IRWIN. Mr. Speaker, it is truly fitting that the first postage stamp in the Champions of Liberty series honors the founder and first president of Czechoslovakia, Thomas G. Masaryk.

In commemorating the 100th anniversary of his birth, we pay tribute to a national hero of seldom paralleled stature and an individual whose work constituted an enormous contribution to mankind's struggle for liberty.

The death of Masaryk and subsequent imprisonment of Czechoslovakia by totalitarian communism have not obscured the principles of freedom which flourished so abundantly during the tragically short term of democracy in that nation.

While we have expressed through resolution our deep sorrow at the plight of all peoples of the captive nations, it is important that we renew our expression and emphasize it with reference to individual nations to help their peoples bear their terrible burden of dictatorial bondage.

Issuance of champions of liberty stamps will help achieve this end.

Certain Organizations Previously Listed in Guide to Subversive Organizations

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. WALTER. Mr. Speaker, on February 18, 1960, I inserted on pages 2668-2673 of the CONGRESSIONAL RECORD a list of organizations which are referred to in the Guide to Subversive Organizations issued by the Committee on Un-American Activities on January 2, 1957.

In fairness to a number of organizations whose names appeared on the list, I would like to explain just what the list comprises.

The organizations listed in the CONGRESSIONAL RECORD were taken from the index to the committee's Guide to Subversive Organizations. Anyone consulting the body of the guide will find that most of the organizations have been cited as Communist or Communist front by Federal legislative and executive authorities or State investigating committees. A number of the organizations, however, have been characterized by official agencies as being "Fascist" or otherwise extremist in nature.

Three other organizations, whose names appear in the index to the guide and therefore appear in the CONGRESSIONAL RECORD of February 18, have been cited as Communist fronts in the past but the citations have been rescinded by the Committee on Un-American Activities. In justice to these organizations—the Consumers Union, Slovene National Benefit Society, and the Vanguard Press—I would like to insert into the RECORD at this time exactly what the committee's Guide to Subversive Organizations has to say in their behalf:

CONSUMERS UNION

This organization was cited by the Special Committee on Un-American Activities in 1944 as a Communist front "headed by the Communist Arthur Kallet (whose party name is Edward Adams)." The citation appeared in House Report 1311 on the CIO Political Action Committee dated March 29, 1944.

The Committee on Un-American Activities in its annual report for 1953 (H. Rept. No. 1192, Feb. 8, 1954) stated that steps were

initiated by Consumers Union through its officers and legal counsel to clarify the exact status of the organization. The committee also announced in the same annual report that: "After hearings and thorough study the committee finds there is no present justification for continuing this organization as one that is cited, and future reports and publications will reflect that this organization has been deleted from the list of subversive organizations and publications."

Consumers Union was last listed in the May 14, 1951, edition of the committee publication, Guide to Subversive Organizations and Publications, page 44. It has been deleted from this edition of the guide.

SLOVENE NATIONAL BENEFIT SOCIETY

This organization was originally described by the Committee on Un-American Activities as being among "the Communist-dominated organizations which have constituted a bulwark of financial support for the American Slav Congress." This description was contained in the committee's report on the American Slav Congress and Associated Organizations, House Report 1951, April 26, 1950 (originally released June 26, 1949).

On the basis of information which has been supplied by the Slovene National Benefit Society, the committee has conducted an additional investigation as to the true nature and purposes of this society.

This investigation disclosed that, while it was true that the Slovene National Benefit Society had financially assisted the American Slav Congress by purchasing advertising space in the publication Slavic American, the official organ of the American Slav Congress, this assistance, though misguided, was not done with the intent of assisting the American Slav Congress. Rather the Slovene National Benefit Society used the Slavic American as a medium to attract individuals to its fraternal insurance benefits.

The committee has satisfied itself that the Slovene National Benefit Society is not under Communist domination and since learning the true nature of the American Slav Congress it has ceased to furnish any aid, financial or otherwise, to the Congress or its affiliates.

The reference to the Slovene National Benefit Society appeared in the committee publication Guide to Subversive Organizations and Publications, March 3, 1951, edition, page 98. It has been deleted from subsequent editions of the guide.

VANGUARD PRESS

This organization was described by the Special Committee on Un-American Activities as a "Communist enterprise" which was established by a donation from the American Fund for Public Service. This description appeared in House Report 1311 on the CIO Political Action Committee, March 29, 1944, which also stated that "one of the first large publishing projects of the Vanguard Press" was "a series of propaganda books on Russia, edited by Jerome Davis."

The Committee on Un-American Activities is in receipt of a sworn affidavit, dated May 24, 1951, from one James Henle, who identified himself as president of Vanguard Press, Inc., of New York. Mr. Henle stated that he purchased one-half of the voting stock of Vanguard Press, Inc., from the owner, the American Fund for Public Service, on December 1, 1928, and that he and his wife acquired the balance of the stock on January 2, 1932. Since 1932, Mr. Henle deposes, "no member of the Garland Fund (American Fund for Public Service) has ever served as an officer, director or employee of Vanguard Press," and "The members of my family—those who actually control and run the business of Vanguard—are uncompromisingly

anti-Communist." Mr. Henie stated that Vanguard Press published its propaganda books on Russia prior to his acquisition of the corporation's stock.

References to Vanguard Press appear in the May 14, 1951, edition of this committee's Guide to Subversive Organizations and Publications, page 114. The committee has agreed to delete the reference from this edition of the guide.

Secrecy

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. GROSS. Mr. Speaker, I am pleased to note that many newspapers throughout the country continue to express strong editorial support for my bill, H.R. 5401, to require disclosure of spending by Members of Congress traveling in overseas areas.

There can be no justification for the secrecy which surrounds expenditures for this purpose, and yet H.R. 5401 is described in some circles as "the bill least likely to succeed." Why?

Among the newspapers supporting the bill is the Des Moines (Iowa) Register, and I include as part of my remarks the following editorial which appeared in the Register on March 4:

SECRECY ON CONGRESSIONAL TRIPS

Congressional Quarterly, a weekly publication which reports on Government matters, has just completed its annual checkup on trips to foreign countries made by Members of Congress. It shows that 190 Members of Congress made trips outside the United States during 1959. There were 31 more travelers than in the previous year.

The publication had to compile the information itself by contacting committees and Members of Congress. There is no information about the cost of individual trips. Congress, which battles mightily for freedom of information about some things, keeps this information secret.

Not all the trips, probably not the majority of them, are "junkets" to provide free vacations for Congressmen in far-off lands. Many are valuable in enabling Members of Congress to get firsthand information pertinent to legislative matters.

But the secrecy about what Congressmen spend from governmental funds on these trips has no justification. Secrecy isn't justified if its purpose is merely to avoid embarrassing a legislator or to make it easier to take junkets. This secrecy increases suspicion that much of the travel is solely for the purpose of giving Congressmen free sightseeing trips.

Congress should not restrict needed missions to foreign lands. But it should end its secrecy policy about junketing expenses. It could do so by passing a bill introduced last year by Representative H. R. Gross, Republican, of Iowa. Gross' bill would require that each lawmaker report his spending on junketing trips.

The Gross bill was approved by a House Administration Subcommittee last August but has been tied up by the full committee. The bill is referred to in Washington, according to Congressional Quarterly, as "the bill least likely to succeed."

We agree with Representative Gross that the measure could result in curbing waste-

ful junketing, without restricting useful missions abroad. The public would not oppose any and all trips. It would be critical only of contrived vacation jaunts at Government expense.

What America Can Afford

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Helen Hill Miller as it appeared in the New Republic magazine of March 7, 1960:

WHAT AMERICA CAN AFFORD—A REVIEW OF NATIONAL NEEDS IN THE SIXTIES

(By Helen Hill Miller)

"A new 'great debate' is raging. . . . The debate has been inspired by a single idea: that the basic trouble with American society is that we devote too much of our resources to increasing an already affluent level of private consumption, and too little to public services of all kinds."—Edwin L. Dale, Jr., New York Times, February 7, 1960.

"The doctrine which determines [the President's] budget, his program, and his preaching to the Nation is, in the perspective of the world struggle, a most dangerous doctrine. The central issue of the world struggle is whether the Soviet system or a liberal system can deal best with the problems that beset mankind. In that struggle we shall surely lose if we tell the world that, though we have the richest economy in all history, our liberal system is such that we cannot afford a sure defense and adequate provision for the civil needs of our people."—Walter Lippmann, February 9, 1960.

How the country's resources are to be used in this decade is, or ought to be, the major political issue of 1960, for on that decision U.S. national well-being, if not U.S. survival, turns. Democrats well shout that the Republicans are complacent, Republicans that the Democrats are reckless spenders of other peoples' money. Each will say that the other is living for the day and taking no thought for the morrow. But the real debate over the national rate of growth, and over what part of the U.S. output is to be channeled into public purposes, and what part is to be allocated in accord with semiprivate decisions of corporations, associations, and voluntary agencies and the private decisions of individuals, has barely started.

In view of the importance of this debate and the contradictory interpretations given the same economic facts by competing parties and candidates, the editors of the New Republic present some black and white figures showing how much income the United States now has and what it is now buying (last year, \$11 billion was spent on advertising). We note how much income the country will have in the coming years at various rates of growth, and some of the claims that will be made upon this wealth. And we cite statements and reports on national needs made prior to the 1960 campaigns by independent study groups representing a wide range of views and having unusual access to facts. The authorities to whom we refer do not blithely demand that more Federal money be poured into public pipelines. Rather, they assess the relevance to the needs of the decade of both the size and the kind of the largest current Federal programs.

Because this is a political year, we are not drawing on congressional committee re-

ports, or statements by political figures, however competent we believe some of them to be. A further reason for emphasizing independent citizen findings is because to an unusual degree the country is puzzled by what it hears from administration leaders. The President and the Secretary of the Treasury have made clear the primacy they place on the maintenance of a balanced budget, but on other matters of importance, the testimony of public officials is often conflicting. The story often varies according to echelon: The President in his messages or at his news conferences, and successive Secretaries of Defense in testimony before Congress, have defended heatedly the adequacy of present levels of military spending; but the uniformed service chiefs, while acknowledging their willingness to go along, have hinted broadly that they regard the proposed budget as inadequate in one way or another; and responsible persons who have recently retired or resigned are openly warning that various gaps are too wide and various margins of safety too narrow. The President tells the press he is undisturbed by the current primacy of the U.S.S.R. in space exploration; within days, both his chief scientific adviser and the head of the USIA, from their respective viewpoints, see in that primacy cause for anxiety.

In trying to judge whether enough is being spent or what is spent is spent wisely, the citizen who is not on the inside of things stumbles over two obstacles: The intricacy of the subject in this era of fast growth and supersonic science, and the classified nature of much of the information. This is especially so when military security is discussed. But though the ordinary citizen is bewildered by this inharmonious chorus, he is nevertheless dubious of uncritically accepting the charges of the Democratic opposition, or of writing any blank check for the Armed Forces.

Likewise bewildering is that, as of this moment, the country as a whole has never had it so good. It is hard to realize that the year 1960 cannot be sliced off and viewed as an isolated cross-section of time. What is done or left undone this year will greatly influence if not determine what can be done in 1961, or 1965, or 1980—or 1984. But to recognize that fact is by no means to know what to do about it, now.

GROWTH OF THE NATIONAL PRODUCT

The argument about what the United States can afford must—if it is to make any sense—start with a recognition of the resources at its disposal. The gross national product (GNP), which is the sum total of goods and services produced each year, represents the country's overall economic capacity. Only by keeping the size of this product in view can the capacity of the country to sustain public expenditures of various amounts be seen in perspective.

The following table shows the GNP over the last decade, and the portion of it that was spent to public account through local, State, and Federal Government budgets. To eliminate the effect of inflation from the comparisons, these figures are expressed in constant dollars, at their 1959 purchasing power.

Year	GNP	Total	Government purchases of goods and services			
			Total	Federal defense	Other	State and local
1949.....	\$328.2	\$57.1	\$30.6	\$18.4	\$12.2	\$26.5
1953.....	417.1	102.0	71.1	60.1	11.0	30.9
1958.....	448.6	94.9	53.3	45.0	8.3	41.6
1959.....	478.8	97.9	53.6	45.5	8.1	44.3

Money at the disposal of the Government is increased in two ways: By raising tax rates, or by applying the same tax rates to in-

creased amounts of income. The above figures show the relationship between the size of GNP and the country's ability to pay for public expenditures. In 1949 the money spent by all governments took almost 15 percent of the gross national product, while in 1959, government expenditures of more than double those of 1949 took only just over 20 percent. At current Federal tax rates, every \$10 billion of growth in the GNP brings in somewhere between \$2 and \$2.5 billion of additional Federal revenue.

The National Planning Association in its "Long Range Projections for Economic Growth," the Committee for Economic Development in its "Trends in Public Expenditures in the Next Decades," and the Conference on Economic Progress in its "The Federal Budget and the General Welfare," have analyzed the possibilities in detail. So has the staff of the Joint Committee on the Economic Report over the years and in a 1960 study paper by its counsel, James W. Knowles.

Over the past 40 years (1919-59), with sharp ups and downs caused by depression, war, and recovery, the GNP grew at an average of 2.9 percent annually. From 1950-57, the growth rate averaged 3.6 percent, doing better in the earlier, and worse in the later years of this span. The difference between the GNP produced by different growth rates is impressive. A 2.5 percent growth rate (which is slightly higher than the actual rate of the past few years) would raise 1959's GNP of \$480 billion to \$557 billion by 1965 and \$713 billion by 1975. But a rate of 3.5 percent would up the 1965 figure to \$590 billion and the 1975 figure to \$832 billion. A rate of 4.5 percent would yield \$625 billion in 1965, and \$971 billion in 1975—double 1959's GNP.

In other countries, a growth rate of better than 4 percent is by no means unusual. Between 1950-57, Western European nations in the OEEC averaged an overall rate of 4.6 percent; the U.S.S.R.'s current rate is estimated by Western sources at around 6 percent—a widely accepted study by the National Planning Association sets the rate at 6.3; over the last 6 years Japan also has achieved a growth rate of better than 6 percent. Obviously, the smaller the base, the easier it is to obtain a high percentage rate of growth; but foreign gains in comparison with the U.S. total are nonetheless rapid. If the U.S.S.R.'s economy continues to expand even at 6 percent a year—a figure considerably less than the announced Soviet intention—and if the U.S. rate is raised to 4 percent, the Soviet GNP will be over half that of the United States by 1965, whereas in 1951, Soviet GNP was only about one-third of America.

GROWTH IN POPULATION

On New Years Day, 1960, 179.3 million people were estimated to live in the United States. Over the decade 1950-60 the population had increased by 28.2 million—or by about as many people as live in the less populous half of the 50 States. U.S. population levels are expected to range from 191.5 to 199 million by 1965, and from 215.8 to 243.9 million by 1975. Twenty years from now there may well be as many as 272.6 million Americans.

So far, per capita disposable personal income has gone up more rapidly than the population, even when the figures are expressed in constant 1959 prices to eliminate the effect of inflation.

Year	Total disposable personal income (in billions)	Population (in millions)	Per capita disposable personal income
1949	\$231.3	149.2	\$1,551
1953	276.0	152.6	1,729
1958	319.7	174.1	1,836
1959	334.6	176.9	1,891

Clearly, a substantial increase in GNP will be required if Malthus is not to ride again.

In addition, there are several new and very practical reasons why plans must be made now for the anticipated larger population. One is a sudden short-term need for additional jobs. As waves of war and postwar babies finish school and set out to earn their living, some 26 million young people over the years of the 1960's will be looking for places in a labor force that now totals almost 71 million. The influx will not be steady; it will have two peaks. One will occur next year, when the number of 18-year-olds will jump by 300,000 to a total of 2.9 million. A 10-12 percent upshoot in young jobseekers in 1961 could glut the labor market. But the major strain on the absorptive power of the economy will come in 1965, when in a single 12-month period the number of youngsters finishing school will skyrocket by a cool million.

The urgency of preparing early enough to receive these newcomers is underscored by the fact that in recent years relatively fewer people have found openings in fields such as manufacturing (which increase the material wealth of the Nation) and relatively more have gone into the service trades (which contribute convenience rather than wealth). A higher, and a rapidly growing capital investment is necessary to provide new opportunities in the sectors of the basic economy where electronics and automation are becoming standard equipment. The National Industrial Conference Board estimates that capital investment per production worker in manufacturing was \$17,800 in the first half of 1959, as compared with only \$10,423 in 1950. Yet these are the jobs that make an economy strong.

The importance of expanding the real wealth of the Nation is made apparent also when one looks at the new shape of the age curve in the United States—and it will be shaped the same way for some time to come. The bulges will be at the two ends, among the youngsters and the elders. Simultaneously, more Americans are being born and more Americans are living longer. Each has special needs: Educational and recreational facilities for the young; shelter, medical care, and basic income for the old. At the same time, the demand for community facilities—roads, hospitals, utilities, communications—will grow among the mounting population of all ages.

Even greater, however, than these domestic incentives to economic growth are the incentives from overseas. The middle-income families in America, with their average of \$5,050 a year, live in a fabulous glass house, wide open for world inspection. Most of those outside looking in have a per capita annual income of less than \$100.

Moreover, the population explosion in this country has been paralleled, and in most cases exceeded, abroad. World population in 1955 was estimated at 2,691 billion; continuance of the recent average annual increase could double this figure within 42 years. Between 1950 and 1975, an 86 percent increase is expected in Latin America, one of around 60 percent in Asia and Oceania, 52 percent in Africa, 43 percent in North America, and 31 percent in Europe including the U.S.S.R.

The Conference Committee on Population Problems, in its study, "Population: An International Dilemma," prepared by Frederick Osborn, notes: "Already in some countries the population is doubling in each generation of 30 years . . . and this rate of increase can be expected in other wide areas. If continued, such growth would multiply the population eight times in less than a century and would bring a 64-fold increase in less than two centuries. . . . The United States and Canada occupy a unique position, shared only by the Soviet Union, Australia, and New Zealand, in that their present balances of population to nat-

ural resources is still favorable to a continuous increase in the well-being of their people. But if present rates of growth should continue for as long as another two generations, both the United States and the Soviet Union will be reduced to a position in which the balance of population to resources may seriously handicap the effort to improve the level of living. They would then lose what is perhaps their major advantage over the other large but more heavily populated areas of the world." To maintain even a minimum food standard for 4 to 5 billion more people would probably require doubling the world's present agricultural production. The position of a high-income island in a world where most human beings face the prospect of growing poorer is bound to be a precarious one.

The Committee for International Economic Growth, in its just-published study of "One Hundred Countries: One and One-Quarter Billion People" prepared by Paul Hoffman, urges an increase in the level of outside public and private capital investment in these countries from its current figure of just over \$4 billion a year to \$7 billion. Such an investment could be expected to induce expansion of their economies by 1 percent per person per year in the 1960's—and to raise U.S. exports to these areas some \$14 billion annually by 1970.

And amid these pressures, a complex of nations in the Sino-Soviet bloc is committed to spectacular improvements in their own and the underdeveloped economies, and equally committed to the elimination of the liberal West as a primary center of power.

It is with these prospects in mind that the citizens of this country must assign priorities in an overall national agenda. It is in view of such facts that the people of the United States need to agree on how a growing national product shall be used.

NATIONAL DEFENSE

For the past several years, in an effort to balance the budget at levels of taxation and economic growth rates current since 1953, increases in Federal spending have been almost wholly confined either to expenditures mandatory under such legislation as that establishing the farm program or veterans benefits, or increases made necessary by market conditions in respect to interest on the national debt. Since 59 cents of the Federal budget dollar goes for national security, the imposition of a ceiling has borne hardest on expenditures for defense and foreign aid.

The supremacy which the President and his advisers have attached to the present budget ceiling and their satisfaction with the sufficiency of U.S. defense have been challenged by competent critics. Thus, in July 1958, the Committee for Economic Development issued an analysis of "The Problem of National Security: Some Economic and Administrative Aspects," in which it said: "In determining the size of our defense effort, we must distinguish sharply between the limitation imposed by the amount of our total product that we are willing to devote to this purpose, at the sacrifice of other desirable uses of output, and the limitation imposed by the consideration that too heavy a defense burden may weaken our economy, and hence our long-term ability to maintain our security. . . . Fear that a high defense burden will weaken the economy has been exaggerated and should not be decisive in determining the size of a defense budget representing 10 to 15 percent of the GNP, or even more. . . . We can afford what we have to afford."

In a special study made for the Senate Committee on Foreign Relations by the Washington Center of Foreign Policy Research of the Johns Hopkins University, issued on December 6, 1959, "Developments in Military Technology and Their Impact on U.S. Strategy and Foreign Policy," there

is this sentence: "The military position of the United States has, in short span of 15 years, declined from one of great security to one of great insecurity."

In his book, "The Uncertain Trumpet," Gen. Maxwell D. Taylor, former Army Chief of Staff, writes that: "The strategic doctrine which I propose to replace massive retaliation is the strategy of flexible response. . . . The new strategy would recognize that it is just as necessary to deter or win quickly a limited war as to deter a general war. Otherwise, limited war may result in our piecemeal attrition or grow into the general war we all want to avoid. . . . To make this change in strategy will require a lot of doing. . . . It will need a new kind of defense budget, to see that the dollars follow the approved priorities."

General Taylor's formula is very similar to that in a study released by the Council on Foreign Relations of New York on November 25, 1959, urging a defense structure resting on deterrent power, mobile forces capable of selective use, research and development, and longrange military aid. The council asked: "Even with greater understanding of foreign affairs, however, will the American people support the necessary policies at the cost of greater sacrifice to themselves? There can be no doubt, we are convinced, of the need for the United States to devote more of its resources than in the past to purposes related to its objectives and responsibilities in the world."

The President in his 1960 budget message set Federal expenditures at \$77.03 billion for all purposes. Of this, \$45.8 billion is for major national security, which includes funds for atomic energy development, stockpiling, and military assistance as well as \$40.85 billion for the Department of Defense. The Defense Department funds are within \$145 million of the previous year's; they work out at 8.5 percent of 1959's \$480 billion gross national product. The entire Federal budget amounts to just under 16 percent of the GNP.

Perhaps this is enough; but recent independent appraisals of defense and military aid programs do not support that conclusion. The Rockefeller report, "International Security—the Military Aspect," published in January 1958, said: "The overall U.S. strategic concept lags behind developments in technology and in the world political situation. In major respects defense organization is unrelated to critically important military missions. Systems of budgets, appropriations and financial management are out of gear with the radically accelerating flow of military developments. The U.S. system of alliances must be adapted to constantly changing strategic requirements. The United States is rapidly losing its lead in the race of military technology. . . . The power of these states, particularly of the U.S.S.R. has been growing both absolutely and relatively to the United States until today it constitutes a grave threat. . . . There exists the great danger that the Soviet Union will seek to use its nuclear striking force as a shield behind which to expand by more limited means. . . ."

"The aggressor need prepare only for the war he proposes to fight. But the side which is militarily on the defensive must gear its planning and procurement to the possibility of an attack at any moment. . . . The . . . deficiencies in our strategic posture can be removed only by substantially increased defense expenditures . . . the deficiencies . . . will require successive additions on the order of \$3 billion each year for the next several fiscal years."

The report of the Gaither Committee, appointed by President Eisenhower in 1957 to survey national security problems, has never been declassified. But its cochairman, Robert C. Sprague, testifying before the

Senate Subcommittee on National Policy Machinery on February 24, 1960, said: "We seem to have accepted a policy limitation that we are not going to put more than about \$40 billion a year into our military effort. In 1957, when the Soviet GNP was \$20 billion less than it is now, their effort approximately equaled ours."

"There is no solid basis to argue that the Soviet economy will not continue to grow at its present rate. We cannot assume that they won't continue to plow at least 25 percent of their GNP into military effort as they have been doing for the past 8 to 9 years. And they will still have enough left to meet minimum domestic needs and wage economic warfare abroad."

"If, for the 10 years ending in 1967, Russia continues to increase her military position by 6.5 percent per year—while ours remains fixed at \$40 billion per year—then we will obviously fall far behind in relative military strength. . . . We are using less than 10 percent of our gross national product for all national security purposes, and the percentage is declining. Per capita disposable income—the amount we have left after paying taxes—is at an alltime high of nearly \$1,900. It probably is \$1,900 this quarter. It has risen about \$325 (measured in 1958 prices) during the last decade. If we were to devote only one-tenth of this increase to national security purposes, it would permit an increase of more than \$5 billion per year in our program for national security."

Similarly, the President's Committee To Study the U.S. Military Assistance Program, headed by William S. Draper, Jr., after a 9 months' review in 1959 emerged with the conclusion that, "Entirely aside from the threat of Communist aggression, the United States and other free nations face the challenge of the revolutionary insistence on progress by the hundreds of millions of people in the less-developed areas. In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security to death."

The reduction in funds for the military assistance programs in the present fiscal year, this group believed, "involves a serious security danger for the United States and for the free world," and implies "major deterioration of military strength in forward areas, and a clearly apparent withdrawal of effective support from many of our allies." To reverse the trend and maintain a posture "strong enough to support all our activities for world peace . . . the annual cost of the military portion, below which we should not go, is about \$2 billion." (The current rate of spending is \$1.8 billion, but the amount requested in the President's new budget is \$2 billion.)

On economic foreign aid, the Draper Committee said: "We cannot assure equal opportunity for all peoples, but we can, along with other prosperous nations, help find a way for all peoples to see opportunities ahead. For us not to do so would be contrary to our national tradition." Among a series of recommended revisions of the economic aid program (including more multilateral contributions) this Committee proposed increasing the rate of developmental lending, "starting in fiscal year 1961 at a rate of at least \$1 billion a year." (The President's budget proposes an allocation for the Development Loan Fund of \$700 million.)

EXPENDITURES FOR EDUCATION

Probably no domestic item on the national agenda has had more public consideration than means of improving the quality and the quantity of education in primary, secondary, and higher schools. A large population is an asset if it is skilled and civilized. In the year 1958-59, expenditures for public schools

totaled \$14.5 billion, or 3 percent of the gross national product. A doubling of the costs of public elementary and secondary school education in the 1960's has been foreseen by a White House Conference, a Rockefeller Report, a study under the chairmanship of MIT's James R. Killian, Jr. Adoption of the recommendations of the Conant Report on "The American High School Today" would more than double costs. Supporting figures are easy to come by: The Congressional Joint Committee on the Economic Report has issued a special "Analysis of the Rising Costs of Public Education;" the McGraw-Hill Book Co. has released its findings on "Financing Higher Education, 1960-70" and the Committee for Economic Development, its study on "Paying for Better Public Schools." Among organizations close to the school system, the National Education Association, the Educational Policies Commission, the U.S. Office of Education have all prepared either estimates or proposals.

At the moment, the expansion of educational facilities is too slow even to wipe out the current backlog of deficits. The Office of Education estimates that recent building only reduced the net classroom shortage from 142,300 in the fall of 1957 to 140,500 in the fall of 1958. At last December's session of the American Statistical Association, a staff member of the Office of Education indicated that over the 10-year period beginning in the autumn of 1959, new enrollments and obsolescence will require 610,000 new classrooms, at an average capital outlay for site, construction, equipment, etc., of \$40,000 each, or \$24.4 billion in all. If the national education bill is going to double, how much of the additional \$15.5 billion that must be found by the end of the decade will be obtainable by allocating to education the same percentage of a larger GNP, and how much must be obtained from moneys currently used in the form of consumer expenditures?

Controversy over what proportion of school funds should be provided by each of the levels of government complicates the question. At present, this is how schools are supported: 56 percent from local funds, 40 percent from State, and 4 percent from the Federal Government. But real property, the usual base for local taxation, now forms a much smaller proportion of national wealth than used to be the case; over recent years, the burden of school budgets has shifted increasingly from local to State governments. Arguments are similarly heard for assumption of a greater share of school costs by the Federal Government, arguments based in considerable part on the wide range of income from State to State, with the States that have the largest number of school-age children the ones that have fewer resources to invest in schooling.

Proposals for further Federal support vary widely, though practically all of them agree on the importance of maintaining the local control that has been a traditional feature of U.S. education. The CED says: "The national interest in good schools everywhere and the national interest in a decentralized school system are not irreconcilable. The combination of these two interests calls for the assumption of an important but limited responsibility by the Federal Government. This is a residual responsibility. It is to provide support to the extent necessary in situations where the decentralized system cannot provide good schools. . . . The clear and present need is for Federal financial assistance to the States that have extremely low personal incomes relative to the number of schoolchildren."

The specific recommendation of this group is that States whose current expenditure per pupil in average daily attendance falls below 80 percent of the national average—

there were 11 such States in 1957-58, with more than a fifth of the Nation's children in their schools—should receive Federal grants based on a formula that takes into account the personal income per student of the State and the national ratio of school expenditures to personal income.

EXPENDITURES FOR THE AGED

Last year there were 15½ million Americans 65 years of age or older. Three-fifths of them had less than \$1,000 a year to live on. About 7 in 10 citizens over 65 are eligible for old-age benefits as retired workers or their dependents under the social security program. The retired workers benefits range from \$33 to \$119 a month, averaging around \$70. About 2 million other aged persons are not eligible for benefits and must rely on relief; their receipts average \$64.10.

Yet these citizens, whose income dives when they cease to be employed, are subject to a particularly costly set of unavoidable expenses. A recent national health survey showed that the annual number of days of restricted activity was 47.3 for those 65 and over, as against 17.43 for those under 65. Other studies show that in the 65-and-over group, some 11 persons per hundred are hospitalized during any given year, with their hospital stay averaging from 2 to 3 weeks. Yet of all the items in the consumers price index (which went up 20 percent in the years 1948-58), the cost of medical care rose fastest—it soared 43 percent. So the need of the aged for more income, particularly to cover medical care, is acute.

State committees are now holding hearings preparatory to the White House Conference on the Aging scheduled for 1961. At the same time, insurance groups are considering incentives to persuade more individuals to save during their earning years—such savings would provide investment funds and so contribute to enlarging the economy at the same time that they would narrow the drop in income on retirement. The availability of variable payment annuities to hedge against inflation is a new development in this connection. The Subcommittee on Problems of the Aged and the Aging of the Senate Committee on Labor and Public Welfare has likewise been taking testimony in all regions of the country, in sessions that permitted a number of citizens and citizens' groups to register proposals, many of them for housing and medical care.

The building of more facilities was strongly urged. For many elderly invalids, nursing home care would be quite as adequate as a bed in an expensively equipped general hospital. The case has also been put for inexpensive living quarters constructed with a view to the disabilities of the elderly, whether interspersed with other housing or concentrated in retirement villages, and housing combined with custodial care. Federal financing of private construction under the FHA formula; public housing; broadening of the Hill-Burton Hospital Construction Act to include the building of facilities designed for the aged have all been advocated.

Comparably extensive testimony has been heard on the financing of the medical care: through including medical benefits in the Social Security Act as currently proposed in the Forand bill; through wider coverage under private plans organized either by medical associations, insurance companies, or special bodies; through institutional provisions for group insurance by corporations, unions, associations, with postretirement features.

The old-age assistance program, being a cooperative program in which initiative is taken by the State governments with the Federal Government matching their funds under an agreed formula, varies markedly from State to State, with each State having its own standards of minimum living costs. The medium estimate is that a man living alone in rented quarters needs \$89.50 a

month. But many State standards are deplorably low, and some even of the low ones are not met because of lack of legislative appropriations. Of the \$3.251 billion annually spent on public assistance of all sorts in this country, \$1.794 billion goes to the aged.

The Advisory Council on Public Assistance, a citizens group established under the 1958 amendment to the Social Security Act to advise the Secretary of Health, Education, and Welfare, stressed in a January 1960 report that at the end of 1958 a 5.7-percent increase in assistance payments would have been necessary just to meet existing cost standards:

Recipients' monthly requirements.....	\$215,525,000
Recipients' own income.....	50,174,000
Deficiency.....	165,351,000
Assistance payments.....	156,458,000
Shortage.....	8,893,000

This same group declared: "The estimates suggest that the amount of unmet need in the old-age assistance and aid to dependent children programs ranges from about half a billion dollars to about \$1 billion."

EXPENDITURES FOR COMMUNITY FACILITIES

A year ago, the final report of the Joint Committee on Washington Metropolitan Problems contained a paragraph which, with the simple transposition of place names, could serve as a description of most of the 168 standard metropolitan areas of the country, areas which in April 1959, contained approximately 57.5 percent of the American people: "Its population is pressing against the limits of such natural resources as water supply. Its growth outstrips the capacity of existing sewage disposal plants. Where growth is most rapid, as at the suburban fringe, the shortage of Government facilities such as schools, highways, and parks is especially acute. With growing population has come territorial expansion into the metropolitan counties * * * and with the metropolitan explosion the decentralization of Government employment centers, retail trade and much other private business. The metropolitan expansion, coupled with fundamental changes in travel habits and transportation technology, has disorganized the older systems of mass transportation. * * * In the central city forces of social change have been accelerated by unprecedented migrations of population, the disorganization of residential neighborhoods, shifting land use, and the invasion of vehicles and parking facilities. The congestion and decay of the central city, the shortages and fiscal plight of the peripheral suburbs, the metropolitan transportation dilemma, and the dissipation of our natural resources are all parts of the same interrelated process of urban growth."

Some idea of the force of the pressures on U.S. cities is suggested by figures (and they already belong to the past) on the annual capital outlay of the five ranking metropolitan areas in 1950 and 1958.

	1950	1958
New York.....	\$435,000,000	\$532,400,000
Chicago.....	49,100,000	170,400,000
Los Angeles.....	104,800,000	128,500,000
Philadelphia.....	49,400,000	65,100,000
Detroit.....	43,100,000	53,000,000

Curbside estimates of the cost of carrying out all the needed metropolitan improvements across the country, over the coming 40-year period, range from \$60 to \$120 billion. The looseness of this estimate is in great part due to the new pattern's not having as yet jelled enough to make their requirements certain. For instance, shall their redesigned transportation systems be based

on rubber-borne transport, such as Los Angeles now has, or will a good many cities retain downtown centers so vigorous and so concentrated that mass transit by rail or subway will be needed? In Washington, D.C., the cost of workable mass transportation, including rail facilities, is estimated at \$500 million for the first step—and at about twice that figure for complete modernization. Yet, if Government policy should continue to disperse large centers of public employment over a 15 to 20 mile radius, the density of the requirements for mass transport might be reduced enough for motor expressways with limited lanes to do the job adequately.

In most States, planning groups are likewise working on the structure and cost of facilities that have to be mapped as requisite for larger-than-metropolitan areas. The Federal Government too is involved, usually on a matching-grant basis, in the solution of problems having interstate or national implications. No overall estimates exist with regard to anticipated costs, but budgets for some individual major expenditures are available. For instance, the 41,000 mile national system of interstate and defense highways, of which 90 percent of the cost is borne by the Federal Government, and on which work began in 1956 and will continue through 1972, was estimated to require an expenditure of some \$40 billion for completion. On 555,000 miles of secondary roads, and on 219,000 further miles of primary roads, Federal funds are available to the States on a 50-50 matching basis. Expenditures for such projects as prevention of stream pollution, development of river navigation, dams, public power, recreation areas, many of which are also on a Federal-State or Federal-local basis, vary greatly from year to year.

The private citizens group, Resources for the Future, is currently making estimates of the country's position over the years to the end of this century, ranging from the supply of water to the supply of outdoor recreational areas. Estimates made by this group in its forthcoming *Energy in the American Economy, 1850-1975*, shows the following changes in energy requirements over 20 years. Advance planning is clearly mandatory if such quantities are to be available:

Energy consumption, by source, 1955 and estimated 1975

	1955	1975	Percentage change, 1955-75
Bituminous coal (million tons).....	431	754	+74.9
Anthracite (million tons).....	20	14	-30.0
Oil and NGL (million barrels).....	3,034	5,923	+95.2
Natural gas (billion cubic feet).....	9,614	19,881	+106.8
Hydropower (billion kilowatt-hours).....	120	265	+120.8
Consumed as electricity (billion kilowatt-hours).....	633	1,966	+210.6

ALLOCATION OF THE GNP

At current levels of taxation, the best rise in the gross national product that the country is likely to get will not bring in enough funds to do what must be done. Recent testimony before congressional committees by informed citizens on the inadequacy of the present arms program has accepted and indeed assumed the necessity of more taxes.

The growth rate of the economy is very relevant not only to the amount of further taxation that will be necessary, but to the amount of economic control that will be required. In an economy that is growing too slowly, strict Government allocation measures would be required to obtain for public purposes an amount of the GNP adequate to carry necessary programs; in an economy that is being pushed at forced draft, as in war-

time, controls are necessary both to allocate and to put a lid on inflationary pressures. In the current view of many economists, a growth rate of between 4 and 5 percent would give us the additional resources which would ease the tax burden, and at the same time not generate pressures requiring the controls. But at a 4- to 5-percent rate, some transfer of resources from personal consumption through individual spending to resources for public spending—more taxes, that is—will be necessary if the quality of American life which most Americans want is going to be available to them and their children. It is a simple but central point. Until the general public gets the point, few politicians will have the courage to say: This is the price of progress and security—and it is the people who must pay the bill. Are the people incapable of responding favorably to such candor? No one can know until the appeal is made. But it cannot be assumed in advance that the electorate will reject the argument that its current level of spending on immediate, short-term personal satisfactions must be curtailed in the interest of the kind of national agenda whose main items have been reviewed above.

The editors of the New Republic believe that Americans both recognize, and have a contempt for, a "boondoggle" when they see one, whether it be publicly or privately financed. That contempt has nowhere been better expressed than in the remarks of Robert A. Lovett, former Secretary of Defense, before Senator Jackson's Subcommittee on National Policy Machinery, February 23: "I had found frills in the military departments objectionable in my time. I had in some fashion, perhaps unfairly, attributed those very largely to Government. But I do not think that they are. . . ."

"As I returned to civilian life . . . I found the most extraordinary examples of what seems to me to be a deterioration in either our national sense of proportion or our national sense of humor. . . . If anything else were needed in my case, I received for Christmas a small tool about the size in its grip of an electric battery used in a flashlight, and then it had a rod that stuck out and a loop on the end of it and a button. This was a drink stirrer, a portable drink stirrer. . . . That was one of three that I have added to my collection. I have two others. One is a foam rubber, electrically driven finger for use in massaging the gums. . . . The third . . . is a motor-driven, portable electric dry-cell manicure burr with six attachments. . . . If those things represent the amount of time and effort which I think any miniature production does, then I feel reasonably sure that there is excess engineering talent, time, and productive capacity to do those things which have a greater importance to us nationally."

WHERE THE MONEY GOES

"As I understand an economy, its ultimate purpose is to produce more consumer goods. This is the object of everything we are working at: to produce things for consumers."—Raymond J. Saulnier, Chairman, Council of Economic Advisers, before the Congressional Joint Economic Committee, January 27, 1958.

In 1958, Americans spent about \$293 billion on items of personal consumption. Here is where the money went:

	Million
Food and tobacco	\$82,980
Clothing, accessories, jewelry	31,459
Personal care	4,255
Housing	38,001
Household operation	41,809
Medical care and death expenses	17,826
Personal business	16,550
Transportation	33,607
Recreation	16,973
Private education and research	8,428
Religious and welfare activities	3,939
Foreign travel and remittances	2,629

Individual items in the above included:

	Million
Alcoholic beverages	\$9,210
Tobacco products	6,376
Toilet articles and preparations	2,351
Barbershops, beauty parlors, and baths	1,904
New cars	11,525
Kitchen and other household appliances	4,405
Radio and TV receivers, records, and musical instruments	3,098
Nondurable toys and sport supplies	2,195
Jewelry and watches	1,937

"The uses to which economic resources are directed largely determine the measure of national power."—CIA Director Allen W. Dulles, before the Congressional Joint Economic Committee, November 13, 1959.

Judge John Keogh, Sr.

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. IRWIN. Mr. Speaker, a true Connecticut pioneer, that rare combination of leader and humanist, Judge John Keogh, Sr., died a few days ago at his home in Norwalk. Few men have left as indelible a mark on their communities as this sturdy campaigner for improvements, dedicated servant of the courts and leader of men. For more than 50 years, he made the law his practice, serving as defense counsel, city attorney, city court judge, and referee in bankruptcy. His approach to problems of those he represented before the bench or those upon whom he was to pass judgment was always tempered by a deep humanism. Many young lawyers got their start in his law offices; among these the late U.S. Senator Brien McMahon. Some of his many achievements are noted in this fitting editorial tribute from the Norwalk (Conn.) Hour of March 7, 1960, which I include under permission to extend my remarks in the RECORD:

JUDGE JOHN KEOGH, SR.

The passing of Judge John Keogh, Sr., leaves a void in Norwalk which will be hard to fill. Judge Keogh had spent a lifetime in promoting the best interests of the community.

A practicing attorney for more than half a century, Judge Keogh devoted most of the spare time in his busy life in working for the adoption of projects for the betterment of the city.

Way back in the early 1900's, Judge Keogh successfully campaigned for the replacement of the old wooden Washington Street Bridge across the Norwalk River with a concrete, modern structure which is still in use.

He was serving as attorney for the old city of South Norwalk when the consolidation of the twin cities, Norwalk and South Norwalk, and the East Norwalk Fire District was first discussed. He became secretary of the committee, favoring consolidation and he worked hard in a bitter campaign until consolidation was approved by the general assembly.

In the law profession, Judge Keogh was looked upon as a lawyer's lawyer. He was wise in the law, and was recognized for his human approach to business problems. He

maintained strong judicial respect for his fairness when he presided as referee in bankruptcy, appointed by Federal Judges Carroll C. Hincks and Edwin S. Thomas.

Judge Keogh was also active in securing for the city beach rights at Calf Pasture and he also worked for the acquisition of the Matthews' property, now Veterans' Memorial Park for Norwalk.

A veteran of World War I in which he was a captain, Judge Keogh was one of the organizers of the Frank C. Godfrey Post, American Legion, and he was its first commander. During all of his busy life, he helped to promote the interests of the post.

Yes, the passing of Judge Keogh leaves a vacancy in the ranks of Norwalkers working for the good of the community and that vacancy will be hard to fill.

The Real Castro—IV

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the fourth in a series of articles on the Cuban dictator, Fidel Castro. This series, written by Joseph Martin and Phil Santora, is currently appearing in the New York Daily News and this installment is from the issue of March 9, 1960:

HIS MUSCLE IS ALL IN LEFTWING

(By Joseph Martin and Phil Santora)

In a little more than a year, the Communists in Cuba have gained control of the armed forces, have thoroughly infiltrated the labor movement and agriculture and taken over the national bank. Through the Ministry of Education, they have embarked on a program designed to brainwash the children and encourage them to tattle on their parents.

So marked has been their animosity toward religion—the teaching of which has been ordered suspended in public schools—that a nun recently wrote her brother in Miami, telling him that she and her sisters were secretly allowing their hair to grow against the day "when we may be forced to flee the country."

Who are the Reds directing this totalitarian barrage? Salvador Diaz-Verson knows them better than anyone else.

Diaz-Verson, now exiled with his family to Miami was in charge of the intelligence service under President Carlos Prío Socarras from 1948 to 1952. He was chief of the national police in 1933, when he sided with Fulgencio Batista against the Machado regime.

He has spent 32 of his 55 years as a fighter against communism. His records, containing the intimate histories of more than 250,000 Reds and fellow travelers in Latin and South America, were confiscated by Fidel Castro's boys within 3 weeks after the revolutionists took Havana.

GIVES THE LOWDOWN ON CUBA'S RED SETUP

Here's where Diaz-Verson knows about the Red regime. The information he supplied has been checked with other sources.

Dr. Osvaldo Dorticos Torrado, currently president of the Cuban Republic: As a student at Havana, he was a leftist. He became attorney for the Communist faction in his native Cienfuegos and was secretary to Dr. Juan Marinello Vidaurreta, then presi-

dent of the Popular Socialist Party (the name for the Communist Party in Cuba). Diaz-Verson once had him arrested as a Communist.

Raul Castro, now minister of defense: Unlike Fidel, he liked to write about his Communist activities. At the time Raul was studying in Prague, Czechoslovakia, some of his letters were intercepted by Diaz-Verson and made part of his official files.

Raul has made numerous trips behind the Iron Curtain, visiting Moscow and spending months in satellite countries. He is bitterly anti-United States and possibly the bloodiest member of the revolutionary brass, personally giving the coup de grace to more than 30 executed prisoners.

PROFESSIONAL COMMIE HEADS NATIONAL BANK

Dr. Ernesto (Che) Guevara was born in Argentina and has made a career of agitation in Latin and South America. He is a professional Communist and now heads the National Bank of Cuba. He is close behind Castro in the government and is president of the ICEA—Cuban Institute for the Stabilization of Sugar. He is one of the leaders of the military forces at the Cabana Fortress in Havana.

El Che, as Guevara is known among Cubans, has been a fervent critic of the United States since he first became involved in Latin-American politics a dozen years ago. During recent speeches, he has said that "what the government of Eisenhower has done to the countries of Latin America will not be repeated in the case of Cuba."

During his last trip to Red China, El Che presented the policy of the Cuban government as one of the extreme left, assuring the Reds that Cuba would ultimately adopt a system similar to Tito's in Yugoslavia.

EL CHE IS THE HEIR TO CASTRO'S POSITION

There are increasing reports of friction among the big three—Fidel, Raul, and El Che. A top intelligence agency observes that Castro, a mere child in politics as compared to the veteran Communist from the Argentine, is fretting over the tremendous power being grabbed by Che Guevara.

Should Castro meet an untimely end, there is little doubt that El Che would take over the Cuban Government.

Dr. Ruiz de Zarata, minister of health, is a well-known Communist leader who worked for the Reds in Cienfuegos. A few months ago, he publicly bragged that "there is no doubt that the Communists are in first place in Cuba."

Osmani Cienfuegos, minister of public works, is a brother of still missing Camillo Cienfuegos, ex-head of the army. His present job was given him as a sort of sop by Castro to offset criticism directed against the regime as a result of Camillo's disappearance. Osmani was known as a leftist student leader at Havana. He has visited Prague twice and Red China to obtain "ideas" for his country.

THIRD MAN IN LINE IS IMPORTANT RED

Dr. Augusto Martinez Sanchez, minister of labor, was a Communist leader in the city of Holguin, in Oriente Province. He was one of the first to establish contact with the rebels in the Sierra Maestra and became a link between the Communist Party and the 25th of July movement.

Dr. Raul Roa, minister of state, was a close friend and confidant of Julio Antonio Mella, the noted international Communist, while a student at Havana University. Together, they formed the Anti-Imperialistic League there. He is recognized as an internationally important Communist.

Roa is right behind El Che and Raul as a pretender to the Fidel Castro throne. Potentially, he is one of the most dangerous Reds in the Cabinet.

Raul Cepero Bonilla, minister of commerce, is a member of the Cuban Commu-

nist Party and an outspoken sympathizer of communism.

Armando Hart, minister of education, is an attorney from a highly respected Cuban family. His father, Enrique Hart, is still a judge in Cuba. Hart is married to Haldee Santamaria, the rabid Red who took part in the Moncada attack. There is little doubt that she influenced Armando into joining the Communist Party. She was a member and he did not join until after their marriage.

Dr. Gustavo Alderregui, the Cuban Ambassador to Yugoslavia, is one of the oldest members of the regime—63. He is officially known as the founder of the Communist Party in Cuba.

Silvino Sorehigui, the Ambassador to Honduras, is the author of articles against American "imperialism" and for many years has been a Communist Party member.

Ambassador Extraordinary Harol Gradmage is a known member of the party and was once a columnist for Hoy, the Red newspaper suppressed during the Batista regime but now allowed to publish.

Throughout the island, youth brigades composed of youngsters in the 12 to 16-year category, are being organized. Their mission is to watch their neighbors, families and friends for any evidence of defection. Cuban newspapers frequently carry items about persons being arrested on information supplied by these youngsters.

Their reward is having their pictures published in Hoy and Revolucion, the two Red newspapers, and being called forward to be recognized as heroes at meetings.

Farmers, including women, are carrying rifles and pistols, ostensibly to guard their fields against saboteurs. Actually, they have been placed under the jurisdiction of the army and can be shot for disobeying a "military command" if they don't bear arms against the enemies of the revolution.

RAIDERS SEIZED FILES ON 250,000 REDS

Diaz-Verson was president of the Inter-American Organization of Anti-Communist Newspapersmen, which boasted almost 900 members in Latin and South America and has offices in Lima, Peru.

On January 24, 1959, just 3 weeks after Castro came to power, a dozen men broke down the door of Diaz-Verson's private office at 558 G Street, in the Vedado section of Havana. They bound and gagged Vicente Blaco, 41, the watchman, and removed the records of Communists and supporters that Diaz-Verson had so painstakingly collected for three decades.

Diaz-Verson said: "I publicly accused Che Guevara of masterminding the robbery, but I never got an answer. Two days later, on January 26, as I was leaving the offices of the Excelsior, where I was managing editor, I was confronted by Julio F. Escalona, Luis Mas Martin and Alfredo Guevara—all three well-known Reds.

"They were all carrying tommyguns and they told me, 'Listen, if you go on publishing accusations, it will cost you your life.'"

Diaz-Verson appealed to a journalistic group to which he belonged—the National Guild of Newspapersmen—and they asked the government on January 29 to give them guarantees that Diaz-Verson would not be molested. The request was refused and the next evening Diaz-Verson left by boat for Key West.

FAMILY FOLLOWED HIM INTO FLORIDA EXILE

His wife, Metodia, 38, two daughters, Silvia, 10, and Lourdes, 6, as well as Salvador Jr., 8, joined him 2 weeks later.

"Everyone tends to excuse Fidel Castro as a sort of impish boy on the grounds that pressure is being put on him from Red members of his regime," says Diaz-Verson. "Granted, some pressure is on him—but a great deal of what goes on is attributable to Fidel alone. He is a product of his background."

Preceding articles in this series have described what Fidel was like at Havana University, his peculiar behavior during the Moncada raid, his alliance with Spanish Communist Alberto Bayo in Mexico, and the invasion of Oriente, as well as the Bogota incident.

His hatred for the United States dates from before those incidents. His father, Angel, fought against the United States during the Spanish-American War and there is no doubt his sons inherited his dislike for this country.

Don Angel became a sort of feudal lord in Cueto, a small town in Oriente. He ran a large sugar plantation and was the owner of a good-sized department store. He was known as a sharp trader.

He insisted on doing business in cash so that, salesmen later charged, he could send his hired hands to rob the visiting drummers as they left Cueto.

Fidel grew up, then, as the son of a feudal landlord. Later, he was sent to Belian, a Jesuit school, for primary education. He grew up fast—with many of his father's less admirable habits ingrained in him.

When Don Angel died, he left his estate to the boys and to his second wife, the woman who had been a servant in his household. Ramon Castro bought out Fidel's share—and must have been somewhat astonished when Fidel later issued a grandiose statement, asserting that "his" farm was being tossed in to the agrarian reform kitty. It wasn't his to toss.

Mama Castro, on the other hand, armed herself with a shotgun and threatened to shoot anyone who set foot on her land.

While still a freshman at Havana, Fidel tried to organize a confederation of all schools—universities and high schools. The planned organization would have had more than 100,000 members and would have given him tremendous power—enough to overthrow any regime.

The plan fell through, and Castro was forced to wait for the power he coveted.

RAUL LAID LOW AND STUDIED MARX

During those years, little was heard of brother Raul, who rather quietly set about learning his Marxist doctrines.

As brothers, they differ in that Raul is a blind instrument and happy to be that. He is a perfectly disciplined Red agent, like Che Guevara.

Fidel is a Marxist because his philosophy employs any means to justify the end he has in sight. He firmly believes that he is using his fellow Communists. In reality, they are using him.

On one occasion, while still in the mountains, he was asked to renounce the Reds who were helping him. The request was made by the Catholic Church.

Fidel refused, saying that he needed Red backing to win. It wasn't until he took over that the prelates who had been in touch with him realized that Fidel wasn't just playing ball with the Communists, that he was really one of them.

The Reverend Ramon O'Farrill, one of those who originally helped Fidel and the revolutionary movement, said, raising his right hand in a solemn oath: "On my honor as a priest, Fidel Castro is a Communist."

Is the FCC Becoming a Captive Agency?

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. EVINS. Mr. Speaker, our so-called independent regulatory agencies

should not become captive agencies of the industries they are supposed to regulate in the public interest. One of these commissions—the FCC—has been very much in the news recently and, regretfully, the news has been most unfavorable. Chairman John C. Doerfer of the Federal Communications Commission, after repeatedly denying to the press that he had accepted extensive hospitality from the owner of a large chain of radio and television stations, admitted before a congressional investigating committee that he did indeed accept this hospitality.

He then tried to brush off his 6 nights aboard a broadcaster's luxury yacht and his plane trip on his host's private plane to and from Florida as just a social engagement. It is unfortunate that the Chairman of a great agency, created to regulate an important industry in the public interest, would allow this Commission to become a captive agency of the industry to be regulated.

Conservative newspapers are calling for Mr. Doerfer's resignation and have pointed out that his actions make "his own position, as Chairman, untenable."

The lead editorial in the March 7, 1960, edition of the Nashville Banner states that Mr. Doerfer "has painted himself into a corner from which there is no possibility of graceful exit."

An editorial of the same date in the Washington Evening Star says that the Chairman "has been less than impressive or persuasive in defending his acceptance of George B. Storer's hospitality."

Mr. Speaker, these editorials speak for themselves and under unanimous consent I include them in the Appendix of the Record:

[From the Nashville Banner]

AN UNTENABLE POSITION: FCC HEAD DOERFER PAINTS HIMSELF INTO CORNER

In accepting the hospitality of an owner of a radio-television chain, Federal Communications Commission Chairman John C. Doerfer has painted himself into a corner from which there is no possibility of graceful exit. All the explanations he has advanced cannot alter the fact that he has stultified the work of his agency, regardless of his assurances that the whole business thus disclosed was open and above-board.

There cannot be a set of double-standards—one to fit the industry supervised and administered by the public official or officials in the case, and the other to fit the administrators.

The FCC, in addition to awarding of frequencies and/or channels, is charged with policing the radio-television industry. This responsibility includes investigation into charges that certain radio diskjockeys have accepted payola for plugging phonograph records.

Mr. Doerfer has told a congressional subcommittee that his 6-day visit aboard a yacht owned by radio-TV magnate George B. Storer was just a "social engagement." He added that his "conscience is clear."

Both Mr. Doerfer's and Mr. Storer's motives may well have been beyond reproach. To date there has been no evidence that Mr. Doerfer granted any official favors or Mr. Storer sought any, but in the light of the payola revelations both are guilty of indiscretion.

Mr. Doerfer's injudicious acts places the Commission in a compromising position and makes his own position—as Chairman—untenable.

[From the Washington Evening Star]

MR. DOERFER'S BLIND SPOT

To put it mildly, Chairman John C. Doerfer of the Federal Communications Commission has been less than impressive or persuasive in defending his acceptance of George B. Storer's hospitality.

The hospitality has taken the form of a vacation-bound ride on Mr. Storer's private plane, plus several days of pleasant living on his yacht in Florida. True, since the two men have been friendly for some years past, there certainly is nothing objectionable about this per se, but Mr. Storer—a respected businessman—happens to be the owner of 12 radio and television stations subject to the FCC's regulations.

Accordingly as head of the FCC, Mr. Doerfer seems to us to have shown exceedingly poor judgment, a blind spot, in socializing as he has with Mr. Storer, from whom he accepted similar hospitality in 1958. Although nothing in the law debar him from such camaraderie, he occupies a position in which a sense of the fitness of things ought to make him feel that he should maintain an arm's-length relationship—aloof and reserved, not intimate—with all broadcasters and telecasters who must do business from time to time with the Commission he heads as a sort of policeman patrolling the Nation's airways.

Mr. Doerfer apparently thinks otherwise. At any rate, in his appearance before the House subcommittee investigating the radio-TV field, he has declared, "My conscience is perfectly clear." And he has gone on to suggest that he feels free to hobnob with men like Mr. Storer as long as he regards them as friends and they have no business pending before his Commission.

This strikes us as a viewpoint betraying a certain obtuseness to the proprieties, a certain insensitivity that ill becomes anybody occupying a public office as important as the chairmanship of the FCC.

Castro's Sugar

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. O'NEILL. Mr. Speaker, it is a tribute to the broad vision and wisdom of our great majority leader, the Honorable JOHN W. MCCORMACK, that a newspaper of his home city, the Boston American, carried in its issue of Thursday, March 3, 1960, a leading editorial commending the majority leader's support of the proposal that the United States buy more sugar from the Philippines and less from Castro's Cuba. The editorial endorses Congressman McCORMACK's argument in which he points out that long ago under the provisions of the Sugar Act the Philippine quota was cut by a change to a fixed tonnage allotment. The editorial might well have reported further that Congressman McCORMACK has pointed out to us also that upon the revision of the Sugar Act in 1956 the Philippines alone of all foreign suppliers did not receive an increase in quota and that the President in signing the Sugar Act revision into law held out the promise that at the further revision of the law, which is before this

Congress, consideration would be given to an increase for the Philippines.

Mr. Speaker, under leave to extend my remarks, I include the editorial from the Boston American entitled "Castro's Sugar" appearing in the issue of March 3, 1960:

CASTRO'S SUGAR

Congressman JOHN W. MCCORMACK wants the United States to buy more sugar from the Philippines, less from Castro's Cuba. We commend him for his campaign.

The Philippines are our ally, as the House majority leader points out, while the best that can be said of Castro's Cuba is that it's playing footsies with native and Russian Communists. Yet we buy Cuban sugar at an above-market bonus price.

There's more to Congressman McCORMACK's argument. He points out that long ago, in 1948, under provisions of the Sugar Act, the Philippines quota of sugar export to the United States was cut by about 3 percent by a change to fixed tonnage allotment. Up to that time the Philippines supplied a percentage of U.S. consumption rather than a fixed amount. Loss to the Philippine suppliers was gain to the Cubans. And the time has come to change this procedure.

A big country like ours cannot permit itself to be provoked into hasty and excessive retaliation against a small country like Cuba, and for this reason the administration has seemed irritatingly slow to many Americans in dealing with the open hostility of Castro's government.

But it is more than time that the turn-the-other-cheek attitude be ended. It is time for a firm assertion of our rights and dignity.

Under the present arrangement, as William Randolph Hearst, Jr., pointed out in "Editor's Report" in the Sunday Advertiser, Cuba gets a fixed quota of 96 percent of the difference between the estimated yearly basis needs of the United States and the fixed domestic and Philippines quota. The remaining 4 percent is allocated to other countries.

The 96 percent favor to Cuba would be questionable under any circumstances.

It is an economic absurdity in view of Castro's recent sugar-barter deal with Russia, his confiscation of American property, and the needs of other Latin American sugar-producing nations (such as Peru, Mexico, and Brazil) that are our friends.

A bill has been introduced in the House by Representative VICTOR L. ANFUSO, New York Democrat, that would cut Cuba's quota by the amount it will export to Russia—1 million tons a year—and transfer it to other Latin American nations. A similar bill is sponsored in the Senate by Senator BARRY GOLDWATER, Arizona Republican.

Not to be sugary about it, this bipartisan recognition of buying from our friends makes a great deal of sense. It ought to have administration backing and it ought to be enacted into law.

The Late Honorable Malcolm C. Tarver

SPEECH

OF

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. VINSON. Mr. Speaker, I yield to the distinguished gentleman from Mississippi [Mr. WHITTEN].

Mr. WHITTEN. Mr. Speaker, it was my privilege to serve with Judge Tarver

in a very close relationship in our work here in the Congress. When I first went on the Subcommittee on Agricultural Appropriations, Judge Tarver, as we knew and loved him, was chairman of that committee. In the service that I have had in the Congress I have never known a brighter mind, a more energetic memory, a more tenacious worker for what he believed to be right.

We have had many outstanding Members of Congress in the years that I have been here, but Judge Tarver was one of those outstanding Members who set a fine example for the membership, one whom the Members could emulate, and one from whom practically any Member could learn.

His contributions through his own work and in his service in the Congress were outstanding. The effect he has had on Members who have served since then has been such as to add to the benefits he brought to the American Nation.

We hate to see him go. We extend our deepest sympathy to his loved ones who can take to themselves the comfort that he lived a full life and contributed his share during his days here through works that will redound to the benefit of all of us in the future.

Hon. Herbert R. O'Connor

SPEECH

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FALLON. Mr. Speaker, Maryland sorrows at the passing of Herbert R. O'Connor. We all knew he had not been feeling well since an unfortunate train accident. Still, his sudden death at the age of 63 brought shock, deep sorrow, and a sense of great personal loss to the people throughout the State who have long made plain their affection for him. Our love and sympathy go out to Mrs. O'Connor and the members of his family in the loss of a devoted husband and father.

Herbert O'Connor was a man of outstanding legal ability and a dedicated public servant. I conceived an admiration for him early in political life. I felt the utmost confidence in his honesty, his leadership and outlook. I had a personal regard and affection for him which cannot be expressed adequately in words here today. As a former colleague, I have often been associated with him fighting for causes dear to his heart and to mine. The grief I felt at the news of his death summoned to my mind that I had not only lost a close friend but one with whom I shared the same philosophy of government.

Personal liberty and private enterprise were two of the prime factors which Herbert O'Connor believed we must protect if our country is not to follow a socialistic pattern. He believed this with all his heart and these factors mo-

tivated his actions in behalf of the people of his State and the Nation. In his long years of active and influential public service he pursued a single-minded policy—to guard and maintain our free way of life. He fought effectively for those freedoms which he felt have been our protection under the Constitution and which have made America the leading Nation of the world. He will long be remembered for these principles and for his leadership in the fight against subversive elements. Even after retiring from the Senate, he continued this fight and endeared himself in the hearts of the people of Maryland.

Herbert O'Connor was a devout Catholic and lived his faith. He has been referred to—and rightly so—as Maryland's best-known Catholic layman. He was a most able past chairman of the lay committees directing the Catholic charities appeal.

As Attorney General, Governor, and U.S. Senator, he rendered the citizens of his State and the Nation an invaluable service. Particularly, he distinguished himself locally and nationally as chairman of the Senate Crime Investigating Committee and as chairman of the Senate Internal Security Subcommittee.

An inspired leader, eloquent speaker and an articulate writer, Herbert O'Connor had personal integrity, professional competence and sound judgment that commanded the highest respect in the U.S. Senate. He was the natural choice of that body to direct the activities being carried on by the Senate Crime Investigating Committee and the Senate Internal Security Subcommittee. History will honor him for the brilliant and outstanding work he accomplished as chairman of these two highly important committees in their fight against the enemies of democracy. His devoted work in this field and his unrelenting fight against communism made him an invaluable contributor to the preservation of our American way of life.

Inside the Policy Racket

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Post magazine of March 8, 1960:

INSIDE THE POLICY RACKET—ARTICLE VIII
(By Ted Poston, with Alfred Hendricks, Irving Liberman and Richard Montague)

The multimillion-dollar shakedown racket which crooked cops operate for the protection of the numbers game is a major source of low morale in the police department.

As one authoritative source pointed out early in this newspaper's inquiry into the racket:

"How would you expect an ordinary policeman to feel about his job when he knows a fellow cop is knocking down three or four

times his basic salary by being on the pad (the approved list of protected policy spots)? "Take two chaps who come out of the police academy together. One, say, winds up on the Juvenile Aid Bureau. The other goes on a vice squad.

"The first may buckle down and do his best to perform his duties. He may even apply himself and earn promotion. But even if he makes sergeant or lieutenant and remains honest, he can't hope to approach the income of his fellow graduate who made the vice squad, even if that guy remains a plainclothesman.

"How long do you expect a man to remain honest under those circumstances?"

The Post investigation indicated that many policemen are forced to join the racket or be branded "finks" or "shooftys" by their grafting colleagues.

Take the experience of a sergeant who was transferred from a Bronx precinct to Harlem.

"This man had no connection with Sammy Schiltz' Bronx policy empire or with any of the other rackets in that borough," a Post source recalled. "So he immediately fell under suspicion when he was sent to the Harlem station.

"For the first week of his new duties in Harlem everybody gave him a wide berth. Then one day when he reported to work and opened his locker an unmarked white envelope fluttered to the floor. He opened it and pulled out a crisp \$100 bill.

"Flabbergasted, he turned around to see everybody watching him intently. He asked if anyone had accidentally put the envelope in his locker. No one said anything. They just sat there watching him.

"Finally, when he went through the station house seeking the bill's owner, a lieutenant snapped at him:

"Aw, put that money in your pocket and shut your yap. What the hell are you trying to pose as? A fink from the commissioner's office?"

One story widely known in the police department illustrates how law enforcement and discipline can actually break down when thieves fall out and the cops can't call the cops.

The story involves a plainclothes woman who was assigned to a geographic subdivision of a borough where vice squad cops were receiving an estimated \$300 a spot monthly from every "protected" policy location in the area.

DOUBLE SHARE

The woman, married to a policeman, immediately made guarded inquiries about the pad, and her "share," from her fellow officers in her new assignment.

She was assured that nothing like the pad existed and that there were no "shares" for anyone from the policy racket. But as the wife of a policeman she was not satisfied.

"If they think they're going to build a bridge over my nose," she told a veteran policy figure, "they've got another think coming. I'm going to get mine and I'll get it straight."

Armed with her badge, her service revolver and a quiet determination, the plainclothes woman began systematic visits to every grocery, tailor shop, bar or other protected "spot" in the area. And in each place, she stated her case bluntly.

"They tell me you're not on the pad," she said quietly, "but I know better. Now if you don't want all hell to break loose where you are concerned, you are going to take care of me, and my husband too. And if you think I'm giving, just try me."

The East Harlem Syndicate, which now controls most of the numbers spots in the area, was not as firmly established in its relationships with the cops then as it is now. So consternation flourished.

A man who followed the case closely told the Post the eventual outcome.

"She buffaloed them all," he said. "While her superiors and squad members were trying to figure out some way to cut her into the actual pad, which they had denied existed, she scared the spot operators so badly that they had to set up an individual pad for her. And she made them double the 'share' to include her husband, although he had never worked on policy or gambling."

"They got her money together weekly—not monthly as is the usual practice—and they turned it over to the owner of a night club where she picked it up regularly."

The case of the persevering plainclothes woman might have had a happy ending for her, except for one thing—

"She just couldn't stand prosperity," another source recalled. "She'd come into the night club to collect her pad, and then she'd have to run-'em-around-the-bar for everybody. In the process, she became very buddy-buddy with some pretty tough characters."

"One night she came into the club with (a prominent Washington policy baron) and her old man was in there waiting for her to collect and give him his taste. One thing led to another and she got mad and raised so much hell that the owner had to call the cops. They came and got her but they didn't take her to the station house."

The woman was taken around the corner to an empty hallway and held there until a higher police official arrived. Almost sober by then, the policewoman reportedly told this official:

"Go on and book me. Or bring me up on charges. And I'll blow the whistle on the whole pad."

OFF THE PAD

The next day she was back at her post as if nothing had happened.

But the story didn't end there.

Estranged from her husband, the woman cop established a liaison with a well-known confidence man who was working out a system to fleece the single action operators (small policy bankers who pay 8 to 1 on any of the three digits composing the day's official number, or 60 to 1 on "bolita" or combination of two of the three digits).

With the lush graft collected from her individual pad—she still collected for her husband, too, but had cut him out of the take—she helped buy a garage and filling station for her new love, plus extensive electronic equipment for the swindle he had devised.

The swindler planned to use the short-wave equipment to have a confederate flash him the first number after the third race totals at Hialeah, so that he could make last-minute sure bets on it with unsuspecting single action bankers.

The police got wind of the scheme, however, and tapped the swindler's phones. While seeking evidence against him, they heard many a torrid conversation between him and his plainclothes mistress.

Police raided the filling station and the swindler's home and confiscated the electronics equipment. Papers seized in the raid also established the policewoman as coowner of the filling station.

The swindler, since deceased, was arrested. And the plainclothes woman was called in for an all-night session of questioning. Again, she played the old record:

"You book me and I'll blow the top off the whole police department," she said. "You push me in a corner, and I'll tell the whole world who gets what, when, and how much."

They didn't book her.

But she didn't get off scot free this time. She was assigned to desk duty and paperwork, automatically cutting off her personal pad.

This woman's extraordinary feat was duplicated on a smaller scale in another area in another case unearthed by the Post investigation.

There a Negro plainclothesman was assigned to a morals squad unit, one of two Negroes "integrated" into the all-white outfit. In this case, the old hands couldn't deny the existence of the pad but the new men were told that only five "spots" were on it.

HE GOT HIS

The cop didn't believe it, of course. One by one, he proceeded to "knock over" protected policy spots in the area, while nabbing an occasional bookmaker on the side. In almost every case, the man arrested would complain:

"What're you trying to do? I'm on the pad."

And the cop would retort: "Whose pad? You ain't on mine. Nobody told me anything about you."

The retired numbers banker who told the Post this story chuckled at the recollection:

"That guy raised so much hell like that that before 3 months had passed they had to put him on the full pad for the squad. But they never forgave him, and a year or so later they busted him down to a foot cop in uniform. Which meant, of course, that he could never make plainclothes again."

"But the last time I saw him, he wasn't too unhappy, even though he was still pounding a beat."

"I got mine," he told me, "I'm just waiting to pack it in (retire)."

Post reporters uncovered similar cases during their 2-month investigation. One Harlem cynic summed it up neatly:

"When thieves fall out—in the police department—it doesn't necessarily follow that honest men will get their due."

James A. Adams, Late Dean of Wyoming Seminary Preparatory School, Kingston, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news story and an editorial from the Wilkes-Barre Record of Monday, March 7, 1960, as well as an editorial from the Wilkes-Barre Times Leader Evening News of the same date, that announce and comment upon the passing of the late dean of Wyoming Seminary Preparatory School, James A. Adams, who retired last year after serving for 23 years as dean of that institution and a total of 39 years as a member of the faculty. It was with deep regret that I learned of the death of Dean Adams as he was truly an outstanding educator and a fine gentleman. I know the graduates of Wyoming Seminary will be equally distressed to learn of his passing. It is said that the true measure of a teacher and educator is the mark made in later life by the students who passed through his classroom and were the recipients of his counseling. Using this as a yardstick and guideline, Dean Adams was eminently successful because many of his former students later became the leaders in the arts and professions, in busi-

ness and industry, and in many other important phases of our national life. The field of education has indeed lost an outstanding member and the district which I represent has lost a fine citizen. The news story and editorial follow:

FUNERAL SERVICES FOR EDUCATOR OF 45 YEARS TO BE HELD TODAY AT 3 IN HOLLYWOOD, FLA.

James Abram Adams, dean of Wyoming Seminary from 1936 until his retirement June 30, 1959, and a member of the faculty of that institution 39 years, died Friday night at his winter home in Hollywood, Fla. Word of his death was received locally by Dean J. Theodore Hughes.

Funeral services will be held today at 3 p.m. from a funeral home in Hollywood. Body will be flown to Bradford, Vt., for burial Thursday.

Mrs. Adams, wife of the deceased, and a nephew, Melvin Estey, and his wife will attend the burial services Thursday. Mrs. Adams then will return to her apartment in Wyoming.

One of the most popular administrators in the 116-year history of Wyoming Seminary, Dean Adams was an outstanding educator, devoting 45 years to the field of education.

A native of Orono, Maine, he was the son of hardy Scots-Irish parents and in spite of almost 40 years residence in Pennsylvania, he retained his habits of thought and manner of speech which reflected his New England background. Following graduation from the public schools of Orono, Dean Adams entered the University of Maine from which he received the degree of bachelor of science in mathematics in 1915.

In the years preceding participation of the United States in World War I, he served as principal of secondary schools in Exeter and Janesport, Maine, and as teacher of mathematics at the high school at Norwood, Mass.

When the United States entered World War I, Dean Adams left Norwood November 1, 1917, having enlisted in the Army. He was placed in a medical unit, trained in Camp Greenleaf at Fort Oglethorpe, Ga., and then shipped overseas. He rose to the rank of top sergeant and had much of the responsibility of clearing the wounded as they were brought into the evacuation hospital for emergency treatment. After the armistice was signed, his unit was sent with the occupation army into Germany to serve as a post hospital in Mayen in the Rhineland where he remained until the spring of 1919.

Following his discharge in 1919, Dean Adams returned to teaching and accepted a position as submaster and teacher of mathematics at the high school in Biddeford. The following year, he came to Kingston where he had been employed as head of the mathematics department. His wife, the former Mildred Ordway, of Waterford, Maine, whom he married in Maine in 1919, accompanied him here.

When Dr. Levi L. Sprague died in 1936 and Dr. Wilbur H. Fleck moved from the dean's office to the presidency of the school, Dean Adams was elevated to the position in which he served 23 years. In that post, as second in command of the school, he had been responsible for the day-to-day administration of school affairs including most of the discipline problems.

Despite the many duties of the dean's office, Dean Adams continued to teach his highly regarded course in advanced mathematics. In addition, he had served as a member of the Board of Readers in Advanced Mathematics of the College Entrance Examination Board from 1927 to 1939. Continuing his pursuit of knowledge, Dean Adams took summer studies and the degree of master of arts was conferred on him by Columbia University in 1934.

A member of Wilkes-Barre Rotary Club and Wyoming Valley Torch Club, both of

which he had served as president, Dean Adams was also an active member of Kingston Methodist Church. With the presentation of the class of 1959 for commencement, Dean Adams had viewed the end of a parade of more than 5,000 students who passed through Wyoming Seminary during his tenure. Many of his former students have risen to positions of rank in Government or military service while others have become prominent in the professions. Among them are Pennsylvania State Supreme Court Justice Benjamin R. Jones, Luzerne County Orphans Court Judge Paul R. Selecky and retired Air Force Gen. Elwood R. (Pete) Quesada.

When Dean Adams arrived in Wyoming Valley in 1920, the school was just starting a period of building which reached a high point early in 1959 with completion of the new Wyoming Seminary gymnasium on North Maple Avenue. Among the other buildings the dean had seen rise on the campus are Sprague Hall, Carpenter Hall, Nesbitt Stadium and reconstruction of the dormitories on Sprague Avenue.

He and Mrs. Adams celebrated their 40th wedding anniversary in October, 1959. Together, the couple had visited the West Indies, Europe, the western United States, Alaska, and Canada.

Dean Adams also had been vice president of Wilkes-Barre Dinner Club, an organization which sponsored outstanding speakers in the field of current events.

Surviving in addition to his wife are a brother, George, Glens Falls, N.Y.; brother-in-law, Clarence Estey, Warwick, R.I.; niece, Phyllis Estey Philbrick, Warwick, and a nephew, Melvin.

JAMES A. ADAMS

After less than a year of retirement, James A. Adams, dean of Wyoming Seminary from 1936 to and well into 1959, has passed away. His retirement last July, after 39 years as a faculty member, caused profound regret and led to many expressions of appreciation of his high worth as an educator.

Woven into the character of Wyoming Seminary with its 116 years of history is the dedication of members of its staff and particularly those bearing the responsibility of providing leadership. Among the foremost was Dean Adams whose ability coupled with his integrity and depth of understanding enabled him to give service of the highest order.

It was with good reason personally that he was proud of the fact that as enrollment at the seminary climbed steadily upward, academic standards remained high. It was readily attested by associates that in no small part this maintenance of quality was due to the example he set and to his administration of the curriculum.

His good influence is a continuing force in the life of this community and in other places where seminary graduates are found, a circumstance enhanced by the parade of more than 5,000 students who passed through the seminary during his tenure as dean.

DEAN ADAMS

As a public-spirited citizen and dedicated member of the faculty of Wyoming Seminary for 39 years, 23 in the capacity of dean, James Adams, who retired last July and died in Florida over the week-end, made a considerable contribution to the betterment of this community as well as to the cause of education.

When he came here after the First World War, it was in the quest of experience at the onset of his career. He intended to stay for 2 years, but so impressed was he with Dr. L. L. Sprague, seminary's venerable president, that he decided to cast his lot with Wyoming Valley and devote his time and talents to the west side institution. It was

a decision neither he nor the community had any occasion to regret, for he found satisfaction in his work and greater Wilkes-Barre was delighted to acquire the services of an educator of his caliber permanently.

More than 5,000 students, many of them prominent in public life today, came under his jurisdiction. The list includes such familiar figures as Justice Benjamin R. Jones of the State Supreme Court, Judge Paul R. Selecky of the Orphans Court of Luzerne County, General Elwood Quesada, Dr. Charles N. Burns, Dr. Jacob Hyman, Dr. Eric Faigle, dean of the College of Liberal Arts at Syracuse University, Dr. Joseph Donchess, chief surgeon for the United States Steel Corp. Hospital at Gary, Ind., and Dr. Ralph Decker, former president of Wyoming Seminary.

Throughout life, Dean Adams retained the character of his New England forebears. His zeal and enthusiasm were matched by his integrity and ability. He was an able administrator as well as an outstanding teacher. His only master was duty. He was an understanding friend, as well as mentor, to his charges, winning their confidence and commanding their respect. A warm personality was not the least of his assets.

Dean Adams believed in the youth of America and his boys and girls at Wyoming Seminary fully justified that confidence. They never let him down.

Department of Justice Announces Indictment of Electric Manufacturers Charging Conspiracy of Price Fixing, Rigged Bidding, and Contract Allocations—Raising Costs of Federal Power Projects

EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. EVINS. Mr. Speaker, recently the Attorney General of the United States announced that a Federal Grand Jury has returned three indictments against several manufacturers of heavy electrical equipment, charging them with violations of the Sherman Antitrust Act. These indictments describe the extraordinary means taken and methods used by these companies to monopolize and to divide among themselves the business of supplying electrical equipment to utilities purchased by the Government; namely, the U.S. Corps of Engineers, the Bureau of Reclamation, Department of the Interior, the Tennessee Valley Authority, the U.S. Air Force, the Navy, and the General Services Administration. These indictments of conspiracy to raise prices and allocate sales also suggest why the cost of Federal power projects has been increasing in recent years.

Mr. Speaker, we hear many complaints about the increase in the size of the national budget and we are daily exhorted to effect economies in Government operations. The American people have every right to be disturbed by the revelations that Federal agencies have been forced to pay excessive prices because of the price rigging and competi-

tion-destroying tactics described in these indictments—an old fashioned conspiracy of around-the-clock contract allocations.

Under unanimous consent I insert in the Appendix of the RECORD the news release of the Department of Justice of February 16 about these indictments. The news release follows:

Attorney General William P. Rogers announced today that a Federal grand jury sitting in Philadelphia returned three indictments charging General Electric Co., Westinghouse Electric Corp., Allis-Chalmers Manufacturing Co., I-T-E Circuit Breaker Co., Federal Pacific Electric Co., and 18 individuals from these companies, with violations of the Sherman Antitrust Act in connection with the sale and distribution of various heavy electrical products.

The indictments returned today involved (1) power switchgear assemblies, (2) oil and air circuit breakers, and (3) low-voltage power circuit breakers—all are used in the generation, conversion, transmission and distribution of electric energy. These products are sold to various Federal, State and local governmental agencies throughout the United States as well as to electric utility companies and private concerns. Industry sales of these products, covered by the indictments, mount up to \$209 million each year.

Named as defendants in the power switchgear indictment were:

General Electric Co., New York, N.Y.; and George E. Burens, vice president and general manager, switchgear and control division; Lewis J. Burger, general manager, switchgear and control division; Clarence E. Burke, general manager, high voltage switchgear department; N. F. Hentschel, general manager, medium voltage switchgear department; Frank E. Stehlik, general manager, low voltage switchgear department; G. R. Fink, product sales manager, medium voltage switchgear department; and Houston Jones, manager, draw-out and load center sales subsection, low voltage switchgear department.

Westinghouse Electric Corp., Pittsburgh, Pa.; and Landon Fuller, assistant general manager, East Pittsburgh division; J. T. Thompson, sales manager, assembled switchgear and devices department; and A. W. Payne, sales manager, assembled switchgear and unit equipment section, assembled switchgear and devices department.

Allis-Chalmers Manufacturing Co., West Allis, Wis.; and L. W. Long, assistant general manager, power equipment division; David W. Webb, manager, switchgear department, power equipment division; and Frank M. Nolan, manager of sales, switchgear assemblies and unit substations, power equipment division.

I-T-E Circuit Breaker Co., Philadelphia, Pa.

Federal Pacific Electric Co., Newark, N.J.

This indictment charged that at least as early as 1956 the defendants conspired "(a) to fix and maintain prices, terms, and conditions for the sale of power switchgear assemblies; (b) to allocate among themselves the business of supplying power switchgear assemblies to Federal, State, and local governmental agencies; (c) to submit noncompetitive, collusive, and rigged bids for supplying power switchgear assemblies to electric utility companies, Federal, State, and local governmental agencies, private industrial corporations and contractors throughout the United States; (d) to refrain from selling certain types of power switchgear assemblies or components thereof to other manufacturers of electrical equipment; and (e) to raise the prices of certain types of components purchased by nondefendant manufacturers of electrical equipment for

use by them in power switchgear assemblies to be sold in competition with defendant manufacturers, so as to eliminate and suppress competition from them."

The second indictment relating to oil and air circuit breakers named as defendants the following:

General Electric Co., New York, N.Y.; and Clarence E. Burke, general manager, High Voltage Switchgear Department; Royce C. Crawford, manager-marketing, High Voltage Switchgear Department; and William H. Schiek, manager, Power Circuit Breaker Sales, High Voltage Switchgear Department.

Westinghouse Electric Corp., Pittsburgh, Pa.; and J. W. Stirling, manager, Power Circuit Breaker Department.

Allis-Chalmers Manufacturing Co., West Allis, Wis.; and L. W. Long, assistant general manager, Power Equipment Division.

I-T-E Circuit Breaker Co., Philadelphia, Pa.

Federal Pacific Electric Co., Newark, N.J.

This indictment charged that at least as early as 1951, the defendants conspired "(a) to fix and maintain prices, terms, and conditions for the sale of circuit breakers; (b) to allocate among themselves the business of supplying circuit breakers to Federal, State, and local governmental agencies; (c) to submit noncompetitive, collusive, and rigged bids for supplying circuit breakers to Federal, State, and local governmental agencies; and (d) to submit noncompetitive, collusive, and rigged price quotations for supplying circuit breakers to electric utility companies."

The third indictment concerning low-voltage power circuit breakers named the following as defendants:

General Electric Co., New York, N.Y.; and Frank E. Stehlik, general manager, low-voltage switchgear department; and R. W. Ayres, Jr., manager, air circuit breaker, fuse and accessory sales subsection, low-voltage switchgear department.

Westinghouse Electric Corp., Pittsburgh, Pa.; and J. T. Thompson, sales manager, assembled switchgear and devices department; and W. T. Pyle, sales manager, switchgear devices section, assembled switchgear and devices department; and I-T-E Circuit Breaker Co., Philadelphia, Pa.

According to this indictment, the defendants, at least as early as 1956, conspired "to fix and maintain prices, terms, and conditions for the sale of low-voltage power circuit breakers."

The indictment, for one example, relating to power switchgear sets forth the various actions taken by the defendants to carry out the alleged conspiracy. In addition to various meetings held throughout the country to discuss prices, the indictment charges that defendants met on at least 35 occasions from November 1958 to October 1959 to allocate bids to governmental agencies so as to provide each manufacturer with an agreed-upon percentage of the sealed-bid market, as follows: General Electric, 39 percent; Westinghouse, 35 percent; I-T-E Circuit Breaker, 11 percent; Allis-Chalmers, 8 percent; and Federal Pacific, 7 percent. At these meetings, according to the indictment, the defendants "would then discuss particular future bid invitations and designate which manufacturer should submit the lowest bid therefor, the amount of such bid, and the amount of the bid to be submitted by others." With respect to bids to public utilities and other purchasers, the indictment charged that defendants used a formula, designated as "phase of the moon," under which "through cyclic rotating positioning inherent in the formula, one defendant manufacturer would quote the low price, others would

quote intermediate prices, and another would quote the high price," and "these positions would be periodically rotated among the manufacturers."

Similar allocation methods were employed with respect to oil and air circuit breakers, according to that indictment. In addition to price-fixing meetings, the indictment charges that defendants in this case met on at least nine occasions between December 1958 and September 1959 to allocate bids to governmental agencies according to the following percentage shares agreed upon: General Electric, 40.3 percent; Westinghouse, 31.3 percent; Federal Pacific, 15.6 percent; Allis-Chalmers, 8.8 percent; and I-T-E Circuit Breaker, 4 percent. According to the indictment, "at these periodic meetings, a cumulative list of sealed bid business secured by all of the defendant manufacturers was circulated, and the representatives present would compare the relative standing of each company according to its agreed upon percentage of the total sales pursuant to sealed bids." Then, they would "discuss particular future bid invitations and designate which manufacturer should submit the lowest bid therefor." The indictment goes on to charge that "the manufacturer designated to receive a particular sale would then declare the price at which it intended to bid" or would later "notify the other representatives" of the "specific figure which he would quote on the bid invitation," and the other manufacturers would submit higher bids.

Two of the indictments allege that in the course of communications among defendants, "various procedures were adopted for the purpose of avoiding detection," one of which was the use of a "code number" for each manufacturer "in such communications either as the sole identification of the sender or in conjunction with the use of the first name of its representative."

As a result of these alleged conspiracies, the indictments charge that price competition has been eliminated in the sale and distribution of these products, and that various governmental agencies "have been denied the right to receive competitive sealed bids" and "have been forced to pay high, artificially fixed prices" for the products. Such agencies include Tennessee Valley Authority, U.S. Department of Interior, U.S. Army Corps of Engineers, U.S. Air Force, U.S. Navy, and General Services Administration.

Companion civil actions were also filed today charging the defendant companies with violations of the Sherman Act, and seeking injunctive relief against the various practices alleged. The prayers for relief in these suits seek to require the companies to issue new price lists based upon costs independently arrived at, to submit affidavits of noncollusion with future bids to governmental agencies, and to prevent any communications among the defendants with respect to future bids and price quotations.

Robert A. Bicks, Acting Assistant Attorney General in charge of the Antitrust Division, in commenting on these cases, stated:

"These indictments and civil actions are the first in a series of proceedings arising out of the Department's extensive grand jury investigation into all phases of the heavy electrical equipment industry. The investigation is continuing into other phases which involve products of significance to industry and national defense."

These cases were prepared by William L. Maher, Chief of the Philadelphia Office of the Antitrust Division, under the general supervision of Baddia J. Rashid, Chief of the Trial Section of the Division, and assisted by Donald G. Balthis and Morton M. Fine, attorneys in the Philadelphia office.

Law Observance Exhibit

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TOLL. Mr. Speaker, the dedication ceremonies of the law observance exhibit, sponsored by the Federal Bar Association, Philadelphia chapter, on February 29, 1960, included the remarks of the chairman, Harry D. Shargel, Esq., of the law observance committee. These remarks and the description of the exhibits are very interesting and should be read by every Member, particularly because they illustrate the aphorism, "The law protects you; respect it, uphold it, obey it."

The remarks of Mr. Shargel follow:

REMARKS BY HARRY D. SHARGEL, CHAIRMAN, LAW OBSERVANCE COMMITTEE, FEDERAL BAR ASSOCIATION, FEBRUARY 29, 1960

The Federal Bar Association (Philadelphia chapter) through its law observance committee is engaged in a campaign to promote respect for law and legal processes on an everyday, year-round basis. Our program is designed to stress the value of law in a civilized society in an effort to prevent delinquency among both adults and juveniles.

The law observance committee includes representatives of law enforcement agencies, the offices of the United States and Philadelphia prosecuting attorneys, the United States and local judiciary and the U.S. Congress.

We have established a speakers subcommittee which furnishes qualified speakers to groups and organizations. Through the courtesy of the Display Corp. of America which supplied posters, and the Yellow Cab Co. of Philadelphia, which supplied the space, large signs have been appearing in the rear of taxicabs reading: "The law protects you; respect it, uphold it, obey it." The program has already received national attention by way of remarks appearing in the CONGRESSIONAL RECORD. As the result of our activities, similar programs are being organized in other cities by local chapters of the Federal Bar Association.

Today, through the generosity of the Philadelphia National Bank we have arranged a display which depicts activities of the Philadelphia Police Department, the Federal Bureau of Investigation, the postal inspectors and Treasury enforcement agencies including alcohol and tobacco tax, narcotics and Secret Service. This is the first time that such a joint exhibit has even been presented.

These agencies have joined hands in a program of crime prevention to make the public better aware of the functions they perform. The law enforcement agencies of the Nation can adequately protect the public only if they receive the cooperation of the public. Respect for law and observance of the laws are essential to the preservation of America's cherished freedoms.

We solicit the cooperation of organizations, firms and individuals in the furtherance of our program to promote respect for law and legal processes. You are invited to examine the exhibits and to furnish comments and suggestions for additional methods for promoting our objectives.

DESCRIPTION OF EXHIBITS

Federal Bureau of Investigation

The FBI exhibit depicts in graphic fashion the history, investigative jurisdiction, service functions, and geographical coverage of this agency. Emphasis is placed on the work of the modern FBI as it is best known to the public, following the appointment in 1924 of J. Edgar Hoover as its Director. There are photographs of the leading figures of the gangster era of the early and mid-thirties when a series of notorious killers and hoodlums were captured and killed by Special Agents of the FBI. With its present organizational set-up covering all fifty of the United States, the FBI can have a representative at the scene of a crime within one hour. There are photographs of FBI training procedures and data regarding the Bureau's high standards for selection and investigation of its personnel. Emphasis is placed sharply on the guiding principles that the FBI is at all times concerned with the maintenance of individual rights; that it is a fact-finding agency which does not evaluate information nor issue clearances; and that to the FBI the proof of guilt is no more important than the establishment of innocence. Throughout the exhibit, from the dramatic display of the 10 most wanted fugitives through the admonitions as to what the individual can do to fight communism and preserve America, emphasis is placed on the fact that the FBI is dependent upon all citizens of our country for the information which enables it to safeguard our national security.

Postal inspector

An exhibit furnished by the Bureau of the Chief Inspector, Post Office Department, portrays the history of the Postal Inspection Service, beginning with its inception in 1787 when Ben Franklin was first appointed by the British Colonial Postmaster General as postmaster of Philadelphia and given the additional duties of "regulating the several post offices and bringing the postmasters to account."

The display shows an outline of functions, and graphically portrays the general areas of investigations by three-dimensional exhibits of typical cases: Post office burglaries, holdups of mail custodians, stolen, and forged negotiable paper, bombs, and poison sent through the mails, extortion, and poison-pen letters, the vast direct mail selling pornography, and innumerable fraudulent schemes by unscrupulous promoters.

U.S. Treasury enforcement agencies

Alcohol and Tobacco Tax

The Alcohol and Tobacco Tax Unit has prepared a dramatic exhibit of machine guns, sawed-off shotguns, and automatic firearms regulated by the Federal and National Firearms Act.

Bureau of Narcotics

In view of our great national concern with narcotics traffic and addiction, the Bureau of Narcotics has supplied specimens of drugs and implements used in connection with narcotics addiction.

Secret Service

The Secret Service has furnished actual plates and molds used by counterfeiters, together with examples of their finished products.

Police Department, Philadelphia

Rounding out the highlights of law enforcement as portrayed in the exhibits of the Federal agencies, there is a traffic accident display by the Philadelphia Police Department. This is designed to emphasize the sometimes neglected fact that no aspect of law observance touches more lives each day than the use of motor vehicles. Instead of an exhibit of smashed cars and bloody heads, the traffic display is dramatized by a facsimile

ile traffic standard with its blinking green light, flanked by charts showing 1959 accident totals by day of the week and for each hour of the day. In 1959, motor vehicle accidents cost the United States 37,750 lives, 1,350,000 serious injuries, \$5½ billion. The Philadelphia toll in 1959 was 162 lives, 11,839 persons injured. It is hoped that the remainder of this display will help to reduce these figures in 1960.

Hon. Herbert R. O'Connor

SPEECH

OF

HON. DANIEL B. BREWSTER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. BREWSTER. Mr. Speaker, it is with deepest regret that I rise to join my colleagues in the Maryland delegation to pay final tribute to former Senator Herbert R. O'Connor, Sr.

His recent death has deprived the State of Maryland of one of its most illustrious sons and distinguished citizens. I feel a deep sense of personal loss, and I join with my colleagues in expressing our most sincere sympathy to his wife and family.

Senator O'Connor leaves behind him a wonderful legacy of service to his country, his State, and the city of Baltimore. He also leaves behind the warming image of a man who throughout his busy eventful life set an example that all of us might well follow. This in some measure alleviates the sorrow that his family and his host of friends feel because of his untimely death.

Senator O'Connor throughout his life enjoyed the respect, the affection, and the esteem of the people of Maryland as few men have in the political history of our State. This respect and affection was demonstrated time and again throughout his meteoric rise through the various stages of his political career.

In 1921, he was appointed assistant State's attorney in Baltimore. This began a career in public life, which is without parallel in Maryland. From 1923 to 1924, he served as peoples counsel before the Public Service Commission. In 1924, at age 27, he became Baltimore's youngest State's attorney. He served in that capacity for 10 years during which time his vigor and skill as a prosecutor brought him great praise and national recognition. In 1934, he was elected attorney general of Maryland. In 1937, he was honored by being elected president of the National Association of Attorneys General.

In 1939, Herbert O'Connor was elected Governor of the State of Maryland, and in 1942, at the annual meeting of the Council of State Governors, he was elected president of that body. He was re-elected Governor in 1942. He will be remembered as one of Maryland's truly great Governors. During this term as Governor, many long overdue fiscal and judicial reforms were effected. In 1946, he was elected to the U.S. Senate, where he served once again with distinction.

He was always vigorous in his devotion to Maryland's interests.

It was my privilege to know Senator O'Connor well. As a young man in political life, I called upon him for advice and counsel. He was always willing to give freely of his time.

The State of Maryland has lost one of its most distinguished citizens. His wife and family have lost a devoted husband and father. I have lost a true friend.

George Huddleston, Sr.

SPEECH

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. ROBERTS. Mr. Speaker, the passing of George Huddleston, Sr., is mourned by all who knew and loved this former outstanding Congressman from Alabama.

I am sure one of the greatest moments in the full and active life of Congressman Huddleston was November 2, 1954, when his son, GEORGE HUDDLESTON, JR., was elected to the 84th Congress from the Ninth Alabama District.

The Honorable GEORGE HUDDLESTON, JR., is serving with great distinction, as a respected member of the Committee on Armed Services and as a devoted servant of the citizens of his district.

I wish to join his many friends in expressing to Congressman HUDDLESTON my sincere condolences and deep sympathy in the passing of his father.

Under leave to extend my remarks, I would like to include in the RECORD an editorial which appeared recently in the Anniston (Ala.) Star, recalling one of the incidents in the illustrious life of the late Congressman Huddleston, Sr.

The editorial follows:

GEORGE HUDDLESTON, SR.

It isn't often that a distinguished lawmaker lives to see his son likewise attain distinction, but that happened in the case of the late George Huddleston, Sr., of the Ninth Alabama District, Birmingham, father of Representative GEORGE HUDDLESTON, JR., now one of the leading men in the Congress of the United States.

The elder Huddleston, when a comparatively young man, possessed one of the finest minds of any man in Congress and was a man of great eloquence.

In his younger days he also was a pronounced liberal and had a tremendous following among the laboring classes of the Ninth District. One of the foremost opponents he had to overcome was the Reverend W. E. Dickinson, a once noted Alabama minister.

Dickinson enjoyed the support of the Birmingham News, then edited by the late Frank P. Glass, who was a classmate of Woodrow Wilson at Princeton. And when the campaign got very hot, he got Wilson to endorse Dickinson, who was to engage in a debate with Huddleston at Woodrow Wilson Park in Birmingham.

But it so happened that Huddleston's train from Washington was several hours late, and his supporters, who had gathered by the thousands at the park to hear his speech,

believed that Glass and his associates had used their influence to hold up the train.

The train finally arrived, however, and as soon as he came up the steps of the station, Huddleston was put in a cane-bottom chair and carried on the backs of his followers all the way from the station to Wilson Park.

Huddleston received a great ovation that night, and the train incident evidently had played a part in his eventual election over Dickinson, in spite of Woodrow Wilson's endorsement, which any seasoned politician should have recognized as a campaign blunder.

I Speak for Democracy

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. MACDONALD. Mr. Speaker, I recently attended the 13th national award luncheon of the Voice of Democracy annual broadcast scriptwriting contest sponsored by the National Association of Broadcasters, Electronic Industries Association, and State Associations of Broadcasters, in cooperation with the Veterans of Foreign Wars at the Statler Hotel here in the Nation's Capital.

This contest is a nationwide competition for high school students. Each contestant is asked to speak on the theme "I speak for Democracy." Each speaker was given the opportunity to present his or her individual views of what democracy means. There were 51 high school students present, one from each State and one from the District of Columbia.

I was very proud that Miss Janice Dwyer, a young lady from my congressional district, was the champion of the State of Massachusetts. She is the daughter of Mr. and Mrs. Fred D. Dwyer, 5 Newell Road, Wakefield, Mass., and a fine student at the Academy of Our Lady of Nazareth, one of the outstanding secondary schools in our State. Miss Dwyer competed with 133 high school students from cities and towns throughout the Commonwealth of Massachusetts and her essay was judged the best submitted in the State. Miss Dwyer certainly has a special message for everyone who lives in a democracy and who would like to be able to define the system under which we live to as many people as possible. The essay which won Massachusetts honors for Miss Dwyer follows:

I SPEAK FOR DEMOCRACY

(By Janice Dwyer, Wakefield, Mass.)

Probably we have all heard the story of the millionaire who stood on a busy street corner trying to sell \$5 bills for a dollar. He didn't have much luck. That's because we Americans are skeptical of the value of something for nothing.

And yet every American is given a free gift the moment he comes into the world—the Constitution, the Bill of Rights, the four freedoms. They might not be neatly gift-wrapped in a big box with a bow on top, but what greater gift could we ever receive?

Granted these freedoms were fought for and preserved by generations before us but to a teenager today, isn't that past history?

Are we not apt to take democracy for granted because it's so much a part of our everyday life? Just as a man doesn't give a thought to his arms until he loses one.

For myself, I have come to think about and appreciate democracy more since I met Peter last summer.

We met at a lake near Augusta, Maine. He was tall, 19, a caddy master for the summer at a nearby golf course, and he was also a Hungarian refugee.

His story didn't come out all at one time. He told me some of it at a dance, other parts while we sat in the swing on the porch, or walked down a dusty country road. But piecemeal his story unfolded.

His father was dead and he and his mother had lived in Budapest until October 1956. When he was 16, he had been selected to attend the Lenin-Marx Institute because of his fine scholastic record. He had been tabbed to be a good Communist leader of the future. But at the age of 17, Peter helped ignite a revolt—a revolt to gain freedoms about which Peter and his friends had been taught nothing—only what they felt down deep inside.

As Peter explained it, first came the whispers of discontent with close, trusted friends. Subjects were discussed that Peter had considered traitorous when they first rumbled through his mind. Then came frank discussions, then shouts, and finally outright rebellion.

Factory workers, schoolchildren, college students—all stormed into Budapest that October day. These desperate young people demanded much—withdrawal of Soviet occupation troops, free elections, freedom of speech and of religion.

That spark flamed into a fire and suddenly Peter and thousands like him tasted freedom for the first time in their lives.

They tasted freedom for 5 short days. Then came the tanks, the flame throwers, machineguns, street fighting, death, destruction, defeat.

While these Hungarian boys and girls my age were fighting Soviet tanks with nothing more than gasoline-filled coke bottles, I was enjoying my daily coke at the drugstore and having cider and donuts at Halloween parties.

"Hungary revolts" were just words spoken by a newscaster before I changed the station. But now I know what it all means.

Now when I open an American history book I don't see strange looking men in powdered wigs and pantaloons. I see young men like Peter fighting for the same freedoms, three centuries ago.

Yes, we are given democracy "free of charge," but it is as precious as life itself.

I speak for democracy; but in these troubled times, democracy speaks for itself.

Fishermen's Paradise

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. MACK of Washington. Mr. Speaker, I often have heard it said that more Americans participate in the sport of fishing than engage in any other sport. If you are one of those who do, come to Washington State and get the biggest fishing thrill of all—that of

hooking and landing a big Pacific coast salmon.

The Washington State fisheries director recently reported that 821,814 salmon were landed by hook and line by sports fishermen last year. The salmon landed by sportsmen weighed an average of about 20 pounds each—more than 1,600,000 pounds—800 tons.

There are big salmon lurking in the waters of Washington State for you to hook. Come and get yours this year.

Awake America

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. O'NEILL. Mr. Speaker, it is a pleasure for me to take this opportunity to bring to the attention of my colleagues in the U.S. House of Representatives the following letter from our beloved archbishop of Boston, Richard Cardinal Cushing, and the address by Norman Knight, president of the Yankee network, delivered on November 28, 1959, at the New Bedford Theater. I believe that all will find both most interesting reading:

CARDINAL'S RESIDENCE,

Brighton, Mass., March 4, 1960.

DEAR FRIENDS: We must never falter in our struggle against atheistic communism. Again and again, I have affirmed the crying need for every one in our great Nation to stand as one against this evil.

It is fortunate that here in New England we have leaders who give of their time, resources, and energies, to expose the Communist menace. In the forefronts of both New England and America itself is my close friend Norman Knight, who unceasingly places this problem ahead of all his other interests, business or social.

I hope you will take the time to read carefully what Norman spoke in New Bedford a short time past and reprinted for distribution to political, educational, business, and religious leaders.

With great respect and admiration for these and other courageous viewpoints that Norman has expressed, I write to you with the earnest hope that you will share these viewpoints and actively do all in your power to encourage great understanding of this massive menace and the danger which confronts all good people in America and throughout the world.

Let us work as though everything depended on us and pray as though everything depended upon God. The warfare in which we are engaged has been called a cold war, a psychological war and a political war. No matter what we call it, it is a struggle for survival. The goal is the minds of men. We can win if we keep one hand in God's hand and with the other work to preserve our freedom and the freedom of our Nation—under God.

Devotedly yours,

RICHARD CARDINAL CUSHING,
Archbishop of Boston.

AWAKE, AMERICA

(By Norman Knight)

Thank you for being here tonight, and to all of you who have been here this week,

and who support and effectively work for those causes dear to us as Americans. There are so many of us who believe as good Americans and so few who do anything about it, you are in the front ranks of those who someday will be blessed by our children and by Almighty God for standing for America and standing up to communism.

Awake, America—from the grassroots, from every city, from every State—awaken to the dangers from without and from within.

We must insist that our leaders in Government stand up rigidly and uncompromisingly to communism.

When will we learn that a Communist promise is the word of the devil? When will we stop responding to Communist bluffs with invitations for negotiations where our fears are exploited? When will we become realists and start fighting in earnest, using our best brains, our full resources to seek victory in every arena in the world so that our democratic way of life shall finally win out over this bestial ballyhoo labeled communism?

When will we demand of our leaders that they stop playing the game of international politics as though it were a high school football game, replete with rules and umpires?

When will we as a nation face up to our responsibility as the only hope for a free world? When will we as individuals face up to our responsibility as Americans?

In dealing with communism we haven't made mistakes; oh, no, we've made colossal blunders.

Our greatest, undoubtedly, was our laxity in allowing Communists to infiltrate our Government, some of our educational institutions, and some of our important unions and businesses.

There have been many, many others—but our great shame is the stupidity coupled with good intentions that constantly brings our Government into naive negotiations with Russia wherein some of our officials display an incomprehensible innocence in assuming that a Communist has any intention of honoring the truth.

Only a few of us spoke against a Khrushchev visit to this country. It wasn't that the rest of the country was in favor of the visit; no, not at all, it was that they took no stand.

Khrushchev was the killer sent to the Ukraine in 1937 by Stalin when he invited all the members of the Ukrainian Government to a dinner and later disposed of most of his "guests" in the cellars of the Kiev and Moscow secret police. Two years after the arrival of the Soviet boss, we are told by Gene Lyons, the Reader's Digest senior editor and an acknowledged, competent foe of communism, 400,000 Russians had been liquidated.

Again, in 1943, Khrushchev was sent to the Ukraine where he committed a purge more bloodthirsty, more horrifying than the first.

This is the Communist who crushed the Hungarian revolution with tanks, who enslaved thousands of Hungarian freedom fighters and who ordered that the top freedom fighter, General Maletier, be summoned to a fake conference under a flag of truce and murdered him. Later, he ordered that Nagy be lured from the Yugoslav Embassy, and had him imprisoned and later executed.

Why can't we realize that this arrogant dictator and any other who follows him in the Communist orbit is the same, or worse than Stalin or Hitler?

Khrushchev doesn't really want a showdown, although we must be prepared for it at all times. No question about that—our goal should be perfection of a thorough retaliatory power so that the Soviets may rattle their missiles all they wish as long as they know that even a push button Russian rocket of flawless accuracy will bring swift retaliatory destruction to their native lands.

We must comprehend the fact that Russia has not won its greatest victories by war, that during the period when communism grew in strength to where it now encompasses almost a billion people, the free world had an overwhelming military superiority and a monopoly of nuclear power.

What then is the Communist advantage? I call on Gene Lyons' testimony and make reference to it herein when he testified before the Committee on Un-American Activities last September 4 and pointed out that their real advantages are not military, but political and psychological.

Why can't we be like the gentle Quaker, who hearing a strange noise in his house one night, got up and discovered a burglar at work.

So he went and got his gun, then came back and stood quietly in the doorway.

"Friend," he said, "I would do thee no harm for the world, but thee standest where I am about to shoot."

We must set the standard, we must lead.

We must stop defending positions; we must attack communism with every political and psychological weapon at our disposal and let them know we're not bluffing.

We have a right to expect some of our leaders in whom we have entrusted our future to substitute boldness and strength in areas where, saddening as the truth is, they previously operated with some degree of naivete and weakness.

When we invited Khrushchev to these shores we only added prestige to the Communist effort.

Communist propaganda has already taken advantage of this symbol of American weakness.

Inviting Khrushchev to America and giving him red carpet treatment is tantamount to a betrayal of the hopes of the enemies of communism everywhere * * * in Asia, in Africa, in Europe, certainly in Russia itself, and yes, even in this country.

Neither should our top leaders allow themselves to be the guests of butchers who hate us and everything for which we stand.

In plain talk * * * let's match communism's arrogance with a firm decisive policy of rugged competition that will put it on the defensive and create respect for America.

One night at a testimonial dinner in New York, Herbert Bayard Swope replied to numerous tributes with these words, "I cannot give you the formula for success, but I can give you the formula for failure—try to please everybody."

Let's stop trying to please everybody * * * least of all, Communists. Let's make it unprofitable to be a Communist. Let's set a strict no-trade policy with Communist nations; let's be absolutely rigid in this regard. Let's be tough and let's be strong wherever and whenever we meet communism. Let's only please our friends, at home and abroad.

And let's start right here at home in honoring those educators, communications people, religious leaders, businessmen, scientists, and others who promulgate American traditions, and who fearlessly fight Communist ideology. Let's make it difficult for those who object to being patriotic, or who refuse to sign non-Communist affidavits regardless of their hanky-panky reasons for so doing, or, for any businessmen who can't take even a minute to worry about the system that makes their profits possible, or for those union leaders who are unmindful of America's welfare, or for anyone anywhere, who thinks that this Nation can survive when selfishness and greed are substituted for pride, dedication, and strength.

What an opportunity we missed in Hungary. When we sent a film crew there in 1956 it was tragic to report the sorrow and total bewilderment of these gallant people, while we sat as observers and watched Russia slaughter their best.

John Donne once wrote: "No man is an island unto himself. Every man is a piece of the continent * * * a part of the main."

"Every man's death diminishes me because I am involved in all mankind."

"Therefore, send not to learn for whom the bell tolls * * * it tolls for thee."

And I shall not forget the thought of the wise man of Athens when he was asked when injustice would be abolished. He said, "When those who are not wronged feel as indignant as those who are."

We should not only have been indignant about Hungary * * * we should have been mad, real mad * * * mad enough to make Russia stay out. I think our people were mad * * * apparently, the men who direct our policies did not properly gauge the emotions of the American people and they failed to take prompt, significant action.

It is good for America that J. Edgar Hoover chose the FBI as his lifework. His service to America is monumental, but how wonderful it would be if this courageous, dedicated, understanding man were placed in a position where he could direct his total energies against the Communist menace throughout the world as well as within our own borders. Why is it that his thorough understanding of the Communist conspiracy and his recognition of it as a worldwide entanglement sworn to world domination, is so lacking in so many other men in high positions—or if recognized, why are their actions so weak as contrasted with Mr. Hoover's? Again, I urge you to request extra copies of Mr. Hoover's "What You Can Do To Fight Communism" which can be obtained free from the FBI and circulate them everywhere. More important, seek every effort to support the aggressive patriotic activities that Mr. Hoover directs, often against great odds, and make sure that he is supported in every direction. Most of all, let's pray God, one and all, that our leaders in America who direct foreign and domestic policy, will, by association with Mr. Hoover in Washington, have some of his zeal, knowledge, and realism rub off on them.

In the forefront of our fight is our own Cardinal Cushing who has dedicated so much of his time and his resources to this problem. Members of all faiths, Catholic, Jewish, and Protestant, have great admiration for the effective actions of this great prince of the church.

We should never forget that communism is atheistic—it is anti-Catholic, it is anti-Semitic and it is anti-Protestant as well. No religious faith can breathe freely as long as communism seeks to dominate the world. There are no exceptions to Communist tyranny.

My mention of J. Edgar Hoover and Richard Cardinal Cushing does not detract from the work of others who have done much—it is only that I would hope by these statements to again indicate to everyone these great examples, one on the national scene and one in New England, so that all of us can be inspired to find equal satisfaction in similar dedication.

It is good for America that there are people and organizations who place greater values on the welfare of our Nation than they do on their personal comforts.

Such people are here tonight in New Bedford, and such organization is The American Heritage Committee. All of these men and women who have organized and spearheaded the work of The American Heritage Committee deserve more than thanks—they deserve duplication of their efforts by other people throughout this Nation. These people work not for personal gain, only for national pride and an American concept of fearless resistance to tyranny in any form. They, and all of us who have espoused the need for appreciation of our American heritage, disregard as unimportant the praise

of well-meaning people. Instead, we need, as never before in our history, the best efforts of our best men in business, in science, in Government, in education, in communications—and of women and children, too—everywhere in this great Nation.

Why must it be that only a few in each field (1) speak and act forthrightly for greater knowledge of our priceless assets, (2) defend those persons and public officials who continue to serve our communities and our Nation courageously even though maligned by the Communists and the fellow thinkers, and (3) themselves take time from their families, from their means of livelihood, from their personal comforts to work for America first.

It is time we used every means at our command to make it fashionable, profitable, praiseworthy, and essential for all Americans to be as dedicated to this country as were our Founding Fathers * * * to love all fellow Americans who live as good citizens of God and of Nation, to proudly exhibit a fierce patriotism, to elect public officials who are honest, fearless, uncompromising foes of communism and who in every way will place America's welfare above personal gain.

Our elected officials in high office should never be concerned with personal health or comfort—they control the future of 180 million Americans and the entire free world and they should work night and day, giving of themselves for this great Nation, if need be, sacrificing their lives while in office because this present test is greater than any war, more critical than any crisis in American history.

Perhaps our problem is that we take things for granted. Maybe each time we breed a new generation we breed a greater desire for comforts and luxuries. Maybe we stress too many artificial means of recreation * * * too many specialized courses in school that do not involve work. Perhaps we're just becoming plain soft * * * it might even be that we don't have enough first generation Americans * * * people who have seen how miserable life is in most other parts of the world so that they can truly appreciate America.

It might be well for every one of us to remember that each of us * * * every one except the Indian among us * * * is an immigrant or descended from immigrants and to take heed of the credo inscribed over the door of LaGuardia House in New York: "It is better America should be born in the man than that the man be born in America."

Lenten Thoughts

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Washington Star, Mar. 8, 1960]

THE INCIDENT THAT GAVE ME AN APPRECIATION OF THE BIBLE

(By Wilber M. Brucker, Secretary of the Army)

From my earliest recollection, the Bible had a prominent place in my boyhood home. Appreciation of the Bible as a true and reliable source of guidance for everyday living was fundamental as the necessity of air and food.

My widowed mother read to my two brothers and me from her well-worn Bible, and

implanted in us the Biblical truth that the highest wisdom is obedience to the voice of God.

Among her favorite passages was the 91st Psalm: "I will say of the Lord, He is my refuge and strength: My God, in Him will I trust." Upon this Biblical foundation she built her own life and the lives of her three sons.

Armed with this shield of faith, she faced the untimely death of our father with courage, and worked long hours to hold her family together.

It was the 91st Psalm that was marked on my exchange of letters throughout the battles of World War I. It was that great Psalm to which that same Bible was opened when I took the oath of office as Michigan's 32d Governor. And it was the 91st Psalm that was read by the chaplain when I took my oath as Secretary of the Army.

Needless to say, the knowledge my mother implanted in me as a boy that in God's word are straightforward answers to all human problems, and her own example, have been a constant source of inspiration to me through the years.

The Real Castro—V

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the fifth in a series of articles on Fidel Castro now appearing in the New York Daily News. This installation is from the issue of March 10, 1960:

KILLED PRIEST'S FAITH IN FIDEL

(By Joseph Martin and Phil Santora)

"He could see in my face that I was bringing bad news. I started talking about religion, about the life after life. He began weeping and hugged me like a child. Then, feverishly, he began to put his cell in order."

Father Juan Ramon O'Farrill has heard the last whispered confessions of at least 15 men sent to the wall to face Castro firing squads. He has accompanied the condemned along the last mile of dark corridors, trying to soothe their troubled minds with mere words, reciting the Litany up to the moment when his words were drowned out in the rattle of gunfire.

The experience has scarred him—even more so than the executions conducted by former dictator Fulgencio Batista, because Father O'Farrill is one of many men who believed that Fidel Castro was the answer to Cuba's problems.

He has been thoroughly disillusioned. He has seen men condemned to die with little or no evidence of guilt against them. He has seen prisoners suffer cruel mental tortures in sadistic execution rehearsals.

He says of Castro, whom he once followed: "Fidel is a magician, a master of simulation, of pretense. He says one thing today and the opposite tomorrow. He is a great actor. His ego has no limits and his cruelty has no limits. Compared to him, Batista was a benevolent man."

STREET NAMED FOR GRANDFATHER

The 5-foot-6, brown-haired, brown-eyed priest was born on O'Farrill Street in Havana 43 years ago. The street is named for his grandfather, who fought with Jose Marti in the war against Spain. The little priest's

father, also Juan Ramon O'Farrill, was a distinguished officer in the Cuban Army.

He was educated in Cuba and Paris and ordained in 1945 in the Province of Cienfuegos.

During the Batista regime, Father O'Farrill was accused of secreting arms for Castro. He was taken into custody by the infamous Capt. Esteban Ventura, of the fifth precinct, and brutally beaten. Ventura's men smashed his ribs with rifle butts and partly destroyed the hearing in his left ear during a 9-hour grilling.

The youthful-looking cleric was forced into exile in Miami. On January 6, 1959, a few days after Castro's successful revolt, he obtained permission to go back to Cuba and visit the prisons to console and bring spiritual peace to the prisoners.

"The Castro people thought I would obtain evidence against Batista followers," said Father O'Farrill, "but I refused to use my priest's robes for such purposes. My visits to the cells of the condemned, the kangaroo courts that passed capricious judgment on political prisoners, the cruelties and the utter disregard for human life and human rights sickened me."

SADISTIC JOKES ON CONDEMNED MEN

"The Fidelistas became masters of the sadistic tricks. One of these was to tell condemned men they had been pardoned, that the president had signed their release from prison. While they were still rejoicing over the good news, an American, Herman Marks, would show up and tell them they were doomed to die."

Herman Marks is typical of the Castro regime—the group that ironically came into power because Cubans were sick of being subjected to Batista's butcheries.

His police record includes 32 arrests on charges ranging from drunkenness, vagrancy, and assault to auto theft, draft dodging, and rape. Born in Milwaukee, Marks cut quite a criminal path for himself. In 1938, he escaped from a Wisconsin reform school. In 1946, he got away from an Ohio jail and in 1950 from a California industrial farm.

He did 3½ years in the Wisconsin State Prison for raping a 17-year-old girl. Warden John C. Burke remembers him as "a real stinker."

The 38-year-old soldier of fortune has a flair for the dramatic. On his left arm he wears a tattooed double heart inscribed, "Love, Nellie." On his right arm is an 8-inch snake coiled about a dagger stuck through the top of a skull with a motto, "Death before dishonor."

MILWAUKEE BOY MAKES GOOD AS EXECUTIONER

And death is what Herman Marks has been dealing in; he has given the "ready, aim, fire" orders to more than 200 firing squads. He joined the Castro forces in the Sierra Maestra in December 1957 and has admitted executing as many as 11 men in a single night. He lost his job as executioner recently and was transferred to an obscure post in a rural province.

"Many times, in the final moment of truth, the condemned pleaded their innocence," recalls Father O'Farrill, "but these last words cannot be told, nor can all of the men be identified, because of the sacredness of the confessional. But there are some I can talk about."

Reinaldo Baro Merodio, for instance.

Reinaldo was 22, one of the hundreds of Batista soldiers thrown into jail by Castro after the successful revolt. Castro had promised Gen. Eulogio Cantillo, head of the Batista forces, that he would not prosecute soldiers unless they had committed crimes of terrorism.

He ratified this promise in a speech in Santiago de Cuba on January 1, 1959. He repeated it in a speech at Columbia Barracks on January 28. It turned out to be a

clear-cut betrayal; he was in this way able to win over the army.

"Reinaldo's only crime was that he had been a soldier, and at his age not a soldier for very long," said Father O'Farrill.

"His trial was conducted at night. I asked to be present and permission was denied. At 2:30 a.m. the trial was adjourned and he was taken to his cell. I presumed it would go on the next day and was about to leave when I overheard a group of officers say, 'Che Guevara has given a personal order that Reinaldo must be executed right now.'

PRIEST DOESN'T CARE IF THEY ARREST HIM

"I went to Duque Estrada, in charge of the tribunal, and asked him for the written sentence. He said the command came from El Che and what else did I need? He said there was nothing we could do. I asked permission to go to Reinaldo and break the news and give him absolution.

"He replied that he had no authorization to allow me in Reinaldo's cell. I told him he would have to arrest me if he wanted to keep me out and finally I was allowed to go.

"He (Reinaldo) could see in my face that I was bringing bad news. I started talking about religion, about the life after life. He began weeping and hugged me like a child. Then, feverishly, he began to put his cell in order.

"He gave his cellmate his belongings—a sheet, a towel, a bottle of medicine, shoes and shirts. It was May 4, about 3:45 a.m. It wasn't raining and the stars were out. He shook hands with the eight men in the adjoining cells and told them, 'I hope you have better luck than I did.'

"He left a gold watch for his mother. They had put handcuffs on him and now four bearded soldiers came for him. I walked by his side. Herman Marks was on the other side as we went down the dark corridors. The Cabana Fortress is a huge place and we had to take a car.

"Reinaldo had stopped crying and was quite composed at this point. I recited the Litany as we walked, then rode, to the execution yard—'Help of the Christians, refuge of sinners, mother of consolation, mother of mercy.'

"IF THIS CHRIST IS MADE OF STONE

"The beacon from Morro Castle was splashing light and in the car Reinaldo alone gave the answer to the Litany—'Pray for us.'

"We could see the huge Cristo de Havana in the rays of the beacon and I told Reinaldo that Christ is the only one who can penetrate the human soul—'take a look, Reinaldo.' He replied, 'For what, Father, if this Christ is made of stone it is useless—in a few minutes I'll present myself to the true Christ.'

"We stopped at the courtyard. The wall was stained with the blood of others who had gone to their deaths. The firing squad was ready. I had heard his confession and I asked him if he had any last words. He said: 'Padre, I forgive them and I only hope my blood is the last to be shed.'

"There was no blindfold. He stood there with his hands in handcuffs. I turned my face and didn't look again until I heard the shots. I turned just in time to see him jerk convulsively into the air. He fell with his face on the ground.

"Marks gave him the coup de grace."

Reinaldo was the last man Father O'Farrill ever visited in prison. Permission was withdrawn for the clergyman to console the prisoners and once again he was exiled to Miami.

On one occasion, before the Reinaldo incident, one of the political prisoners was taken out shortly before dawn, placed in front of the firing squad and "shot" in a mock execution in which blanks were used.

DESTROYED HIM—LITTLE BY LITTLE

"They might as well have used real bullets," said Father O'Farrill. "He was more dead than alive when they brought him back. Later, they really did execute him."

A sample of the mental torture undergone by the prisoners in the case of Col. Rogelio Sopo, a Navy physician. He had been acquitted by a revolutionary tribunal of having taken part in the Batista coup of 1952—but he was kept in jail.

"They destroyed him little by little," said Father O'Farrill. "I knew this man well. His conduct was above reproach. He was a dedicated doctor. He had studied in the United States.

"They kept him in a completely dark cell and they reversed his schedule so that he lost all track of time. His breakfast would be served at midnight. They would send guards to insult him, break his spirit.

"They would address him as Antonio Fernandez and kept repeating this until he almost believed he was Fernandez. Then they switched to other names. He lost all sense of time and self-identification.

"In 3 months, he lost 25 pounds. They wouldn't allow him to sleep—another Communist trick. Finally, he went against the religion that had been a great part of his life. On March 18, 1959, he leaped to his death from the roof of the Morro Prison."

The colonel's son, Edgar Sopo Granda, 20, lives in Miami with his mother, Josefina, 41, and a sister, Mariella. He still refuses to believe that his father was a suicide.

SON TOLD HIS DAD WOULD ROT IN JAIL

"I went to see Armando Lora, secretary of the Prime Minister," said young Sopo, "and he got in touch with Comdr. Juan Castineiras. When I got to Castineiras' office, he told me, 'Let him rot in jail.'

"He whipped a pamphlet my father had written, calling Castro a Communist, out of his desk and repeated the threat of letting my father rot in jail.

"Lora protested, 'You cannot do this. The man is free—acquitted. This man must be allowed his freedom.' Castineiras told him, 'This is none of your business.' That was that.

"I was allowed to see my father. He told me to take care of my mother and sister. I put my arms around him. His arm felt as thin as a boy's under my touch. I said, 'Fuerte, Papi'—(chin up, keep strong). I never saw him alive again."

Edgar Sopo treasures a snapshot his father once gave him. It says on the back, "To Edgar, my best friend, son of my heart, who will surpass me in everything."

"There were no witnesses to his death," he says, "and no one can tell me what my father—who was in solitary confinement—was doing on the roof of the prison. My father was a very devout man who said his rosary daily. He could not have committed suicide. Castro has eliminated others whom he did not like—my father is another of his victims."

The 110th Birthday of Thomas Garrigue Masaryk, Founder and First President of Czechoslovakia

SPEECH

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MURPHY. Mr. Speaker, among the great men of this century Thomas Masaryk is assured a distinct and honored place. He was not only the greatest Czechoslovak statesman of modern times, but also great in his own right in a number of other fields: a distinguished man of letters, an illustrious philos-

opher, a great teacher, an eminent parliamentarian, an inspiring leader, a devoted public servant, a humanitarian, and an outspoken defender of freedom. These attainments made Masaryk widely known beyond the boundaries of his native land, and thus he became a man of international fame. His greatest and lasting accomplishments, however, were in the field of statesmanship, and there he ranked as equal among the very great men of his day. He is rightly credited with the creation of the Czechoslovak Republic in 1918. And, besides becoming the founding father of that Republic and its first President, he was the beloved father of his country and the admired leader of his grateful countrymen during his long and fruitful life. On the 110th anniversary of the birth of this great man we pay tribute to his blessed memory.

ADA: Blueprint for Socialism in America

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an analysis of ADA prepared by Mr. Kelvin Bailey who heads my research staff:

ADA: BLUEPRINT FOR SOCIALISM IN AMERICA

The ADA (Americans for Democratic Action) program has been properly described as "a collectivist bill of goods . . . a program of laundered communism . . . with the Bill of Rights tacked on." And still another disclosure terms the ADA as "a group of leftwing Democrats who hope, as either the senior or junior partner of a labor alliance, to capture the Democratic Party and bring about a system which would amount to national socialism in America."¹ These serious statements are not reckless or politically inspired, instead they are warning signs of peril that, unless heeded, our country will be further guided down the avenue of darkness toward socialism. And communism is merely a practical application of socialism. The vehicle for this transition is the infamous ADA.

In 1942 the Committee on Un-American Activities disclosed a popular front organization known as the Union for Democratic Action. The committee found that 50 UDA leaders had Communist connections. Because so many liberals found themselves in the corner with the Communists and fellow travelling coterie in advancing their pet policies, a sort of purification rite became necessary, thus the ADA was created. This 1947 change-in-name-only ceremony carried with it at least 29 of the 50 leaders.² The ADA set out to prove that it is possible in America to be ultra-radical without being Communist, to advocate change in our politico-economic traditions without being disloyal. But their long honeymoon of frolicking in the Red mud with Communists and Sovietiers still left these fake liberals—this ADA—as hard-core troublemakers and crypto-Fabians which are collectivist in principle and unprincipled in politics.

Footnotes at end of speech.

American principles and ideals are being betrayed by subterfuge and deception. This betrayal of the American way of life is spearheaded by the ADA reactionary radicals masquerading as liberals. It is selling socialism under the guise of liberalism. It is practicing the greatest deception of our time. And unless their Trojan-horse methods are exposed and understood, America is doomed to be remade in the image of Marx.

The ADA is the planning body for the whole Socialist movement. Its propaganda is advanced in newspapers, radio, TV, magazines, and speeches. And like their English cousins, it never admits that it is selling socialism. It doubletalks about planned economy, social reforms, constitutional rights, civil liberties, and patriotism, while working for its ultimate goal: The replacement of the free-enterprise system with Marxian socialism. Meanwhile, of course, they fight for civil license for the leftwingers, ignore the civil liberty of rightwingers, wage psychological warfare against the anti-Socialist, and employ character assassination against the anti-Communist.

The ADA campaigns for higher taxes, more Government intervention through regulations and controls, expansion of Federal power over the States and individuals, rocketing subsidies forever for farmers and workers, and a telescoping bureaucracy—all in the name of liberalism. The ADA has perverted the word "liberalism" to mean "socialism." And we must never forget that a Socialist is nothing more than a housebroken Communist. A prominent Socialist affectionately said of the ADA: "The national program of the ADA is so close to that of the Socialist Party that the Socialist National Committee recently passed a resolution saying that membership in the ADA was politically compatible."³

On the key issues of our time, the ADA dramatizes its radicalism, or liberalism, by fighting against the exposure of Communists, against the Smith Act trials of top Communists, against loyalty programs, and against congressional investigations of Communists, but for investigation of the late Senator Joe McCarthy.

On foreign affairs, the ADA's views are singularly divorced from American thinking. During the Korean war the ADA was clamoring for relief aid to Red China, which was supplying the arms which killed American troops. They continually prate for recognizing the Communist government of Red China as a fact but agitating against aid to Spain, obviously not a fact. They trumpet for a superworld government. By creating fear, the ADA is trying to panic the American people into the acceptance of our cessation of nuclear testing and armaments. Meanwhile, and as expected, they join the Communists in denouncing our nuclear contribution in defense of West Germany. No mention is made of Russia's nuclear armaments surrounding West Germany.

The ADA loudly protests that it is anti-Communist. Its self-proclaimed great and heroic fight with communism has apparently been carried on in the belief that the really effective way to fight the Communist cause is to kill it with kindness. And since the ADA claims to be anti-Communist, let's look at the record:⁴

- (a) It opposed the Mundt bill to control communism in 1948.
- (b) It opposed the Communist control bill in Illinois in 1949.
- (c) It opposed the Communist control bill of 1950.
- (d) It opposed the Maryland Communist control bill in 1950.
- (e) It opposed the Smith Act in 1952.
- (f) It opposed military aid to Nationalist China.
- (g) It attempts to discredit the FBI.
- (h) It defended Communist student groups.

(i) It repeatedly attacks the House Un-American Activities Committee and urges that it be abolished.

(j) It urges the United States to withdraw recognition of Nationalist China, while plugging for Red China's admission into the U.N.

(k) It endorsed Truman's removal of General MacArthur.

(l) It defended the Institute of Pacific Relations (found to be an instrument of Soviet policy by a Senate committee).

(m) They condemn loyalty oaths.

(n) It called for an investigation of the American Legion.

(o) It opposed a bill to permit the FBI to tap telephone conversations of suspected Communists.

(p) It defended fifth-amendment teachers.

(q) It opposed a bill requiring Communists to testify.

One of the disconcerting things about the ADA is that it seems to attract so many prosperous people. Incongruously it combines big money, big labor (labor union contributions represent about one-third of the ADA budget⁵), and big names. Who supports the ADA? A few of their organizers and members are:⁶

(a) Prof. Arthur Schlesinger, Jr.: "The faults and injustice in our present system which make even freedom-loving Americans look wistfully to Russia."

(b) Eleanor Roosevelt: "Smearing good people like Alger Hiss is unforgivable."

(c) Joe Lash: officer of Communist front American Youth Congress.

(d) Francis Henson: "I'm a Marxist."

(e) Senator PAUL DOUGLAS: "I'm a Socialist."

(f) Telford Taylor: defended Communist Harry Bridges.

(g) Adlai Stevenson.

(h) Senator HUBERT HUMPHREY.

(i) Senator WAYNE MORSE.

(j) Walter P. Reuther.

The record makes it clear that the ADA now dominates the policy-forming levels of the Democratic Party. And locally, like COPE, their influence is effective. Mayor, and ADA'er, Richardson Dilworth, of Philadelphia, says his recent victory over Harold Stassen was managed exclusively by ADA staff and volunteers.⁷ Nor is the Republican Party entirely free from the ADA menace. Governor McKeldin of Maryland warmly embraced the socialist ADA line with glowing terms, and even a White House staff member offered an apology, or token blessing, to the ADA.⁸

As a power-hungry, control-minded cell of intellectual radicals, they bear careful watching, especially this year, a major election year, since most of the presidential hopefuls are either officers, complete adherents, or favorably endorsed by the radicals at the ADA summit.

ADA, like COPE, has a single composite objective: to centralize political and economic power. They would have individuals give up much of their freedom and the States give up much of their sovereignty to the Federal Government which can easiest be controlled by a partnership of union bosses and Fabian liberal intellectuals, or apostles of the ADA.

COPE: Control, Then Destroy

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the Record, I include an analysis of COPE prepared by Mr. Kelvin Bailey, who heads my research staff:

COPE: CONTROL, THEN DESTROY

Labor unions have been active in America since 1823, and their rocketing success (using the techniques of gangsters, Socialists, and Communists) continues unchecked because of their fanatical adherence to their basic reactionary premise: "We'll get from the company what we have the power to take."¹ Power, therefore, regardless of how achieved, is their revolutionary war cry. And the frightening truth is that today, 1960, the unions boast of their chokehold on America by asserting, for example: "I control Philadelphia. The union controls the country."²

Today the greatest concentrations of political and economic power in the United States are found—not in the overregulated, overcriticized, overinvestigated, and overtaxed business corporations—and certainly not in their hag-ridden, brow-beaten, publicity fearful managers. The greatest concentrations of political and economic power are found in the underregulated, undercriticized, underinvestigated, tax-exempt, and specially privileged labor organizations—and in their belligerent, aggressive, and far-too-often lawless and corrupt managers.³ Such is the stormy existence of the union's political mouthpiece, the treacherous COPE (Committee on Political Education).

COPE was uncorked in 1955. COPE grew, like cancer, out of CIO's political action committee which was conceived in 1943 under the tutelage of FDR's strong right arm, Sidney Hillman, long known for his radical left-wing views. Thus COPE became the concentration camp for unionism by means of which money could be siphoned away from the workers (without regard and consent as to disposition) for purposes of electing politicians who have no integrity whatsoever and will do whatever the unions ask. And what do unions and COPE demand? Anything at all that favors collectivism over individualism.

Labor unions moved to control Federal and State Capitals, and cities as it would operate to organize workers in industry. But picket lines were found unnecessary. Elected representatives, owing their political lives to COPE, demonstrated an eagerness to insure long tenure by following the wishes of the labor barons. The procedure is simple; the docile members get financial support from labor political committees; they are eulogized in the union newspapers whose circulation totals over 17 million; and the million-odd union shop stewards seek to regiment the rank-and-file union members into voting for them.

A formidable force, COPE and organized labor, with a structure suited to engage in politics, and having the three essentials for successful political action—money, organization, and driving lust for big government, big labor, big spending, and bigger taxing which can be gained through hip-pocket, COPE-captive Congressmen.

Incidentally, since 95 percent or more of labor's support has been given to liberal

Footnotes at end of speech.

Democratic candidates, this is taken to mean that when the unions can control Congress from inside the Democratic Party, there is simply no sense in organizing a separate Labor Party. In fact, in 1958, organized labor plunked more money into the Democratic campaign kitty than the national Democratic committees themselves did.

There is no mystery about the staggering control which COPE has over congressional members. In 1959, in the Senate, no less than 66 of 98 Members, a two-thirds majority, could be depended upon to obey labor dictates much of the time. In the House, a minimum of 237 Members have the pro-labor brand. For Members opposed to union dominance, the penalty of their antilabor stigma was made abundantly clear in the 1958 elections. Of 204 House incumbents, supported by COPE, 189 were returned to office, or 92 percent. Of 187 incumbents opposed by COPE, 166 retained their seats and 21 were defeated, or an 11 percent loss.¹

COPE endorsed 24 candidates for Governor in 1958, of whom 18 won and 6 lost for a winning percentage of 75 percent.² It should be remembered that unions, through COPE, are similarly busy on the local level. A little imagination should awaken the citizen into realizing what is happening to his city hall.

While the Nation was busy electing a President in 1956, the unions and COPE were more successful in electing a captive pro-union Congress. After all, Congress makes and changes the laws.

COPE is headquartered in the new \$3.5 million AFL-CIO building across from the White House. COPE functions in all 50 States and in cities down to the precinct level. (There are 42 national union headquarters in Washington, D.C.)

The chief textbook in COPE's political school is a booklet, "How Your Senators and Representatives Voted." Every Federal lawmaker is listed, along with his right or wrong voting record on legislation labor considers important. More than 11 million of these booklets are sent out to union members and used in local meetings to point out the "blackguards" in Congress. From this record, it is not hard to see well in advance of the local conventions which lawmakers will be the main targets of COPE, and who will get full-scale COPE aid.

Of the 33 Senators up for reelection in 1960, 6 show up in the COPE "record" as extremely bad. Naturally they are all Republicans (COPE piously claims nonpartisanship). The remaining 27, or a whopping 80 percent, are either captive-COPE Senators, or sufficiently weaned into their camp for purposes of echoing the COPE-ADA Socialist line.

Presidential hopefuls, Senators KENNEDY, SYMINGTON and HUMPHREY, have a 100-percent pro-union voting record. With a liberal Supreme Court, a pro-union Congress, and now the possibility of a COPE-captive White House occupant, the American people would be further hammered to their knees. After all, this coalition of radical left-wing ADA'ers, Socialists, and power-hungry unions admit they are playing a " * * * courageous and active role in changing the shape of things." ³

In 1958, 32 of organized labor's political committees reported spending a total of \$1,828,777. This figure is absurd. Political groups whose activities are limited to a single State, city, or district do not have to report. Therefore, accurate figures on all campaign spending—national, State, and local—are impossible to obtain. Thus the amounts listed by unions do not truly reflect the total amount of union participation. Even \$5 million is unconvincingly low.⁴

A more realistic COPE expenditure is reflected in the 1954 campaign of liberal Senator McNAMARA, of Michigan, where the unions spent an estimated \$841,000 to achieve this single election. (For example, 500 "special organizers" were employed by the unions, costing \$300,000.) From case histories and experience it is known that actual expenditures are more than 10 times those required to be reported. This means that approximately \$10 million was spent in Michigan alone. And inasmuch as unions collect about \$620 million per year (up from \$458 million in 1955) it can be assumed that 10 percent is spent for political purposes, or \$62 million for political purposes annually, or a total of \$124 million for each biannual election of House and Senate Members.⁵

Contributions received by COPE in 1958 were 14 percent higher than in 1956 while contributions by COPE to candidates for Federal office were 27 percent higher in 1958 than in 1956. In 1958 awards for 100 percent COPE contributions were given 404 local unions and 39 international and national organizations that fully met their obligations to COPE, 27 of which completed a 3-year record of full participation. Not bad. Not bad.

In addition to COPE's reputation as a "fatcat," they are becoming equally famous in slippery procedures, shared by their puppets. Democrat JOHN FOLEY, a COPE candidate from Maryland, filed expenditures of only \$620 with the Clerk of the House, while filing \$18,728 at the county courthouse. In short, 30 times as much. Also in the same 1958 elections, COPE-backed candidate McGovern, of South Dakota, filed a paltry \$6,554 contribution with the Clerk, but in his State he filed nearly twice as much—\$11,442. Further peculiarities appear when his statement in South Dakota lists only \$2,000 from COPE, and his Washington statement lists no COPE contributions. Yet COPE's own statement to the Clerk reflects two \$2,000 contributions to McGovern.⁶

The decision as to who receives this money rests principally with one man, Dr. Walter P. Reuther (6 doctorate degrees, although he never finished college), AFL-CIO kingpin, and one of the financial angels of the radical ADA. Reuther does not give campaign funds to anyone except those he expects to further in his legislative aims, which included all but 2 of the 27 planks included in the 1957 platform of the Communist Party.⁷

Reuther's present influence and background, association in Communist-front organizations, his working in a Soviet machine factory, and his statement that he did not believe in God, his abiding affection and advocacy for socialism, and his letter recommending that workers in America "work for a Soviet America," should dramatize the fate of the United States if this little Caesar is permitted to elect or defeat through his political front, the infamous COPE.⁸

Some Congressmen are feeling the sting of COPE's political pay-offs. A young Congressman was compelled to appoint a former union organizer as his assistant. "I've lost control of my own office force," the freshman legislator bitterly remarked. "Now I'm beginning to wonder how far the payoff will extend and whether it's worth it."⁹ And still another new Congressman appointed a high-ranking UAW union official as his assistant, possibly to insure 100 percent submission to their will by their political debtors.¹⁰

But money is an incidental explanation of the immense power of COPE. It has at its command, and under strict union discipline, thousands of workers—that indispensable factor in winning elections. COPE's pre-election preparations are extensive. COPE has headquarters in most precincts recruiting members, wives, teenagers, and children. They are given jobs as checkers, telephoners,

messengers, drivers, babysitters, poll-watchers, leaflet passers, sound truck crews, coffeemakers, and coordinators. With this kind of mechanically smooth-running operation, it is little wonder they can cockily boast: "We are started on a course that will allow us to deliver Illinois in 1960 to the candidate we think best for labor."¹¹

COPE is a beehive of booming activity. During 1958 and 1959, 33 different items of literature were printed and distributed, with a total circulation in excess of 31 million. In early 1959 the circulation of "Political Memo From COPE," published biweekly, went over the 100,000 mark. Paid resubscriptions have been running at the rate of 2,300 per month. The "Keeping in Touch" newsletter has a circulation of 4,000, while 10,000 copies of "Notes From COPE" are sent out twice a month. During 1958-59 over 2,100 requests for research material were handled by COPE.¹²

Much of COPE's successes can be traced to their variety of activities which extend into (a) high school and college democracy programs, (b) libraries, (c) training films, (d) book clubs, (e) dramatic pageants, (f) choral groups, (g) arts and crafts, (h) painting classes, (i) shop lunch time democracy programs, (j) education for new immigrants, (k) international union exchanges, (l) old-timers' centers, (m) use of noted movie and TV personalities, (n) veterans, (o) religion. With a blitz movement like this it is little wonder that COPE was able to dominate the political affairs in the 1958 congressional campaign in Idaho.¹³

The women's activities department, WAD, is a part of COPE's regular organization. WAD, like COPE, operates on national, State, county, city, and congressional district levels. WAD carries out year-round programs of education and action in trying to help their union husbands, fathers, and brothers in their struggle. They savagely work the other side of the street, such as PTA's, service clubs, small businesses, churches, women's clubs, and telephoning. They develop and maintain an intricate central card file system on community citizens—available only to COPE.¹⁴

Thirty-six WAD women did the following in one Senate election:

1. Handled 47,850 pieces of literature.
2. Made 6,704 telephone calls.
3. Made 9,528 home calls.
4. Provided 5,798 hours of voluntary work.¹⁵

In 1958 COPE neatly packaged a 311-page speakers' handbook on 24 issues for use in preparing speeches, leaflets, pamphlets, and campaign material. The purpose is to standardize the "line" from their highest captive congressional robots, to the lowest card-carrying unionworker. Without surprise the booklet is permeated with typical dialectical ADA-COPE jargon designed to brainwash their corralled listeners with falsehoods, and to panic them into believing that the Republicans are responsible for everything that is wrong, evil, unsuccessful, untried, or even unthought of, whereas the Democrats remain perfumed, saintly, and untouchable. No mention is made that the position taken on all 24 issues follows the socialist ADA platform which, in most cases, closely parallels that of the Communist Party. Their guided lectures, principally social reforms in nature, are: Atomic giveaway, civil rights, corruption, cost of living, education, foreign policy, Government pay raises, housing, immigration and citizenship, jobs and recession, labor law, minimum wage, natural gas, natural resources, old-age and survivors insurance, political money, public assistance programs, public power, REA social security, taxes, TVA, unemployment insurance, and why labor is in politics.

A little arithmetic applied to the adoption of their COPE-sponsored reactionary programs suggests an increase in our national budget of about \$40 billion, or about double

Footnotes at end of speech.

our present individual tax burden. And even worse, it means complete, and final, slavery for America, handcuffed to an all-powerful centralized government. We would then have attained Reuther's ambition, "a Soviet America."

If it is only security for which COPE and Reuther plead, then they can go to prison. They'll have enough to eat, a bed, and a roof over their heads.¹⁹

The programs and dogma prescribed by COPE are unacceptable. Deal high handedly as they would have us do with the mechanisms of the marketplace, and the mechanisms will blind. Preempt the surplus of the people, and surpluses will dwindle. Centralize the political function, and then lose touch with reality. Stifle the economic sovereignty of the individual by spending his surplus dollars for him, and you stifle his freedom. Socialize the individual's surplus and you socialize his spirit and creativeness; you cannot paint the Mona Lisa by assigning one dab each to a thousand painters.²⁰

³⁸ "Up From Liberalism," by William F. Buckley, Jr.

We believe in instilling, promoting, and proclaiming pride in our Nation and its Government; pride in working for that Government; pride in the Veterans' Administration; pride in the VA's mission of sympathetic service to the veteran, his family, his widow, and his orphan; pride in our dedication to the highest attainable quality in every program and service.

We believe in reporting clearly and simply, promptly and meaningfully, uniformly and fully to all members of the VA family; to the President and the Congress; to veterans and all other citizens of this Republic.

We believe in a policy of decentralization, that the point of decision should be as close to the area of action as is reasonable.

We believe recruitment and promotion should be based on merit; that dedication, ability, and hard work should be the standards for sound appraisal, and for career development; that the key is in the search and the discovery and use of the most competent people.

We believe that all things can be measured; that for all parts and programs, as well as the whole VA, standards, tall and idealistic, should be set, for the short range and the long range; that performance should be constantly evaluated against these standards; and that everything is susceptible to improvement.

We believe in cooperating with other Federal and State Government agencies and private institutions in furthering common program objectives.

We believe that our mission is broad; that if we of VA are to be advisors to the President, spokesmen before committees of Congress, interpreters of veterans' needs to the Nation, planners for today and for the long future, then we must seek fresh ideas, think anew on concepts of both the past and the present, accepting the Nation as our obligation, the world as our source; that out of the dedication, the imagination, the contributions of all 170,000 of us come sounder programs, truer fulfillment of veterans' and the Nation's needs, and finer means of healing and cure, even miracles of research and discovery that will benefit not alone the veteran but all mankind.

is shown in his own statement when he said:

If the organs of the government consider that I am dying too slowly, then let them order my physical liquidation as they ordered my juridic liquidation 14 years ago.

St. Cyprian gave 25 pieces of gold to the executioner who was to behead him. I have no gold. I can only pray for the person who may eventually execute me, asking the Lord to forgive him in eternity and asking the Lord to allow me to die in peace.

The article follows:

[From the Brooklyn (N.Y.) Tablet, Feb. 27, 1960]

CARDINAL URGED PEOPLE TO STAND FAST IN THE LORD—LATE YUGOSLAV PRIMATE, IN SPIRITUAL TESTAMENT, NOTED INFILTRATION—LAST LETTER REVEALED—NOTE TO RED COURT TELLS OF CONSTANT SUFFERING YET UNWAVERING DEFIANCE

VATICAN CITY.—Cardinal Alojzije Stepinac in a spiritual testament made a last exhortation to his Yugoslav flock to resist the pressures of atheistic communism, it was revealed here.

Excerpts of the testament were published in L'Osservatore Romano, Vatican City daily paper. L'Osservatore said that the document was dated May 28, 1957, a time when the Cardinal Archbishop of Zagreb felt that his death was near. It said he wanted to protect his flock, even after his death, against dangers to their faith and happiness.

Cardinal Stepinac died February 10 at the age of 61. He had been isolated in his native village of Krasic since 1951 by the Communist government, which had previously held him in prison for 5 years.

WARNS OF ATHEISTS

In death, Cardinal Stepinac told his people:

"Atheists have infiltrated into your midst who, although they are a minority (as I am writing they are hardly 2 percent), have done everything in their power to remove the name of God from your souls and to make you happy—they say—without God.

"But as I prepare to leave this world, I must repeat to you, in the face of every attempt of this kind, what the Prophet Isaiah said: 'O my people, they that call thee blessed, the same deceive thee, and destroy the way of thy steps'" (Isaiah 3: 12).

The cardinal warned that every attempt to create a culture and a civilization without God would seal the people's doom for time and for eternity. To this he added:

"In taking my leave of you, therefore, my beloved children, I address to you the words that St. Paul wrote to the Philippians, to 'stand fast thus in the Lord,' (Philippians 4: 1). Those who despise the Lord want to take you from Him and in this way they degrade you to the lowest level. Their work is condemned by God.

BE FAITHFUL TO MARY

The cardinal then urged his people to have special devotion to the Blessed Virgin Mary:

"If you love and venerate the Mother of God with sincere and constant affection, the words of the Wise Man—'He that honoreth his mother is as one that layeth up a treasure' (Ecclesiasticus 3: 5)—will be true for you as well.

"Only atheistic communism has been capable of inserting blasphemies against the Mother of God even into school manuals, blasphemies which I reproved in 1946 during the so-called trial with which it was hoped to cancel the Catholic Church from our country with the stroke of a pen. May the Lord not permit that any of you will ever imitate those evil persons in insulting the Mother of God. To such a one, the words of the same wise man would apply: 'He is cursed of God that angereth his mother'" (Ecclesiasticus 3: 18).

Administration Policies

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CANFIELD. Mr. Speaker, for some time now I have been impressed with the competence of Mr. Sumner G. Whittier, Administrator of the Veterans' Administration. I would like to insert in the CONGRESSIONAL RECORD a recent statement of his that outlines the Administrator's policies:

ADMINISTRATOR'S POLICIES

We believe in the importance of the individual, veteran and employee, and citizen; the heightening of human dignity; inspiration rather than compulsion; with emphasis upon the positive rather than the negative; healthy competition born of comparison and contrast, of a spirit of striving toward higher standards of quality and service; motivating all members of the VA family to contribute fully, creatively, and imaginatively to the fulfillment of VA's precious mission.

Cardinal Alojzije Stepinac

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article which appeared in the Brooklyn (N.Y.) Tablet on February 27 and which was sent to me by my constituent Mr. Jozo Poduje, of Larchmont, N.Y.

It points up the superb qualities of Cardinal Alojzije Stepinac manifested under severe pressures of involuntary confinement. He appealed to Catholics to cast aside and repel the pressures of atheistic communism. In his last sufferings Cardinal Stepinac avowed that he would refuse to give any kind of response to questions asked him under the threat of torture or other physical force. The character and nobility of the cardinal

LAST LETTER REVEALS SUFFERING DEFIANCE

VIENNA.—What is perhaps the last letter written by Cardinal Alojzije Stepinac reveals his great suffering and his defiance of the church's persecutors in the final days of his life.

The letter, addressed to the district tribunal of Osijek, Yugoslavia, is dated December 4, 1959, only 63 days before his death.

Father Ciril Kos, spiritual director of the seminary at Djakovo, had been brought to trial and Cardinal Stepinac had been summoned for interrogation in connection with it. Father Kos was found guilty of alleged anti-Government activities and sentenced to 7 years in jail.

Excerpts from his letter in answer to the summons follow:

"To the organ of the government power which was to have interrogated me in connection with the citation sent me by the District Tribunal of Osijek:

"A reason why I cannot comply with the citation is this:

"I was condemned by a supreme people's court of the people's Croatian Republic on October 11, 1946, to 16 years of forced labor, first in the prison of Lepoglava and then to my present internment in Krasic. That sentence was juridic homicide of an innocent man. That was the interpretation given to it by the whole civilized world.

"This was admitted even by certain leaders of Federated People's Republic of Yugoslavia who met with Prof. Ivan Mestrovic in the United States. All this was communicated to me by word of mouth by Professor Mestrovic when he came to visit me this year at Krasic. He knows their names.

"The consequence of the condemnations, which scandalized the whole world, is that my physical life, during the 13 years spent in prison and confinement, has reached the edge of the tomb. Our doctors and foreign doctors have done everything possible to prolong my life, but they have not restored my life to me.

"Until today they have extracted 34 liters (66 pints) of blood and this is not enough. They have had to perform operations on both my legs to save me from imminent death by thrombosis (blood clot).

RARELY WITHOUT PAIN

"As a result of these operations, I am practically an invalid who drags his feet around the house with a cane. Moreover, for the past 5 years I have been ill with prostatism and, despite all medicines which I take frequently, it is rare that I am completely without pain.

"I will not mention the deadly infirmity which struck me 2 years ago when journalists reported me near death. Nor will I recall the many other ailments from which I suffer, as for example, bronchial catarrh. I have suffered from this for years. When Dr. Serce asked that I be allowed to go to the seashore, the request was refused.

*"The serious state of my health is better known to the parish priest of Krasic and to the nuns, who often spend whole days at my bedside to assist me. I often must skip the celebration of holy mass, even on Sunday, because of my pain * * *."*

WHO VIOLATES U.N. CHARTER?

"If I combat the ideology of the party being convinced that it is wholly false, is this combating the state?"

"It is lawful for the Yugoslav Communist Party to persecute the Catholic Church with fire and steel for 15 years, separating men from the church, preventing baptism of children, preventing Christian instruction of youth and the celebration of religious marriage; if it is lawful for the Yugoslav Community Party to destroy Catholic institutions and schools, printing presses, newspapers and their properties, and to commit innumerable acts of suppression, how can

one ever dare to accuse me of crime if I raise my voice in defense of the sacred things of catholicism?"

"Have I perhaps violated the charter of human rights of the United Nations; or is it not others instead who have violated that charter since, after the bloody injustices and many suppressions, some wish to torture me with long interrogations regarding a subject on which I will never admit guilt?"

"Is it not enough for you to know that some of your leaders have openly confessed to Professor Mestrovic that they have no grounds for instituting proceedings against me, and to know that even so a trial was held with consequences resulting practically in my death, as I have outlined above?"

REFUSES TO GIVE ANSWER

"Therefore, I say to you that I am a man with both feet in the grave and am almost descending into it. Since I am seriously ill, I cannot comply with your citation. If, then, there will be an attempt to torture me by force with questions either on my bed of pain or during my painful walks in the courtyard, I refuse from now on to give any kind of response. And moreover, I decline every responsibility for the public scandal that will result therefrom and which will be publicized in the world press when the new attack perpetrated against a half-dead man becomes known.

"If the organs of the government consider that I am dying too slowly, then let them order my physical liquidation, as they ordered my juridic liquidation 14 years ago.

"St. Cyprian gave 25 pieces of gold to the executioner who was to behead him. I have no gold. I can only pray for the person who may eventually execute me, asking the Lord to forgive him in eternity and asking the Lord to allow me to die in peace.

"If you have provoked me to speak of your inhuman treatment during these long years, do not take it badly, since the Romans said:

"Sunt certi denique fines." (There are certain limits.)

"My jailers may continue to mount guard according to your instructions so as to make my life impossible, but I know what my duty is. With the grace of the Lord, I will fulfill it to the end—to the end without the least hatred, without the least revenge on anyone, but at the same time without fear of anyone."

Adlai Stevenson's Great Debate Plan

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I include the second of Adlai E. Stevenson's two-part article in This Week magazine in which he presents a plan for taking some of the waste and foolishness out of our presidential election campaigns, as follows:

ADLAI STEVENSON'S PLAN FOR A GREAT DEBATE—PART 2

(By Adlai E. Stevenson)

Last week I outlined what I consider to be the major problems of political television. These troubles can be summarized quite briefly. The costs of TV force on any political candidate the awful demands of brevity—and these demands can only eventually lead to sloganeering. In addition, every candidate is confronted by the natural desire of the TV public to be entertained. And be-

cause the public is constantly offered such a variety of TV fare, it cannot help being apathetic to a great deal of what it sees and hears.

I would like to try to feel my way toward a single solution of these complicated problems. I would like to propose that we transform our circus-atmosphere presidential campaign into a great debate conducted in full view of all the people.

More than a hundred years ago my great-grandfather, Jesse Fell, an Illinois editor and friend of Abraham Lincoln, proposed the Lincoln-Douglas debates on a great issue: slavery. Imagine a debate now, or at least a discussion on the great issues of our time with the whole country watching. Disengagement or containment, farm policy, disarmament, aid to India, the defense budget, the problems of old age and of urban growth and of civil rights—because candidates neglect these questions, few people understand them, but how we decide them may fix our children's future, and mankind's. And we can decide them not after canned rhetoric and TV spectacles but only after intelligent discussion, which the candidates and the network can provide.

TWO CANDIDATES MEET FACE TO FACE

Suppose that every Monday evening, at peak viewing time, for an hour and a half, from Labor Day to election eve, the two candidates aired their views. They might on each evening take up a single issue. Each in turn might discuss it for half an hour, followed by 15-minute rebuttals of one another for the third half hour.

There are other possibilities, including face-to-face debate. But the central idea is that in some manner the candidates for president appear together at the same prime time each week for a serious presentation of views on public questions. The time should cost them and their parties nothing.

Now this idea raises a number of questions, some quite difficult.

Who should pay for the time?

It has been suggested that Congress appropriate money to pay for it but nothing has come of this. Yet the idea is not revolutionary—many years ago Theodore Roosevelt proposed that the Federal Government bear the cost of political campaigns.

SHOULD TV TIME BE FREE?

It has been proposed that the networks should provide the time free as a public service, either voluntarily or be required by law to do so. This has been opposed as discriminatory. Presidential candidates, it is argued, must pay for planes and trains, newspaper advertisements, sound trucks, campaign headquarters, confetti—why should only television be provided free?

Well, none of these other campaign expenses involves a communications medium licensed by Government to operate in the public interest. It is true that railroads and airlines are also Government licensees—but they are not media of communications. It is true that newspapers are media of communication—but they do not use the people's property and are therefore not Government licensees.

The air belongs to the people, and the people have granted the radio-TV industry immensely valuable monopolies free of charge. Radio and television are unique in this respect and, therefore, it would seem to me to justify unique treatment under the law.

Other problems arise. Shall only the Republican and Democratic Parties be given time? Or all parties? To give so much time to all parties is manifestly absurd. But how eliminate any without abridging their rights to be heard?

Perhaps free time should be given only to parties that polled 20 percent of the vote at the preceding election and to new parties

which can demonstrate substantial national support.

Again, shall we prescribe how the free time is to be used to insure sober discussion and avoid entertainment by bigger and bigger spectacles? Should the candidates be required to appear on the program alone, not surrounded by friends, who cannot share the responsibilities of office after the election?

One more problem: Would anybody watch such a 90-minute program? Confronted by a long serious discussion of public questions, will people turn to another channel? The remedy, of course, is to preempt all channels. But I have confidence enough in the American people to believe that given a chance they are willing and eager to listen to serious discussion of their most important business.

But if all channels are not preempted and we permit other programs at the same time, Candidate A may during his half hour find himself competing with "Gunsmoke," while Candidate B, following a half hour later, may compete only with an ancient grade B movie that nobody wants to see anyway.

Yet preempting all channels smacks of cramming politics down people's throats, an abhorrent idea. Here, too, is a difficult question.

I realize I have raised more questions than I have answered—and I have not by any means raised them all. They can be resolved only by thorough discussion. It is my hope to stimulate such discussion. But let us not forget the main point—to provide presidential candidates with free prime time on TV at the same time each week for continuing sober discussion of the issues. Once we determine to do this, the details can be worked out.

TV'S OBLIGATION TO THE PUBLIC

Television is today the most powerful medium of communication available to candidates for public office. It owes an obligation to serve the public good. That it has not always done so in its nonpolitical broadcasts has been shown by the quiz shows, payola and other frauds on a gullible public. Used in politics as it has been in the past, it may likewise lose the confidence of the people in the political area. Such a useful means of mass communication must be conserved for the improvement of the democratic dialogue, not allowed to encourage its debasement.

During the 1956 campaign, I was urged by some of my advisers to challenge President Eisenhower to a debate. I did not, for I feared the challenge would be misunderstood, would be taken as a gimmick. What I am proposing now is no gimmick; it is the establishment of what I hope will become a national institution, a great debate for the Presidency.

And I don't mean a "debate" in the literal collegiate sense of that word, but a sustained discussion. Only television can establish such a forum. I propose that it provide a quadrennial clearing of the air by the use of the air.

Sustained, serious discussion on all networks would reach all the people directly. It would require effort on their part, mental effort, and I know of no better cure for apathy. It would end the financial problem that TV now presents to the parties. It would end the tendency to reduce everything to assertions and slogans. It would diminish the temptation of politicians to entertain, to please and to evade the unpleasant realities. It might even help to restore what we seem to have lost—our sense of great national purpose.

A GREAT DECISION OF THE SIXTIES

I would hope that the networks and the political parties would voluntarily take the initiative in this matter. If they do not, then I think Congress should.

Legislation on this subject has been introduced in Congress but has died quickly.

I would urge its revival, and that the television networks participate fully and thoughtfully in the ensuing discussion. For in the long run it may turn out that the direction we give to political television is one of the great decisions of the decisive decade of the sixties.

The primary system ran away with the nominating process because we allowed it to get out of hand. Let us get television under control before it runs away with the electoral process.

University of California Cracks Down on Housing Discrimination

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. COHELAN. Mr. Speaker, the University of California, at its Berkeley campus in the Seventh Congressional District, recently took steps to strengthen its policy of nondiscrimination in providing housing for its students and staff.

The following article from the Berkeley Daily Gazette outlines this action in detail. I would call particular attention to the university's policy statement:

The university is proud to have native born students of practically every race, creed, and color, as well as foreign born from more than 80 nations.

In a recent letter discussing this university policy, Mr. Lawrence Crouchett, housing chairman of the Berkeley branch of the National Association for the Advancement of Colored People, pointed out:

As far as we are able to find out, this is the best university housing policy in this country.

Mr. Crouchett goes on to say:

This is one type of effort integrated universities and colleges may make in the total goal of complete equal educational opportunities. As you are aware, equal educational opportunities extend far beyond the boundaries of colleges and universities.

Regarding this action as sound, realistic, and forthright, I wish to submit the following report for the RECORD under permission to extend remarks:

UNIVERSITY OF CALIFORNIA CRACKDOWN ON DISCRIMINATION—RENTAL LISTING SERVICE BARS BIAS

Householders in Berkeley and adjoining communities who make use of the University of California rental listing service after March 1 will be asked to sign a statement agreeing to abide by the university's policy of nondiscrimination in providing housing for its students and staff.

The new requirement, which in essence only augments a long standing policy of the university to provide equal opportunities in all of its services, was announced today by William F. Shepard, dean of students, and Mrs. Ruth N. Donnelly, supervisor of housing services.

"The main purpose of the written agreement is to clear up any confusion that may exist in the minds of interested parties, and to make sure that everyone who uses our

housing services has a clear understanding of our policy," Dean Shepard said.

INCREASING NEED

"We recognize and appreciate the aid that householders have given us in a time of increasing need for student housing," he added, "and we believe that most householders are already well aware of our policy and conform to it."

A letter explaining the nondiscrimination policy will be sent to all householders who have listings on file, as well as any who request listing after March 1. After that date, the privilege of listing with the university will be afforded all those who sign and return the accompanying statement of understanding.

The explanatory letter states, in part, "The university is proud to have native born students of practically every race, creed, and color, as well as foreign born from more than 80 nations."

AGREEMENT QUOTED

The statement of agreement itself is worded as follows:

"In availing myself of the university listing service I acknowledge that I am aware that it is against the public policy of the State and the policy of the regents of the University of California to make such service available to anyone who, in affording housing, discriminates on the basis of race, color, religion, national origin, or ancestry. I hereby agree not to engage in any such discriminatory practice in providing housing for students or staff at the University of California."

As in the past, Dean Shepard pointed out, evidence that a householder has failed to abide by the nondiscrimination policy will result in withdrawal of that landlord's listings.

Last year, more than 7,800 listings of accommodations were filed with the university housing services and approximately 56,000 contracts were made by students and staff members in the office located at 2620 Bancroft Way.

Squaw Valley Success

EXTENSION OF REMARKS

OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. JOHNSON of California. Mr. Speaker, recently I reported to this Congress on the successful staging of the Winter Olympic games in Squaw Valley, Calif. Much of the success was due to the fine newspaper support given this project during the formative years when we all worked so hard to achieve this international goal.

The McClatchy newspapers, represented by the Sacramento, Modesto, and Fresno Bees, was one of the main supporters of this effort. May I commend the staff of the McClatchy newspapers for their fine assistance before and during the games and include in the Appendix of the RECORD the following editorial published Sunday in all three papers.

The editorial follows:

The winter Olympics which will end today at Squaw Valley have been a success even beyond expectations.

Almost without exception everyone attending the games has been tremendously

impressed by both the events and the facilities. What little griping there has been has come from those who are professional grippers or have not been within 100 miles of Squaw Valley. A day at the Olympics has been a once in a lifetime experience.

California has done itself proud in staging the winter games. Avery Brundage, president of the International Olympic Committee, stated:

"Nearly all nations represented have come to me and said they were not only happy but enthusiastic. It's almost unanimous."

The California Olympic officials and all those who have had a part in the event are to be commended unreservedly for the splendid job they have done. And this sentiment is shared by those with long experience with winter Olympics held in many other countries.

Mr. Speaker, I also would like to add to these remarks the views of Mr. Theodore Rosequist, planning coordinator of the California State Fair and Exposition, who wrote the following letter to the editor of the San Francisco (Calif.) Examiner:

FEBRUARY 29, 1960.

EDITOR, SAN FRANCISCO EXAMINER,
San Francisco, Calif.

DEAR SIR: Squaw Valley is presently the most widely known winter sports area in the world. It is no longer "Squawk" Valley by sheer weight of success. The VIII Olympic winter games is a universally conceded success. The athletes broke record after record, proving the excellence of the facility planning. All who were privileged to witness the opening day pageantry and the succeeding days of the world's finest athletic competitions were thrilled and rewarded with a once-in-a-lifetime Olympiad.

For an all too brief period, the divergent national interests of the world's finest winter athletes were combined into one friendly group in the dining halls, recreation rooms, and quadrangle of the Olympic village. This never before has been accomplished in the history of the winter games.

While there are many proud moments for America and her athletes, as the games progressed, the overwhelming superiority of the Soviet was unmistakable. Pseudoamateurs or not, they were great competitors.

Above all this, the spirit of the Olympiad was everywhere in evidence and the conduct of the games was a great tribute to the organizers and its staff. The \$15 million investment in the VIII Olympic winter games pales into insignificance in the light of the resulting international attention and good will.

What of the future? Why not plan ahead in view of the foregoing. Preserve these world-renowned facilities for the benefit of generations to come in the fast-growing West. Conduct an annual California, Pacific coast, or Western States winter (Olympics) festival which will afford incentive and training for American youth so that future Olympic games will place America first among the competing nations. Let's make it plain that we are out to win more gold medals—yes, even if we must overcome the entrenched system of idealistic but possibly outmoded amateurism. These are big stakes involved and time marches on.

With continued good management and promotion, Squaw Valley, as a State park or otherwise, will become a shrine for winter sports enthusiasts and embryo Olympic athletes which literally could attract the support of organizations throughout the Nation. Where else in the world does there exist so much possibility for so little extra effort?

A unanimous "well done" to the VIII Olympic Winter Games Commission, organizing committee, and the great dedicated staff which planned and executed the all-

time best in winter Olympiads. And congratulations to those who supported the games by attending.

Sincerely,

THEODORE ROSEQUIST,
Planning Coordinator, California State
Fair and Exposition.

The Life and Times of Nicholas Appert

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein, an article by Norman Sorensen, 1959 president, National Canners Association, entitled "The Life and Times of Nicholas Appert."

Mr. Speaker, January 3, 1960, marked the 150th anniversary of the birth of canning—the official acceptance by the French Government in 1810 of Nicholas Appert's method of preserving food by cooking it in a hermetically sealed container, and on August 25, 1810—6 months after Appert's method was published to the world—the first patent for the manufacture of a metal container was granted by George III of England.

These important happenings lead to the establishment of two great industries—canning and can manufacture.

I urge the Members of the House to read the most timely article which I include herein, entitled "Norman Sorensen Salutes Appert":

NORMAN SORENSEN SALUTES APPERT

(By Norman Sorensen, 1959 president, National Canners Association, Washington, D.C.)

The art of canning, as discovered by Nicolas Appert in 1810, freed mankind from the bondage of the seasons. It has enabled the farmer to plant his crops free of fear that his work of many months might be lost in a few days at the marketplace, and has enabled almost everyone, everywhere, to enjoy the products of the field without regard for the calendar. As someone stated it once, "It puts June peas on the December platter."

Appert worked for 14 years before attaining his goal. His simple theory was that if food is sufficiently heated while sealed in a container that excludes air, the food will keep. This is the fundamental modern principle of canning as practiced today, as we mark the 150th anniversary of Appert's important contribution to mankind.

From Appert's time to the present, the story of canning is one of inventive genius devoted to scientific research, development of better containers, improved equipment, and timesaving machinery, to which many have contributed, and the results of which canners have been quick to utilize.

Canning has indeed been brought to a high point of efficiency, placing choice, nutritious, and wholesome foods within the reach of all. Today, in this era of new-product development, with widespread public recognition of the importance of convenience foods, it is interesting to contemplate the significance of Appert's discovery of the art of canning. For canned foods were our first convenience foods and are today one of America's fastest growing food lines.

THE LIFE AND TIMES OF NICOLAS APPERT

Year 1752, October 23: Nicolas Appert, born in Chalons-sur-Marne, France.

Years 1752-1795: Appert lived in moderate circumstances and was self-educated in his home village; he conducted and superintended operations in making confectionery, in brewing, distilling, storehouses for grocers in Paris and environs, and in the wine cellars of Champagne.

Year 1795: French Government (the Directory) offered prize for a method of conserving food so that it could be conveyed on sea voyages and military campaigns and transported to the civilian population in various parts of the nation.

Years 1795-1809: Appert conducted continuous self-financed experiments in self-built workshops, and with self-built apparatus at Massy, near Paris, using glass bottles and jars.

Year 1803, November: The Board of Health presented to the Marine Prefect at the port of Brest a favorable report on Appert-prepared supplies (broth with beef, beans and green peas), based on their condition after 3 months of roadstead.

Year 1805: In "Almanach des Gourmands," volume 3, Grimod de la Reyniere, leading gastronomist of the time, approved Appert's results and announced Appert had bought land near Massy to grow fruits and vegetables close to his experimental workshop. (In later statements Appert annunciated the theory that adjacency to source of raw product was a prime consideration in attaining the celerity that is indispensable in successful preservation of food.)

Year 1806: The Society for the Encouragement of National Industry brought Appert's results to the attention of the Government. Appert-prepared foods were carried across the Equator and far south so as to subject them to extremes of temperature, humidity and transportation. There were favorable reports from Admirals Martin and Allemand and the maritime prefects of Bordeaux and Brest, calling attention to the possibility of provisioning the Navy with foods, which, by replacing the salt meats, would prevent the ravages of scurvy, the greatest scourge of seafaring men. The society suggested that Appert's methods be published, stating, "It will be serving the country and humanity by publishing, with the eulogies it merits, a discovery so generally useful."

Year 1809, February 10: "Courier d'Europe" eulogized Appert's work saying "M. Appert has discovered the art of fixing the seasons."

Year 1809, March 15: The French Minister of the Interior, Count Montallivet, requested the Consulting Bureau of Arts and Manufactures to investigate the Appert method. The committee did so and recommended that the 12,000-franc award be granted to Appert.

Year 1810, January 30: Count Montallivet bestowed the award on Appert, requiring him to "write an exact and detailed description of these processes," this to be deposited with the Consulting Bureau of Arts and Manufactures for their examination and review, after which it was to be printed at Appert's expense and 200 copies delivered to the Minister.

Year 1810, February 26: August de Heine patented the use of iron containers for preserving food (English patent No. 3310) but never engaged in commercial canning.

Year 1810, June: First edition (6,000 copies) of Appert's required treatise was published at the house of Patris & Co., Printers-Booksellers, Quay Napoleon, Corner Street of the Dove, No. 4, Paris, under the title "Le Livre de Tous les Menages ou L'Art de Conserver, pendant plusieurs annees, Toutes les Substances Animales et Vegetales" ("The Book of All Households; or The Art of Preserving Animal and Vegetable Substances for Many Years"). It gave detailed instructions for canning more than 50 different food

items. In that same year it was translated into a German edition.

Year 1810, August 25: Peter Durand, merchant of Hoxton Square, Middlesex Shire, was granted a patent by King George III (English Patent No. 3372) authorizing him to "use, exercise, and vend within England, Wales, and the town of Berwick-upon-Tweed, an invention communicated to him by a certain foreigner residing abroad, of the Method of Preserving Animal Food, Vegetable Food, and Other Perishable Articles a Long Time from Perishing or Becoming Useless." This required Durand to place a description of the "invention" in writing in His Majesty's High Court of Chancery within 6 calendar months.

Year 1810, August 30: Durand filed his description which included the statement "I place and inclose the said food or article in bottles or other vessels of glass, pottery, tin, or other metals to fit materials * * *." This reference to tin or other metals is the only particular in which the Durand description differs from Appert's, and has been referred to in much of the canning history literature as a first patent for the manufacture of the tin can. Since this is the first record of using the tin can as a food container, its invention is attributed to Durand. It is recorded by Dr. A. W. Bitting, however, that even previous to 1800 the Dutch put up fish in tin, although their methods were not those now generally recognized for canning. The fish were boiled a short time in salt brine, smoked for 2 days, put in cans, covered with hot butter or olive oil, and sealed.

Year 1810-1830: Bulletins of the French Society for the Encouragement of National Industry periodically contained accounts of the work of Appert, with eulogistic reports.

Year 1811: The second edition of "Appert's Treatise," revised and augmented by the author, was published in France and translated into Swedish and English.

Year 1811: A food preservation process based on that of Appert was developed in England by John Hall and Bryan Donkin of the Dartford Iron Works.

Year 1812: The second English edition of the "Appert Treatise" was published, and the first American (by D. Longworth, Shakespeare Gallery, New York) from the second English edition.

Year 1812: Appert established "The House of Appert" in Massy, the first commercial cannery in the world.

Year 1813: The third edition of the "Appert Treatise," revised and augmented by the author, was published in France.

Year 1813: Foods canned by Donkin & Hall were being favorably tested by the English army and navy.

Year 1813, April 30: An agent of the Duke of Wellington wrote favorably to Donkin & Hall about their preserved meat.

Year 1814: Appert delivered certain products requested by the French Government: "fresh meats, game, consomme, milk, fish, lobster pates of meat and fowl, fresh eggs, cream, butter, vegetables, fruits, and antiscorbutic juices." In that year he went to London to demonstrate his methods. Afterwards he made his own cans—of iron, coated with tin. Although the French Navy demanded square cans, for facility of loading and storing, Appert recommended round cans and oval for fish and certain fowl. He used all three types in his packs but stated that round cans contained the best foods.

Year 1814: Appert requested his government to test his bouillon cubes. (Bitting credits him as the inventor of this form of food preservation also.)

Year 1814: Admiral Cochrane, commanding England's West Indies Station, sent for "patent preserved meats" from Donkin & Hall, and some were also shipped to St. Helena. Sir Joseph Banks, president of the

Royal Society, wrote Donkin & Hall: "in favor of the nutritious qualities of your embalmed provisions."

Year 1814: John Ross, in command, and Edward Parry, his lieutenant (later Captain Sir Edward), on an expedition to Baffin's Bay, fed the crews of their two ships "preserved meats, vegetable soup, concentrated soup" at the rate of 1 pound meat, 1 pound vegetable soup per week.

Year 1815: Otto von Kotzebue, Russian explorer, used Donkin & Hall preserved meat successfully on his Arctic voyage to try to discover a northwest passage.

Year 1815, June: Admiral Cochrane gave Donkin & Hall an enthusiastic report on the canned food stores used at the British West Indies station.

Year 1816: Appert was awarded a silver medal by the French Society for the Encouragement of National Industry.

Year 1817: William Underwood arrived in New Orleans from England to establish food canning in America.

Year 1818, March-December: The British Admiralty victualing depot of Deptford received 45,360 pounds of food in 23,779 canisters ranging in size from 1 pound 6 ounces to 4 pounds, at a total cost of 5,481 pounds, 4 shillings, or an average of 2 shillings, 4½ pence per pound. The products were: mess beef; corned round of beef; roasted, seasoned, and boiled beef; boiled mutton; seasoned mutton; mutton and vegetables; boiled, roasted veal; veal and vegetables; soup and bouilli; vegetable soup; mess beef and vegetables; and concentrated soup. About one-fourth was earmarked for ships voyaging to the Arctic Circle.

Year 1819: Underwood established a cannery in Boston and started packing fruits, pickles, and condiments in bottles, mostly for sale in South America and the Far East. Thomas Kensett and Ezra Daggett canned salmon, lobsters, and oysters in New York City. Both operations used the Appert process.

Years 1819-26: Sir Edward Parry continued to use canned foods on his four voyages of discovery of the northwest passage and his surgeons wrote letters of endorsement to the suppliers (Donkin, Hall, Gamble, Morrison).

Year 1820: Appert was awarded a gold medal by the French Society for Encouragement of National Industries.

Year 1822: The French Society for Encouragement of National Industries bestowed on Appert the title, "Un Bienfaiteur de l'Humanite" for his contribution to the world of the canning method and his continuing efforts to improve it.

Year 1824: Appert delivered juices of meats and vegetables in "tabloid form" (concentrates) to the Society for the Encouragement of National Industry.

Year 1825: President James Monroe granted Kensett and Daggett the first American patent for preserving foods in "vessels of tin."

Year 1826: Canned meats used on voyage to the Sandwich Islands by HMS *Blonde*.

Year 1831: The fourth edition of "Appert's Treatise," revised and augmented by the author, was published in France. This contained, for the first time, plates showing his arrangements and apparatus.

Year 1839: Both Underwood and Kensett changed their containers from glass to tin. Isaac Winslow, of Maine, makes first attempt to can corn.

Year 1840: Oyster canning is started in Baltimore. Tristram Hollday canned salmon and lobsters in New Brunswick. Upman Stower treated canned salmon and lobsters in Maine.

Year 1841: Appert died in Massy, leaving The House of Appert in charge of his nephew, Prieur-Appert, who had been his associate during Appert's last years.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Daily Digest

HIGHLIGHTS

Senate continued on civil rights, rejecting cloture motion on substitute bill, and acting on two amendments.

Senate committee approved second supplemental appropriations.

House debated civil rights.

Senate

Chamber Action

Routine Proceedings, pages 4764-4785

Bills Introduced: 21 bills were introduced, as follows:
S. 3156-3176. Page 4766

Bill Reported: Report was made as follows: S. 1283, to regulate the interstate distribution and sale of packages of hazardous substances intended or suitable for household use (S. Rept. 1158). Page 4766

Bills Referred: Two House-passed bills were referred to appropriate committees. Page 4764

President's Communications—Supplemental Appropriations: The President transmitted two communications, as follows, which were referred to Committee on Appropriations, and ordered to be printed as Senate documents as indicated:

Proposed supplemental appropriations for fiscal year 1960 in the amount of \$670,690 for the legislative branch, \$755,000 for the executive branch, and \$364,000 for the District of Columbia (S. Doc. 86); and

Proposed supplemental appropriation to pay claims and judgment rendered against U.S. in the amount of \$4,948,934, together with amounts for interest and costs (S. Doc. 87). Pages 4764-4765

Public Land for School Purposes—Civil Rights: Senate continued consideration of H.R. 8315, directing the Secretary of the Army to lease certain property in Missouri for school purposes, taking the following actions thereon:

Adopted: By unanimous vote of 89 yeas, Ervin amendment to first branch (regarding obstruction of certain court orders) of Dirksen amendments (in nature of a substitute for the bill) comprising "Civil Rights Act of 1960." The Ervin amendment would reduce criminal penalties from \$10,000 fine or imprisonment for 2 years, or both, to \$1,000 fine or imprisonment for 1 year, or both; and

Rejected: By 42 yeas to 53 nays, Douglas cloture mo-

tion to bring to a close debate on Dirksen amendments (in nature of a substitute for the bill). Two-thirds affirmative vote of Senators present and voting are necessary to adopt a cloture motion. Also rejected was Case (South Dakota) amendment to strike out last word of Ervin amendment, above described, and to substitute language to empower the Attorney General to initiate injunctive relief in all classes of civil rights cases (by adoption, 55 yeas to 38 nays, of motion of Senator Johnson of Texas to table Case amendment).

Senate tabled motions to reconsider each of the three actions above described.

Pending at recess was Lausche amendment to first branch (regarding obstruction of certain court orders) of Dirksen amendments (in nature of a substitute for the bill) so as to make the language applicable to obstruction of any court orders rather than solely those having to do with question of school segregation.

Pages 4728-4764, 4785, 4797-4798, 4799-4829, 4830-4838

Legislative Program: Majority leader announced Senate will recess on Friday until Monday. Pages 4829-4830

Record Votes and Quorum Calls: During Senate proceedings today three record votes and one quorum call were taken, which appear on pages 4763-4764, 4828, and 4829.

Treaty Received: Treaty of mutual cooperation and security between U.S. and Japan, signed at Washington on January 19, 1960 (Ex. E, 86th Cong., 2d sess.), was received and referred to Committee on Foreign Relations. Pages 4774-4775

Confirmations: Four judicial nominations were confirmed. Page 4838

Program for Friday: Senate met at 9 a.m. and recessed at 9:49 p.m. until 11 a.m. Friday, March 11, when it will continue on H.R. 8315, to lease certain property in Missouri for school purposes. Pages 4829, 4838

Appendix

A Truly Balanced Industrial Complex Is Attainable in West Virginia

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. RANDOLPH. Mr. President, it was my privilege to have been invited by the editor of the Charleston (W. Va.) Gazette to prepare, and present for publication yesterday, an article on the elements and attainability of a balanced industrial complex in West Virginia.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A WEST VIRGINIA GOAL: A BALANCED INDUSTRIAL COMPLEX

(By JENNINGS RANDOLPH, U.S. Senator from West Virginia)

Through most of the first half of this century the economy of West Virginia was dominated by our natural resource extractive industries. During that time the wealth wrung from our earth in the form of coal, oil, and gas fueled the furnaces and factories of America and, together with the timber cut from our hills, made West Virginia one of the main contributors to the economic and industrial might of the United States.

In addition to those basic natural resources industries, and along with the early glass and pottery productions of the upper Ohio Valley and the Monongahela Valley, and the iron and steel industry of the northern panhandle, there has been added during the past three decades—mostly in the Kanawha and mid-Ohio River Valleys—the vital chemical and petrochemical industrial complex. This development will continue at an accelerated rate.

Today, West Virginia ranks first in coal production, fourth in natural gas output, and fifth in the construction of new chemical facilities. And though our State ranks but 40th in area and 41st in population among the continental States, it stands 15th among the States in per capita value of products added in mining and manufacturing, and 16th in per capita corporate income.

Most of the product value added and much of the corporate income leaves the State, and, as I stated in the Senate, February 4, 1960, during a discussion on taxation, "because most of the large corporations doing business in our State are incorporated in other States, we receive little Federal tax credit for the great corporate wealth produced in West Virginia."

TAX CREDIT NEEDED FOR WEALTH PRODUCED

We are happy to have the nonresident corporations producing and doing business in our State, but we do believe the value of their Federal taxes paid on profits derived from operations in the State should be credited properly to West Virginia. If this were an accomplished fact, the standing of our State among all States in the matter of Federal tax

payments would be much more favorable. We could thus make a more convincing case for the equity which is inherent in Federal grants, payments, loans, et cetera, to West Virginia for defense installations, public works, airports, and other worthy and necessary facilities and activities.

It is clearly evident that our State has not yet achieved a balanced industrial complex, nor have we yet developed the means of overcoming the unemployment created in a major degree, but not wholly, by the process of automation in our principal industries.

While the national economy as a whole has shifted from extractive and basic manufacturing industries, as the main source of employment and personal income, to the distributive and service industries, the West Virginia pattern continues to rely primarily upon the extraction and production of goods.

Here are some statistical examples: In 1920, for the United States, mining, agriculture, manufacturing, and construction accounted for 61 percent of the total civilian employment, with 39 percent in services such as communications, wholesale and retail trade, transportation, education, government, the professions, et cetera. In West Virginia, at that time, the figures were 71 percent in mining, agriculture, manufacturing, and construction, and only 29 percent in the services. By 1958, the figures for the Nation had shifted to 46 percent in the field of production and 54 percent in services, while for West Virginia the figures were relatively reversed—56 percent for production and 44 percent for services.

MORE SERVICE INDUSTRY EMPLOYMENT NEEDED

Thus, although the service industries, since 1920, have increased their share of the total employment 15 percent throughout the United States, in West Virginia we have placed the preponderant burden of employment upon mining, primary manufacturing, and agriculture.

Wholesale and retail trade accounts for 20 percent of the total employment of the United States, but only 14.5 percent in West Virginia.

Financial, insurance, and real estate businesses employ 4.5 percent of the national labor force; whereas the percentage of jobs in these categories in West Virginia is only 2.1 percent.

Contract construction embraces 6 percent of the labor reservoir of the United States, but in West Virginia only 3.3 percent.

Miscellaneous and personal services employ 11 percent of the workers in the Nation, but in West Virginia this category of employment is only 8.6 percent.

It is worth noting, also, that in only one of the above categories has there been any appreciable change from the recession years of 1954 to 1959. This occurred in the field of miscellaneous services, which rose from 8.1 percent in 1954 to 8.6 percent in 1959. But in the other previously mentioned groupings the variation was limited to one-tenth of 1 percent or less.

It is apparent, therefore, that we have failed to keep pace in employment opportunities with the shift in our national economy from the production to the distribution and servicing of goods. Consequently, we are also relatively more vulnerable to the displacement process of automation, not only in coal but throughout the major segments of the economy of our State.

To illustrate, reciting again the recession

year of 1954 as a point of departure and 1959 as "a year of normal national prosperity"—even though not a "normal prosperity year" in our State:

GAP BETWEEN PRODUCTION AND EMPLOYMENT

In 1954, the West Virginia coal industry produced 116.3 millions tons and employed 71,300 workers; in 1957 production rose to a high of 155 million tons and employment stood at 77,400 workers; but in 1959 production fell back to substantially the 1954 figure, having been 117.1 million tons for 1959, but with 14,800 fewer workers in the industry now than were employed in 1954.

The circumstances are repeated in manufacturing, although with a difference in degree. In 1954, manufacturing industries employed 125,500 persons, while in 1959, in spite of a substantial increase in capital investment and gross product, employment opportunities had increased for only 1,900 new workers.

Thus, the contribution to our long range improvement by new primary industries is somewhat limited. This observation is in no sense an implication that we should stop our efforts to build new industries in our State. Indeed, we should increase our thrust in this field, and I believe we are on the verge of some gratifying successes in industrial development. But we must recognize that new industries will not, in themselves, provide the total solution to our problems.

What I am emphasizing is that if we wish to escape the economic imbalance and unemployment problems which we seem to share with such heavily industrialized areas as Detroit, Pittsburgh, and Buffalo, we must balance the development of new major industries by encouraging the growth of locally owned and locally financed small businesses.

The ideal program would be to have a constellation of small independent businesses developed around each of the major industrial establishments. Compare, for example, the relative lack of independent aluminum fabricators and processors at Ravenswood with the 66 locally owned fabricating plants surrounding a similar Kaiser plant in a Far West community. It is to be hoped that the newly constructed plants of Ravens-Metal Products, Inc., in Wood, Ritchie, and Wirt Counties will represent a growing trend in this area both geographically and functionally.

MARKET ADVANTAGES ARE PRESENT

The same market advantages which drew the Kaiser plant to Ravenswood also exist for potential satellite fabrication establishments which might be developed in the area surrounding the primary production facility at Ravenswood.

What is being suggested here is that we can, as a State, apply to our major industries the same principle of vertical integration that some of the mammoth corporations resort to in their operations. The Ford Motor Co., for example, has sought to control each phase of production of the materials that enter into its final product—from rubber plantations and iron ore deposits to the final assembly line off which comes a finished, ready-to-roll automobile.

There is no reason, in logic or in economics, why West Virginians should not reverse this process and enlarge our resources beyond the extractive and basic manufacturing level.

We have the natural, human, and industrial resources to provide a truly balanced industrial complex—a system of small independent businesses existing in healthy relationship with the major chemical, primary metals, and lumber industries—and eventually with the coal industry, too, if coal research is stepped up as it should be without delay.

The Current Salary Study for Teachers

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. NORRELL. Mr. Speaker, under unanimous consent I offer for insertion in the Appendix of the RECORD the following statement on the subject, "The Current Salary Study for Teachers," at the request of Dr. George S. Reuter, Jr. Mr. Speaker, by this I do not mean to express my position in regards to this legislation.

The statement follows:

THE CURRENT SALARY STUDY FOR TEACHERS
(By Dr. George S. Reuter, Jr., Research Director, American Federation of Teachers)

LARGEST CITIES

Salaries are slightly higher in a majority of the 32 largest cities this year, but the Consumer Price Index reports an increase, for the same period, of 1.5. The average increase for beginning salary of those with the bachelor's degree is \$163, with Baltimore, St. Louis, Washington, D.C., Boston, Pittsburgh, Buffalo, Atlanta, Louisville, and Denver reporting no increase. Philadelphia's increase came after the study was completed. The 1958 average was \$4,034, and the current one is \$4,197.

The top salaries for those with the bachelor's degree went from \$6,342 in 1958 to \$6,570, which represents an average increase in the 32 cities of \$228. The same cities, that are noted above with the exception of Denver, reported no salary increase. While Chicago, with \$5,000 beginning salary, led the group, New York City and Newark had the highest salary for the bachelor's degree, which was \$7,900.

NORTHEASTERN SECTION

The northeastern section of the Nation has an average beginning salary of \$4,002, with the following State averages: Connecticut, \$4,102; Maine, \$3,625; Massachusetts, \$3,869; New Hampshire, \$3,536; New Jersey, \$4,164; New York, \$4,364; Pennsylvania, \$3,844; Rhode Island, \$3,856; and Vermont, \$3,563. The national average beginning salary for the bachelor's is \$4,033, while the top national average is \$6,161. For the master's degree, the national average beginning salary is \$4,408 and the top one is \$6,557.

The highest ranking cities in the northeastern section for teachers with the bachelor's degree are as follows: Greenwich led in Connecticut with a beginning salary of \$4,500 and ending salary of \$7,500; Lewiston, with \$3,700, and Portland, with \$5,200, led in Maine; the men teachers of Winchester, with \$4,350, and the men teachers of Wellesley, with \$7,250, led in Massachusetts; Nashua, with \$3,600 and \$5,400, led in New Hampshire; Jersey City, Linden, and Summit, with \$4,400, and Newark, with \$7,900, led in New Jersey; Mamaroneck, with \$5,000, and Scarsdale, with \$9,000, led in New York; Johnstown, with \$4,100, and Yeadon, with \$7,000, led in Pennsylvania; Providence, Pawtucket,

Warwick, Coventry and Cranston, with \$4,000, and Providence, with \$6,275, led in Rhode Island; and Bennington led in Vermont with \$3,800 and \$5,800.

CENTRAL SECTION

The central section of the Nation has an average beginning salary of \$4,223, with the following State averages: Illinois, \$4,368; Indiana, \$4,412; Iowa, \$4,161; Kansas, \$3,750; Michigan, \$4,483; Minnesota, \$4,218; Missouri, \$3,967; Nebraska, \$3,780; North Dakota, \$4,200; Ohio, \$4,033; South Dakota, \$3,800; and Wisconsin, \$4,171.

The highest ranking districts in the central section for teachers with the bachelor's degree are as follows: Franklin Park led in Illinois with a beginning salary of \$5,040, and Highland Park led with an ending salary of \$9,000; East Chicago with \$5,092; and Gary with \$7,380, led in Indiana; Des Moines, with \$4,500 and \$7,050, led in Iowa; Kansas City, with \$4,200 and \$6,000, led in Kansas; River Rouge, with \$4,900, and Dearborn, with \$7,645, led in Michigan; Mountain Iron, with \$4,692, and Minnetonka, with \$7,500, led in Minnesota; special district in St. Louis County, with \$4,500, and University City and Clayton, with \$7,200, led in Missouri; Omaha, with \$4,200 and \$6,650, led in Nebraska; Fargo, with \$4,300 and \$6,350, led in North Dakota; Cleveland, with \$4,350, and East Cleveland, with \$7,100, led in Ohio; Sioux Falls, with \$4,000 and \$5,850, led in South Dakota; and Milwaukee, with \$4,550, and Shorewood, with \$7,500, led in Wisconsin.

SOUTHERN SECTION

The southern section of the Nation has an average beginning salary of \$3,472, with the following State averages: Alabama, \$3,210; Arkansas, \$3,333; Delaware, \$4,100; Washington, D.C., \$4,500; Florida, \$3,633; Georgia, \$3,412; Kentucky, \$3,040; Louisiana, \$3,358; Maryland, \$3,825; Mississippi, \$3,194; North Carolina, \$3,389; Oklahoma, \$3,552; South Carolina, \$2,869; Tennessee, \$3,437; Texas, \$3,756; Virginia, \$3,325; and West Virginia, \$3,578.

The highest ranking districts in the southern section for teachers with the bachelor's degree are as follows: Mobile, with a beginning salary of \$3,600 and an ending salary of \$4,700, led in Alabama; Little Rock, with \$4,255.90 for 12 months, and \$5,517.54 for 12 months, led in Arkansas; Wilmington, with \$4,100 and \$6,600, led in Delaware; Washington, with \$4,500 and \$6,600, led in the District of Columbia; Dade County, with \$4,000, and Broward County, with \$6,130, led in Florida; Atlanta, with \$3,636 and \$6,036, led in Georgia; Louisville, with \$3,360 and \$5,184, led in Kentucky; East Baton Rouge Parish, with \$3,550 and \$6,100, led in Louisiana; Baltimore County and Anne Arundel County, with \$4,000, and Baltimore County, with \$6,500, led in Maryland; Hattiesburg, with \$3,260, and Jackson, with \$4,800, led in Mississippi; High Point, with \$3,496.30, and Charlotte, with \$5,341.95, led in North Carolina; Oklahoma City, with \$3,800, and Tulsa, with \$5,880, led in Oklahoma; Columbia's A teachers, with \$3,000 and \$4,152, led in South Carolina; Oak Ridge, with \$3,675 and \$5,500, led in Tennessee; Dallas, with \$4,100, and Houston, with \$6,000, led in Texas; Richmond, with \$3,500 and \$5,000, led in Virginia; and Hancock County, with \$4,130 and \$5,730, led in West Virginia.

WESTERN SECTION

The western section of the Nation has an average beginning salary of \$4,434, with the following State averages: Alaska, \$5,293; Arizona, \$4,289; California, \$4,587; Colorado, \$3,981; Hawaii, \$4,020; Idaho, \$3,982; Montana, \$4,249; Nevada, \$4,491; New Mexico, \$4,233; Oregon, \$4,093; Utah, \$3,771; Washington, \$4,209; and Wyoming, \$4,280.

The highest ranking districts in the western section for teachers with the bachelor's degree are as follows: Fairbanks, with a be-

ginning salary of \$6,150 and ending salary of \$7,650, led in Alaska; Tucson, with \$4,550 and \$7,550, led in Arizona; Kern County Union, with \$5,100, and Redwood City, with \$8,340, led in California; Pueblo, with \$4,200 and \$6,575, led in Colorado; Honolulu, with \$4,020 and \$6,000, led in Hawaii; Lewiston, with \$4,200, and Boise, with \$5,680, led in Idaho; Anaconda, with \$4,475, and Great Falls, with \$6,600, led in Montana; Clark County and Washoe County, with \$4,500, and Ormsby County, with \$6,200, led in Nevada; Clovis, with \$4,300, and Albuquerque, with \$6,700, led in New Mexico; Portland, with \$4,300 and \$6,600, led in Oregon; Salt Lake City, with \$3,870 and \$6,060, led in Utah; Port Angeles, with \$4,430, and Tacoma, with \$6,200, led in Washington; and Casper-Midwest, with \$4,600 and \$6,394, led in Wyoming.

TERRITORIES

The Canal Zone has a beginning salary of \$5,625, while Guam's is \$3,770. This would make an average of \$4,698.

Snow Travel

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we have heard many statistical arguments intended to prove that commuter trains can carry a greater number of passengers more efficiently than individual automobiles and other forms of transportation.

Convincing as these arguments are they are not quite as dramatic as the demonstrations of rail reliability which occurred during last week's snowstorms. When all else was slowed or stopped, the trains continued to operate.

An editorial in the March 5 Newark Evening News discusses the situation in one part of the Nation.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SNOW TRAVEL

The good old railroads came through again. With air and highway traffic paralyzed by the snowstorm, the trains kept running. And if they were running late, it was chiefly because they were swamped by refugees who normally use buses, cars and planes that weren't running at all.

The railroads, so often accused of shirking their responsibilities to the traveling public, put on extra cars and special trains. And they must have lost money because thousands crowded aboard without bothering to buy tickets and rode free because collectors couldn't push through the jammed cars.

The collapse of rubber-based interstate transportation was complete, with the Lincoln Tunnel blocked and Port Authority bus terminal officials halting ticket sales and advising commuters to seek other transportation. The vulnerability of the motor vehicle to the rigors of winter was demonstrated anew, and the storm reinforced, if reinforcement were needed, the argument that railroad service must somehow be preserved.

So, it should be added, must local public transportation systems. Around here the buses didn't do too well during the worst of the storm. As usual, they were delayed by private cars not equipped for snow. But they did get through eventually, while a lot of cars didn't. And yesterday, like the railroads, they were jammed with extra riders, the inevitable foul-weather friends.

As for all the grousing being done about municipal efforts in Newark and elsewhere to combat the snow, perhaps a better job could have been done. But the situation wouldn't have been nearly so bad if a lot of people had left their cars home after it started to snow Thursday morning, and if a lot of abandoned cars without snow tires or chains hadn't blocked the path of the plows.

New Wheat Bill Holds Hope for Farmers

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WEAVER. Mr. Speaker, I would like at this time to discuss briefly a new wheat marketing bill, H.R. 11022, which I introduced in the House on March 9, 1960. The bill, to amend the Agricultural Adjustment Act of 1938, would establish a wheat marketing program for the thousands of farmers whose principal product is wheat and who, for the past few years, have been suffering a severe setback because of falling prices and mounting surpluses.

Basically, this is the same bill that I introduced last year along with a group of my colleagues from the wheat-producing States of the Midwest and Pacific Northwest. However, the bill has been changed in several respects and we hope that this year it will be more acceptable to the Secretary of Agriculture.

Under provisions of this bill the most dramatic change from old programs is contained in the bushel quota proposal rather than the old acreage allotment system. We all fully realize that the acreage allotment system has not functioned well. The wheat in storage continues to mount up and the cost to the taxpayers and the farmers themselves continues to rise. These price-depressing surpluses have become an almost impossible burden to America.

The purpose of my wheat bill is to stabilize prices to the wheatgrowers, lower the surpluses now in stock and prevent the accumulation of further unwieldy surpluses in wheat.

To accomplish this we have switched from the acreage control to the bushel control.

Each year, under the proposal, the Secretary of Agriculture would be directed to assay the wheat market, both domestic and foreign, in terms of bushels of wheat. Once this assessment is made, the Secretary would then draw out of storage 150 million bushels of wheat to be sold on the domestic or export exchanges at not less than 100 percent of parity.

The rest of the market would be divided up among the wheat producers whose bushel allotment would be based

on the present acreage allotments. However, in order to get marketing certificates the wheat producer would have to withdraw 20 percent of all his land from production. Of this 20 percent, at least half would be in the acreage reserve and the Government would be required to pay the usual soil bank fees. The other half would simply be withdrawn from production without compensation to the producing farmer.

Once a farmer has received a certificate to sell wheat, the sales would be made on the open market at the going price. This competitive sales principle would put the wheat producer back on his feet as an independent.

Obviously, only top grade wheat would go into the domestic and foreign markets for human consumption. Lower grades would be sold as feed. Feed grain producers, however, would not be as severely penalized by this plan as they are at present, because the wheat producer would not be sowing part of his land to feed grains as he is now; it would be out of production altogether.

By reducing our surpluses at the rate of 150 million bushels annually, the storage costs to the taxpayers would be lowered and the general public would benefit. By withdrawing 20 percent of the wheatland from production, future surpluses would not be allowed to accumulate. By putting the 150 million bushels on the open market, the Secretary of Agriculture, in effect, would force a short market which, in turn, would stabilize prices at or near 100 percent of parity without cost to the Government.

Although no legislation ever drafted is ideal or 100-percent foolproof, Mr. Speaker, this measure seems to me to be most meritorious and a long step along the road to solving a very difficult problem.

Strong Support for Legislation To Provide Overtime Compensation for Substitute Employees in the Postal Service

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. KEATING. Mr. President, for a number of years I have sponsored legislation to provide for payment of overtime compensation to substitute employees in the postal service. It is the purpose of this bill to bring the overtime wages of the substitute employees of the Post Office under the same provisions which govern those of the regular employees.

In other words, if a substitute works over 8 hours in 1 day, he should be paid time and a half, as is a regular employee. If a substitute works over 40 hours in a week, he should be paid time and a half, as is a regular employee.

Under the current provisions, the substitute carrier or clerk may work any number of hours in 1 day or 1 week, and yet never receive additional pay for over-

time. This is grossly unfair, and certainly not in keeping with established wage practices in private industry. My bill, S. 1444, would correct this injustice, and therefore deserves widespread support in this body.

I was gratified recently to receive a letter from the Postal Union of Manhattan-Bronx Clerks supporting this measure. Because of their intimate knowledge of this situation, I am particularly pleased to have the backing of this organization. I ask unanimous consent to have this letter and the bill printed in the Appendix of the Record.

There being no objection, the letter and bill were ordered to be printed in the Record, as follows:

POSTAL UNION OF MANHATTAN-
BRONX CLERKS.

New York, N.Y., March 8, 1960.

DEAR SENATOR KEATING: This union, at its last membership meeting, went on record in support of your bill, S. 1444, to provide time-and-a-half overtime pay for substitutes in the postal service after 8 hours in 1 day or 40 hours in a week.

The postal substitute works under conditions today which belong to the past century. The conditions would never be tolerated elsewhere, in fact, they run counter to what is advocated by Uncle Sam himself when he speaks to other employers. We think it high time that Uncle Sam practiced what he preaches—became a complying employer.

Your interest in the miserable status of this unfortunate worker, the post office sub is indeed appreciated.

Sincerely yours,

MORRIS BILLER,
President.
WILLIAM J. KARP,
Secretary.

S. 1444

A bill to amend section 4 of the Act of July 6, 1945, as amended, so as to provide for payment of overtime compensation to substitute employees in the postal field service

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Act entitled "An Act to reclassify the salaries of postmasters, officers, and employees of the postal service; to establish uniform procedures for computing compensation, and for other purposes", approved July 6, 1945, as amended, is amended by striking out the period in the last sentence and inserting a colon and the following: "Provided further, That in emergencies or if the needs of the service require, substitute and hourly rate employees in post offices of the first, second, and third class may be employed in excess of eight hours per day or forty hours per week and for such overtime service they shall be paid on the basis of 150 per centum of the hourly rate of pay received by such employees."

The Water Pollution Bill

EXTENSION OF REMARKS

OF

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. THOMPSON of Louisiana. Mr. Speaker, under leave to extend my remarks in the Record, I include the fol-

lowing editorial from the Lake Charles (La.) American Press, of February 25, 1960. I feel that this editorial is most timely and accurate in its views. I was most happy to be one of those in 1956 who assisted in the framing and preparing of the water pollution bill and, together with Congressman BLATNIK and others who have worked so hard to attain some relief for our people, to attempt to continue to expand this program, which is not a giveaway. Should the program be continued, it would eventually save billions of dollars to the taxpayers of the United States through the raising of health standards and the lowering of hospital costs. It is, indeed, unfortunate that some of the good legislation, such as this, airport construction and flood control and navigation, must be accomplished over the objections of the Bureau of the Budget and the President. These vetoes and threatened vetoes are an attempt to force legislation by coercion and should it prevail, the legislative branch of our Federal Government will be reduced to a group of lackeys to the office of the President. The editorial follows:

VITAL BILL

Today the House is scheduled to attempt to override the President's first veto of the present session—that of the water pollution bill.

The veto was presented Tuesday shortly after the President left on his South American tour. And his reason for vetoing the bill was one he has cited often before—that water pollution is a local, not a Federal responsibility, and should be dealt with on a local basis.

The President's reasoning is difficult to understand on this bill just as it was difficult on the airport bill which he also claimed was a local responsibility. Pollution may be a localized problem but it can affect a number of localities through the acts of just one community.

For instance, several communities have contributed to the pollution of the Calcasieu River. Happily, most of the pollution problems on the upper reaches of the Calcasieu have been eliminated through construction of a sewage disposal plant at Oakdale. The main source of pollution now appears to be those areas surrounding Lake Charles which do not have sewerage facilities.

What has happened on the Calcasieu has happened on countless rivers across the Nation. The problem has been most acute on some of the larger rivers, such as the Missouri, where many small towns dump raw sewage into the river, the same river that communities downstream depend upon for their water supply. A low level dam has been proposed on the Calcasieu and it is expected that Lake Charles will one day get its drinking water from the river rather than deep wells, hence the purity of river water is of great concern here.

So water pollution is not exactly a local problem. And it isn't necessarily a State problem since many rivers cross State lines. It is a national problem just as much as the farm problem.

Actually, the water pollution bill that has been in effect since 1956 has furnished an incentive for local communities to launch construction of sewerage systems and the expenditures on such projects have increased tremendously since the bill went into effect. And the Federal contribution has been small—one-third the cost of disposal plants in small communities. The Federal Government has contributed nothing toward the cost of collecting systems which generally cost more than the disposal plants.

Here in Calcasieu Parish, West Lake and Hollywood have taken advantage of Federal aid to build sewerage systems. The Hollywood system is in operation and West Lake is just getting underway on theirs. Iowa recently passed a bond issue to finance a sewerage system there.

The battle between Congress and the President is essentially over the extent to which the Federal Government will participate in sewerage projects. The President wants to extend the act 10 years and allow for \$50 million per year in Federal contributions. Congress wants to raise it to \$90 million a year.

The increased Federal expenditures which Congress has approved would allow the Federal Government to extend financial aid to larger communities. At the present time no Federal grant can exceed \$250,000 which means that the largest plant that can be constructed under the bill is three times that amount or \$750,000.

With this limitation only small communities can qualify. Lake Charles would not be eligible under the present program. The bill passed by Congress would approximately double the maximum Federal contribution and would enable many more communities to qualify for Federal aid.

The bill passed by Congress has been referred to as a \$900 million measure rather than the \$500 million the President requested which sounds like Congress is seeking to practically double the amount the President asked. But it is for a 10-year period and \$90 million per year in Federal money for sewerage projects is a piddling amount compared to most appropriations asked by the President.

Considerable sums have been expended by local communities since 1956 on sewerage projects and Federal funds have furnished the incentive. And each dollar of additional Federal funds would probably result in at least a tenfold increase on the local level. It is difficult to conceive a more worthy use of Federal funds, especially since the movement toward the urban areas has heightened the need for sewerage facilities.

Water pollution is a growing national problem and if more communities aren't furnished incentives toward developing adequate sewerage facilities the health of perhaps millions will be jeopardized.

Battle of Natural Bridge in War Between the States

EXTENSION OF REMARKS OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. HOLLAND. Mr. President, we are about to have the centennial observance of the War Between the States, and matters that are of historical interest relating to that war are particularly interesting at this time.

I doubt if many Senators know that the capital of Florida, Tallahassee, was the only capital of any State east of the Mississippi not captured by the Federal troops during that war. There were three battles fought near there, the Battle of Olustee, the Battle of Marianna, and the Battle of Natural Bridge.

I was pleased to read in the Monday, March 7, issue of the Tallahassee Democrat an article with special reference to

the Battle of Natural Bridge, fought March 6, 1865, described by my good friend, Maj. Gen. Mark W. Lance, the adjutant general of the State of Florida.

I believe this article will be of interest to all Senators, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEN. MARK LANCE REPORTS BATTLE OF NATURAL BRIDGE

How teenage cadets and old men of the Home Guard defended Tallahassee was described by Maj. Gen. Mark W. Lance, of St. Augustine, adjutant general of Florida, yesterday afternoon at the site of the Battle of Natural Bridge, fought March 6, 1865.

His address was part of a ceremony that marked an annual pilgrimage to the battle-site marker, near Woodville.

Many townspeople joined in memorializing the heroes of that battle, the last one fought in Florida in the Civil War. Their valor resulted in Tallahassee being the only southern capital east of the Mississippi River which was not captured during the war.

General Lance has served in the Navy, Army, and Florida National Guard, and has studied the historical events surrounding the Battle of Natural Bridge.

FLORIDIANS HELPED

He pointed out that in addition to the several thousand men from Florida serving in the Confederate Army and Navy, as a great contribution to the war effort by Florida was the supply of cattle, hogs, sirup, salt, and leather to the Confederate armies.

In the third year of the war Union military forces were ordered to destroy the railroad running east and west through north Florida and connecting lines into Georgia, and also to destroy all the plantations and farms producing these essential agricultural products.

A Union force of about 5,000 soldiers, under command of General Seymour, marched west from Jacksonville in February 1864, following the railroad connecting Jacksonville and Tallahassee. At Olustee, Gen. Joseph Flanagan, with about 2,000 Confederate troops, defeated the Union, force which withdrew back to Jacksonville.

NEXT ATTEMPT

General Lance recalled that the next attempt to capture Tallahassee came from the west. Early in September, 1864, Gen. Alexander Asboth with 700 Union troops left Pensacola marching east. After a heavy skirmish they entered Marianna on the 27th. The small Confederate force opposing General Asboth at Marianna was composed of about 300 old men and boys.

Driven out of town, they withdrew to the east bank of the Chipola River where the Federal troops were prevented from crossing. The reported approach of Confederate reinforcements caused Asboth to retreat back to Pensacola, destroying farms, crops and livestock on the way.

Both attempts to reach Tallahassee from the east and west having failed, the Union command decided to launch a combined sea and land operation, General Lance related.

NEAR ST. MARKS

Union Navy transports embarked troops at Key West, Fort Myers and Cedar Keys for an amphibious landing in the vicinity of the St. Marks Lighthouse, then to march overland the 25 miles up the St. Marks-Tallahassee railroad, and capture Tallahassee from the south.

Gen. John Newton, commanding the Union forces, arrived aboard Navy transports off St. Marks Bar on March 1, 1865, where ships of the Union Gulf Blockade Squadron

met the transports to furnish naval support for the landing.

General Lance said Newton's plan of action was: first, at night put landing party ashore, capture Confederate pickets and secure bridge over the river; second, follow landing party during darkness, with troop debarkation and landings; third, march upriver to Newport, destroy Newport, take Fort St. Marks from the rear, cross the river and move up the railroad to Tallahassee.

To protect his force from Confederate reinforcements by rail movement, he sent small raiding parties to destroy the railroad bridges over the Aucilla River east of Tallahassee and the Ochlockonee River southwest of Tallahassee.

When the Union ships arrived off St. Marks Bar, a heavy fog and high surf prevented landing until midnight of March 3. Meanwhile, word of the enemy force had reached the capital. Tallahassee was alerted and dispatches sent to commanders of Florida troops in the area to move immediately toward the capital.

General Lance said there is no doubt that but for the delay in the landing of Union troops, the defenders of Tallahassee would not have reached the excellent defensive area at Natural Bridge in sufficient numbers to have held the ground.

"Once the enemy troops had crossed to the west bank of the river and exited from the hammock defiles, their approach to the capital through open wooded areas might not have been stopped," he said.

BRIDGE AT NEWPORT

On March 5 the Federal force under General Newton advanced up the east bank of the St. Marks River to Newport, hoping to cross the river on the bridge there. The Confederates had destroyed the bridge, forcing the Federals to continue their movement up the river with expectations of crossing near Natural Bridge.

This march was made during the night, with the leading elements arriving at the eastern approach to Natural Bridge at daylight of March 6, there to be confronted by well entrenched defending forces.

After the main Federal force arrived, an attack was launched. The Confederates under Gen. William Miller repulsed several charges but were finally forced to withdraw their forward elements back to the main line of resistance. Effective fire forced the Federal troops to retreat to the east side of the river, followed by part of the Confederate force. The Federal force retreated during the night to the St. Marks Lighthouse, later reembarking on naval transports and sailing to Key West.

When news of the Federal troop landing at St. Marks Lighthouse had reached Tallahassee the night of March 4, General Lance said, the militia was assembled, which consisted of every man and boy capable of bearing arms. The West Florida Seminary cadets who were over 12 years of age, numbering about 30, reported for the defense of the capital, under command of Capt. V. M. Johnson, the seminary superintendent.

General Miller moved every available effective soldier to the Newport-Natural Bridge area on March 5, placed pickets along the east bank of the river, placed a defense force to prevent crossing by bridge at Newport and entrenched his main body to repulse the enemy attack at Natural Bridge.

General Lance said military historians agree that the opposing forces in the Natural Bridge engagement were about of equal strength, with an estimated 500 to 600 on each side in the battle and with reported losses being 21 Federal killed and 89 wounded, and 3 Confederate dead and 23 wounded.

Senator Richard L. Neuberger

SPEECH OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. RIVERS of Alaska. Mr. Speaker, the sad and untimely death of my good friend, Senator RICHARD L. NEUBERGER, leaves me with a deep sense of personal loss. It is tragic indeed that one so young, with a past that was great but a future greater still, should be taken from us and that we should be so deprived of his leadership, his wisdom, and his shining courage. My wife, Martha, and I extend to his widow, Maurine, our heartfelt sympathy with awareness, however, that his qualities of greatness will continue to inspire her.

DICK NEUBERGER's death does not bring a family sorrow alone—there is an unbridgeable void in our lives—our Nation has lost an outstanding statesman, one of her most dedicated sons; his own State of Oregon, a great Senator; the State of Alaska, a good friend; the people as a whole, a leading exponent of their causes, their hopes, their dreams; the literary world, a voice of conscience and great talent. His voice is silent, his pen is still, but to those of us left behind he bequeathed the inspiration of his high courage and integrity. He was a gentle and kind and tolerant man who believed unerringly in the democratic principles of our Government and unfailingly in the fundamental rights of mankind. He was a true "liberal" in the full sense of the word.

From his early days at the University of Oregon, DICK NEUBERGER could always be found out in front fighting for good causes, regardless of their current unpopularity, or prevailing complacency. He was a man of basic wisdom with the courage of his convictions. He was a champion of the underprivileged, a passionate believer in democracy, a true American.

We in Alaska who have at long last found our place among the society of States will forever be grateful to him for his steadfast support of statehood. He was one of the early advocates of statehood for Alaska and likewise for Hawaii. He would, of course, be such an advocate for he lived by and worked for the ideals he so eloquently expressed. During the construction of the Alaska Highway by the military during World War II, he lived among us, worked with us, wrote about us, understood our endeavors, and left with us an even greater appreciation of our beautiful and bountiful State than we had had before—a richness that stretches before us in a never ending progression. To all of us he brought into sharp focus the problems of the Northwest in such perspective that we cannot but be blind to reality if we do not continue his good fight to preserve for posterity some of that beauty of mountain and stream and forest that was so much a part of

RICHARD NEUBERGER, the man; RICHARD NEUBERGER, the American.

While he sleeps peacefully in his beloved Northwest, I should like to think he is doing so beneath stately trees he loved so much, and in the shadow of towering mountains marked with all their splendor and natural beauty. He has left us poor with his passing, but indeed we are rich for having known him, having worked with him, and having been inspired by him. Our loss, but Heaven's gain.

A Situation of Monopsony

EXTENSION OF REMARKS OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. BUSH. Mr. President, in the March 1960 issue of the bulletin on Business and Economic Conditions published by the First National City Bank of New York there is, on page 30, an article entitled "A Situation of Monopsony." This article deals with one phase of the report of the majority of the Joint Economic Committee recently submitted to the Congress. I call particular attention to this paragraph in the article, which reads:

But the advocacy of competition in the Government securities market collides with quite another line of thinking; namely, that the Federal Government, being such a large and frequent borrower, should exercise a monopolist's power and hold its borrowing costs down simply by refusing to pay more.

The point here, as the article makes clear to readers, is that the majority in the committee, on the one hand, are critical of a lack of competition in the Government securities market, whereas, on the other hand, they are anxious to have the Federal Reserve bank, representing the Government, step in and buy huge quantities of bonds in order to stabilize the bond market. Such action would be bringing monopolistic power into a market which they say should be free of monopolistic influences.

This article points out the inconsistency in the position of the majority, and I think will be of interest to students of this issue.

Speaking of the criticisms of the Treasury, which the majority in the joint committee has voiced from time to time, because they assert the Treasury does not get the best prices it should for its offerings under the system it uses, the article states the following:

In the year 1958 the Treasury, taking advantage of cheap money and also facing some sizable bond maturities, did issue a considerable volume of bonds. These totaled \$15.6 billion, including the ill-starred 2½s due in 6½ years which involved speculative buyers in such heavy losses.

The heavy losses suffered by investors and speculators in the 2½s.

Which, I say parenthetically, were only market losses, but need not have

been losses if the bonds had been held to maturity—

along with other less spectacular examples of Government certificate, note, and bond issues going below par soon after issuance, cast doubt on the theory that the Treasury, in setting rates on such securities, has been giving anything away. It is true that some other issues have proved profitable to initial purchasers, but there must be counterbalancing profits to warrant the underwriting risks assumed.

Mr. President, I ask unanimous consent that my remarks just delivered be printed in the Appendix of the RECORD, followed by the article I have mentioned.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SITUATION OF "MONOPSONY"

The Joint Economic Committee's report, in urging more use of the auction technique of selling Government securities, argues that this can make the Government securities market more competitive and hence cheapen Treasury borrowing costs. On this point many experts would disagree though there might not be any harm in trying out, say, a sale of 1-year Treasury certificates of indebtedness on a competitive auction basis.

But the advocacy of competition in the Government securities market collides with quite another line of thinking, namely, that the Federal Government, being such a large and frequent borrower, should exercise a monopolist's power and hold its borrowing costs down simply by refusing to pay more. Under the heading of "Imperfect Competition in the Government Bond Market," the JEC majority states:

"The borrowings of the Federal Government are of such large volume both in total and in comparison with the volume of bonds of corporations and of State and local governments that they help markedly to determine interest rates instead of merely conforming to the forces of competition and supply and demand as has so often been asserted by the Treasury.

"In economic language, the situation approaches 'monopsony' or a market in which one buyer purchases such a large proportion of the supply that imperfect competition results.

"The facts are that in 1958, the Federal Government borrowed three-quarters of the funds in the long-term market (excluding short-term bills, mortgages, and consumer credit)."

To people in the business, any figures showing the U.S. Treasury as a dominant factor in the long-term market are hard to believe. The most striking facts of the capital market since World War II have been (a) the dominance of real estate mortgages and (b) the comparative abstinence of the Treasury from the long-term market, even though it had a huge floating debt in need of funding into bonds. The committee omits mortgage investments from its analysis and includes, as Treasury borrowings in the long-term market, sales of certificates of indebtedness due within 1 year and notes due in 1 to 5 years. Such short intermediate borrowings totaled \$46.9 billion during 1958, as the table below shows.

In the year 1958, the Treasury, taking advantage of cheap money and also facing some sizable bond maturities, did issue a considerable volume of bonds. These totaled \$15.6 billion, including the ill-starred 2½s due in 6½ years which involved speculative buyers in such heavy losses.

The heavy losses suffered by investors and speculators in the 2½s, along with other less spectacular examples of Government certificate, note, and bond issues going below par soon after issuance, cast doubt on the

theory that the Treasury, in setting rates on such securities, has been giving anything away. It is true that some other issues have proved profitable to initial purchasers, but there must be counterbalancing profits to warrant the underwriting risks assumed.

Bonds due in 5 to 10 years have more of an intermediate than long-term character. In the fullest sense, long-term bonds would be those due beyond 20 years. Treasury issues which fulfill this criterion have been few and far between and modest in amount. As a matter of record, the Treasury has come to market with bonds due beyond 20 years only six times since 1946—once in 1953, twice in 1955, twice in 1958, and once in 1959. Treasury issues of bonds due beyond 20 years were the largest in 1958 of any of the 14 postwar years. Even so, they reached only \$2.9 billion.

Gross issues of marketable U.S. Government securities (In billions)

	1958	1959	1946-59
Bills due within 1 year.....	\$97.2	\$102.7	\$1,044.2
Certificates due within 1 year.....	36.6	19.7	357.7
Notes due in 1 to 5 years.....	10.3	26.7	178.4
Bonds due in 5 to 10 years.....	12.7		44.3
Bonds due in 10 to 20 years.....		.6	2.0
Bonds due after 20 years.....	2.9	.9	9.2
Total.....	159.7	150.6	1,635.8

The Late Honorable George Huddleston, Sr.

EXTENSION OF REMARKS OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks, I am pleased to include for the RECORD an editorial which appeared in the Montgomery Alabama Journal on Wednesday, March 2, in tribute to a former distinguished Alabamian, the late Hon. George Huddleston, Sr., whose record of service in the House of Representatives of the U.S. Congress from the Ninth District of Alabama is an enviable one.

The editorial follows:

GEORGE HUDDLESTON'S RECORD

George Huddleston of Birmingham who served in Congress from 1914 to 1936 was one of the most controversial and independent figures who ever appeared in Alabama politics. His passing at the age of 90 marks a notable epoch in Alabama's political history.

Mr. Huddleston started out as one of the most ardent advocates of better laws for the laboring man. He drew the line tightly, so that he made himself known as a friend of the "common man," which in Birmingham politics meant that he was opposed by the corporations and big business people of Jefferson County.

Yet in the last years of his public service he was regarded as a warm friend of business and an opponent of many of the radical elements which had so long supported him. Mr. Huddleston claimed that he had not changed, but that the attitude of the people of his district had changed.

He won the friendship of business by

ardent attention to the public's business. For example, Charley DeBardleben, an industrial leader, on one occasion had something very important he wanted attended to in Washington. Repeated requests to the State's Senators got no action at all.

At last in desperation he sent a telegram to George Huddleston, a man he had always opposed in politics. It is said that within 3 hours Mr. Huddleston wired back that the matter had been attended to and said he was glad to be of service. There were many cases like that. Businessmen who did not like Huddleston and did not vote for him invariably found him honest in his convictions and quick to be of service any time a request was made. This kind of record gradually made an impression with the result that business people in Jefferson County became Huddleston's friend.

When the First World War broke out Mr. Huddleston was violently criticized for some of the steps he took in opposition to President Wilson's handling of the situation. It stirred passions in his home city, but before the war had gone very far Mr. Huddleston had shown himself as ardent a patriot as anybody.

In his early days when he had to campaign hard to get elected Mr. Huddleston spent weeks out in far reaches of the county. Time after time he would spend the night in the home of a constituent and thus form ties that could not be broken. With such backing any opposition to Huddleston was futile, as was shown by the many years he spent in Congress though he had stirring opposition nearly every time he had to run for reelection.

Mr. Huddleston established a record of political independence and along with it a reputation for able and honest administration of his office that will be long remembered.

Helping Citizens To Understand Their Government

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the New Jersey Bell Telephone Co. has begun a new series in its monthly publication, New Jersey Bell. The series will discuss the governments of the State, counties, and communities. It is non-partisan in approach and is intended to help citizens of that State to understand a few of the levels of government that have a direct effect on them.

The first article in the series deals with the Governor of New Jersey, Robert B. Meyner. In a letter to all Bell Telephone employees, Governor Meyner tells what he hopes the series will accomplish. His letter says:

It is my earnest hope that this series will stimulate increased interest in government, for while the benefits of a democratic system are universally enjoyed, its responsibilities are individual. In other words, government—local, State, or National, is not better than the degree of interest and participation displayed by its citizens.

This responsibility extends beyond voting. It includes the duty of always being aware of issues and questions facing our government, and of giving your elected representatives the benefit of your opinions. I also urge

every New Jersey citizen to take as active a role as possible in the affairs of his community.

In another article in the same issue of the magazine the editors have quoted the views of Representative JOHN W. McCORMACK, majority leader of the House of Representatives. Mr. McCORMACK exhorts the American people to make their views known directly to their Congressman about many issues.

It seems to me that the New Jersey Bell Telephone Co. and other private companies that make efforts to stir interest in public questions can perform notable public service. If there ever was a time when we need crystal clear understanding of our Government, that time is now.

I ask unanimous consent that the articles from the March 1960 issue of New Jersey Bell be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE GOVERNOR: NEW JERSEY'S CHIEF EXECUTIVE LEADS ONE OF THE NATION'S OLDEST STATES UNDER A FRAMEWORK OF GOVERNMENT ESTABLISHED BY ONE OF THE NEWEST STATE CONSTITUTIONS

(By R. H. Yard)

Footsteps rang through the empty corridors of New Jersey's State House in Trenton as an overcoat-clad figure, burdened under the weight of a pair of bulging briefcases, hurried out a side door to a waiting limousine. "Good evening, Governor," greeted a waiting State trooper who has long since become accustomed to waiting for his distinguished passenger until long after other State House workers have left for their homes.

Although working late at his State House office is not a nightly habit with Gov. Robert B. Meyner, neither is it unusual. While the State's new (1947) constitution charts the Governor's official duties, his important office cloaks him with a host of unofficial, but nonetheless important, assignments. He is, for example, leader of his political party, a constant target of newsmen seeking a story, and a ceremonial leader who is expected to be present at an astonishing number of civic functions ranging from testimonial dinners to plant dedications. These extra-constitutional duties require the Governor to be on the road 2, 3, or sometimes even 7 nights a week.

Because of these uncompromising demands on his time, the Governor and his briefcases are constant traveling companions. State House aides like to recall the fall day several years ago when Governor Meyner attended a world series game in Yankee Stadium. As long as his car was embroiled in stop-and-go traffic in Trenton, the car was filled with small talk, but when they reached the open stretches of Route 1 the Governor murmured "Excuse me" and reached for his ubiquitous brief case, whose contents absorbed his attention until the car reached New York City. Demands on the Governor's time are no respecter of party, for the incumbent's predecessors were subject to the same pressures, as will his successor in 1962.

WHO CAN BE GOVERNOR?

Though we are all familiar with Governor Meyner, who is now beginning the third year of his second 4-year term as the State's chief executive, few of us have any real idea of the responsibilities and duties required of our Governor by the constitution and the law, nor of the changes in this office that have evolved during the 184-year history of

our State which has operated under three constitutions.

The constitution of 1947, which has been widely hailed as a leading example of a modern State charter, spells out who may serve as Governor, his term of office, and his official duties.

The Governor, according to the constitution, "shall be not less than 30 years of age," a citizen of the United States for at least 20 years, and a resident of the State for at least 7 years before his election (unless he has been absent from the State on the public business of the United States or of this State.) He is elected by legally qualified voters of the State (and he is the only State official elected by the people of the entire State) for a 4-year term. Under the new constitution, the Governor for the first time in the State's history is eligible to succeed himself, but only for a second successive term. Alfred E. Driscoll was the first chief executive to be reelected to a second term. New Jersey pays its Governor \$30,000 per year.

In the event of the Governor's death or resignation the reins of government are inherited by the President of the State Senate, and, should he then die, or retire, the Speaker of the General Assembly becomes Governor.

DUTIES AND RESPONSIBILITIES OF THE GOVERNOR

What then are the Governor's duties and responsibilities? Listed first in our constitution is the requirement that "The Governor shall take care that the laws be faithfully executed." Because it is obviously impossible for one man to see that all the State's laws and regulations are obeyed, the constitution permits the establishment of 20 administrative departments in the executive branch of the State government which is headed by the Governor. Fourteen of these departments are now in operation, with the head of each a member of the Governor's cabinet. These 14 departments include: agriculture, banking and insurance, board of public utility commissioners, civil service, conservation and economic development, defense, education, health, institutions and agencies, labor and industry, law and public safety, state, state highway, and treasury.

Generally speaking, department heads are appointed by the Governor, but his nominations are subject to the "advice and consent" of the Senate. Although most of these appointments are approved without serious objection by the senate, there is an old, and unwritten custom known as senatorial courtesy, which occasionally pits the senate in a bitter battle with the Governor. If a nominee is declared to be personally displeasing to the senator from the candidate's home county, then other senators invariably refuse to confirm the nomination. Each cabinet member serves at the Governor's pleasure, with the exception of the attorney general and the secretary of state, who are appointed to terms of office that coincide with the Governor's term.

The Governor's appointive powers include also the right to appoint judges in the State's court system, along with the members of the many State boards and agencies, and other policymaking officials. This appointive power is tempered by the requirement that the Senate give its approval to most gubernatorial appointments.

A STRONGER VETO POWER

The Governor's role in his relations with the legislature was strengthened greatly under the new constitution, which granted him a far stronger veto power than had ever before been entrusted to the chief executive. When the State's first constitution was written in 1776, its authors were all too familiar with the dictatorial rule of British Royal Governors to entrust their Governor with virtually anything but ceremonial powers.

Today, both houses of the legislature—the general assembly and the senate—must each muster a two-thirds majority vote in order to override. After a bill is passed, the Governor has a 10-day period during which he can approve or reject a bill. Should he fail to sign within that period, the bill automatically becomes law—if the legislature is in session. If the legislature has ended its session during the 10-day span, an additional 45-day period of grace is permitted. Then, if the Governor wishes to veto a bill he must call the legislators back into a special session.

The Governor is required to send a message to the legislature at the opening of each regular session, reporting on the condition of the State, and recommending legislation. But just as the Governor can exert some control over legislation through his veto power, so can the legislature accept or reject the Governor's legislative proposals—an illustration of the checks and balances system that safeguards our rights as citizens by preventing one branch of the government from dominating the governmental processes. The chief executive can call the two branches of the legislature, or the senate alone, into session whenever he considers such action necessary.

NO NEW TAXES IN 1960-61 BUDGET

Another responsibility of the executive branch which each year attracts widespread interest is the preparation of the budget. In his most recent budget message delivered February 1 to a joint session of the senate and the general assembly, Governor Meyner proposed a record outlay of \$431,365,104 for the fiscal year beginning July 1, 1960. As required by the constitution, the budget was balanced against an expected income of \$432,475,057. Although the Governor stressed the fact that the budget—\$24,212,000 higher than the current year's spending—would require no new taxes, he did not rule out the possibility of increases in some existing taxes.

Budget preparation is no easy task, for State government is becoming an increasingly complex operation. Unexpected events can exert a real impact on budgetary planning. For example, the tragic epidemic of eastern viral encephalitis that swept southern New Jersey last year shows up in the Governor's proposed budget in which he called for a safe and sane approach to the problem, combining both research and control measures, under an appropriation of \$535,000 for the coming fiscal year, compared to this year's anti-mosquito appropriation of \$135,000.

Another innovation in the new constitution gave the Governor, for the first time in the history of the State, a constitutional power to remove State officials. Department heads, with the exception of the secretary of state and the attorney general who serve for definite terms, serve at the Governor's pleasure, which means that he is able to request—and get—their resignations at any time. Other officials may be removed "for cause." Employees subject to this removal power, however, are protected by the requirement that charges must be filed, and that they be given an opportunity to be heard at a public hearing. Not subject to this gubernatorial removal power are members and employees of the legislature, the courts, or officers appointed by the legislature in joint session.

GOVERNOR'S ARREST ENDS BRITISH RULE

Our State was born in 1776 amid a turbulence that we can scarcely imagine today. The British Royal Governor was William Franklin, son of Philadelphia's Benjamin Franklin. William chose to ally himself with the British—a decision he may have come to regret by 1776 when he found himself attempting to enforce the infamous stamp tax. It was the passage of this act by the British

Parliament that gave rise to the rallying cry, "No taxation without representation."

Resentment boiled up rapidly and reached a climax with the arrest on June 15, 1778, of Governor Franklin as "an enemy to the liberties of this country." A committee quickly began drawing up a constitution outlining the government of the new State which was passed by the provincial congress in Burlington on July 2, 2 days before the ringing words of the Declaration of Independence were signed by the Continental Congress in Philadelphia.

The first legislature organized under the new constitution met in Princeton in late August, and its members elected William Livingston, of Elizabeth, as the State's first Governor. Because of their bitter experience with the personal power wielded by Royal Governors, the architects of the new constitution gave Governor Livingston little power in a government that was dominated by the legislature.

The State's second constitution was approved in 1844. Though the new charter was an improvement in many ways, it did little actually to strengthen the Governor's role in the State administration. He still lacked a worthwhile veto power, and his power to remove State officials was severely limited. This constitution served the State until 1947 when the people gave an overwhelming vote of approval for our present document, which has restored the balance between the three branches of the State government, greatly increased the Governor's personal executive authority, and streamlined the State's archaic court system, which today is one of the most highly esteemed judicial systems of any State in the land.

The governorship, and the State government as a whole have undergone considerable change since the more carefree days of Gov. Daniel Haines who, in his message to the legislature more than a century ago, declared: "I have no hesitation in recommending that no money be raised by taxation for the current year; and I confidently hope that in the future we will be wholly relieved from any such burden."

PUT IN YOUR 2 CENTS' WORTH

(By JOHN W. MCCORMACK, Congressman from Massachusetts, and majority leader of the House of Representatives)

Americans have a way of expressing their views in down-to-earth, simple terms, and one of these phrases is: "I put in my 2 cents worth."

Putting in our 2 cents worth, or expressing our individual opinions, can be vitally important to the future of our country.

Americans have a God-implanted love of free speech, but I have observed during my service in Congress that too few of our citizens take advantage of this privilege of speaking up on government matters.

A reason may be that many people believe their Congressman does not welcome a letter or a telephone call from a citizen who has an opinion on some past, pending or future matter. May I correct this mistaken idea as simply and as clearly as possible? Every Congressman welcomes the opinion and counsel of our citizens because his primary job is to do just that: represent our people in the government of our country. To do this well, the Congressman must know what his people are thinking, and the more opinions he gets the better will be his decisions. Public opinion is a very important factor in a democracy.

The very basis of our Government is built around people. What we call politics, elections, legislation—all are attuned to one great determinant, the voice of the people or public opinion.

The people created America, and the people—you and I—must continue to watch over and improve the country our forefathers built and our contemporaries are building. This is our duty and our greater obligation.

As a country, we decided long ago to place this responsibility upon our citizens. Freedom for all was the fruit of this decision, but freedom carries with it the cost of widespread citizen interest and participation in the affairs of Government.

One of the best ways to fulfill your duties of active citizenship, of course, is to help elect the man or woman of our choice to public office. But do not stop there. Let me encourage you to take the next step. Keep the persons who represent you in Government informed of your views throughout the year. This is an equally important responsibility in our democratic form of Government.

Sometimes I think it might be well if we erect a large sign over Congress which contained this theme. Here the opinions of all Americans are heard—should be heard—with equality. As a result, the aim of their proposals becomes the law of the land.

Or perhaps we should put it in more typical American language: Here your 2 cents worth does make a difference.

MATS in Danger?

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. DULSKI. Mr. Speaker, a few days ago an excellent editorial appeared in the Buffalo, N.Y., Evening News, concerning the Military Air Transport Service.

This editorial deserves much consideration, in view of the tremendous job MATS is doing at the present time.

Under unanimous consent, the editorial dated March 8, 1960, follows:

MATS IN DANGER?

A House Armed Services Subcommittee reported a few months ago that the Military Air Transport Service (MATS) is "probably more important to our defense today than any individual supply component has been through history." It is difficult to reconcile this finding—derived from testimony of high-ranking officers—with a Pentagon proposal that more military business be transferred to commercial airlines.

The services lack adequate airlift as it is. The limited Lebanon crisis of 1958 demonstrated that. Any reduction or idling of its personnel and equipment would mean a grave weakening of MATS capability of providing transportation for men and military freight to any part of the world—which is its mission.

MATS has been under attack by several airlines, mostly cargo carriers, which complain that it operates in competition with them. And yet these private carriers received about \$85 million in military contracts last year. They are hoping for another \$100 million if the Pentagon proposal is approved in congressional committee. With all sympathy for the private operators' desire for more business, it is to be hoped that nothing will be done that would impair the effectiveness of our armed services. And deterioration of MATS would seem to threaten exactly that.

Student Loyalty Oath

EXTENSION OF REMARKS

OF

HON. EUGENE J. MCCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the news story concerning the resolution of the National Conference on Higher Education on the student loyalty oath. At its meeting in Chicago this week, this group went beyond its position of last year, when it limited its objection to the disclaimer affidavit. The college and university representatives now ask for the elimination of both the loyalty oath and the affidavit which are required of students making loans under the National Defense Education Act. I also ask unanimous consent to include an editorial from the Minneapolis Tribune and editorials from other newspapers which discuss various aspects of the loyalty oath.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Evening Star, Mar. 10, 1960]

STUDENT LOYALTY OATH DECRIED BY EDUCATORS

CHICAGO, March 10.—The National Conference on Higher Education yesterday called for elimination of both the loyalty oath and the disclaimer affidavit in the student loan section of the National Defense Education Act.

The conference thus went a step further than it did last year when, after much debate, it limited its objections to the affidavit alone.

When a student applies for a loan under the act, he must sign a loyalty oath and an affidavit that he does not believe in any organization which advocates violent overthrow of the U.S. Government. A number of colleges and universities, including Yale and Harvard, have stayed out or withdrawn from the program in protest.

OBJECTION ON PRINCIPLE

Most of the protest centers on the affidavit on the basis that you cannot pass laws about what people shall believe. Those who object to the loyalty oath do so generally on principle. They say it makes college students a particular center of suspicion, since the oath isn't required of farmers getting crop loans or veterans getting home loans.

Many college officials call both the oath and the affidavit offensive and ineffectual.

Yesterday's action came during the final session of the 3-day conference, sponsored by the Association for Higher Education, a department of the National Education Association. About 1,300 college and university presidents, deans, faculty members, and graduate students attended the conference.

Another resolution adopted also concerned the student loan program. Under present law, up to 50 percent of a loan may be forgiven if the borrower later teaches in a public elementary or secondary school. The conference recommended that this forgiveness provision be extended to anyone who later teaches in any institution of higher learning.

ON RACE ISSUE

The conference took note of the current segregation controversy in the South with the following resolution:

"We condemn political interference in the operation of schools and colleges and urge regional and national accrediting agencies to investigate and take appropriate action when such interference occurs."

This is a modified version of a resolution submitted by the United States National Students Association, which dealt specifically with the situation at Alabama State College. The students association said nine Negro students were expelled there on direct orders of the Governor of Alabama, for participating in a sit-in strike.

Members of the resolutions committee declined to accept the wording of the students association, saying they (the committee members) just didn't know enough about it right now.

[From the Minneapolis Morning Tribune, December 10, 1959]

IKE ON THE AFFIDAVIT

At his last news conference before leaving for his good will tour, the President spoke out against the so-called non-Communist affidavit required of students receiving Federal loans under the National Defense Education Act of 1958.

The President said he believed the standard oath of allegiance also required of the student was "sufficient." He left the impression that he would like to see the affidavit provision repealed.

Many of the Nation's leading educators will welcome Mr. Eisenhower as an ally in their fight against the affidavit.

The simple oath of allegiance which the student loan applicant must take has not aroused as much opposition. It is the "affidavit of disbelief" which has been largely responsible for the withdrawal of a dozen or more colleges and universities from the loan program. This compels the student to swear that he "is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

When Harvard University announced the withdrawal from the program recently, President Nathan M. Pusey pointed out that the oath of allegiance made the affidavit "superfluous."

The affidavit, he objected, was discriminatory, singling out "students alone in our population—and among students the neediest—as subjects for special distrust." Furthermore, he said, it would "present no barrier to those it was designed to catch." He found it, along with many other distinguished educators, "an affront to freedom of belief and conscience."

At the next session of Congress, a serious effort will be made to repeal the affidavit requirement. There will be some pressure, too, to repeal the oath of allegiance provision but this is generally considered less objectionable.

With the "affidavit of disbelief" removed, most of the protesting colleges and universities could participate in the loan program in good conscience. We hope that Mr. Eisenhower will press for its removal. His influence might well prove decisive in a close fight.

[From the Chicago Sun-Times, Jan. 19, 1960]

KILL THE AFFIDAVIT OF DISBELIEF

The Senate Labor and Public Welfare Committee is scheduled within the next few days to bring to the Senate floor an amendment which would remove the affidavit of disbelief from the National Defense Act. The act as it stands requires recipients of Federal student loans to swear allegiance to the

United States, and in addition to execute an affidavit declaring they do not believe in, do not support, and are not members of any organization advocating overthrow of the U.S. Government by force or violence or other illegal or unconstitutional method.

We urge Congress to adopt the amendment and eliminate the affidavit.

At the very least the affidavit is superfluous—something like requiring a student to swear disbelief in dishonesty in addition to pledging his honesty.

The utility of the affidavit as a means of catching Communists is completely nullified. It seems to us, by the fact that no dedicated Communist would hesitate for a moment in swearing to a lie.

But the principal reason that one leading university after another is dropping out of the Federal student-aid program rather than accept the "affidavit of disbelief" is that it is basically un-American.

It is un-American because it singles out a particular group of citizens and imposes upon them a special oath not required of other Americans.

It is the more so because it intrudes into an area held inviolate by the most fundamental doctrines of the American system—the privacy of men's minds and thoughts.

To some it may seem picayunish to quibble at signing a statement disclaiming subversive thought or intent at a time when communism is a major menace—a threat to our very way of life.

But communism would not be a threat to our way of life had the Russian people been able to maintain the same freedom of thought, the same freedom from the governmental domination of people's minds, that is our heritage.

The time to head off that kind of domination is before it begins—and the "affidavit of disbelief" is a beginning.

Explaining the University of Chicago's withdrawal from the Federal aid program, chairman Glen A. Lloyd of the board of trustees said the affidavit requirement could lead to "star-chamber investigations into a man's beliefs," and to "governmental interference in the conduct of universities." We agree, times and views change, moreover, and if the Government can proscribe belief in subversion it can also, at some future time, place its own arbitrary definition upon subversion as meaning whatever a majority of its members declare it to mean.

It is far safer to keep Government's foot out of the door entirely, and Congress can do its part by striking out a phrase which is, intentionally or not, a manifest of lack of faith in the loyalty of America's youth.

[From the Hartford Courant, Nov. 19, 1959]

YALE AND HARVARD REJECT AN OATH

Students who benefit from the loans provided by the National Defense Education Act of 1958 are required to take an oath of allegiance to the United States. But to the authors of the act this was not enough. The student is required also to take a second oath, by signing an affidavit saying that he doesn't believe in or belong to or support any subversive organization. It is this second oath that has now prompted both Yale and Harvard to withdraw from the loan program. In so doing they follow what other colleges and universities have done before them, either by refusing to accept the program in the first place or by withdrawing from it since. Among them are institutions like Oberlin, Bryn Mawr, Haverford, Swarthmore, Reed, and perhaps half a dozen others—with Wesleyan and others apparently still to come.

It is piling on top of the first oath a second one, which President Griswold of Yale calls negative and President Pusey of Harvard calls superfluous, that has prompted Yale and Harvard to act. Presumably they

hope by lending their prestige to this protest to dramatize the desirability of another attempt, like the one that failed in Congress last summer to repeal the requirement.

Obviously there is little harm in requiring the first oath of allegiance. But, if two oaths are better than one, why aren't three or even four still better? And why not make the student repeat them every day, or even several times a day? The basic trouble is, as President Griswold puts it, that loyalty "cannot be coerced or compelled; it has to be won." And "loyalty oaths are inherently futile, as no subversive or treasonous person hesitates to use them as a cloak for his intentions."

Let's first try to stay ahead of Russia by seeing to it that every talented youngster in the country has a chance at as much education as he is capable of. Let us never try to catch up with Soviet Russia in enforcing orthodoxy by state compulsion.

[From the Greenville (Mich.) News, Dec. 1, 1959]

EDUCATION ACT NEEDS REPAIRS

Here in Michigan there has been no big fuss over the provision of the National Defense Education Act of 1958 requiring a loyalty oath from any applicant for a Federal student loan.

Most of the complaints have come from ivied halls of learning in the East. Because of this requirement, schools like Yale, Princeton, Harvard, Amherst, Sarah Lawrence, Bates, and others have withdrawn from the program.

Dartmouth and Columbia are taking the money but they don't like the ground rules—and say so.

The affidavit states that the student "does not believe in, and is not a member of and doesn't support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

And what are the objections of the schools and their students to signing such an oath? Basically, they are these:

1. They see an implication that is repugnant in being singled out as a group. It is pointed out that the Government gives away and loans billions without asking recipients of its largesse to take any such oath.

2. They don't believe a needy student who is a traitor would hesitate for a minute to lie and sign such an oath.

Senator JOHN KENNEDY, Democrat, Massachusetts, sought to have this provision altered at the last session of Congress. He failed. It is to be hoped that he will make a second try.

It seems to us that the complaints of the educators are justified and on this occasion we agree with them.

Can We Eat Our Way Out of the Surplus Problem?

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. QUIE. Mr. Speaker, there appeared in the magazine *Minnesota Farm and Home Science* last month an interesting, informative article on the agricultural surplus problem. At the same time it has an important bearing on human diet and health. I believe the article deserves study, as this subject

agricultural overproduction is being considered by many Members of this body.

The article follows:

CAN WE EAT OUR WAY OUT OF THE SURPLUS PROBLEM?

(By Martin Abel, research assistant, Department of Agricultural Economics)

Solving agriculture's surplus food problem by increasing domestic consumption has been a popular idea since the early 1930's. Considerable thought and energy have been devoted to developing means to increase food consumption and reduce surpluses. The food stamp plan of the late 1930's and early 1940's, the present school lunch program, and the special milk program are examples.

The goals of increased food consumption are (1) to reduce agricultural surpluses through increased food consumption and (2) to improve the health and vigor of our Nation's people. If consumers are enabled to eat more and better foods the nutrient content of their diets will be improved. Although all nutrient deficiencies will not be eliminated (even the highest income groups have nutritional shortages), the size of the deficiencies will be reduced.

Many ways for increasing the demand for farm food products have been suggested. Three broad approaches¹ examined in considerable detail are:

Income approach which involves subsidizing low income consumers for food needs (i.e., giving low income consumers the food purchasing power of a higher income group).

Price approach which calls for reducing retail prices of food and paying producers the difference between the resulting prices and some established "fair" price.

Nutrition approach which assumes that everyone would eat a nutritionally adequate diet at some specified level of cost.

Several levels of achievement under each approach are analyzed. By level of achievement we mean the degree to which an approach to demand expansion is pursued. The changes in total food consumption represent an upper limit for each level of achievement. The potential changes assume no lags or leakages. If programs were implemented to achieve demand expansion, however, not all eligible consumers would participate nor would all who take part use the program fully. Thus, somewhat smaller changes in food consumption might be expected when specific programs for achieving demand expansion are implemented.

How much will these approaches reduce agricultural surpluses? Total surplus production in agriculture—both food and non-food—in 1955 was about 6 percent. However, it is probably considerably higher now. Since 75 percent of total agricultural production is food production, food consumption would have to increase by 8 percent to eliminate total surpluses of 6 percent in agriculture.

INCREASING INCOMES

Table 1 shows the food consumption potentials under the income approach.

Raising all per capita incomes above \$1,000 would increase total food consumption by 7.3 percent, which is near the 8 percent surplus that exists. However, this would involve a food subsidy to half the Nation's people, and this would appear to be unreasonable. At a more reasonable level, such as raising all per capita incomes to \$500, total food consumption increases by only 2.4 percent. Almost one-fifth of the Nation's people would be affected, but the increase in total food consumption would not be enough to eliminate total agricultural surpluses.

TABLE 1.—Percentage changes in total quantity of food purchased under assumed changes in per capita income, United States, 1955

Per capita incomes raised above	Changes in total quantity purchased	Proportion of total United States population
	Percent	Percent
\$200.....	1.0	8.9
\$500.....	2.4	18.1
\$750.....	6.1	36.3
\$1,000.....	7.3	50.1

REDUCING FOOD PRICES

Table 2 shows the results of specified reductions in food prices at retail on food consumption use.

A 20-percent decline in the price of all livestock and livestock products would increase food consumption 3.3 percent. However, a 20-percent decline in retail prices will mean about a 40-50-percent decline in farm level prices of livestock and livestock products. The subsidy to farmers for the difference between the new low farm price and an established fair price would, undoubtedly, be large. And still, the price approach would not completely eliminate agricultural surpluses.

TABLE 2.—Percentage changes in total quantity of food purchased under price declines of 10 and 20 percent

Price declines for—	Changes in total food consumption due to a price decline of—	
	10 percent	20 percent
All food.....	2.1	4.6
Meat, fruit, and vegetables.....	1.7	3.7
Meat.....	1.1	2.4
All livestock and products.....	1.5	3.3

IMPROVING NUTRITION

The nutrition approach to demand expansion specifies that all individuals eat a nutritionally adequate diet, including recommended caloric intake, at some specified level of diet cost.

If everyone ate a nutritionally adequate diet of moderate cost (i.e., a diet representative of food consumption patterns of families whose income was between \$4,000-\$4,999), total food consumption would decline by 5.5 percent. The decline in total food consumption results primarily from an adjustment for excess calories rather than a downgrading of the diet as such.

Adjusting everyone's consumption to a liberal cost diet plan (i.e., a diet representative of food consumption patterns of families whose income was between \$6,000-\$7,999) would increase total food consumption by 2.3 percent. But the liberal cost diet plan requires everyone in the Nation to eat a high cost diet and achieving this potential would, again, seem unreasonable.

Expanding the demand for farm food products does not provide a single, easily attainable solution to the agricultural surplus problem. Reasonable levels of achievement will not completely eliminate agricultural surpluses. However, demand expansion policies offer a partial solution and when combined with other agricultural surplus policies may provide a means of reducing and even eliminating agricultural surpluses.

The aims of demand expansion are not solely surplus elimination. To the extent

that increased food consumption enables people to eat more and better food the overall health and productivity of our Nation's people will be improved.

South Dakota Poll Shows Nixon Far in Front

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. MUNDT. Mr. President, I believe my colleagues in Congress and the people in the country generally will be interested in the latest report of the South Dakota Poll, published on March 9, analyzing the convictions and preferences of South Dakota voters in the forthcoming presidential campaign. I ask unanimous consent to have the poll printed in the Appendix of the Record.

DICK NIXON, it will be noted, is leading the top Democrat contender in South Dakota by a margin of more than 20 points. HUBERT HUMPHREY, a native son of South Dakota, is the top Democrat contender in our State, with LYNDON JOHNSON rating a second; STUART SYMINGTON rating third; JOHN KENNEDY fourth; and Adlai Stevenson showing up in fifth place. It is also interesting to observe that DICK NIXON shows considerable vote-pulling appeal among South Dakota Democrats and that among independents he also leads all except HUMPHREY. Furthermore, the defection among Republicans is negligible.

In 1952, the South Dakota poll called the shots accurately in the hotly contested Eisenhower-Taft primary and its predictions were again accurately substantiated in the presidential elections of November in both 1952 and 1956. It is sponsored by three of the largest and most influential newspapers of South Dakota.

There being no objection, the poll was ordered to be printed in the Record, as follows:

HOW DEMOCRATIC CANDIDATES RATE AGAINST NIXON IN SOUTH DAKOTA POLL

More than 20 percentage points separate front-running presidential candidate RICHARD NIXON from his nearest Democratic rival in South Dakota, the South Dakota poll revealed today.

Senator HUBERT HUMPHREY, leading Democratic contender in the State, received the support of 39.8 percent of the poll respondents, as compared with the 60.2 percent favoring NIXON, at present unopposed for the Republican presidential nomination.

Respondents were asked to indicate for whom they would vote "if the November election were held today" and if the candidates were Vice President NIXON and, in turn, each of five possible Democratic opponents.

KENNEDY FALLS INTO FOURTH PLACE

Democratic Senators LYNDON JOHNSON of Texas and STUART SYMINGTON of Missouri show new strength in the poll, joining Min-

nesota's HUMPHREY to relegate Senator JOHN KENNEDY of Massachusetts to fourth place in competition for support against NIXON. JOHNSON is especially strong, with 38.0 percent against the Vice President, less than two points behind HUMPHREY.

Both SYMINGTON and KENNEDY edge Adlai Stevenson, twice-defeated Democratic nominee against President Eisenhower. Of the candidates listed, only Stevenson has indicated that he will not seek the nomination.

Other findings of the new sampling indicate a pronounced preference for Democratic candidates among younger voters, an almost equal division of rural support between the parties, and a tendency to vote fairly consistently along party lines.

VOTE BY RESIDENCE

Tabulation of the poll according to residence follows:

	Farm	City	Town	Total
Hubert Humphrey (Democrat).....	52.9	30.3	26.1	39.8
Richard Nixon (Republican).....	47.1	69.7	73.9	60.2
Lyndon Johnson (Democrat).....	50.0	33.3	17.6	38.0
Nixon (Republican).....	50.0	66.7	82.4	62.0
Stuart Symington (Democrat).....	42.2	29.4	22.2	33.9
Nixon (Republican).....	57.8	70.6	77.8	66.1
John Kennedy (Democrat).....	41.9	29.4	16.7	32.7
Nixon (Republican).....	58.1	70.6	83.3	67.3
Adlai Stevenson (Democrat).....	34.2	32.5	22.2	31.1
Nixon (Republican).....	65.8	67.5	77.8	68.9

HOW VOTE SPLITS ON PARTY LINES

In terms of partisan support the Republicans stand more solidly behind the Vice President than do the Democrats in support of any of their party's possible nominees. The following table reports the contests in terms of party preference of respondents:

	Democrat	Republican	Independent	Total
Humphrey.....	86.0	5.6	51.7	39.8
Nixon.....	14.0	94.4	48.3	60.2
Johnson.....	91.6	8.1	46.1	38.0
Nixon.....	8.4	91.9	53.9	62.0
Symington.....	84.3	3.7	47.6	33.9
Nixon.....	15.7	96.3	52.4	66.1
Kennedy.....	70.0	6.1	48.2	32.7
Nixon.....	30.0	93.9	51.8	67.3
Stevenson.....	76.3	5.6	49.3	31.1
Nixon.....	23.7	94.4	50.7	68.9

Most respondents—65.8 percent—voted consistently for the candidates for one party in all five mythical contests. Party regularity was highest among the Republicans (87.2 percent), lowest among the Democrats (31.2 percent), and a surprising 71.6 percent among the "independents" who expressed a preference for neither major party.

HOW VOTE IS DIVIDED BY AGE GROUPS

Apart from the strictly partisan analysis the greatest divergence is to be found in terms of the age of respondents with the youngest group favoring the Democratic candidates, while Republican support increases with the age of the respondents:

	Under 40	Age 40 to 59	60 and above	Total
Humphrey.....	73.4	32.0	30.3	39.8
Nixon.....	26.6	68.0	69.7	60.2
Johnson.....	68.2	41.4	16.1	38.0
Nixon.....	31.8	58.6	83.9	62.0
Symington.....	61.9	40.7	15.4	33.9
Nixon.....	38.1	59.3	84.6	66.1
Kennedy.....	55.4	36.0	18.9	32.7
Nixon.....	44.6	64.0	81.1	67.3
Stevenson.....	63.5	24.7	13.9	31.1
Nixon.....	36.5	75.3	86.1	68.9

NOTE.—The South Dakota poll is sponsored by the Sioux Falls Argus-Leader, Watertown Public Opinion and Aberdeen American-News.

The Springfield Daily News Achieves Notable Publishing Record

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. BOLAND. Mr. Speaker, it is with a great deal of personal pride that I announce to the House today that one of the great Democratic daily newspapers of the country, the Springfield (Mass.) Daily News, has achieved another notable milestone in the field of journalism and publishing by exceeding for the first time in its 80 years of existence the 100,000 circulation mark.

I am personally thrilled at this news for many reasons. Foremost in my mind, at the moment, is the fact that this is the newspaper that gave me one of my first jobs as a young boy in the circulation department. I do not presume to take any personal credit for the Daily News' record of exceeding 100,000 circulation.

CREDIT GIVEN TO EDITOR FRANK H. KELLY AND STAFF

The credit for this achievement rightly goes to Editor Frank H. Kelly and his staff of well trained and qualified newspapermen who daily publish a newspaper that presents the news and editorial opinion without fear or favor on local, State, National, and international events.

DAILY NEWS FOUNDED 80 YEARS AGO BY CHARLES J. AND EDWARD BELLAMY

One of the few evening daily newspapers in New England to publish over 100,000 issues, the Springfield Daily News is also celebrating its 80th birthday. The newspaper was founded by Charles J. and Edward Bellamy, and the first issue was published on February 24, 1880. Edward later became the famous author of "Looking Backward." The Bellamy brothers made a simple pledge in their first edition, as follows:

We mean to interest our readers, but we shall not seek to do so by spicing our columns with questionable personalities. The News means to be a gentleman.

NEWSPAPER GREW IN STATURE, INFLUENCE UNDER SHERMAN H. BOWLES

The editors who succeeded Charles and Edward Bellamy certainly have lived up to the code set forth on the first day of publication. The Daily News was acquired in 1915 by the Springfield Republican Publishing Co., and under the guidance of Sherman H. Bowles, a member of the fourth generation of the famous Springfield publishing family, grew in stature, influence, journalistic quality and circulation until today, when it proudly joined other respected newspapers selling more than 100,000 copies daily.

Mr. Speaker, I want to take this opportunity to salute the Springfield Daily News on this glorious occasion and congratulate Editor Kelly and members of his staff for their achievement in fulfilling the hopes and aspirations and goals of Charles and Edward Bellamy, and Sherman H. Bowles.

Margaret Yamashiro: American Teacher

EXTENSION OF REMARKS

OF

HON. OREN E. LONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. LONG of Hawaii. Mr. President, the National Education Association Journal for March 1960 carries an article about Miss Margaret Yamashiro of Hawaii. Because the story of Miss Yamashiro illustrates both the best in American teaching and the importance which Hawaiians attach to education, I should like to bring the article to the attention of the U.S. Senate. I ask unanimous consent that the story be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARGARET YAMASHIRO: A SUPERVISOR IN THE 50TH STATE

(By Lillian A. Givens)

It was 1942 on the island of Hawaii scarcely a year after that memorable December 7th, and Margaret Yamashiro had an important job to do.

It was not a job on the front line as a nurse, nor in a munitions factory, but in a first-grade classroom full of youngsters.

The first year was a busy one for the young teacher just out of college: In addition to her regular teaching responsibilities, she had the difficult task of allaying the fears of her young charges while at the same time reminding them of the need to observe curfew and blackout regulations.

She was a building representative of the local association; she assisted at the Information Center of the Office of Civilian Defense after school and on week ends; she worked in canteens of the United Service Organizations.

Such a schedule might have caused many people to give up the work they had chosen, but not Margaret. And the steadiness of purpose with which she entered the pro-

fession has now brought her to the position of field assistant in elementary education for Oahu Schools, Department of Public Instruction, Hawaii.

Miss Yamashiro is a typical Hawaiian product. She was born in Hamakua, Hawaii, to immigrant Japanese parents who had left Japan in the early 1900's to work on a Hawaiian plantation. There they raised a family of seven children: six girls and one boy.

While Margaret was still a child the family moved to Olaa, a town closer to Hilo, the county seat of the big island, and second-largest city in the State. All the children attended public schools and played with young friends from such varied backgrounds as Chinese, Korean, Hawaiian, and haole (Caucasian).

Because Japanese was the language in the Yamashiro home, Margaret spoke no English until she entered first grade. There, because of her language handicap, she was placed in a special reading class. Although this was a sensible administrative move, it humiliated the little girl and made her work fiercely to learn English as fast as possible. She soon accomplished her goal and was removed from the special class by the end of the year.

Margaret's desire to become a teacher followed a one-track pattern, influenced by her teachers, who, as she recalls, "set an example for me." While a teenager, she taught Sunday school in a Buddhist temple to gain experience teaching children.

After graduating from high school, she attended the University of Hawaii and obtained a Bachelor of Education degree, and after continued studies, earned a fifth-year certificate at the same campus. Not content with the certificate, she took a year's sabbatical leave and obtained her M.A. in curriculum and supervision from Columbia University.

Her experience in the teaching field covers a wide background from the first through the sixth grades; in the intermediate level (as junior high schools are termed in the Islands); as vice principal in an elementary school; as part-time supervisor of evening community school classes for adults; to her present position as field assistant. She has also taken and passed the principalship examination.

This young woman serves 11 of the 77 elementary schools on Oahu, covering 8,375 pupils and 178 teachers. The Oahu district is one of four districts, all a part of the centralized school system in Hawaii, headed by a superintendent and one board of school commissioners. The Hawaiian system embraces 207 schools, 140,518 students, and 5,270 teachers.

Margaret pays high tribute to the teachers and principals with whom she works and regards them as very dedicated people. She assists both individuals and groups in the area of curriculum and instruction and in providing inservice education. She also helps in obtaining resources and teaching aids, and serves as reading consultant to grades 7 and 8.

Margaret expresses enthusiasm for the work she is now doing. "I particularly enjoy working with young people fresh out of college," she said. "Even though they naturally have had little experience, they come with so many ideas and theories that helping them make practical application of these theories is most rewarding."

Although her work finds her "on the road" to schools as distant as 40 miles from her office, Margaret still finds time for professional association matters and is a member of local, State, and National education associations. As chairman of the educational policies committee of the Hawaii Education Association, she is on the HEA board of directors and will be a delegate to the 40th annual HEA convention scheduled for April 12 and 13.

She has given much professional leadership to the policies committee. The committee is now involved in a project to further upgrade certification, and on this subject she has some definite ideas.

"I believe in high standards; we should not water down qualification requirements to the point where anybody can be a teacher," she insists.

"Teaching requires rich subject-matter background and deep understanding of the principles of education. Here in Hawaii, I believe, we have one of the highest standards; for young people who want to go into teaching are required to have 5 years of university preparation for the professional certificate.

"According to a recent NEA Research Bulletin, of the 50 States, 39 require at least a bachelor of education degree for teaching. I think that high certification standards will encourage many young people to go into teaching as a profession or a career, instead of using it as a steppingstone to something else."

She is State chairman of the NEA National Commission on Teacher Education and Professional Standards, serves the Hawaii Association for Supervision and Curriculum Development as its membership chairman, and is an officer in the local chapter of the Association for Childhood Education.

Margaret is not the only teacher in her family. Her sister is a teacher at the Hawaii Technical School in Hilo, and a niece teaches in Los Angeles.

Although the family is scattered, they recently held a reunion when the parents celebrated their golden wedding anniversary. Mr. and Mrs. Yamashiro, now 74 years old, still live on the Big Island, where they enjoy tending their chickens and garden. Margaret's father likes flying the hundred miles to Oahu Island, but her mother voices skepticism at this modern mode of travel and prefers to remain on the ground.

Margaret is a many-sided person. Her interests include knitting, crocheting, amateur photography, and her favorite—music. Nothing is more relaxing to her than to come home after work, slip into a muumuu (Hawaiian Mother Hubbard), sit on a stack of zabutons (Japanese floor cushions), and listen to recordings on her hi-fi set. An avid record collector, she likes to sip tea and listen to the album that is her current favorite, "My Fair Lady."

Margaret Yamashiro is humble and quiet in manner and speech, she is friendly and sensitive to the feelings of others, and she has great resourcefulness and strong conviction of purpose. A dedicated educator, she can be just as thrilled by the progress of one small first-grader as by the progress being made daily in the profession she loves.

This crisis requires action at all levels, including postsecondary education. The community junior college idea is one which is, in many ways, particularly adapted to our needs as a democratic society committed to maximum educational opportunities. It is because I feel so strongly that this is the case that I have introduced the bill referred to and continue to urge its favorable consideration by the Congress.

I am certainly not alone in this belief and under leave to extend my remarks, I would like to enter into the Record an important address on this specific subject, presented to the recent annual convention of the American Association of School Administrators.

The address follows:

THE SOCIAL AND ECONOMIC NECESSITY OF COMMUNITY JUNIOR COLLEGES

(By Dr. Peter Masiko, Jr., dean, Chicago City Junior College, on February 16, 1960, at annual convention of the American Association of School Administrators, Atlantic City, N.J.)

This is a most intriguing title for a talk. The fact that a discussion session has been set aside by the American Association of School Administrators shows that this group feels, as do many educational groups at all levels of American education, that the community junior college has an important role to play in helping to meet the total educational needs of American youth and adults.

The President's Committee on Education Beyond the High School described the American ideal in education as follows:

"Every individual regardless of race, creed, or color or national origin, shall have the opportunity to develop his or her best self, to continue appropriate education up to his or her personal point of optimum development."

Dr. Conant recently expressed the national need in these terms:

"A modern industrial nation needs more than a few brains; it has to uplift talents at every level. It cannot afford technological unemployables—spiritually, politically, or economically."

The distinguished anthropologist, Margaret Mead, in an article in the Harvard Business Review, described the challenge to American education as follows:

"We need lateral transmission of knowledge; not an outpouring of knowledge from the 'wise old teacher' into the minds of young pupils, as in vertical transmission. Rather, it is a sharing of knowledge by the informed with the uninformed, whatever their ages."

In these three quotations, we have the challenge that is before us today. At the post high school level, we believe that the community junior college is ready and able to bring this ideal into reality, not only for the young college-age group, but for adults as well.

The effects of the population explosion are well known to educational administrators. We are already feeling the pressures which the high birth rates in the 1940's have brought to the American elementary and high school. Within 3 or 4 years, the first large increase in high school graduating classes will begin to impinge on the colleges of this country.

Let us review very briefly the facts in just one of our States, New York:

In June, 1958, there were 115,000 high school seniors who graduated in that State. By 1970, this will increase to 240,000, more than a 100-percent increase.

In 1958 about 30 percent of the high school graduates entered college. We estimate that by 1970 this percentage will in-

The Social and Economic Necessity of Community Junior Colleges

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. ULLMAN. Mr. Speaker, in April of 1958, I first introduced a bill to provide Federal assistance in the development of community junior colleges. Last year, I again introduced such a bill in H.R. 967. We hear much, and rightly so, of the current crisis in education.

crease to 40 percent. In other words, there will be not only a 100-percent increase in the number of high school graduates, but there is expected to be a one-third increase in the percentage of these graduates going on to college.

For the country as a whole, it means that instead of the present 3 million students in college, we may conservatively estimate that more than 6 million will be seeking a college education in 1970.

There has been a tremendous increase in the interest shown in community junior colleges in recent years. The President's Committee on Education Beyond the High School gave considerable attention to the importance of the 2-year community college and urged the public to consider the advisability of expanding these institutions in the years ahead. Dr. Conant has emphasized the community junior college in his recent publications and statements. He urges that every interested and capable student should have at least a 2-year college experience. He believes that many students who now go to 4-year colleges and universities are not adequately served there because the most appropriate curriculums for them frequently are not available.

At the last session of Congress, Senator CLIFFORD CASE, of New Jersey, introduced a bill into Congress which would provide financial assistance for the construction of a system of 2-year community colleges across the country. He believes this is the only way in which we will be able to make a real start toward meeting the needs of post high school educational opportunities for the vast increase in the number of college students we know will be upon us shortly. Two similar bills were introduced in the House by Representatives PRICE and ULLMAN.

Most of our States have made recent comprehensive surveys of their needs for post high school educational facilities. In State after State, the recurring theme has been that one of the most economical and most promising developments is the 2-year community college. In almost every instance it is felt that the only way in which college opportunities can be made more nearly equal is to bring them close to the homes of students and to provide these opportunities at little or no tuition cost, thereby virtually eliminating the economic cause of the failure of large numbers of talented high school students to seek admission to college.

What is the role now being played by the community junior college in American higher education? In 1958-59 there were 677 junior colleges and they enrolled 905,000 students, including 180,000 adults. Of these colleges 400 colleges were public, enrolling 807,000 students, while the other 277 were private institutions, enrolling just under 100,000 students.

The junior college is a uniquely American institution. In 1900 there were eight junior colleges, all private. By 1915 there were 74, 19 of which were public and 55 private. By 1929, this number had risen to 436 of which 178 were public and 258 private, but by 1957, the public junior colleges outnumbered the private by 392 to 276.

As dramatic as the increase in the number of institutions has been, there has been an even more dramatic increase in the enrollment. In 1900, the 8 junior colleges had an enrollment of 100 students. By 1929, it rose to 78,000 of which 61 percent were in the public institutions, and by 1958-59 the total had reached 905,000, of which 89 percent were enrolled in the public institutions.

Thus, across the Nation, the community junior college has already demonstrated its vitality and its ability to develop in response to local needs. For the years ahead an even greater growth and expansion in this American institution can be anticipated.

The picture in some of the individual states is as follows: Illinois has 18 public junior colleges with an annual enrollment in excess of 37,000. Michigan has 16, enrolling over 38,000. New York has 20 with an enrollment of over 34,000. Texas has 35, with over 66,000 enrollment, and Washington State has 10, with over 30,000 enrollment. Nationally, one out of every four freshman students in American colleges gets his start in a junior college.

The greatest development of community junior colleges has taken place in the State of California. In 1958-59, this State had 65 community colleges with an enrollment of over 417,000. California has a well-developed State plan for post-high-school education and the results in that State have indicated that there is a tremendous increase in the percentage of high school graduates who go on to college when opportunities are readily available to them at little or no cost. For the year 1958-59, the public junior colleges in California enrolled 73.3 percent of all full-time students in public higher educational institutions in their freshman and sophomore years.

On December 18, 1959, the regents of the University of California and members of the State board of education met in joint session to approve unanimously the so-called master plan for higher education in California.

Assembly Concurrent Resolution 88 had asked the two boards to assist in a basic study of higher education and to develop a plan "to meet the needs of the State during the next 10 years and thereafter." The eight-man team to conduct the master plan survey included two representatives each from the University of California, the State colleges, the junior colleges, and private institutions in California.

It was recommended that the University of California, the State colleges and the junior colleges make studies to tighten and standardize admission requirements. A suggested formula: that the University of California in the future admit the top 12½ percent of high school graduates instead of the top 15 percent; and that the State colleges admit the upper 33½ percent instead of the upper 40 percent.

It was recommended that freshman and sophomore students in both the University of California and in the State colleges be reduced to 10 percent by 1975. This recommendation, plus the first one, is expected to channel some 50,000 additional lower division students to the junior colleges in the next 15 years.

It was recommended that junior colleges receive more State support—not only for operating budgets but for new buildings as well. It was also recommended that those areas of California not in junior college districts be included as soon as possible. Twenty-two new junior colleges were proposed.

The heart of the entire proposal is in its delineation of the functions of the three systems of public-supported higher education. Junior colleges would continue to be locally governed with minimum standards set up by the State board of education.

It would therefore appear that in California and in a number of other States we have already reached the point where we are saying that every student in the State should be given the opportunity for at least 2 years of collegiate experience at virtually no cost to him and within commuting distance of his home. We may soon be at the point throughout the Nation where we will have universal community college opportunities on the same basis as we now provide high school education. There is much in our recent history to suggest the urgency of this development, and a look at the economic wealth and productive power of this

Nation should demonstrate that this objective is within the economic reach of this country.

If we were to assume that we should provide public 4-year colleges and universities to take care of most of the high school graduates who will be seeking admission to college in the years ahead, the cost of doubling present college facilities becomes fantastically high. We need to ask ourselves, first, whether we are able to afford this kind of development, and, secondly, whether such a development is necessary. If we answer the second question first, the economic cost may not be so staggering. If we study the statistics at our senior colleges and universities, particularly the dropouts and failures, we may reasonably conclude that either we have faulty admission policies and procedures, or the kinds of curricula which are available at our 4-year colleges and universities are not suitable to the needs, interests, and abilities of many who are presently admitted to these institutions. We could accommodate larger numbers of the more able youth within our present 4-year college facilities if other institutions were developed at the community college level to serve those who do not want and do not need 4 years of college, and if we provided the variety of technical and terminal curricula which are so urgently needed by industry and by government.

The community junior college can serve as a screening device for the senior colleges and universities. We have enough experience to report that the graduates of the academic curricula of community colleges make very acceptable students at the senior colleges and universities. They hold their own academically and they are a credit both to the colleges from which they came and the colleges to which they have transferred.

We must face frankly the question of possible competition between the public and private colleges and between these institutions and the new community junior colleges. There is no single pattern emerging in the development of the community junior college. It varies from State to State, but it is fair to say that the most frequent development is that of a tuition-free institution under the control of a local board of education or a specific regional board of education set up to operate a junior college. It is supported largely or entirely through local taxes although a large number of States now provide State aid on a per student basis, some going as high as \$250 per student. Some States also provide capital funds for construction.

For the time being, the community junior college may provide a kind of competition to the other State-supported colleges and universities and to private higher education institutions. Within a very few years, however, the numbers of students who will need to be, and must be, serviced by all of the existing higher education institutions will be larger than all combined can adequately handle. Moreover, experience shows that senior colleges in the area reap the benefits of greater educational opportunities made possible by the public junior college.

The question of the cost of going to college is a very perplexing one, and if you have sent a son or daughter to college in recent years, you know that it is a very severe strain on the family budget to provide a reasonably comfortable experience for a son or daughter away from home. There is pressure from the private colleges who are urging the public colleges to increase their tuition, thereby reducing the differential between the cost of attending private and public institutions. This would help to minimize the alleged unfair competitive advantage that the public institutions have.

In a recent talk before the American Association of Land Grant Colleges in St. Louis, Chancellor Lawrence Kimpton of the University of Chicago had the following to say:

"Anyway, from a moral point of view, why should not a student pay for his education if he can afford to and why should not the private institutions charge what its product costs. It is the professor and his family who are currently subsidizing higher education, and if labor can talk about a day's pay for a day's work, why cannot the academic world.

"All these are arguments that the private institutions have made among themselves, and the results are apparent. Tuition has gone up year after year and my guess is that a figure of \$2,000 will not be uncommon within another 6 to 8 years.

"Now comes the rub. To put it into the crassest terms possible, and I know this will offend many of the brotherhood, it is hard to market a product at a fair price when down the street someone is giving it away.

"The ability of a private institution to raise its tuition has varied inversely with its proximity to strong public institutions. It was only natural therefore, that presidents of private institutions, singly and collectively, should suggest to the heads of neighboring public universities that they raise their tuition rates, thereby reducing this ruinous competition. The suggestion was received by the public institutions without enthusiasm. In fact, they thought it was a lousy idea and said so."

"Lest you get the idea that Chancellor Kimpton is opposed to public higher education, let me quote further from this same address.

"The State owes to everyone the opportunity to receive all the education he has the ability and will to acquire, and any other view of education is debasing and erroneous."

In looking at the cost of education, I think it is appropriate to think in terms of the total social cost. In other words, What is the cost to all concerned to provide, say, 2 years of collegiate experience for our young men and women? We should consider not only the tuition cost to the student, but the additional cost of going to college away from home, including room and board, travel, and other expenses, and the loss of family income that the student could provide to a family if he were working and living at home. We must also include the very substantial additional cost in our private colleges which is not received from the student in tuition, but which must be made up by endowments or gifts, or, failing these, by low salaries to the faculty of these institutions. When you add all these costs of attending college away from home and compare them to the cost of providing a comparable 2-year college experience in a community junior college within commuting distance of the students, the difference is most substantial.

If we look at the experience in California and study the dimensions of our problems within our own States and relate these to the financial problems which all of us face, we may well come to the conclusion that in the near future we will need to provide, within commuting distance, community college opportunities for the bulk of the students who graduate from our high schools. We may have to reserve the upper division college and university opportunities for those who demonstrate that they are both able and willing to do the quality of work necessary for success at the 4-year colleges and universities.

Our population explosion, the Russian sputnik, and the work of Dr. Conant and others, have given school administrators a tremendous task for the days ahead. We are being asked to reexamine to their very

foundations the ways in which we have organized ourselves for education. Many radical changes have been introduced in the last few years. We now teach modern languages in our elementary schools. General science is now taught in the upper elementary grades. Many high schools offer calculus to their students. Educational television is in use on a large scale. We are even thinking about the 6-4-4 plan again.

Many will remember Prof. Leonard V. Koos and his advocacy of the 6-4-4 plan, particularly his emphasis on the need to integrate the work of the upper high school years and the junior college years. It may well be that Koos was ahead of his time, since the development of the junior college movement in the last 20 years has not followed his suggestions. It may be time, however, that we study Koos again and learn from what he had to say. The tremendous growth of the community colleges and the role they will be asked to play in the years ahead gives us an opportunity to relate this institution more closely to the high schools, and particularly to integrate the work in these two institutions for the benefit of the students attending them.

Junior college authorities believe that a better job can be done when the community junior college has its own facilities, and I would agree that this is most desirable when local finances permit. In many situations, however, there seems to be no choice at the start except to share facilities with high schools. Whatever facilities are available, close coordination and integration with the high school below and the senior college above is a necessary responsibility of a good community junior college.

Across the land there have been notable developments in advanced placement work for gifted high school students. Community junior college could play a tremendous role in expanding such opportunities for the more able high school youth. We could organize classes and schedules for them comparable to those available to freshmen and sophomores in college. These are the years of growth and maturity for these young people. They are seeking their independence. What better way to encourage them to become independent, to do independent thinking, than to provide them with a college atmosphere during their 11th and 12th grade years. The integration with the first 2 years of college would be a natural, normal development and these high school students could move ahead into senior college level work as rapidly as they were able and willing to move.

We have to keep in mind that while many of these 15- and 16-year-old youths are able to do college level work, many are not socially and emotionally mature enough to leave home. Hence, a 2-year community junior college can give these able youngsters the opportunity to advance in their academic work and make progress toward their 4-year college and university goals and at the same time remain within the environment of the home, so that greater emotional and social maturity can be developed before the students are sent away to school.

We must remember that human beings still require essentially the same length of time to achieve mental and emotional and psychological maturity even though we have learned how to speed up the educational process. Many 15- and 16-year-old high school youths can be taught to master the calculus, but this does not mean that they are well enough developed in other important regards to be sent to college away from the home environment.

Aside from the social and economic advantages of community junior colleges, it is important to bear in mind that many of our 11th and 12th grade teachers in high school are better equipped by training, ex-

perience, and teaching know-how, to provide freshman and sophomore college instruction than many of the instructors who are presently teaching freshmen and sophomores in our 4-year colleges and universities. This is particularly true in the larger universities with graduate degree programs, in which graduate students, who are working on advanced degrees, pay for their own education by teaching freshmen and sophomores. Many of these are very capable research students, but they are not primarily interested in teaching as a career, as is true of the high school teacher or the junior college teacher.

The net result is that many students experience a poorer quality of teaching in their first 2 years of college than they had in their high schools. We believe that the community junior college, under local control with certificated teachers, with a minimum requirement of a master's degree, can provide and does provide in many cases a better educational experience at the freshman and sophomore level than is available at many of our larger colleges and universities.

As we look upon the experience in communities that have had good community junior colleges, it is apparent that these institutions attract a larger percentage of the high school graduates into college than is true in those communities which do not have comparable opportunities. This means that many youngsters who normally would not attempt a college career are encouraged to do so. Large numbers of these are then encouraged to transfer to senior colleges and universities, where they have made very fine records.

This means we not only have helped to develop talents which otherwise would not be developed, but we have helped to increase the number of upper classmen at our 4-year colleges and universities. In fact, if we develop a system of community junior colleges throughout the country to bring post high school educational opportunities, both of the traditional liberal arts and preprofessional varieties, as well as new terminal and technical curriculums which are so urgently needed, we may well increase substantially the total demand for 4-year college education. The community college experience is that larger numbers of students are encouraged to seek a college education when it is available close to home and at little or no cost.

Each year sees higher admission requirements being imposed by our colleges and universities. This poses a real problem for the so-called "late bloomer." The President's Committee on Scientists and Engineers raised this warning:

"For some years to come the arbitrary restriction on college entrance will be directly contrary to our national interest. Moreover, denying admission to all who did not meet fairly high academic standards would in the future deprive the country of the not inconsiderable number of scientists and engineers who, in their early years, show little promise but whose late development or innate drives ultimately lead them to outstanding performance."

As we look at our total task in education, we know that we must prepare our students not only for the immediate years ahead, but for the problems of their living 20, 30, and 40 years hence. We also have a responsibility to the adults whose previous educational experience is proving woefully inadequate in meeting the challenging problems and issues of the day. The community junior college again can come to the rescue as has been demonstrated in California and elsewhere. Hundreds of thousands of adults who are beyond the normal college attendance years are willing and anxious to come back to school to enable them to adjust to

the changing times, to understand the issues of the day, to prepare for new jobs which demand higher levels of skill and technical knowledge. A college atmosphere in a community junior college within easy access of the adults, at little or no cost, would encourage many adults to continue their education and would be an invaluable service to our whole society.

I would hope that as this new community college develops throughout the country, we will think not only of the expansion of facilities and the expansion of opportunities in campus situations, but that we will also make provision for the new technologies which can enlarge our educational opportunities in ways undreamed of a few years ago. I refer for example to television in education. We have enough experience in this medium to assert that it is perfectly possible to provide high-quality instruction to students in their homes with only occasional contact with the college campus. With the full development of television in education, we can say with confidence that we can provide for every man, woman, and child in this country a reasonable opportunity for at least 2 years of college education, either through a full development of community junior colleges, or with a combination of such institutions and 4-year colleges and universities, plus the full utilization of educational television.

In the first 3 years of our experiment with open-circuit telecasts in the Chicago City Junior College's TV College, 7,572 individuals registered for college credit courses and 22,030 registered on a not-for-credit basis, a total of 29,603 individuals and 46,936 course registrations. One course in Spanish had 3,995 registrations in 1 semester. In addition to the formally registered students, it is estimated that there are 10 casual viewers for each registered student. In June 1959, 42 graduating students earned their associate in arts degrees entirely or in large part via TV, including the mother of 10 children, 2 of whom were born after she began her TV courses.

Going back briefly to our earlier discussion of the population explosion, we should keep in mind that another aspect of that problem relates to the tremendous mobility of our population. Educational opportunities play a significant role in that mobility. Better schools entice rural families to move to the cities, and city families to move to the mushrooming suburban developments. States which provide free or low cost college opportunities attract families from other States in large numbers. Can your community or State afford to lose its more ambitious families and youth?

Our postwar families are having 3, 4, or 5 children, and these are closely spaced. Figuring \$2,000 per child per year to send the child away to college, it would cost \$8,000 per child and \$32,000 for a family of four children to provide a college education only as far as the bachelor's degree, and this financial burden might fall within a 6- or 8-year span. A recent poll of 20 high-quality private eastern colleges shows that the cost to the family for 1 year of college is \$2,500 and that within 5 years this will probably be \$3,000. It is this kind of financial calculation that causes many families to move to towns having a free public college. Can we blame them? Can we afford to let this continue and perhaps become more widespread?

I have attempted to outline the challenge and the opportunity that is before us in post high school education. I have indicated that the community junior college can play a crucial role in meeting this challenge. As Ordway Tead says in the January 1960 issue of the Junior College Journal, the junior colleges have a distinctive and necessary role in higher education.

"This college is not a dilution of the 4-year college, nor is it a substitute for it. It is rather a ministry to students who confront other, and for them not less important, problems and purposes."

The junior college has demonstrated that it can do a fine job in preparing students for senior colleges and universities and for the professional schools; it offers a variety of 1- and 2-year terminal and technical curricula for those planning to go directly into employment; it provides a good general education background for all; and it provides an ideal setting for the promotion of "continuing education" for adults and our senior citizens.

Let us recognize that the community junior college has a meaning and competence in its own right. Let it continue to be an experimental multipurpose institution, adjusting to the ever-changing needs of our society. Only in this way can we democratize higher education and give to our Nation the variety of educated talents that it so urgently needs.

Needed: Realistic Pilotage Requirements for Great Lakes and St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway in 1959 opened a new era of economic progress for the Upper Midwest and the Nation. This waterway provides a lifeline from the greatest agricultural-industrial complex in the world to ports, countries, and people around the globe and offers ever greater opportunity for the future.

The ever-expanding traffic on the Great Lakes and the seaway requires realistic standards for pilots to assure safe travel for vessels in these waters.

The expansion of traffic through the seaway and on the Great Lakes, however, is not without its inherent problems.

Today I refer specifically to the tasks of determining the right kind of pilotage requirements for navigation on this tremendous waterway system.

For some time now, United States and Canada—including port, shipping, travel and other commercial and trade interests—have been attempting to find common ground for agreement on pilotage requirements.

Currently, a bill, S. 3019, designed to establish fundamental criteria for pilotage requirements is pending before the Merchant Marine and Fisheries Subcommittee of the Senate Interstate and Foreign Commerce Committee. Hearings have been held. As I understand it, the measure has the general approval of both the United States and the Canadian Governments.

Recognizing the importance of establishment of sound requirements for pilots as soon as possible, I believe the Congress should act expeditiously on this legislation.

I am respectfully urging, therefore, that the measure be favorably reported out of the Interstate and Foreign Commerce Committee as early as possible. Moreover, I believe that Congress should expeditiously approve the bill, S. 3019, with any necessary modifications—to help assure traffic safety, by adoption of adequate pilotage requirements, on the Great Lakes and the St. Lawrence Seaway.

Recently, I was pleased to receive messages from first, Harry Brockel, municipal port director of Milwaukee, Wis.; and second, Ray Weisbrod, executive vice president of the Milwaukee Association of Commerce endorsing the objectives of this legislation.

I ask unanimous consent to have these messages, along with a recent editorial from the Milwaukee Journal entitled "A Good Pilotage Bill, at Last," printed in the Appendix of the RECORD.

There being no objection, the messages and editorial were ordered to be printed in the RECORD, as follows:

CITY OF MILWAUKEE
BOARD OF HARBOR COMMISSIONERS,
Milwaukee, Wis., March 4, 1960.

HON. ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: We have your letter of recent date and very much appreciate your expression of interest in S. 3019 to establish pilotage requirements for navigation on the Great Lakes-St. Lawrence Seaway waters.

Legislation earlier proposed by pilot associations and unions, to require compulsory pilotage throughout the seaway and the Great Lakes system, was strongly opposed by Great Lakes-overseas shipping lines, Great Lakes ports, the Great Lakes Commission, and other interested parties. Although this bill had the approval and sponsorship of the U.S. Coast Guard, on the basis of improved marine safety, it was generally opposed as piling an unconscionable economic burden on Great Lakes-overseas shipping, and thereby tending to defeat the economic objectives of the St. Lawrence Seaway and its shipping services.
